Clinicomp FHIR Server API

Version: 6.2.1
BasePath:/fhir
All rights reserved

Overview

Schema

All API access is over HTTPS, TLS1.2 or above required. All data is sent and received as JSON or XML. Blank fields are omitted. All timestamps are returned in FHIR standard date/dateTime formats.
See https://hl7.org/fhir/R4/resourcelist.html for detailed Resource schemas

    Important: Only TLS 1.2 or above connections are accepted. All plaintext connections will be refused.

Media Types

Clinicomp EHR supports the R4 FHIR standard defined media type for JSON content: application/fhir+json

Root URL

EHR Production root URL: https://mum8.clinicomp.com:8445/fhir
FHIR API requests will be made against URLs of the following format. :rootURL/:resource[?:parameters]

Resource

The FHIR standard resource to access. Example: Patient

Parameters

Most API methods take ResourceId, search criteria and other optional parameters.

Resource Identity

Please note that no IDs or Identifiers in the FHIR server are intended to be used outside of the context of their complete URL. A complete URL consists of the service root url, the resource, id, type and the parameters (if any).

Errors

Error codes

The Clinicomp EHR FHIR server will return standard HTTP Error codes, here are some you might want to know:
. A 400 Bad Request response can be received for a variety of reasons such as making a request with a invalid query parameter. For example searching Patient resource with the "wrongparame" query param:

```
GET rootURL/Patient?wrongparam=abcd
    -> HTTP/1.1 400 Bad Request
```

. A 404 Not Found response can be received when making a request with an invalid or unsupported resource type or if a specific FHIR resource is not found for a certain ID. For example if you request the "NotExistResource" that does not exist:

```
GET rootURL/NotExistResource
    HTTP/1.1 404 Not Found
```

. A 403 Forbidden response is received when making a request the client does not have permissions to make. For example if your token only allows access to one Patient's resources but you request all Patient resources:

```
GET rootURL/Patient
    HTTP/1.1 403 Forbidden
```

OperationOutcome

For most errors we will include a response body in the form of an OperationOutcome FHIR resource. You will find more information about the error within the resource in the issue.diagnostics.

```
{
    "resourceType": "OperationOutcome",
    "text": {
      "status": "generated",
    },
    "issue": [{
        "severity": "error",
        "code": "processing",
        "diagnostics": "HAPI-2001: Resource Patient/dfdsfdf is not known"
    }]
}
```

Validation

When making create or update requests to the FHIR server the payloads will be validated according to the FHIR Release 4 specifications(http://hl7.org/fhir/R4/index.html). Any get or search requests will return payloads that conform to the FHIR specifications.

Authentication

SMART app on FHIR applications need to be registered before they can be used. To start the registration process, please submit a request by filling out this form (htttps://mum8.clinicomp.com/ppt/ui/logon). Clinicomp EHR will review your request and if you are approved you will receive an OAuth client_id to use on subsequent requests following the protocols specified in the official SMART App Authorization Guide.

```
    Registration Services Endpoint: https://mum8.clinicomp.com/oauth/register
```

Clinicomp FHIR APIs are authenticated using the OAuth 2.0 protocol. All API requests must include an Authorization header with an Access Token of the form:

```
    Authorization: Bearer MY_JWT_TOKEN
    OAuth 2.0 Authorize Endpoint: https://mum8.clinicomp.com/oauth/auth
    OAuth 2.0 Token Endpoint: https://mum8.clinicomp.com/oauth/token
```

Confidential clients, such as web apps, which are capable of securely storing credentials will be issued a client_secret that may be used in conjunction with the client_id to form an authorization grant, which can be used to obtain refresh and access tokens. Our refresh tokens are long-lived and conform to Health IT criteria documented here.

Public applications, such as native apps, which are incapable of securely storing credentials will not be issued a client_secret. Instead, the authorization_code grant flow will be used to issue refresh tokens. As recommended in the OAuth 2.0 Authorization Framework spec (RFC 6749), we require additional security measures when issuing refresh tokens to native applications. Specifically, we enforce refresh token rotation for all public applications, which is an auth flow in which each refresh token issued is valid for one use only. Whenever a public application uses a refresh token to request an access token, a new refresh token will be returned in the response body in addition to the requested access token.

Table of Contents

Account

- POST /Account/$expunge
- GET /Account
- GET /Account/_history

- DELETE /Account/{id}
- POST /Account/{id}/$expunge
- GET /Account/{id}
- GET /Account/{id}/_history
- GET /Account/{id}/_history/{version_id}
- POST /Account/{id}/$meta-add
- POST /Account/{id}/$meta-delete
- GET /Account/{id}/$meta
- PATCH /Account/{id}
- PUT /Account/{id}
- GET /Account/{id}/$validate
- GET /Account/$meta
- POST /Account
- GET /Account/$validate

ActivityDefinition

- POST /ActivityDefinition/$expunge
- GET /ActivityDefinition
- GET /ActivityDefinition/_history
- DELETE /ActivityDefinition/{id}
- POST /ActivityDefinition/{id}/$expunge
- GET /ActivityDefinition/{id}
- GET /ActivityDefinition/{id}/_history
- GET /ActivityDefinition/{id}/_history/{version_id}
- POST /ActivityDefinition/{id}/$meta-add
- POST /ActivityDefinition/{id}/$meta-delete
- GET /ActivityDefinition/{id}/$meta
- PATCH /ActivityDefinition/{id}
- PUT /ActivityDefinition/{id}
- GET /ActivityDefinition/{id}/$validate
- GET /ActivityDefinition/$meta
- POST /ActivityDefinition
- GET /ActivityDefinition/$validate

AdverseEvent

- POST /AdverseEvent/$expunge
- GET /AdverseEvent
- GET /AdverseEvent/_history
- DELETE /AdverseEvent/{id}
- POST /AdverseEvent/{id}/$expunge
- GET /AdverseEvent/{id}
- GET /AdverseEvent/{id}/_history
- GET /AdverseEvent/{id}/_history/{version_id}
- POST /AdverseEvent/{id}/$meta-add
- POST /AdverseEvent/{id}/$meta-delete
- GET /AdverseEvent/{id}/$meta
- PATCH /AdverseEvent/{id}
- PUT /AdverseEvent/{id}
- GET /AdverseEvent/{id}/$validate
- GET /AdverseEvent/$meta
- POST /AdverseEvent
- GET /AdverseEvent/$validate

AllergyIntolerance

- POST /AllergyIntolerance/$expunge
- GET /AllergyIntolerance
- GET /AllergyIntolerance/_history
- DELETE /AllergyIntolerance/{id}
- POST /AllergyIntolerance/{id}/$expunge
- GET /AllergyIntolerance/{id}
- GET /AllergyIntolerance/{id}/_history

- GET /AllergyIntolerance/{id}/_history/{version_id}
- POST /AllergyIntolerance/{id}/$meta-add
- POST /AllergyIntolerance/{id}/$meta-delete
- GET /AllergyIntolerance/{id}/$meta
- PATCH /AllergyIntolerance/{id}
- PUT /AllergyIntolerance/{id}
- GET /AllergyIntolerance/{id}/$validate
- GET /AllergyIntolerance/$meta
- POST /AllergyIntolerance
- GET /AllergyIntolerance/$validate

Appointment

- POST /Appointment/$expunge
- GET /Appointment
- GET /Appointment/_history
- DELETE /Appointment/{id}
- POST /Appointment/{id}/$expunge
- GET /Appointment/{id}
- GET /Appointment/{id}/_history
- GET /Appointment/{id}/_history/{version_id}
- POST /Appointment/{id}/$meta-add
- POST /Appointment/{id}/$meta-delete
- GET /Appointment/{id}/$meta
- PATCH /Appointment/{id}
- PUT /Appointment/{id}
- GET /Appointment/{id}/$validate
- GET /Appointment/$meta
- POST /Appointment
- GET /Appointment/$validate

AppointmentResponse

- POST /AppointmentResponse/$expunge
- GET /AppointmentResponse
- GET /AppointmentResponse/_history
- DELETE /AppointmentResponse/{id}
- POST /AppointmentResponse/{id}/$expunge
- GET /AppointmentResponse/{id}
- GET /AppointmentResponse/{id}/_history
- GET /AppointmentResponse/{id}/_history/{version_id}
- POST /AppointmentResponse/{id}/$meta-add
- POST /AppointmentResponse/{id}/$meta-delete
- GET /AppointmentResponse/{id}/$meta
- PATCH /AppointmentResponse/{id}
- PUT /AppointmentResponse/{id}
- GET /AppointmentResponse/{id}/$validate
- GET /AppointmentResponse/$meta
- POST /AppointmentResponse
- GET /AppointmentResponse/$validate

AuditEvent

- POST /AuditEvent/$expunge
- GET /AuditEvent
- GET /AuditEvent/_history
- DELETE /AuditEvent/{id}
- POST /AuditEvent/{id}/$expunge
- GET /AuditEvent/{id}
- GET /AuditEvent/{id}/_history
- GET /AuditEvent/{id}/_history/{version_id}
- POST /AuditEvent/{id}/$meta-add
- POST /AuditEvent/{id}/$meta-delete
- GET /AuditEvent/{id}/$meta

- PATCH /AuditEvent/{id}
- PUT /AuditEvent/{id}
- GET /AuditEvent/{id}/$validate
- GET /AuditEvent/$meta
- POST /AuditEvent
- GET /AuditEvent/$validate

Basic

- POST /Basic/$expunge
- GET /Basic
- GET /Basic/_history
- DELETE /Basic/{id}
- POST /Basic/{id}/$expunge
- GET /Basic/{id}
- GET /Basic/{id}/_history
- GET /Basic/{id}/_history/{version_id}
- POST /Basic/{id}/$meta-add
- POST /Basic/{id}/$meta-delete
- GET /Basic/{id}/$meta
- PATCH /Basic/{id}
- PUT /Basic/{id}
- GET /Basic/{id}/$validate
- GET /Basic/$meta
- POST /Basic
- GET /Basic/$validate

Binary

- POST /Binary/$expunge
- GET /Binary
- GET /Binary/_history
- DELETE /Binary/{id}
- POST /Binary/{id}/$expunge
- GET /Binary/{id}
- GET /Binary/{id}/_history
- GET /Binary/{id}/_history/{version_id}
- POST /Binary/{id}/$meta-add
- POST /Binary/{id}/$meta-delete
- GET /Binary/{id}/$meta
- PATCH /Binary/{id}
- PUT /Binary/{id}
- GET /Binary/{id}/$validate
- GET /Binary/$meta
- POST /Binary
- GET /Binary/$validate

BiologicallyDerivedProduct

- POST /BiologicallyDerivedProduct/$expunge
- GET /BiologicallyDerivedProduct
- GET /BiologicallyDerivedProduct/_history
- DELETE /BiologicallyDerivedProduct/{id}
- POST /BiologicallyDerivedProduct/{id}/$expunge
- GET /BiologicallyDerivedProduct/{id}
- GET /BiologicallyDerivedProduct/{id}/_history
- GET /BiologicallyDerivedProduct/{id}/_history/{version_id}
- POST /BiologicallyDerivedProduct/{id}/$meta-add
- POST /BiologicallyDerivedProduct/{id}/$meta-delete
- GET /BiologicallyDerivedProduct/{id}/$meta
- PATCH /BiologicallyDerivedProduct/{id}
- PUT /BiologicallyDerivedProduct/{id}
- GET /BiologicallyDerivedProduct/{id}/$validate
- GET /BiologicallyDerivedProduct/$meta

- POST /BiologicallyDerivedProduct
- GET /BiologicallyDerivedProduct/$validate

BodyStructure

- POST /BodyStructure/$expunge
- GET /BodyStructure
- GET /BodyStructure/_history
- DELETE /BodyStructure/{id}
- POST /BodyStructure/{id}/$expunge
- GET /BodyStructure/{id}
- GET /BodyStructure/{id}/_history
- GET /BodyStructure/{id}/_history/{version_id}
- POST /BodyStructure/{id}/$meta-add
- POST /BodyStructure/{id}/$meta-delete
- GET /BodyStructure/{id}/$meta
- PATCH /BodyStructure/{id}
- PUT /BodyStructure/{id}
- GET /BodyStructure/{id}/$validate
- GET /BodyStructure/$meta
- POST /BodyStructure
- GET /BodyStructure/$validate

Bundle

- POST /Bundle/$expunge
- GET /Bundle
- GET /Bundle/_history
- DELETE /Bundle/{id}
- POST /Bundle/{id}/$expunge
- GET /Bundle/{id}
- GET /Bundle/{id}/_history
- GET /Bundle/{id}/_history/{version_id}
- POST /Bundle/{id}/$meta-add
- POST /Bundle/{id}/$meta-delete
- GET /Bundle/{id}/$meta
- PATCH /Bundle/{id}
- PUT /Bundle/{id}
- GET /Bundle/{id}/$validate
- GET /Bundle/$meta
- POST /Bundle
- GET /Bundle/$validate

CapabilityStatement

- POST /CapabilityStatement/$expunge
- GET /CapabilityStatement
- GET /CapabilityStatement/_history
- DELETE /CapabilityStatement/{id}
- POST /CapabilityStatement/{id}/$expunge
- GET /CapabilityStatement/{id}
- GET /CapabilityStatement/{id}/_history
- GET /CapabilityStatement/{id}/_history/{version_id}
- POST /CapabilityStatement/{id}/$meta-add
- POST /CapabilityStatement/{id}/$meta-delete
- GET /CapabilityStatement/{id}/$meta
- PATCH /CapabilityStatement/{id}
- PUT /CapabilityStatement/{id}
- GET /CapabilityStatement/{id}/$validate
- GET /CapabilityStatement/$meta
- POST /CapabilityStatement
- GET /CapabilityStatement/$validate

CarePlan

- POST /CarePlan/$expunge
- GET /CarePlan
- GET /CarePlan/_history
- DELETE /CarePlan/{id}
- POST /CarePlan/{id}/$expunge
- GET /CarePlan/{id}
- GET /CarePlan/{id}/_history
- GET /CarePlan/{id}/_history/{version_id}
- POST /CarePlan/{id}/$meta-add
- POST /CarePlan/{id}/$meta-delete
- GET /CarePlan/{id}/$meta
- PATCH /CarePlan/{id}
- PUT /CarePlan/{id}
- GET /CarePlan/{id}/$validate
- GET /CarePlan/$meta
- POST /CarePlan
- GET /CarePlan/$validate

CareTeam

- POST /CareTeam/$expunge
- GET /CareTeam
- GET /CareTeam/_history
- DELETE /CareTeam/{id}
- POST /CareTeam/{id}/$expunge
- GET /CareTeam/{id}
- GET /CareTeam/{id}/_history
- GET /CareTeam/{id}/_history/{version_id}
- POST /CareTeam/{id}/$meta-add
- POST /CareTeam/{id}/$meta-delete
- GET /CareTeam/{id}/$meta
- PATCH /CareTeam/{id}
- PUT /CareTeam/{id}
- GET /CareTeam/{id}/$validate
- GET /CareTeam/$meta
- POST /CareTeam
- GET /CareTeam/$validate

CatalogEntry

- POST /CatalogEntry/$expunge
- GET /CatalogEntry
- GET /CatalogEntry/_history
- DELETE /CatalogEntry/{id}
- POST /CatalogEntry/{id}/$expunge
- GET /CatalogEntry/{id}
- GET /CatalogEntry/{id}/_history
- GET /CatalogEntry/{id}/_history/{version_id}
- POST /CatalogEntry/{id}/$meta-add
- POST /CatalogEntry/{id}/$meta-delete
- GET /CatalogEntry/{id}/$meta
- PATCH /CatalogEntry/{id}
- PUT /CatalogEntry/{id}
- GET /CatalogEntry/{id}/$validate
- GET /CatalogEntry/$meta
- POST /CatalogEntry
- GET /CatalogEntry/$validate

ChargeItem

- POST /ChargeItem/$expunge
- GET /ChargeItem
- GET /ChargeItem/_history
- DELETE /ChargeItem/{id}

- POST /ChargeItem/{id}/$expunge
- GET /ChargeItem/{id}
- GET /ChargeItem/{id}/_history
- GET /ChargeItem/{id}/_history/{version_id}
- POST /ChargeItem/{id}/$meta-add
- POST /ChargeItem/{id}/$meta-delete
- GET /ChargeItem/{id}/$meta
- PATCH /ChargeItem/{id}
- PUT /ChargeItem/{id}
- GET /ChargeItem/{id}/$validate
- GET /ChargeItem/$meta
- POST /ChargeItem
- GET /ChargeItem/$validate

ChargeItemDefinition

- POST /ChargeItemDefinition/$expunge
- GET /ChargeItemDefinition
- GET /ChargeItemDefinition/_history
- DELETE /ChargeItemDefinition/{id}
- POST /ChargeItemDefinition/{id}/$expunge
- GET /ChargeItemDefinition/{id}
- GET /ChargeItemDefinition/{id}/_history
- GET /ChargeItemDefinition/{id}/_history/{version_id}
- POST /ChargeItemDefinition/{id}/$meta-add
- POST /ChargeItemDefinition/{id}/$meta-delete
- GET /ChargeItemDefinition/{id}/$meta
- PATCH /ChargeItemDefinition/{id}
- PUT /ChargeItemDefinition/{id}
- GET /ChargeItemDefinition/{id}/$validate
- GET /ChargeItemDefinition/$meta
- POST /ChargeItemDefinition
- GET /ChargeItemDefinition/$validate

Claim

- POST /Claim/$expunge
- GET /Claim
- GET /Claim/_history
- DELETE /Claim/{id}
- POST /Claim/{id}/$expunge
- GET /Claim/{id}
- GET /Claim/{id}/_history
- GET /Claim/{id}/_history/{version_id}
- POST /Claim/{id}/$meta-add
- POST /Claim/{id}/$meta-delete
- GET /Claim/{id}/$meta
- PATCH /Claim/{id}
- PUT /Claim/{id}
- GET /Claim/{id}/$validate
- GET /Claim/$meta
- POST /Claim
- GET /Claim/$validate

ClaimResponse

- POST /ClaimResponse/$expunge
- GET /ClaimResponse
- GET /ClaimResponse/_history
- DELETE /ClaimResponse/{id}
- POST /ClaimResponse/{id}/$expunge
- GET /ClaimResponse/{id}
- GET /ClaimResponse/{id}/_history
- GET /ClaimResponse/{id}/_history/{version_id}

- POST /ClaimResponse/{id}/$meta-add
- POST /ClaimResponse/{id}/$meta-delete
- GET /ClaimResponse/{id}/$meta
- PATCH /ClaimResponse/{id}
- PUT /ClaimResponse/{id}
- GET /ClaimResponse/{id}/$validate
- GET /ClaimResponse/$meta
- POST /ClaimResponse
- GET /ClaimResponse/$validate

ClinicalImpression

- POST /ClinicalImpression/$expunge
- GET /ClinicalImpression
- GET /ClinicalImpression/_history
- DELETE /ClinicalImpression/{id}
- POST /ClinicalImpression/{id}/$expunge
- GET /ClinicalImpression/{id}
- GET /ClinicalImpression/{id}/_history
- GET /ClinicalImpression/{id}/_history/{version_id}
- POST /ClinicalImpression/{id}/$meta-add
- POST /ClinicalImpression/{id}/$meta-delete
- GET /ClinicalImpression/{id}/$meta
- PATCH /ClinicalImpression/{id}
- PUT /ClinicalImpression/{id}
- GET /ClinicalImpression/{id}/$validate
- GET /ClinicalImpression/$meta
- POST /ClinicalImpression
- GET /ClinicalImpression/$validate

CodeSystem

- POST /CodeSystem/$apply-codesystem-delta-add
- POST /CodeSystem/$apply-codesystem-delta-remove
- POST /CodeSystem/$expunge
- GET /CodeSystem
- GET /CodeSystem/_history
- DELETE /CodeSystem/{id}
- POST /CodeSystem/{id}/$expunge
- GET /CodeSystem/{id}
- GET /CodeSystem/{id}/_history
- GET /CodeSystem/{id}/_history/{version_id}
- POST /CodeSystem/{id}/$meta-add
- POST /CodeSystem/{id}/$meta-delete
- GET /CodeSystem/{id}/$meta
- PATCH /CodeSystem/{id}
- PUT /CodeSystem/{id}
- GET /CodeSystem/{id}/$validate-code
- GET /CodeSystem/{id}/$validate
- GET /CodeSystem/$lookup
- GET /CodeSystem/$meta
- POST /CodeSystem
- GET /CodeSystem/$subsumes
- POST /CodeSystem/$upload-external-code-system
- GET /CodeSystem/$validate-code
- GET /CodeSystem/$validate

Communication

- POST /Communication/$expunge
- GET /Communication
- GET /Communication/_history
- DELETE /Communication/{id}
- POST /Communication/{id}/$expunge

- GET /Communication/{id}
- GET /Communication/{id}/_history
- GET /Communication/{id}/_history/{version_id}
- POST /Communication/{id}/$meta-add
- POST /Communication/{id}/$meta-delete
- GET /Communication/{id}/$meta
- PATCH /Communication/{id}
- PUT /Communication/{id}
- GET /Communication/{id}/$validate
- GET /Communication/$meta
- POST /Communication
- GET /Communication/$validate

CommunicationRequest

- POST /CommunicationRequest/$expunge
- GET /CommunicationRequest
- GET /CommunicationRequest/_history
- DELETE /CommunicationRequest/{id}
- POST /CommunicationRequest/{id}/$expunge
- GET /CommunicationRequest/{id}
- GET /CommunicationRequest/{id}/_history
- GET /CommunicationRequest/{id}/_history/{version_id}
- POST /CommunicationRequest/{id}/$meta-add
- POST /CommunicationRequest/{id}/$meta-delete
- GET /CommunicationRequest/{id}/$meta
- PATCH /CommunicationRequest/{id}
- PUT /CommunicationRequest/{id}
- GET /CommunicationRequest/{id}/$validate
- GET /CommunicationRequest/$meta
- POST /CommunicationRequest
- GET /CommunicationRequest/$validate

CompartmentDefinition

- POST /CompartmentDefinition/$expunge
- GET /CompartmentDefinition
- GET /CompartmentDefinition/_history
- DELETE /CompartmentDefinition/{id}
- POST /CompartmentDefinition/{id}/$expunge
- GET /CompartmentDefinition/{id}
- GET /CompartmentDefinition/{id}/_history
- GET /CompartmentDefinition/{id}/_history/{version_id}
- POST /CompartmentDefinition/{id}/$meta-add
- POST /CompartmentDefinition/{id}/$meta-delete
- GET /CompartmentDefinition/{id}/$meta
- PATCH /CompartmentDefinition/{id}
- PUT /CompartmentDefinition/{id}
- GET /CompartmentDefinition/{id}/$validate
- GET /CompartmentDefinition/$meta
- POST /CompartmentDefinition
- GET /CompartmentDefinition/$validate

Composition

- POST /Composition/$expunge
- GET /Composition
- GET /Composition/_history
- DELETE /Composition/{id}
- GET /Composition/{id}/$document
- POST /Composition/{id}/$expunge
- GET /Composition/{id}
- GET /Composition/{id}/_history
- GET /Composition/{id}/_history/{version_id}

- POST /Composition/{id}/$meta-add
- POST /Composition/{id}/$meta-delete
- GET /Composition/{id}/$meta
- PATCH /Composition/{id}
- PUT /Composition/{id}
- GET /Composition/{id}/$validate
- GET /Composition/$meta
- POST /Composition
- GET /Composition/$validate

ConceptMap

- POST /ConceptMap/$expunge
- GET /ConceptMap
- GET /ConceptMap/_history
- DELETE /ConceptMap/{id}
- POST /ConceptMap/{id}/$expunge
- GET /ConceptMap/{id}
- GET /ConceptMap/{id}/_history
- GET /ConceptMap/{id}/_history/{version_id}
- POST /ConceptMap/{id}/$meta-add
- POST /ConceptMap/{id}/$meta-delete
- GET /ConceptMap/{id}/$meta
- PATCH /ConceptMap/{id}
- PUT /ConceptMap/{id}
- GET /ConceptMap/{id}/$translate
- GET /ConceptMap/{id}/$validate
- GET /ConceptMap/$meta
- POST /ConceptMap
- GET /ConceptMap/$translate
- GET /ConceptMap/$validate

Condition

- POST /Condition/$expunge
- GET /Condition
- GET /Condition/_history
- DELETE /Condition/{id}
- POST /Condition/{id}/$expunge
- GET /Condition/{id}
- GET /Condition/{id}/_history
- GET /Condition/{id}/_history/{version_id}
- POST /Condition/{id}/$meta-add
- POST /Condition/{id}/$meta-delete
- GET /Condition/{id}/$meta
- PATCH /Condition/{id}

- POST /Contract/{id}/$meta-delete
- GET /Contract/{id}/$meta
- PATCH /Contract/{id}
- PUT /Contract/{id}
- GET /Contract/{id}/$validate
- GET /Contract/$meta
- POST /Contract
- GET /Contract/$validate

Coverage

- POST /Coverage/$expunge
- GET /Coverage
- GET /Coverage/_history
- DELETE /Coverage/{id}
- POST /Coverage/{id}/$expunge
- GET /Coverage/{id}
- GET /Coverage/{id}/_history
- GET /Coverage/{id}/_history/{version_id}
- POST /Coverage/{id}/$meta-add
- POST /Coverage/{id}/$meta-delete
- GET /Coverage/{id}/$meta
- PATCH /Coverage/{id}
- PUT /Coverage/{id}
- GET /Coverage/{id}/$validate
- GET /Coverage/$meta
- POST /Coverage
- GET /Coverage/$validate

CoverageEligibilityRequest

- POST /CoverageEligibilityRequest/$expunge
- GET /CoverageEligibilityRequest
- GET /CoverageEligibilityRequest/_history
- DELETE /CoverageEligibilityRequest/{id}
- POST /CoverageEligibilityRequest/{id}/$expunge
- GET /CoverageEligibilityRequest/{id}
- GET /CoverageEligibilityRequest/{id}/_history
- GET /CoverageEligibilityRequest/{id}/_history/{version_id}
- POST /CoverageEligibilityRequest/{id}/$meta-add
- POST /CoverageEligibilityRequest/{id}/$meta-delete
- GET /CoverageEligibilityRequest/{id}/$meta
- PATCH /CoverageEligibilityRequest/{id}
- PUT /CoverageEligibilityRequest/{id}
- GET /CoverageEligibilityRequest/{id}/$validate

- GET /CoverageEligibilityRequest/$meta
- POST /CoverageEligibilityRequest
- GET /CoverageEligibilityRequest/$validate

CoverageEligibilityResponse

- POST /CoverageEligibilityResponse/$expunge
- GET /CoverageEligibilityResponse
- GET /CoverageEligibilityResponse/_history
- DELETE /CoverageEligibilityResponse/{id}
- POST /CoverageEligibilityResponse/{id}/$expunge
- GET /CoverageEligibilityResponse/{id}
- GET /CoverageEligibilityResponse/{id}/_history
- GET /CoverageEligibilityResponse/{id}/_history/{version_id}
- POST /CoverageEligibilityResponse/{id}/$meta-add
- POST /CoverageEligibilityResponse/{id}/$meta-delete
- GET /CoverageEligibilityResponse/{id}/$meta
- PATCH /CoverageEligibilityResponse/{id}
- PUT /CoverageEligibilityResponse/{id}
- GET /CoverageEligibilityResponse/{id}/$validate
- GET /CoverageEligibilityResponse/$meta
- POST /CoverageEligibilityResponse
- GET /CoverageEligibilityResponse/$validate

DetectedIssue

- POST /DetectedIssue/$expunge
- GET /DetectedIssue
- GET /DetectedIssue/_history
- DELETE /DetectedIssue/{id}
- POST /DetectedIssue/{id}/$expunge
- GET /DetectedIssue/{id}
- GET /DetectedIssue/{id}/_history
- GET /DetectedIssue/{id}/_history/{version_id}
- POST /DetectedIssue/{id}/$meta-add
- POST /DetectedIssue/{id}/$meta-delete
- GET /DetectedIssue/{id}/$meta
- PATCH /DetectedIssue/{id}
- PUT /DetectedIssue/{id}
- GET /DetectedIssue/{id}/$validate
- GET /DetectedIssue/$meta
- POST /DetectedIssue
- GET /DetectedIssue/$validate

Device

- POST /Device/$expunge
- GET /Device
- GET /Device/_history
- DELETE /Device/{id}
- POST /Device/{id}/$expunge
- GET /Device/{id}
- GET /Device/{id}/_history
- GET /Device/{id}/_history/{version_id}
- POST /Device/{id}/$meta-add
- POST /Device/{id}/$meta-delete
- GET /Device/{id}/$meta
- PATCH /Device/{id}
- PUT /Device/{id}
- GET /Device/{id}/$validate
- GET /Device/$meta
- POST /Device
- GET /Device/$validate

DeviceDefinition

- POST /DeviceDefinition/$expunge
- GET /DeviceDefinition
- GET /DeviceDefinition/_history
- DELETE /DeviceDefinition/{id}
- POST /DeviceDefinition/{id}/$expunge
- GET /DeviceDefinition/{id}
- GET /DeviceDefinition/{id}/_history
- GET /DeviceDefinition/{id}/_history/{version_id}
- POST /DeviceDefinition/{id}/$meta-add
- POST /DeviceDefinition/{id}/$meta-delete
- GET /DeviceDefinition/{id}/$meta
- PATCH /DeviceDefinition/{id}
- PUT /DeviceDefinition/{id}
- GET /DeviceDefinition/{id}/$validate
- GET /DeviceDefinition/$meta
- POST /DeviceDefinition
- GET /DeviceDefinition/$validate

DeviceMetric

- POST /DeviceMetric/$expunge
- GET /DeviceMetric
- GET /DeviceMetric/_history
- DELETE /DeviceMetric/{id}
- POST /DeviceMetric/{id}/$expunge

Account

POST /Account/$expunge   [Up](#)

(**accountExpungePost**)

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body [object](#) (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

200
Success [Object](#)

GET /Account   [Up](#)

search-type: Search for Account instances (**accountGet**)

This is a search type

Query parameters

owner (optional)
Query Parameter — Entity managing the Account

identifier (optional)
Query Parameter — Account number

period (optional)
Query Parameter — Transaction window

subject (optional)
Query Parameter — The entity that caused the expenses

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

type (optional)
Query Parameter — E.g. patient, expense, depreciation

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter — The entity that caused the expenses

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — Human-readable label

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — active | inactive | entered-in-error | on-hold | unknown

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

GET /Account/_history   Up

type-history: Fetch the resource change history for all resources of type Account (**accountHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

DELETE /Account/{id}

instance-delete: Perform a logical delete on a resource instance (**accountIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

GET /ActivityDefinition

search-type: Search for ActivityDefinition instances (**activityDefinitionGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — The activity definition publication date

successor (optional)
Query Parameter — What resource is being referenced

context-type-value (optional)
Query Parameter — A use context type and value assigned to the activity definition

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter — Intended jurisdiction for the activity definition

derived-from (optional)
Query Parameter — What resource is being referenced

description (optional)
Query Parameter — The description of the activity definition

context-type (optional)
Query Parameter — A type of use context assigned to the activity definition

predecessor (optional)
Query Parameter — What resource is being referenced

composed-of (optional)
Query Parameter — What resource is being referenced

title (optional)
Query Parameter — The human-friendly name of the activity definition

context-quantity (optional)
Query Parameter — A quantity- or range-valued use context assigned to the activity definition

depends-on (optional)
Query Parameter — What resource is being referenced

effective (optional)
Query Parameter — The time during which the activity definition is intended to be in use

context (optional)
Query Parameter — A use context assigned to the activity definition

context-type-quantity (optional)
Query Parameter — A use context type and quantity- or range-based value assigned to the activity definition

identifier (optional)
Query Parameter — External identifier for the activity definition

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter — The business version of the activity definition

url (optional)
Query Parameter — The uri that identifies the activity definition

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — Computationally friendly name of the activity definition

publisher (optional)

Query Parameter — Name of the publisher of the activity definition

topic (optional)
Query Parameter — Topics associated with the module

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — The current status of the activity definition

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200

GET /AdverseEvent   Up

search-type: Search for AdverseEvent instances (**adverseEventGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — When the event occurred

severity (optional)
Query Parameter — mild | moderate | severe

recorder (optional)
Query Parameter — Who recorded the adverse event

study (optional)
Query Parameter — AdverseEvent.study

actuality (optional)
Query Parameter — actual | potential

subject (optional)
Query Parameter — Subject impacted by event

_lastUpdated (optional)
Query Parameter — When the resource version last changed

resultingcondition (optional)
Query Parameter — Effect on the subject due to this event

substance (optional)
Query Parameter — Refers to the specific entity that caused the adverse event

_security (optional)
Query Parameter — Security Labels applied to this resource

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

seriousness (optional)
Query Parameter — Seriousness of the event

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

location (optional)
Query Parameter — Location where adverse event occurred

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — product-problem | product-quality | product-use-error | wrong-dose | incorrect-prescribing-information | wrong-technique | wrong-route-of-administration | wrong-rate | wrong-duration | wrong-time | expired-drug | medical-device-use-error | problem-different-manufacturer | unsafe-physical-environment

event (optional)
Query Parameter — Type of the event itself in relation to the subject

Responses
200
Success [AllergyIntolerance](#)

GET /AllergyIntolerance   [Up](#)

search-type: Search for AllergyIntolerance instances (**allergyIntoleranceGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](#): Date first version of the resource instance was recorded
- [CarePlan](#): Time period plan covers
- [CareTeam](#): Time period team covers
- [ClinicalImpression](#): When the assessment was documented
- [Composition](#): Composition editing time
- [Consent](#): When this Consent was created or indexed
- [DiagnosticReport](#): The clinically relevant time of the report
- [Encounter](#): A date within the period the Encounter lasted
- [EpisodeOfCare](#): The provided date search value falls within the episode of care's period
- [FamilyMemberHistory](#): When history was recorded or last updated
- [Flag](#): Time period when flag is active
- [Immunization](#): Vaccination (non)-Administration Date
- [List](#): When the list was prepared
- [Observation](#): Obtained date/time. If the obtained element is a period, a date that falls in the period
- [Procedure](#): When the procedure was performed
- [RiskAssessment](#): When was assessment made?
- [SupplyRequest](#): When the request was made

code (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](#): Code that identifies the allergy or intolerance
- [Condition](#): Code for the condition
- [DeviceRequest](#): Code for what is being requested/ordered

- **DiagnosticReport**: The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- **FamilyMemberHistory**: A search by a condition code
- **List**: What the purpose of this list is
- **Medication**: Returns medications for a specific code
- **MedicationAdministration**: Return administrations of this medication code
- **MedicationDispense**: Returns dispenses of this medicine code
- **MedicationRequest**: Return prescriptions of this medication code
- **MedicationStatement**: Return statements of this medication code
- **Observation**: The code of the observation type
- **Procedure**: A code to identify a procedure
- **ServiceRequest**: What is being requested/ordered

_lastUpdated (optional)
Query Parameter — When the resource version last changed

verification-status (optional)
Query Parameter — unconfirmed | confirmed | refuted | entered-in-error

criticality (optional)
Query Parameter — low | high | unable-to-assess

clinical-status (optional)
Query Parameter — active | inactive | resolved

type (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: allergy | intolerance - Underlying mechanism (if known)
- **Composition**: Kind of composition (LOINC if possible)
- **DocumentManifest**: Kind of document set
- **DocumentReference**: Kind of document (LOINC if possible)
- **Encounter**: Specific type of encounter
- **EpisodeOfCare**: Type/class - e.g. specialist referral, disease management

patient (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Who the sensitivity is for
- **CarePlan**: Who the care plan is for
- **CareTeam**: Who care team is for
- **ClinicalImpression**: Patient or group assessed
- **Composition**: Who and/or what the composition is about
- **Condition**: Who has the condition?
- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)

- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

severity (optional)
Query Parameter — mild | moderate | severe (of event as a whole)

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

manifestation (optional)
Query Parameter — Clinical symptoms/signs associated with the Event

recorder (optional)
Query Parameter — Who recorded the sensitivity

_security (optional)
Query Parameter — Security Labels applied to this resource

onset (optional)
Query Parameter — Date(/time) when manifestations showed

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

asserter (optional)
Query Parameter — Source of the information about the allergy

route (optional)
Query Parameter — How the subject was exposed to the substance

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — food | medication | environment | biologic

last-date (optional)
Query Parameter — Date(/time) of last known occurrence of a reaction

Return type
[AllergyIntolerance](#)

Example data
Content-Type: application/fhir+json

```
Custom MIME type example not yet supported: application/fhir+json
```

Example data
Content-Type: application/fhir+xml

```
Custom MIME type example not yet supported: application/fhir+xml
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [AllergyIntolerance](#)

GET /AllergyIntolerance/_history

type-history: Fetch the resource change history for all resources of type AllergyIntolerance (**allergyIntoleranceHistoryGet**)

Return type
[AllergyIntolerance](#)

Example data
Content-Type: application/fhir+json

```
Custom MIME type example not yet supported: application/fhir+json
```

Example data
Content-Type: application/fhir+xml

```
Custom MIME type example not yet supported: application/fhir+xml
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success AllergyIntolerance

DELETE /AllergyIntolerance/{id}   [Up](Up)

instance-delete: Perform a logical delete on a resource instance (**allergyIntoleranceIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
AllergyIntolerance

Example data
Content-Type: application/fhir+json

```
Custom MIME type example not yet supported: application/fhir+json
```

Example data
Content-Type: application/fhir+xml

```
Custom MIME type example not yet supported: application/fhir+xml
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success AllergyIntolerance

POST /AllergyIntolerance/{id}/$expunge   [Up](Up)

(**allergyIntoleranceIdExpungePost**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type
AllergyIntolerance

Example data
Content-Type: application/fhir+json

```
Custom MIME type example not yet supported: application/fhir+json
```

Example data
Content-Type: application/fhir+xml

```
Custom MIME type example not yet supported: application/fhir+xml
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success AllergyIntolerance

GET /AllergyIntolerance/{id}

read-instance: Read AllergyIntolerance instance (**allergyIntoleranceIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
AllergyIntolerance

Example data
Content-Type: application/fhir+json

```
Custom MIME type example not yet supported: application/fhir+json
```

Example data
Content-Type: application/fhir+xml

```
Custom MIME type example not yet supported: application/fhir+xml
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success AllergyIntolerance

GET /AllergyIntolerance/{id}/_history

instance-history: Fetch the resource change history for all resources of type AllergyIntolerance (**allergyIntoleranceIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type

AllergyIntolerance

Example data
Content-Type: application/fhir+json

```
Custom MIME type example not yet supported: application/fhir+json
```

Example data
Content-Type: application/fhir+xml

```
Custom MIME type example not yet supported: application/fhir+xml
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success AllergyIntolerance

GET /AllergyIntolerance/{id}/_history/{version_id}   Up

vread-instance: Read AllergyIntolerance instance with specific version (**allergyIntoleranceIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
AllergyIntolerance

Example data
Content-Type: application/fhir+json

```
Custom MIME type example not yet supported: application/fhir+json
```

Example data
Content-Type: application/fhir+xml

```
Custom MIME type example not yet supported: application/fhir+xml
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success AllergyIntolerance

POST /AllergyIntolerance/{id}/$meta-add   Up

(**allergyIntoleranceIdMetaAddPost**)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type
AllergyIntolerance

Example data
Content-Type: application/fhir+json

```
Custom MIME type example not yet supported: application/fhir+json
```

Example data
Content-Type: application/fhir+xml

```
Custom MIME type example not yet supported: application/fhir+xml
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success AllergyIntolerance

POST /AllergyIntolerance/{id}/$meta-delete   Up

(allergyIntoleranceIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type
AllergyIntolerance

Example data
Content-Type: application/fhir+json

```
Custom MIME type example not yet supported: application/fhir+json
```

Example data
Content-Type: application/fhir+xml

```
Custom MIME type example not yet supported: application/fhir+xml
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success AllergyIntolerance

GET /AllergyIntolerance/{id}/$meta   Up

(allergyIntoleranceIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
AllergyIntolerance

Example data
Content-Type: application/fhir+json

```
Custom MIME type example not yet supported: application/fhir+json
```

Example data
Content-Type: application/fhir+xml

```
Custom MIME type example not yet supported: application/fhir+xml
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success AllergyIntolerance

PATCH /AllergyIntolerance/{id}   Up

instance-patch: Patch a resource instance of type AllergyIntolerance by ID **(allergyIntoleranceIdPatch)**

Path parameters

   id (required)
   Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

   body object (optional)
   Body Parameter —

Return type
AllergyIntolerance

Example data
Content-Type: application/fhir+json

```
Custom MIME type example not yet supported: application/fhir+json

GET /Appointment

search-type: Search for Appointment instances (**appointmentGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — Appointment date/time.

specialty (optional)
Query Parameter — The specialty of a practitioner that would be required to perform the service requested in this appointment

service-category (optional)
Query Parameter — A broad categorization of the service that is to be performed during this appointment

_lastUpdated (optional)
Query Parameter — When the resource version last changed

slot (optional)
Query Parameter — The slots that this appointment is filling

reason-code (optional)
Query Parameter — Coded reason this appointment is scheduled

based-on (optional)
Query Parameter — The service request this appointment is allocated to assess

patient (optional)
Query Parameter — One of the individuals of the appointment is this patient

supporting-info (optional)
Query Parameter — Additional information to support the appointment

identifier (optional)
Query Parameter — An Identifier of the Appointment

practitioner (optional)
Query Parameter — One of the individuals of the appointment is this practitioner

appointment-type (optional)
Query Parameter — The style of appointment or patient that has been booked in the slot (not service type)

part-status (optional)
Query Parameter — The Participation status of the subject, or other participant on the appointment. Can be used to locate participants that have not responded to meeting requests.

service-type (optional)
Query Parameter — The specific service that is to be performed during this appointment

_security (optional)
Query Parameter — Security Labels applied to this resource

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

actor (optional)
Query Parameter — Any one of the individuals participating in the appointment

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

reason-reference (optional)
Query Parameter — Reason the appointment is to take place (resource)

_source (optional)
Query Parameter — Identifies where the resource comes from

location (optional)
Query Parameter — This location is listed in the participants of the appointment

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — The overall status of the appointment

Success Object

GET /AuditEvent

search-type: Search for AuditEvent instances (**auditEventGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — Time when the event was recorded

entity-type (optional)
Query Parameter — Type of entity involved

agent (optional)
Query Parameter — Identifier of who

entity-role (optional)
Query Parameter — What role the entity played

_lastUpdated (optional)
Query Parameter — When the resource version last changed

source (optional)
Query Parameter — The identity of source detecting the event

type (optional)
Query Parameter — Type/identifier of event

altid (optional)
Query Parameter — Alternative User identity

agent-name (optional)
Query Parameter — Human friendly name for the agent

entity-name (optional)
Query Parameter — Descriptor for entity

subtype (optional)
Query Parameter — More specific type/id for the event

patient (optional)
Query Parameter — Identifier of who

action (optional)
Query Parameter — Type of action performed during the event

outcome (optional)
Query Parameter — Whether the event succeeded or failed

policy (optional)
Query Parameter — Policy that authorized event

address (optional)
Query Parameter — Identifier for the network access point of the user device

_security (optional)
Query Parameter — Security Labels applied to this resource

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

site (optional)
Query Parameter — Logical source location within the enterprise

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

agent-role (optional)
Query Parameter — Agent role in the event

entity (optional)
Query Parameter — Specific instance of resource

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /AuditEvent/_history   Up

type-history: Fetch the resource change history for all resources of type AuditEvent (**auditEventHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

DELETE /AuditEvent/{id}   Up

instance-delete: Perform a logical delete on a resource instance (**auditEventIdDelete**)

Path parameters

id (required)

Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /AuditEvent/{id}/$expunge

(**auditEventIdExpungePost**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /Binary/{id}/_history

instance-history: Fetch the resource change history for all resources of type Binary (**binaryIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /Binary/{id}/_history/{version_id}

vread-instance: Read Binary instance with specific version (**binaryIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json

- application/fhir+xml

Responses
200
Success [Object](#)

POST /Binary/{id}/$meta-add   [Up](#)

(binaryIdMetaAddPost)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body [object](#) (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

POST /Binary/{id}/$meta-delete   [Up](#)

(binaryIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body [object](#) (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /Binary/{id}/$meta   [Up](Up)

(binaryIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

PATCH /Binary/{id}   [Up](Up)

instance-patch: Patch a resource instance of type Binary by ID (**binaryIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json

GET /Bundle   Up

search-type: Search for Bundle instances (**bundleGet**)

This is a search type

Query parameters

identifier (optional)
Query Parameter — Persistent identifier for the bundle

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

message (optional)
Query Parameter — The first resource in the bundle, if the bundle type is "message" - this is a message header, and this parameter provides access to search its contents

type (optional)
Query Parameter — document | message | transaction | transaction-response | batch | batch-response | history | searchset | collection

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

composition (optional)
Query Parameter — The first resource in the bundle, if the bundle type is "document" - this is a composition, and this parameter provides access to search its contents

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

timestamp (optional)
Query Parameter — When the bundle was assembled

Return type

Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

DELETE /Bundle/{id} [Up](#)

instance-delete: Perform a logical delete on a resource instance (**bundleIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

POST /Bundle/{id}/$expunge [Up](#)

(**bundleIdExpungePost**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

> **body object (optional)**
> *Body Parameter —*

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /Bundle/{id}

read-instance: Read Bundle instance (**bundleIdGet**)

Path parameters

> **id (required)**
> *Path Parameter —* The resource ID default: null

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /Bundle/{id}/_history

instance-history: Fetch the resource change history for all resources of type Bundle (**bundleIdHistoryGet**)

Path parameters

> **id (required)**
> *Path Parameter —* The resource ID default: null

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /Bundle/{id}/_history/{version_id}

vread-instance: Read Bundle instance with specific version (**bundleIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /Bundle/{id}/$meta-add

(**bundleIdMetaAddPost**)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /Bundle/{id}/$meta-delete

(bundleIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /Bundle/{id}/$meta   Up

(bundleIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

PATCH /Bundle/{id}

instance-patch: Patch a resource instance of type Bundle by ID (**bundleIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

200
Success Object

PUT /Bundle/{id}

update-instance: Update an existing Bundle instance, or create using a client-assigned ID (**bundleIdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

Success Object

CapabilityStatement

POST /CapabilityStatement/$expunge

(**capabilityStatementExpungePost**)

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

200
Success Object

GET /CapabilityStatement   Up

search-type: Search for CapabilityStatement instances (**capabilityStatementGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: The capability statement publication date
- CodeSystem: The code system publication date
- CompartmentDefinition: The compartment definition publication date
- ConceptMap: The concept map publication date
- GraphDefinition: The graph definition publication date
- ImplementationGuide: The implementation guide publication date
- MessageDefinition: The message definition publication date
- NamingSystem: The naming system publication date
- OperationDefinition: The operation definition publication date
- SearchParameter: The search parameter publication date
- StructureDefinition: The structure definition publication date
- StructureMap: The structure map publication date
- TerminologyCapabilities: The terminology capabilities publication date
- ValueSet: The value set publication date

software (optional)
Query Parameter — Part of the name of a software application

context-type-value (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: A use context type and value assigned to the capability statement
- CodeSystem: A use context type and value assigned to the code system
- CompartmentDefinition: A use context type and value assigned to the compartment definition
- ConceptMap: A use context type and value assigned to the concept map
- GraphDefinition: A use context type and value assigned to the graph definition
- ImplementationGuide: A use context type and value assigned to the implementation guide
- MessageDefinition: A use context type and value assigned to the message definition

- **NamingSystem**: A use context type and value assigned to the naming system
- **OperationDefinition**: A use context type and value assigned to the operation definition
- **SearchParameter**: A use context type and value assigned to the search parameter
- **StructureDefinition**: A use context type and value assigned to the structure definition
- **StructureMap**: A use context type and value assigned to the structure map
- **TerminologyCapabilities**: A use context type and value assigned to the terminology capabilities
- **ValueSet**: A use context type and value assigned to the value set

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Intended jurisdiction for the capability statement
- **CodeSystem**: Intended jurisdiction for the code system
- **ConceptMap**: Intended jurisdiction for the concept map
- **GraphDefinition**: Intended jurisdiction for the graph definition
- **ImplementationGuide**: Intended jurisdiction for the implementation guide
- **MessageDefinition**: Intended jurisdiction for the message definition
- **NamingSystem**: Intended jurisdiction for the naming system
- **OperationDefinition**: Intended jurisdiction for the operation definition
- **SearchParameter**: Intended jurisdiction for the search parameter
- **StructureDefinition**: Intended jurisdiction for the structure definition
- **StructureMap**: Intended jurisdiction for the structure map
- **TerminologyCapabilities**: Intended jurisdiction for the terminology capabilities
- **ValueSet**: Intended jurisdiction for the value set

description (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The description of the capability statement
- **CodeSystem**: The description of the code system
- **CompartmentDefinition**: The description of the compartment definition
- **ConceptMap**: The description of the concept map
- **GraphDefinition**: The description of the graph definition
- **ImplementationGuide**: The description of the implementation guide
- **MessageDefinition**: The description of the message definition
- **NamingSystem**: The description of the naming system
- **OperationDefinition**: The description of the operation definition
- **SearchParameter**: The description of the search parameter
- **StructureDefinition**: The description of the structure definition
- **StructureMap**: The description of the structure map
- **TerminologyCapabilities**: The description of the terminology capabilities
- **ValueSet**: The description of the value set

context-type (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A type of use context assigned to the capability statement
- **CodeSystem**: A type of use context assigned to the code system
- **CompartmentDefinition**: A type of use context assigned to the compartment definition
- **ConceptMap**: A type of use context assigned to the concept map
- **GraphDefinition**: A type of use context assigned to the graph definition
- **ImplementationGuide**: A type of use context assigned to the implementation guide
- **MessageDefinition**: A type of use context assigned to the message definition
- **NamingSystem**: A type of use context assigned to the naming system
- **OperationDefinition**: A type of use context assigned to the operation definition
- **SearchParameter**: A type of use context assigned to the search parameter
- **StructureDefinition**: A type of use context assigned to the structure definition
- **StructureMap**: A type of use context assigned to the structure map
- **TerminologyCapabilities**: A type of use context assigned to the terminology capabilities
- **ValueSet**: A type of use context assigned to the value set

fhirversion (optional)
Query Parameter — The version of FHIR

title (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The human-friendly name of the capability statement
- **CodeSystem**: The human-friendly name of the code system
- **ConceptMap**: The human-friendly name of the concept map
- **ImplementationGuide**: The human-friendly name of the implementation guide
- **MessageDefinition**: The human-friendly name of the message definition
- **OperationDefinition**: The human-friendly name of the operation definition
- **StructureDefinition**: The human-friendly name of the structure definition
- **StructureMap**: The human-friendly name of the structure map
- **TerminologyCapabilities**: The human-friendly name of the terminology capabilities
- **ValueSet**: The human-friendly name of the value set

mode (optional)
Query Parameter — Mode - restful (server/client) or messaging (sender/receiver)

context-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A quantity- or range-valued use context assigned to the capability statement
- **CodeSystem**: A quantity- or range-valued use context assigned to the code system
- **CompartmentDefinition**: A quantity- or range-valued use context assigned to the compartment definition
- **ConceptMap**: A quantity- or range-valued use context assigned to the concept map
- **GraphDefinition**: A quantity- or range-valued use context assigned to the graph definition
- **ImplementationGuide**: A quantity- or range-valued use context assigned to the implementation guide
- **MessageDefinition**: A quantity- or range-valued use context assigned to the message definition
- **NamingSystem**: A quantity- or range-valued use context assigned to the naming system
- **OperationDefinition**: A quantity- or range-valued use context assigned to the operation definition
- **SearchParameter**: A quantity- or range-valued use context assigned to the search parameter
- **StructureDefinition**: A quantity- or range-valued use context assigned to the structure definition
- **StructureMap**: A quantity- or range-valued use context assigned to the structure map
- **TerminologyCapabilities**: A quantity- or range-valued use context assigned to the terminology capabilities
- **ValueSet**: A quantity- or range-valued use context assigned to the value set

context (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context assigned to the capability statement
- **CodeSystem**: A use context assigned to the code system
- **CompartmentDefinition**: A use context assigned to the compartment definition
- **ConceptMap**: A use context assigned to the concept map
- **GraphDefinition**: A use context assigned to the graph definition
- **ImplementationGuide**: A use context assigned to the implementation guide
- **MessageDefinition**: A use context assigned to the message definition
- **NamingSystem**: A use context assigned to the naming system
- **OperationDefinition**: A use context assigned to the operation definition
- **SearchParameter**: A use context assigned to the search parameter
- **StructureDefinition**: A use context assigned to the structure definition
- **StructureMap**: A use context assigned to the structure map
- **TerminologyCapabilities**: A use context assigned to the terminology capabilities
- **ValueSet**: A use context assigned to the value set

guide (optional)
Query Parameter — Implementation guides supported

context-type-quantity (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: A use context type and quantity- or range-based value assigned to the capability statement
- CodeSystem: A use context type and quantity- or range-based value assigned to the code system
- CompartmentDefinition: A use context type and quantity- or range-based value assigned to the compartment definition
- ConceptMap: A use context type and quantity- or range-based value assigned to the concept map
- GraphDefinition: A use context type and quantity- or range-based value assigned to the graph definition
- ImplementationGuide: A use context type and quantity- or range-based value assigned to the implementation guide
- MessageDefinition: A use context type and quantity- or range-based value assigned to the message definition
- NamingSystem: A use context type and quantity- or range-based value assigned to the naming system
- OperationDefinition: A use context type and quantity- or range-based value assigned to the operation definition
- SearchParameter: A use context type and quantity- or range-based value assigned to the search parameter
- StructureDefinition: A use context type and quantity- or range-based value assigned to the structure definition
- StructureMap: A use context type and quantity- or range-based value assigned to the structure map
- TerminologyCapabilities: A use context type and quantity- or range-based value assigned to the terminology capabilities
- ValueSet: A use context type and quantity- or range-based value assigned to the value set

resource-profile (optional)
Query Parameter — A profile id invoked in a capability statement

resource (optional)
Query Parameter — Name of a resource mentioned in a capability statement

_security (optional)
Query Parameter — Security Labels applied to this resource

format (optional)
Query Parameter — formats supported (xml | json | ttl | mime type)

version (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: The business version of the capability statement
- CodeSystem: The business version of the code system
- CompartmentDefinition: The business version of the compartment definition
- ConceptMap: The business version of the concept map
- GraphDefinition: The business version of the graph definition
- ImplementationGuide: The business version of the implementation guide
- MessageDefinition: The business version of the message definition
- OperationDefinition: The business version of the operation definition
- SearchParameter: The business version of the search parameter
- StructureDefinition: The business version of the structure definition
- StructureMap: The business version of the structure map
- TerminologyCapabilities: The business version of the terminology capabilities
- ValueSet: The business version of the value set

supported-profile (optional)
Query Parameter — Profiles for use cases supported

url (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The uri that identifies the capability statement
- **CodeSystem**: The uri that identifies the code system
- **CompartmentDefinition**: The uri that identifies the compartment definition
- **ConceptMap**: The uri that identifies the concept map
- **GraphDefinition**: The uri that identifies the graph definition
- **ImplementationGuide**: The uri that identifies the implementation guide
- **MessageDefinition**: The uri that identifies the message definition
- **OperationDefinition**: The uri that identifies the operation definition
- **SearchParameter**: The uri that identifies the search parameter
- **StructureDefinition**: The uri that identifies the structure definition
- **StructureMap**: The uri that identifies the structure map
- **TerminologyCapabilities**: The uri that identifies the terminology capabilities
- **ValueSet**: The uri that identifies the value set

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

security-service (optional)
Query Parameter — OAuth | SMART-on-FHIR | NTLM | Basic | Kerberos | Certificates

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Computationally friendly name of the capability statement
- **CodeSystem**: Computationally friendly name of the code system
- **CompartmentDefinition**: Computationally friendly name of the compartment definition
- **ConceptMap**: Computationally friendly name of the concept map
- **GraphDefinition**: Computationally friendly name of the graph definition
- **ImplementationGuide**: Computationally friendly name of the implementation guide
- **MessageDefinition**: Computationally friendly name of the message definition
- **NamingSystem**: Computationally friendly name of the naming system
- **OperationDefinition**: Computationally friendly name of the operation definition
- **SearchParameter**: Computationally friendly name of the search parameter
- **StructureDefinition**: Computationally friendly name of the structure definition
- **StructureMap**: Computationally friendly name of the structure map
- **TerminologyCapabilities**: Computationally friendly name of the terminology capabilities
- **ValueSet**: Computationally friendly name of the value set

publisher (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Name of the publisher of the capability statement
- **CodeSystem**: Name of the publisher of the code system
- **CompartmentDefinition**: Name of the publisher of the compartment definition
- **ConceptMap**: Name of the publisher of the concept map
- **GraphDefinition**: Name of the publisher of the graph definition
- **ImplementationGuide**: Name of the publisher of the implementation guide
- **MessageDefinition**: Name of the publisher of the message definition
- **NamingSystem**: Name of the publisher of the naming system
- **OperationDefinition**: Name of the publisher of the operation definition
- **SearchParameter**: Name of the publisher of the search parameter
- **StructureDefinition**: Name of the publisher of the structure definition
- **StructureMap**: Name of the publisher of the structure map
- **TerminologyCapabilities**: Name of the publisher of the terminology capabilities
- **ValueSet**: Name of the publisher of the value set

_source (optional)

Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): The current status of the capability statement
- [CodeSystem](): The current status of the code system
- [CompartmentDefinition](): The current status of the compartment definition
- [ConceptMap](): The current status of the concept map
- [GraphDefinition](): The current status of the graph definition
- [ImplementationGuide](): The current status of the implementation guide
- [MessageDefinition](): The current status of the message definition
- [NamingSystem](): The current status of the naming system
- [OperationDefinition](): The current status of the operation definition
- [SearchParameter](): The current status of the search parameter
- [StructureDefinition](): The current status of the structure definition
- [StructureMap](): The current status of the structure map
- [TerminologyCapabilities](): The current status of the terminology capabilities
- [ValueSet](): The current status of the value set

GET /CarePlan   [Up](Up)

search-type: Search for CarePlan instances (**carePlanGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Date first version of the resource instance was recorded
- [CarePlan](): Time period plan covers
- [CareTeam](): Time period team covers
- [ClinicalImpression](): When the assessment was documented
- [Composition](): Composition editing time
- [Consent](): When this Consent was created or indexed
- [DiagnosticReport](): The clinically relevant time of the report
- [Encounter](): A date within the period the Encounter lasted
- [EpisodeOfCare](): The provided date search value falls within the episode of care's period
- [FamilyMemberHistory](): When history was recorded or last updated
- [Flag](): Time period when flag is active
- [Immunization](): Vaccination (non)-Administration Date
- [List](): When the list was prepared
- [Observation](): Obtained date/time. If the obtained element is a period, a date that falls in the period
- [Procedure](): When the procedure was performed
- [RiskAssessment](): When was assessment made?
- [SupplyRequest](): When the request was made

care-team (optional)
Query Parameter — Who's involved in plan?

subject (optional)
Query Parameter — Who the care plan is for

_lastUpdated (optional)
Query Parameter — When the resource version last changed

part-of (optional)
Query Parameter — Part of referenced CarePlan

based-on (optional)
Query Parameter — Fulfills CarePlan

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
- [DetectedIssue](): Associated patient
- [DeviceRequest](): Individual the service is ordered for
- [DeviceUseStatement](): Search by subject - a patient
- [DiagnosticReport](): The subject of the report if a patient
- [DocumentManifest](): The subject of the set of documents
- [DocumentReference](): Who/what is the subject of the document
- [Encounter](): The patient or group present at the encounter
- [EpisodeOfCare](): The patient who is the focus of this episode of care
- [FamilyMemberHistory](): The identity of a subject to list family member history items for
- [Flag](): The identity of a subject to list flags for
- [Goal](): Who this goal is intended for
- [ImagingStudy](): Who the study is about
- [Immunization](): The patient for the vaccination record
- [List](): If all resources have the same subject

- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

activity-date (optional)
Query Parameter — Specified date occurs within period specified by CarePlan.activity.detail.scheduled[x]

instantiates-uri (optional)
Query Parameter — Instantiates external protocol or definition

activity-code (optional)
Query Parameter — Detail type of activity

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

goal (optional)
Query Parameter — Desired outcome of plan

performer (optional)
Query Parameter — Matches if the practitioner is listed as a performer in any of the "simple" activities.
(For performers of the detailed activities, chain through the activitydetail search parameter.)

replaces (optional)
Query Parameter — CarePlan replaced by this CarePlan

_security (optional)
Query Parameter — Security Labels applied to this resource

instantiates-canonical (optional)
Query Parameter — Instantiates FHIR protocol or definition

encounter (optional)
Query Parameter — Encounter created as part of

intent (optional)
Query Parameter — proposal | plan | order | option

activity-reference (optional)
Query Parameter — Activity details defined in specific resource

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

condition (optional)
Query Parameter — Health issues this plan addresses

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — Type of plan

status (optional)
Query Parameter — draft | active | on-hold | revoked | completed | entered-in-error | unknown

GET /ChargeItem

search-type: Search for ChargeItem instances (**chargeItemGet**)

This is a search type

Query parameters

performing-organization (optional)
Query Parameter — Organization providing the charged service

code (optional)
Query Parameter — A code that identifies the charge, like a billing code

subject (optional)
Query Parameter — Individual service was done for/to

_lastUpdated (optional)
Query Parameter — When the resource version last changed

occurrence (optional)
Query Parameter — When the charged service was applied

entered-date (optional)
Query Parameter — Date the charge item was entered

performer-function (optional)
Query Parameter — What type of performance was done

factor-override (optional)
Query Parameter — Factor overriding the associated rules

patient (optional)
Query Parameter — Individual service was done for/to

price-override (optional)
Query Parameter — Price overriding the associated rules

context (optional)
Query Parameter — Encounter / Episode associated with event

enterer (optional)
Query Parameter — Individual who was entering

identifier (optional)
Query Parameter — Business Identifier for item

quantity (optional)
Query Parameter — Quantity of which the charge item has been serviced

_security (optional)
Query Parameter — Security Labels applied to this resource

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

service (optional)
Query Parameter — Which rendered service is being charged?

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

performer-actor (optional)
Query Parameter — Individual who was performing

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

account (optional)
Query Parameter — Account to place this charge

requesting-organization (optional)
Query Parameter — Organization requesting the charged service

PATCH /ChargeItemDefinition/{id}

instance-patch: Patch a resource instance of type ChargeItemDefinition by ID (**chargeItemDefinitionIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body [object](#) (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

PUT /ChargeItemDefinition/{id}

update-instance: Update an existing ChargeItemDefinition instance, or create using a client-assigned ID
(**chargeItemDefinitionIdPut**)

Path parameters

> **id (required)**
> *Path Parameter* — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`
- `application/fhir+xml`

Request body

> **body [object](#) (optional)**
> *Body Parameter* —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

GET /Claim

search-type: Search for Claim instances (**claimGet**)

This is a search type

Query parameters

care-team (optional)
Query Parameter — Member of the CareTeam

use (optional)
Query Parameter — The kind of financial resource

_lastUpdated (optional)
Query Parameter — When the resource version last changed

payee (optional)
Query Parameter — The party receiving any payment for the Claim

provider (optional)
Query Parameter — Provider responsible for the Claim

insurer (optional)
Query Parameter — The target payor/insurer for the Claim

patient (optional)
Query Parameter — Patient receiving the products or services

detail-udi (optional)
Query Parameter — UDI associated with a line item, detail product or service

enterer (optional)
Query Parameter — The party responsible for the entry of the Claim

procedure-udi (optional)
Query Parameter — UDI associated with a procedure

item-udi (optional)
Query Parameter — UDI associated with a line item product or service

identifier (optional)
Query Parameter — The primary identifier of the financial resource

created (optional)
Query Parameter — The creation date for the Claim

_security (optional)
Query Parameter — Security Labels applied to this resource

encounter (optional)
Query Parameter — Encounters associated with a billed line item

priority (optional)
Query Parameter — Processing priority requested

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

subdetail-udi (optional)
Query Parameter — UDI associated with a line item, detail, subdetail product or service

facility (optional)
Query Parameter — Facility where the products or services have been or will be provided

status (optional)
Query Parameter — The status of the Claim instance.

GET /ClinicalImpression

search-type: Search for ClinicalImpression instances (**clinicalImpressionGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- AllergyIntolerance: Date first version of the resource instance was recorded
- CarePlan: Time period plan covers
- CareTeam: Time period team covers
- ClinicalImpression: When the assessment was documented
- Composition: Composition editing time
- Consent: When this Consent was created or indexed
- DiagnosticReport: The clinically relevant time of the report
- Encounter: A date within the period the Encounter lasted
- EpisodeOfCare: The provided date search value falls within the episode of care's period
- FamilyMemberHistory: When history was recorded or last updated
- Flag: Time period when flag is active
- Immunization: Vaccination (non)-Administration Date
- List: When the list was prepared
- Observation: Obtained date/time. If the obtained element is a period, a date that falls in the period
- Procedure: When the procedure was performed
- RiskAssessment: When was assessment made?
- SupplyRequest: When the request was made

identifier (optional)
Query Parameter — Business identifier

previous (optional)
Query Parameter — Reference to last assessment

finding-code (optional)
Query Parameter — What was found

assessor (optional)
Query Parameter — The clinician performing the assessment

subject (optional)
Query Parameter — Patient or group assessed

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

encounter (optional)
Query Parameter — Encounter created as part of

finding-ref (optional)
Query Parameter — What was found

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

problem (optional)
Query Parameter — Relevant impressions of patient state

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter —

Multiple Resources:

- AllergyIntolerance: Who the sensitivity is for
- CarePlan: Who the care plan is for
- CareTeam: Who care team is for
- ClinicalImpression: Patient or group assessed
- Composition: Who and/or what the composition is about
- Condition: Who has the condition?
- Consent: Who the consent applies to

- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

supporting-info (optional)
Query Parameter — Information supporting the clinical impression

investigation (optional)
Query Parameter — Record of a specific investigation

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — in-progress | completed | entered-in-error

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /ClinicalImpression/_history   Up

type-history: Fetch the resource change history for all resources of type ClinicalImpression (**clinicalImpressionHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

DELETE /ClinicalImpression/{id}   Up

instance-delete: Perform a logical delete on a resource instance (**clinicalImpressionIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

POST /ClinicalImpression/{id}/$expunge   Up

(**clinicalImpressionIdExpungePost**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body [object](#) **(optional)**
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /ClinicalImpression/{id}   [Up](#)

read-instance: Read ClinicalImpression instance (**clinicalImpressionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /ClinicalImpression/{id}/_history   [Up](#)

instance-history: Fetch the resource change history for all resources of type ClinicalImpression
(**clinicalImpressionIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /ClinicalImpression/{id}/_history/{version_id}   [Up](#)

vread-instance: Read ClinicalImpression instance with specific version (**clinicalImpressionIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success <u>Object</u>

POST /ClinicalImpression/{id}/$meta-add   <u>Up</u>

(clinicalImpressionIdMetaAddPost)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body <u>object</u> (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success <u>Object</u>

POST /ClinicalImpression/{id}/$meta-delete   <u>Up</u>

(clinicalImpressionIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

Success Object

GET /CodeSystem

search-type: Search for CodeSystem instances (**codeSystemGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: The capability statement publication date
- CodeSystem: The code system publication date
- CompartmentDefinition: The compartment definition publication date
- ConceptMap: The concept map publication date
- GraphDefinition: The graph definition publication date
- ImplementationGuide: The implementation guide publication date
- MessageDefinition: The message definition publication date
- NamingSystem: The naming system publication date
- OperationDefinition: The operation definition publication date
- SearchParameter: The search parameter publication date
- StructureDefinition: The structure definition publication date
- StructureMap: The structure map publication date
- TerminologyCapabilities: The terminology capabilities publication date
- ValueSet: The value set publication date

code (optional)
Query Parameter — A code defined in the code system

context-type-value (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: A use context type and value assigned to the capability statement
- CodeSystem: A use context type and value assigned to the code system
- CompartmentDefinition: A use context type and value assigned to the compartment definition
- ConceptMap: A use context type and value assigned to the concept map
- GraphDefinition: A use context type and value assigned to the graph definition
- ImplementationGuide: A use context type and value assigned to the implementation guide
- MessageDefinition: A use context type and value assigned to the message definition
- NamingSystem: A use context type and value assigned to the naming system
- OperationDefinition: A use context type and value assigned to the operation definition
- SearchParameter: A use context type and value assigned to the search parameter
- StructureDefinition: A use context type and value assigned to the structure definition
- StructureMap: A use context type and value assigned to the structure map
- TerminologyCapabilities: A use context type and value assigned to the terminology capabilities
- ValueSet: A use context type and value assigned to the value set

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: Intended jurisdiction for the capability statement
- CodeSystem: Intended jurisdiction for the code system
- ConceptMap: Intended jurisdiction for the concept map

- **GraphDefinition**: Intended jurisdiction for the graph definition
- **ImplementationGuide**: Intended jurisdiction for the implementation guide
- **MessageDefinition**: Intended jurisdiction for the message definition
- **NamingSystem**: Intended jurisdiction for the naming system
- **OperationDefinition**: Intended jurisdiction for the operation definition
- **SearchParameter**: Intended jurisdiction for the search parameter
- **StructureDefinition**: Intended jurisdiction for the structure definition
- **StructureMap**: Intended jurisdiction for the structure map
- **TerminologyCapabilities**: Intended jurisdiction for the terminology capabilities
- **ValueSet**: Intended jurisdiction for the value set

description (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The description of the capability statement
- **CodeSystem**: The description of the code system
- **CompartmentDefinition**: The description of the compartment definition
- **ConceptMap**: The description of the concept map
- **GraphDefinition**: The description of the graph definition
- **ImplementationGuide**: The description of the implementation guide
- **MessageDefinition**: The description of the message definition
- **NamingSystem**: The description of the naming system
- **OperationDefinition**: The description of the operation definition
- **SearchParameter**: The description of the search parameter
- **StructureDefinition**: The description of the structure definition
- **StructureMap**: The description of the structure map
- **TerminologyCapabilities**: The description of the terminology capabilities
- **ValueSet**: The description of the value set

context-type (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A type of use context assigned to the capability statement
- **CodeSystem**: A type of use context assigned to the code system
- **CompartmentDefinition**: A type of use context assigned to the compartment definition
- **ConceptMap**: A type of use context assigned to the concept map
- **GraphDefinition**: A type of use context assigned to the graph definition
- **ImplementationGuide**: A type of use context assigned to the implementation guide
- **MessageDefinition**: A type of use context assigned to the message definition
- **NamingSystem**: A type of use context assigned to the naming system
- **OperationDefinition**: A type of use context assigned to the operation definition
- **SearchParameter**: A type of use context assigned to the search parameter
- **StructureDefinition**: A type of use context assigned to the structure definition
- **StructureMap**: A type of use context assigned to the structure map
- **TerminologyCapabilities**: A type of use context assigned to the terminology capabilities
- **ValueSet**: A type of use context assigned to the value set

language (optional)
Query Parameter — A language in which a designation is provided

title (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The human-friendly name of the capability statement
- **CodeSystem**: The human-friendly name of the code system
- **ConceptMap**: The human-friendly name of the concept map
- **ImplementationGuide**: The human-friendly name of the implementation guide
- **MessageDefinition**: The human-friendly name of the message definition
- **OperationDefinition**: The human-friendly name of the operation definition
- **StructureDefinition**: The human-friendly name of the structure definition
- **StructureMap**: The human-friendly name of the structure map
- **TerminologyCapabilities**: The human-friendly name of the terminology capabilities
- **ValueSet**: The human-friendly name of the value set

context-quantity (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: A quantity- or range-valued use context assigned to the capability statement
- CodeSystem: A quantity- or range-valued use context assigned to the code system
- CompartmentDefinition: A quantity- or range-valued use context assigned to the compartment definition
- ConceptMap: A quantity- or range-valued use context assigned to the concept map
- GraphDefinition: A quantity- or range-valued use context assigned to the graph definition
- ImplementationGuide: A quantity- or range-valued use context assigned to the implementation guide
- MessageDefinition: A quantity- or range-valued use context assigned to the message definition
- NamingSystem: A quantity- or range-valued use context assigned to the naming system
- OperationDefinition: A quantity- or range-valued use context assigned to the operation definition
- SearchParameter: A quantity- or range-valued use context assigned to the search parameter
- StructureDefinition: A quantity- or range-valued use context assigned to the structure definition
- StructureMap: A quantity- or range-valued use context assigned to the structure map
- TerminologyCapabilities: A quantity- or range-valued use context assigned to the terminology capabilities
- ValueSet: A quantity- or range-valued use context assigned to the value set

context (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: A use context assigned to the capability statement
- CodeSystem: A use context assigned to the code system
- CompartmentDefinition: A use context assigned to the compartment definition
- ConceptMap: A use context assigned to the concept map
- GraphDefinition: A use context assigned to the graph definition
- ImplementationGuide: A use context assigned to the implementation guide
- MessageDefinition: A use context assigned to the message definition
- NamingSystem: A use context assigned to the naming system
- OperationDefinition: A use context assigned to the operation definition
- SearchParameter: A use context assigned to the search parameter
- StructureDefinition: A use context assigned to the structure definition
- StructureMap: A use context assigned to the structure map
- TerminologyCapabilities: A use context assigned to the terminology capabilities
- ValueSet: A use context assigned to the value set

context-type-quantity (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: A use context type and quantity- or range-based value assigned to the capability statement
- CodeSystem: A use context type and quantity- or range-based value assigned to the code system
- CompartmentDefinition: A use context type and quantity- or range-based value assigned to the compartment definition
- ConceptMap: A use context type and quantity- or range-based value assigned to the concept map
- GraphDefinition: A use context type and quantity- or range-based value assigned to the graph definition
- ImplementationGuide: A use context type and quantity- or range-based value assigned to the implementation guide
- MessageDefinition: A use context type and quantity- or range-based value assigned to the message definition
- NamingSystem: A use context type and quantity- or range-based value assigned to the naming system
- OperationDefinition: A use context type and quantity- or range-based value assigned to the operation definition
- SearchParameter: A use context type and quantity- or range-based value assigned to the search parameter

- **StructureDefinition**: A use context type and quantity- or range-based value assigned to the structure definition
- **StructureMap**: A use context type and quantity- or range-based value assigned to the structure map
- **TerminologyCapabilities**: A use context type and quantity- or range-based value assigned to the terminology capabilities
- **ValueSet**: A use context type and quantity- or range-based value assigned to the value set

identifier (optional)
Query Parameter —

Multiple Resources:

- **CodeSystem**: External identifier for the code system
- **ConceptMap**: External identifier for the concept map
- **MessageDefinition**: External identifier for the message definition
- **StructureDefinition**: External identifier for the structure definition
- **StructureMap**: External identifier for the structure map
- **ValueSet**: External identifier for the value set

content-mode (optional)
Query Parameter — not-present | example | fragment | complete | supplement

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The business version of the capability statement
- **CodeSystem**: The business version of the code system
- **CompartmentDefinition**: The business version of the compartment definition
- **ConceptMap**: The business version of the concept map
- **GraphDefinition**: The business version of the graph definition
- **ImplementationGuide**: The business version of the implementation guide
- **MessageDefinition**: The business version of the message definition
- **OperationDefinition**: The business version of the operation definition
- **SearchParameter**: The business version of the search parameter
- **StructureDefinition**: The business version of the structure definition
- **StructureMap**: The business version of the structure map
- **TerminologyCapabilities**: The business version of the terminology capabilities
- **ValueSet**: The business version of the value set

url (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The uri that identifies the capability statement
- **CodeSystem**: The uri that identifies the code system
- **CompartmentDefinition**: The uri that identifies the compartment definition
- **ConceptMap**: The uri that identifies the concept map
- **GraphDefinition**: The uri that identifies the graph definition
- **ImplementationGuide**: The uri that identifies the implementation guide
- **MessageDefinition**: The uri that identifies the message definition
- **OperationDefinition**: The uri that identifies the operation definition
- **SearchParameter**: The uri that identifies the search parameter
- **StructureDefinition**: The uri that identifies the structure definition
- **StructureMap**: The uri that identifies the structure map
- **TerminologyCapabilities**: The uri that identifies the terminology capabilities
- **ValueSet**: The uri that identifies the value set

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

supplements (optional)
Query Parameter — Find code system supplements for the referenced code system

system (optional)
Query Parameter — The system for any codes defined by this code system (same as 'url')

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): Computationally friendly name of the capability statement
- [CodeSystem](): Computationally friendly name of the code system
- [CompartmentDefinition](): Computationally friendly name of the compartment definition
- [ConceptMap](): Computationally friendly name of the concept map
- [GraphDefinition](): Computationally friendly name of the graph definition
- [ImplementationGuide](): Computationally friendly name of the implementation guide
- [MessageDefinition](): Computationally friendly name of the message definition
- [NamingSystem](): Computationally friendly name of the naming system
- [OperationDefinition](): Computationally friendly name of the operation definition
- [SearchParameter](): Computationally friendly name of the search parameter
- [StructureDefinition](): Computationally friendly name of the structure definition
- [StructureMap](): Computationally friendly name of the structure map
- [TerminologyCapabilities](): Computationally friendly name of the terminology capabilities
- [ValueSet](): Computationally friendly name of the value set

publisher (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): Name of the publisher of the capability statement
- [CodeSystem](): Name of the publisher of the code system
- [CompartmentDefinition](): Name of the publisher of the compartment definition
- [ConceptMap](): Name of the publisher of the concept map
- [GraphDefinition](): Name of the publisher of the graph definition
- [ImplementationGuide](): Name of the publisher of the implementation guide
- [MessageDefinition](): Name of the publisher of the message definition
- [NamingSystem](): Name of the publisher of the naming system
- [OperationDefinition](): Name of the publisher of the operation definition
- [SearchParameter](): Name of the publisher of the search parameter
- [StructureDefinition](): Name of the publisher of the structure definition
- [StructureMap](): Name of the publisher of the structure map
- [TerminologyCapabilities](): Name of the publisher of the terminology capabilities
- [ValueSet](): Name of the publisher of the value set

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): The current status of the capability statement
- [CodeSystem](): The current status of the code system

- **CompartmentDefinition**: The current status of the compartment definition
- **ConceptMap**: The current status of the concept map
- **GraphDefinition**: The current status of the graph definition
- **ImplementationGuide**: The current status of the implementation guide
- **MessageDefinition**: The current status of the message definition
- **NamingSystem**: The current status of the naming system
- **OperationDefinition**: The current status of the operation definition
- **SearchParameter**: The current status of the search parameter
- **StructureDefinition**: The current status of the structure definition
- **StructureMap**: The current status of the structure map
- **TerminologyCapabilities**: The current status of the terminology capabilities
- **ValueSet**: The current status of the value set

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json

GET /Communication

search-type: Search for Communication instances (**communicationGet**)

This is a search type

Query parameters

subject (optional)
Query Parameter — Focus of message

_lastUpdated (optional)
Query Parameter — When the resource version last changed

part-of (optional)
Query Parameter — Part of this action

medium (optional)
Query Parameter — A channel of communication

based-on (optional)
Query Parameter — Request fulfilled by this communication

patient (optional)
Query Parameter — Focus of message

instantiates-uri (optional)
Query Parameter — Instantiates external protocol or definition

identifier (optional)
Query Parameter — Unique identifier

_security (optional)
Query Parameter — Security Labels applied to this resource

instantiates-canonical (optional)
Query Parameter — Instantiates FHIR protocol or definition

received (optional)
Query Parameter — When received

encounter (optional)
Query Parameter — Encounter created as part of

sent (optional)
Query Parameter — When sent

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

sender (optional)
Query Parameter — Message sender

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

recipient (optional)
Query Parameter — Message recipient

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)

Query Parameter — Message category

status (optional)
Query Parameter — preparation | in-progress | not-done | on-hold | stopped | completed | entered-in-error | unknown

- [TerminologyCapabilities](#): The terminology capabilities publication date
- [ValueSet](#): The value set publication date

code (optional)
Query Parameter — Patient | Encounter | RelatedPerson | Practitioner | Device

context-type-value (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](#): A use context type and value assigned to the capability statement
- [CodeSystem](#): A use context type and value assigned to the code system
- [CompartmentDefinition](#): A use context type and value assigned to the compartment definition
- [ConceptMap](#): A use context type and value assigned to the concept map
- [GraphDefinition](#): A use context type and value assigned to the graph definition
- [ImplementationGuide](#): A use context type and value assigned to the implementation guide
- [MessageDefinition](#): A use context type and value assigned to the message definition
- [NamingSystem](#): A use context type and value assigned to the naming system
- [OperationDefinition](#): A use context type and value assigned to the operation definition
- [SearchParameter](#): A use context type and value assigned to the search parameter
- [StructureDefinition](#): A use context type and value assigned to the structure definition
- [StructureMap](#): A use context type and value assigned to the structure map
- [TerminologyCapabilities](#): A use context type and value assigned to the terminology capabilities
- [ValueSet](#): A use context type and value assigned to the value set

resource (optional)
Query Parameter — Name of resource type

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

description (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The description of the capability statement
- **CodeSystem**: The description of the code system
- **CompartmentDefinition**: The description of the compartment definition
- **ConceptMap**: The description of the concept map
- **GraphDefinition**: The description of the graph definition
- **ImplementationGuide**: The description of the implementation guide
- **MessageDefinition**: The description of the message definition
- **NamingSystem**: The description of the naming system
- **OperationDefinition**: The description of the operation definition
- **SearchParameter**: The description of the search parameter
- **StructureDefinition**: The description of the structure definition
- **StructureMap**: The description of the structure map
- **TerminologyCapabilities**: The description of the terminology capabilities
- **ValueSet**: The description of the value set

context-type (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A type of use context assigned to the capability statement
- **CodeSystem**: A type of use context assigned to the code system
- **CompartmentDefinition**: A type of use context assigned to the compartment definition
- **ConceptMap**: A type of use context assigned to the concept map
- **GraphDefinition**: A type of use context assigned to the graph definition
- **ImplementationGuide**: A type of use context assigned to the implementation guide
- **MessageDefinition**: A type of use context assigned to the message definition
- **NamingSystem**: A type of use context assigned to the naming system
- **OperationDefinition**: A type of use context assigned to the operation definition
- **SearchParameter**: A type of use context assigned to the search parameter
- **StructureDefinition**: A type of use context assigned to the structure definition
- **StructureMap**: A type of use context assigned to the structure map
- **TerminologyCapabilities**: A type of use context assigned to the terminology capabilities
- **ValueSet**: A type of use context assigned to the value set

version (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The business version of the capability statement
- **CodeSystem**: The business version of the code system
- **CompartmentDefinition**: The business version of the compartment definition
- **ConceptMap**: The business version of the concept map
- **GraphDefinition**: The business version of the graph definition
- **ImplementationGuide**: The business version of the implementation guide
- **MessageDefinition**: The business version of the message definition
- **OperationDefinition**: The business version of the operation definition
- **SearchParameter**: The business version of the search parameter
- **StructureDefinition**: The business version of the structure definition
- **StructureMap**: The business version of the structure map
- **TerminologyCapabilities**: The business version of the terminology capabilities
- **ValueSet**: The business version of the value set

url (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The uri that identifies the capability statement

- **CodeSystem**: The uri that identifies the code system
- **CompartmentDefinition**: The uri that identifies the compartment definition
- **ConceptMap**: The uri that identifies the concept map
- **GraphDefinition**: The uri that identifies the graph definition
- **ImplementationGuide**: The uri that identifies the implementation guide
- **MessageDefinition**: The uri that identifies the message definition
- **OperationDefinition**: The uri that identifies the operation definition
- **SearchParameter**: The uri that identifies the search parameter
- **StructureDefinition**: The uri that identifies the structure definition
- **StructureMap**: The uri that identifies the structure map
- **TerminologyCapabilities**: The uri that identifies the terminology capabilities
- **ValueSet**: The uri that identifies the value set

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

context-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A quantity- or range-valued use context assigned to the capability statement
- **CodeSystem**: A quantity- or range-valued use context assigned to the code system
- **CompartmentDefinition**: A quantity- or range-valued use context assigned to the compartment definition
- **ConceptMap**: A quantity- or range-valued use context assigned to the concept map
- **GraphDefinition**: A quantity- or range-valued use context assigned to the graph definition
- **ImplementationGuide**: A quantity- or range-valued use context assigned to the implementation guide
- **MessageDefinition**: A quantity- or range-valued use context assigned to the message definition
- **NamingSystem**: A quantity- or range-valued use context assigned to the naming system
- **OperationDefinition**: A quantity- or range-valued use context assigned to the operation definition
- **SearchParameter**: A quantity- or range-valued use context assigned to the search parameter
- **StructureDefinition**: A quantity- or range-valued use context assigned to the structure definition
- **StructureMap**: A quantity- or range-valued use context assigned to the structure map
- **TerminologyCapabilities**: A quantity- or range-valued use context assigned to the terminology capabilities
- **ValueSet**: A quantity- or range-valued use context assigned to the value set

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

context (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context assigned to the capability statement
- **CodeSystem**: A use context assigned to the code system
- **CompartmentDefinition**: A use context assigned to the compartment definition
- **ConceptMap**: A use context assigned to the concept map
- **GraphDefinition**: A use context assigned to the graph definition
- **ImplementationGuide**: A use context assigned to the implementation guide
- **MessageDefinition**: A use context assigned to the message definition
- **NamingSystem**: A use context assigned to the naming system
- **OperationDefinition**: A use context assigned to the operation definition
- **SearchParameter**: A use context assigned to the search parameter
- **StructureDefinition**: A use context assigned to the structure definition
- **StructureMap**: A use context assigned to the structure map
- **TerminologyCapabilities**: A use context assigned to the terminology capabilities
- **ValueSet**: A use context assigned to the value set

name (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Computationally friendly name of the capability statement
- **CodeSystem**: Computationally friendly name of the code system
- **CompartmentDefinition**: Computationally friendly name of the compartment definition
- **ConceptMap**: Computationally friendly name of the concept map
- **GraphDefinition**: Computationally friendly name of the graph definition
- **ImplementationGuide**: Computationally friendly name of the implementation guide
- **MessageDefinition**: Computationally friendly name of the message definition
- **NamingSystem**: Computationally friendly name of the naming system
- **OperationDefinition**: Computationally friendly name of the operation definition
- **SearchParameter**: Computationally friendly name of the search parameter
- **StructureDefinition**: Computationally friendly name of the structure definition
- **StructureMap**: Computationally friendly name of the structure map
- **TerminologyCapabilities**: Computationally friendly name of the terminology capabilities
- **ValueSet**: Computationally friendly name of the value set

publisher (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Name of the publisher of the capability statement
- **CodeSystem**: Name of the publisher of the code system
- **CompartmentDefinition**: Name of the publisher of the compartment definition
- **ConceptMap**: Name of the publisher of the concept map
- **GraphDefinition**: Name of the publisher of the graph definition
- **ImplementationGuide**: Name of the publisher of the implementation guide
- **MessageDefinition**: Name of the publisher of the message definition
- **NamingSystem**: Name of the publisher of the naming system
- **OperationDefinition**: Name of the publisher of the operation definition
- **SearchParameter**: Name of the publisher of the search parameter
- **StructureDefinition**: Name of the publisher of the structure definition
- **StructureMap**: Name of the publisher of the structure map
- **TerminologyCapabilities**: Name of the publisher of the terminology capabilities
- **ValueSet**: Name of the publisher of the value set

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

context-type-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and quantity- or range-based value assigned to the capability statement
- **CodeSystem**: A use context type and quantity- or range-based value assigned to the code system
- **CompartmentDefinition**: A use context type and quantity- or range-based value assigned to the compartment definition
- **ConceptMap**: A use context type and quantity- or range-based value assigned to the concept map
- **GraphDefinition**: A use context type and quantity- or range-based value assigned to the graph definition
- **ImplementationGuide**: A use context type and quantity- or range-based value assigned to the implementation guide
- **MessageDefinition**: A use context type and quantity- or range-based value assigned to the message definition
- **NamingSystem**: A use context type and quantity- or range-based value assigned to the naming system

- **OperationDefinition**: A use context type and quantity- or range-based value assigned to the operation definition
- **SearchParameter**: A use context type and quantity- or range-based value assigned to the search parameter
- **StructureDefinition**: A use context type and quantity- or range-based value assigned to the structure definition
- **StructureMap**: A use context type and quantity- or range-based value assigned to the structure map
- **TerminologyCapabilities**: A use context type and quantity- or range-based value assigned to the terminology capabilities
- **ValueSet**: A use context type and quantity- or range-based value assigned to the value set

status (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The current status of the capability statement
- **CodeSystem**: The current status of the code system
- **CompartmentDefinition**: The current status of the compartment definition
- **ConceptMap**: The current status of the concept map
- **GraphDefinition**: The current status of the graph definition
- **ImplementationGuide**: The current status of the implementation guide
- **MessageDefinition**: The current status of the message definition
- **NamingSystem**: The current status of the naming system
- **OperationDefinition**: The current status of the operation definition
- **SearchParameter**: The current status of the search parameter
- **StructureDefinition**: The current status of the structure definition
- **StructureMap**: The current status of the structure map
- **TerminologyCapabilities**: The current status of the terminology capabilities
- **ValueSet**: The current status of the value set

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success **Object**

GET /CompartmentDefinition/_history   Up

type-history: Fetch the resource change history for all resources of type CompartmentDefinition
(**compartmentDefinitionHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success **Object**

DELETE /CompartmentDefinition/{id}

instance-delete: Perform a logical delete on a resource instance (**compartmentDefinitionIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success **Object**

POST /CompartmentDefinition/{id}/$expunge

(**compartmentDefinitionIdExpungePost**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success **Object**

GET /CompartmentDefinition/{id}

read-instance: Read CompartmentDefinition instance (**compartmentDefinitionIdGet**)

Path parameters

id (required)

Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

GET /CompartmentDefinition/{id}/_history Up

instance-history: Fetch the resource change history for all resources of type CompartmentDefinition
(**compartmentDefinitionIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

GET /CompartmentDefinition/{id}/_history/{version_id} Up

vread-instance: Read CompartmentDefinition instance with specific version
(**compartmentDefinitionIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

200
Success [Object](#)

POST /CompartmentDefinition/{id}/$meta-add

(compartmentDefinitionIdMetaAddPost)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body [object](#) (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

POST /CompartmentDefinition/{id}/$meta-delete

(compartmentDefinitionIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body [object](#) (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /CompartmentDefinition/{id}/$meta

(**compartmentDefinitionIdMetaGet**)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

PATCH /CompartmentDefinition/{id}

instance-patch: Patch a resource instance of type CompartmentDefinition by ID (**compartmentDefinitionIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

PUT /CompartmentDefinition/{id}   Up

update-instance: Update an existing CompartmentDefinition instance, or create using a client-assigned ID
(**compartmentDefinitionIdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /CompartmentDefinition/{id}/$validate   Up

(**compartmentDefinitionIdValidateGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

resource (optional)
Query Parameter —

mode (optional)
Query Parameter —

profile (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /CompartmentDefinition/$meta   Up

(compartmentDefinitionMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /CompartmentDefinition   Up

create-type: Create a new CompartmentDefinition instance (**compartmentDefinitionPost**)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

200
Success Object

GET /CompartmentDefinition/$validate   Up

(**compartmentDefinitionValidateGet**)

Query parameters

resource (optional)
Query Parameter —

Success Object

Up

GET /Composition

search-type: Search for Composition instances (**compositionGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Date first version of the resource instance was recorded
- [CarePlan](): Time period plan covers
- [CareTeam](): Time period team covers
- [ClinicalImpression](): When the assessment was documented
- [Composition](): Composition editing time
- [Consent](): When this Consent was created or indexed
- [DiagnosticReport](): The clinically relevant time of the report
- [Encounter](): A date within the period the Encounter lasted
- [EpisodeOfCare](): The provided date search value falls within the episode of care's period
- [FamilyMemberHistory](): When history was recorded or last updated
- [Flag](): Time period when flag is active
- [Immunization](): Vaccination (non)-Administration Date
- [List](): When the list was prepared
- [Observation](): Obtained date/time. If the obtained element is a period, a date that falls in the period
- [Procedure](): When the procedure was performed
- [RiskAssessment](): When was assessment made?
- [SupplyRequest](): When the request was made

subject (optional)
Query Parameter — Who and/or what the composition is about

_lastUpdated (optional)
Query Parameter — When the resource version last changed

confidentiality (optional)
Query Parameter — As defined by affinity domain

section (optional)
Query Parameter — Classification of section (recommended)

type (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): allergy | intolerance - Underlying mechanism (if known)
- [Composition](): Kind of composition (LOINC if possible)
- [DocumentManifest](): Kind of document set
- [DocumentReference](): Kind of document (LOINC if possible)
- [Encounter](): Specific type of encounter
- [EpisodeOfCare](): Type/class - e.g. specialist referral, disease management

title (optional)
Query Parameter — Human Readable name/title

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?

- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

context (optional)
Query Parameter — Code(s) that apply to the event being documented

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

period (optional)
Query Parameter — The period covered by the documentation

related-id (optional)
Query Parameter — Target of the relationship

author (optional)
Query Parameter — Who and/or what authored the composition

_security (optional)
Query Parameter — Security Labels applied to this resource

encounter (optional)
Query Parameter —

Multiple Resources:

- [Composition](): Context of the Composition
- [DeviceRequest](): Encounter during which request was created
- [DiagnosticReport](): The Encounter when the order was made
- [DocumentReference](): Context of the document content
- [Flag](): Alert relevant during encounter
- [List](): Context in which list created
- [NutritionOrder](): Return nutrition orders with this encounter identifier
- [Observation](): Encounter related to the observation
- [Procedure](): Encounter created as part of
- [RiskAssessment](): Where was assessment performed?
- [ServiceRequest](): An encounter in which this request is made
- [VisionPrescription](): Return prescriptions with this encounter identifier

attester (optional)
Query Parameter — Who attested the composition

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

entry (optional)
Query Parameter — A reference to data that supports this section

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

related-ref (optional)
Query Parameter — Target of the relationship

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — Categorization of Composition

status (optional)
Query Parameter — preliminary | final | amended | entered-in-error

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /Composition/_history

type-history: Fetch the resource change history for all resources of type Composition (**compositionHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

DELETE /Composition/{id}

instance-delete: Perform a logical delete on a resource instance (**compositionIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /Composition/{id}/$document

(**compositionIdDocumentGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

_count (optional)
Query Parameter — Results from this method are returned across multiple pages. This parameter controls the size of those pages.

_offset (optional)
Query Parameter — Results from this method are returned across multiple pages. This parameter controls the offset when fetching a page.

_lastUpdated (optional)
Query Parameter — Only return resources which were last updated as specified by the given range

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

Success Object

GET /Composition/{id}/_history   Up

instance-history: Fetch the resource change history for all resources of type Composition (**compositionIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /Composition/{id}/_history/{version_id}   Up

vread-instance: Read Composition instance with specific version (**compositionIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /Composition/{id}/$meta-add

(compositionIdMetaAddPost)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

200
Success Object

POST /Composition/{id}/$meta-delete

(compositionIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /Composition/{id}/$meta   [Up](#)

(**compositionIdMetaGet**)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

PATCH /Composition/{id}   [Up](#)

instance-patch: Patch a resource instance of type Composition by ID (**compositionIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body [object](#) (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

PUT /Composition/{id}   [Up](Up)

update-instance: Update an existing Composition instance, or create using a client-assigned ID (**compositionIdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`
- `application/fhir+xml`

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /Composition/{id}/$validate   [Up](Up)

(**compositionIdValidateGet**)

Path parameters

Responses
200
Success Object

GET /ConceptMap   [Up](Up)

search-type: Search for ConceptMap instances (**conceptMapGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): The capability statement publication date
- [CodeSystem](): The code system publication date
- [CompartmentDefinition](): The compartment definition publication date
- [ConceptMap](): The concept map publication date
- [GraphDefinition](): The graph definition publication date
- [ImplementationGuide](): The implementation guide publication date
- [MessageDefinition](): The message definition publication date
- [NamingSystem](): The naming system publication date
- [OperationDefinition](): The operation definition publication date
- [SearchParameter](): The search parameter publication date
- [StructureDefinition](): The structure definition publication date
- [StructureMap](): The structure map publication date
- [TerminologyCapabilities](): The terminology capabilities publication date
- [ValueSet](): The value set publication date

other (optional)
Query Parameter — canonical reference to an additional ConceptMap to use for mapping if the source concept is unmapped

context-type-value (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): A use context type and value assigned to the capability statement
- [CodeSystem](): A use context type and value assigned to the code system
- [CompartmentDefinition](): A use context type and value assigned to the compartment definition
- [ConceptMap](): A use context type and value assigned to the concept map
- [GraphDefinition](): A use context type and value assigned to the graph definition
- [ImplementationGuide](): A use context type and value assigned to the implementation guide
- [MessageDefinition](): A use context type and value assigned to the message definition
- [NamingSystem](): A use context type and value assigned to the naming system
- [OperationDefinition](): A use context type and value assigned to the operation definition
- [SearchParameter](): A use context type and value assigned to the search parameter
- [StructureDefinition](): A use context type and value assigned to the structure definition
- [StructureMap](): A use context type and value assigned to the structure map
- [TerminologyCapabilities](): A use context type and value assigned to the terminology capabilities
- [ValueSet](): A use context type and value assigned to the value set

dependson (optional)
Query Parameter — Reference to property mapping depends on

target-system (optional)
Query Parameter — Target system that the concepts are to be mapped to

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): Intended jurisdiction for the capability statement
- [CodeSystem](): Intended jurisdiction for the code system
- [ConceptMap](): Intended jurisdiction for the concept map
- [GraphDefinition](): Intended jurisdiction for the graph definition
- [ImplementationGuide](): Intended jurisdiction for the implementation guide
- [MessageDefinition](): Intended jurisdiction for the message definition
- [NamingSystem](): Intended jurisdiction for the naming system
- [OperationDefinition](): Intended jurisdiction for the operation definition
- [SearchParameter](): Intended jurisdiction for the search parameter
- [StructureDefinition](): Intended jurisdiction for the structure definition
- [StructureMap](): Intended jurisdiction for the structure map

- **TerminologyCapabilities**: Intended jurisdiction for the terminology capabilities
- **ValueSet**: Intended jurisdiction for the value set

description (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The description of the capability statement
- **CodeSystem**: The description of the code system
- **CompartmentDefinition**: The description of the compartment definition
- **ConceptMap**: The description of the concept map
- **GraphDefinition**: The description of the graph definition
- **ImplementationGuide**: The description of the implementation guide
- **MessageDefinition**: The description of the message definition
- **NamingSystem**: The description of the naming system
- **OperationDefinition**: The description of the operation definition
- **SearchParameter**: The description of the search parameter
- **StructureDefinition**: The description of the structure definition
- **StructureMap**: The description of the structure map
- **TerminologyCapabilities**: The description of the terminology capabilities
- **ValueSet**: The description of the value set

context-type (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A type of use context assigned to the capability statement
- **CodeSystem**: A type of use context assigned to the code system
- **CompartmentDefinition**: A type of use context assigned to the compartment definition
- **ConceptMap**: A type of use context assigned to the concept map
- **GraphDefinition**: A type of use context assigned to the graph definition
- **ImplementationGuide**: A type of use context assigned to the implementation guide
- **MessageDefinition**: A type of use context assigned to the message definition
- **NamingSystem**: A type of use context assigned to the naming system
- **OperationDefinition**: A type of use context assigned to the operation definition
- **SearchParameter**: A type of use context assigned to the search parameter
- **StructureDefinition**: A type of use context assigned to the structure definition
- **StructureMap**: A type of use context assigned to the structure map
- **TerminologyCapabilities**: A type of use context assigned to the terminology capabilities
- **ValueSet**: A type of use context assigned to the value set

source (optional)
Query Parameter — The source value set that contains the concepts that are being mapped

title (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The human-friendly name of the capability statement
- **CodeSystem**: The human-friendly name of the code system
- **ConceptMap**: The human-friendly name of the concept map
- **ImplementationGuide**: The human-friendly name of the implementation guide
- **MessageDefinition**: The human-friendly name of the message definition
- **OperationDefinition**: The human-friendly name of the operation definition
- **StructureDefinition**: The human-friendly name of the structure definition
- **StructureMap**: The human-friendly name of the structure map
- **TerminologyCapabilities**: The human-friendly name of the terminology capabilities
- **ValueSet**: The human-friendly name of the value set

context-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A quantity- or range-valued use context assigned to the capability statement

- **CodeSystem**: A quantity- or range-valued use context assigned to the code system
- **CompartmentDefinition**: A quantity- or range-valued use context assigned to the compartment definition
- **ConceptMap**: A quantity- or range-valued use context assigned to the concept map
- **GraphDefinition**: A quantity- or range-valued use context assigned to the graph definition
- **ImplementationGuide**: A quantity- or range-valued use context assigned to the implementation guide
- **MessageDefinition**: A quantity- or range-valued use context assigned to the message definition
- **NamingSystem**: A quantity- or range-valued use context assigned to the naming system
- **OperationDefinition**: A quantity- or range-valued use context assigned to the operation definition
- **SearchParameter**: A quantity- or range-valued use context assigned to the search parameter
- **StructureDefinition**: A quantity- or range-valued use context assigned to the structure definition
- **StructureMap**: A quantity- or range-valued use context assigned to the structure map
- **TerminologyCapabilities**: A quantity- or range-valued use context assigned to the terminology capabilities
- **ValueSet**: A quantity- or range-valued use context assigned to the value set

source-uri (optional)
Query Parameter — The source value set that contains the concepts that are being mapped

context (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context assigned to the capability statement
- **CodeSystem**: A use context assigned to the code system
- **CompartmentDefinition**: A use context assigned to the compartment definition
- **ConceptMap**: A use context assigned to the concept map
- **GraphDefinition**: A use context assigned to the graph definition
- **ImplementationGuide**: A use context assigned to the implementation guide
- **MessageDefinition**: A use context assigned to the message definition
- **NamingSystem**: A use context assigned to the naming system
- **OperationDefinition**: A use context assigned to the operation definition
- **SearchParameter**: A use context assigned to the search parameter
- **StructureDefinition**: A use context assigned to the structure definition
- **StructureMap**: A use context assigned to the structure map
- **TerminologyCapabilities**: A use context assigned to the terminology capabilities
- **ValueSet**: A use context assigned to the value set

context-type-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and quantity- or range-based value assigned to the capability statement
- **CodeSystem**: A use context type and quantity- or range-based value assigned to the code system
- **CompartmentDefinition**: A use context type and quantity- or range-based value assigned to the compartment definition
- **ConceptMap**: A use context type and quantity- or range-based value assigned to the concept map
- **GraphDefinition**: A use context type and quantity- or range-based value assigned to the graph definition
- **ImplementationGuide**: A use context type and quantity- or range-based value assigned to the implementation guide
- **MessageDefinition**: A use context type and quantity- or range-based value assigned to the message definition
- **NamingSystem**: A use context type and quantity- or range-based value assigned to the naming system
- **OperationDefinition**: A use context type and quantity- or range-based value assigned to the operation definition
- **SearchParameter**: A use context type and quantity- or range-based value assigned to the search parameter
- **StructureDefinition**: A use context type and quantity- or range-based value assigned to the structure definition
- **StructureMap**: A use context type and quantity- or range-based value assigned to the structure map
- **TerminologyCapabilities**: A use context type and quantity- or range-based value assigned to the terminology capabilities

- **ValueSet**: A use context type and quantity- or range-based value assigned to the value set

source-system (optional)
Query Parameter — Source system where concepts to be mapped are defined

target-code (optional)
Query Parameter — Code that identifies the target element

target-uri (optional)
Query Parameter — The target value set which provides context for the mappings

identifier (optional)
Query Parameter —

Multiple Resources:

- **CodeSystem**: External identifier for the code system
- **ConceptMap**: External identifier for the concept map
- **MessageDefinition**: External identifier for the message definition
- **StructureDefinition**: External identifier for the structure definition
- **StructureMap**: External identifier for the structure map
- **ValueSet**: External identifier for the value set

product (optional)
Query Parameter — Reference to property mapping depends on

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The business version of the capability statement
- **CodeSystem**: The business version of the code system
- **CompartmentDefinition**: The business version of the compartment definition
- **ConceptMap**: The business version of the concept map
- **GraphDefinition**: The business version of the graph definition
- **ImplementationGuide**: The business version of the implementation guide
- **MessageDefinition**: The business version of the message definition
- **OperationDefinition**: The business version of the operation definition
- **SearchParameter**: The business version of the search parameter
- **StructureDefinition**: The business version of the structure definition
- **StructureMap**: The business version of the structure map
- **TerminologyCapabilities**: The business version of the terminology capabilities
- **ValueSet**: The business version of the value set

url (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The uri that identifies the capability statement
- **CodeSystem**: The uri that identifies the code system
- **CompartmentDefinition**: The uri that identifies the compartment definition
- **ConceptMap**: The uri that identifies the concept map
- **GraphDefinition**: The uri that identifies the graph definition
- **ImplementationGuide**: The uri that identifies the implementation guide
- **MessageDefinition**: The uri that identifies the message definition
- **OperationDefinition**: The uri that identifies the operation definition
- **SearchParameter**: The uri that identifies the search parameter
- **StructureDefinition**: The uri that identifies the structure definition
- **StructureMap**: The uri that identifies the structure map
- **TerminologyCapabilities**: The uri that identifies the terminology capabilities
- **ValueSet**: The uri that identifies the value set

target (optional)
Query Parameter — The target value set which provides context for the mappings

_filter (optional)

Query Parameter — Search the contents of the resource's data using a filter

source-code (optional)
Query Parameter — Identifies element being mapped

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter —

Multiple Resources:

- <u>CapabilityStatement</u>: Computationally friendly name of the capability statement
- <u>CodeSystem</u>: Computationally friendly name of the code system
- <u>CompartmentDefinition</u>: Computationally friendly name of the compartment definition
- <u>ConceptMap</u>: Computationally friendly name of the concept map
- <u>GraphDefinition</u>: Computationally friendly name of the graph definition
- <u>ImplementationGuide</u>: Computationally friendly name of the implementation guide
- <u>MessageDefinition</u>: Computationally friendly name of the message definition
- <u>NamingSystem</u>: Computationally friendly name of the naming system
- <u>OperationDefinition</u>: Computationally friendly name of the operation definition
- <u>SearchParameter</u>: Computationally friendly name of the search parameter
- <u>StructureDefinition</u>: Computationally friendly name of the structure definition
- <u>StructureMap</u>: Computationally friendly name of the structure map
- <u>TerminologyCapabilities</u>: Computationally friendly name of the terminology capabilities
- <u>ValueSet</u>: Computationally friendly name of the value set

publisher (optional)
Query Parameter —

Multiple Resources:

- <u>CapabilityStatement</u>: Name of the publisher of the capability statement
- <u>CodeSystem</u>: Name of the publisher of the code system
- <u>CompartmentDefinition</u>: Name of the publisher of the compartment definition
- <u>ConceptMap</u>: Name of the publisher of the concept map
- <u>GraphDefinition</u>: Name of the publisher of the graph definition
- <u>ImplementationGuide</u>: Name of the publisher of the implementation guide
- <u>MessageDefinition</u>: Name of the publisher of the message definition
- <u>NamingSystem</u>: Name of the publisher of the naming system
- <u>OperationDefinition</u>: Name of the publisher of the operation definition
- <u>SearchParameter</u>: Name of the publisher of the search parameter
- <u>StructureDefinition</u>: Name of the publisher of the structure definition
- <u>StructureMap</u>: Name of the publisher of the structure map
- <u>TerminologyCapabilities</u>: Name of the publisher of the terminology capabilities
- <u>ValueSet</u>: Name of the publisher of the value set

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter —

Multiple Resources:

- <u>CapabilityStatement</u>: The current status of the capability statement

- **CodeSystem**: The current status of the code system
- **CompartmentDefinition**: The current status of the compartment definition
- **ConceptMap**: The current status of the concept map
- **GraphDefinition**: The current status of the graph definition
- **ImplementationGuide**: The current status of the implementation guide
- **MessageDefinition**: The current status of the message definition
- **NamingSystem**: The current status of the naming system
- **OperationDefinition**: The current status of the operation definition
- **SearchParameter**: The current status of the search parameter
- **StructureDefinition**: The current status of the structure definition
- **StructureMap**: The current status of the structure map
- **TerminologyCapabilities**: The current status of the terminology capabilities
- **ValueSet**: The current status of the value set

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /ConceptMap/_history   Up

type-history: Fetch the resource change history for all resources of type ConceptMap (**conceptMapHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

DELETE /ConceptMap/{id}   Up

instance-delete: Perform a logical delete on a resource instance (**conceptMapIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json

search-type: Search for Condition instances (**conditionGet**)

This is a search type

Query parameters

onset-info (optional)
Query Parameter — Onsets as a string

code (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](#): Code that identifies the allergy or intolerance
- [Condition](#): Code for the condition
- [DeviceRequest](#): Code for what is being requested/ordered
- [DiagnosticReport](#): The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- [FamilyMemberHistory](#): A search by a condition code
- [List](#): What the purpose of this list is
- [Medication](#): Returns medications for a specific code
- [MedicationAdministration](#): Return administrations of this medication code
- [MedicationDispense](#): Returns dispenses of this medicine code
- [MedicationRequest](#): Return prescriptions of this medication code
- [MedicationStatement](#): Return statements of this medication code
- [Observation](#): The code of the observation type
- [Procedure](#): A code to identify a procedure
- [ServiceRequest](#): What is being requested/ordered

evidence (optional)
Query Parameter — Manifestation/symptom

subject (optional)
Query Parameter — Who has the condition?

_lastUpdated (optional)
Query Parameter — When the resource version last changed

verification-status (optional)

Query Parameter — unconfirmed | provisional | differential | confirmed | refuted | entered-in-error

clinical-status (optional)
Query Parameter — The clinical status of the condition

onset-date (optional)
Query Parameter — Date related onsets (dateTime and Period)

abatement-date (optional)
Query Parameter — Date-related abatements (dateTime and period)

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
- [DetectedIssue](): Associated patient
- [DeviceRequest](): Individual the service is ordered for
- [DeviceUseStatement](): Search by subject - a patient
- [DiagnosticReport](): The subject of the report if a patient
- [DocumentManifest](): The subject of the set of documents
- [DocumentReference](): Who/what is the subject of the document
- [Encounter](): The patient or group present at the encounter
- [EpisodeOfCare](): The patient who is the focus of this episode of care
- [FamilyMemberHistory](): The identity of a subject to list family member history items for
- [Flag](): The identity of a subject to list flags for
- [Goal](): Who this goal is intended for
- [ImagingStudy](): Who the study is about
- [Immunization](): The patient for the vaccination record
- [List](): If all resources have the same subject
- [MedicationAdministration](): The identity of a patient to list administrations for
- [MedicationDispense](): The identity of a patient to list dispenses for
- [MedicationRequest](): Returns prescriptions for a specific patient
- [MedicationStatement](): Returns statements for a specific patient.
- [NutritionOrder](): The identity of the person who requires the diet, formula or nutritional supplement
- [Observation](): The subject that the observation is about (if patient)
- [Procedure](): Search by subject - a patient
- [RiskAssessment](): Who/what does assessment apply to?
- [ServiceRequest](): Search by subject - a patient
- [SupplyDelivery](): Patient for whom the item is supplied
- [VisionPrescription](): The identity of a patient to list dispenses for

abatement-age (optional)
Query Parameter — Abatement as age or age range

evidence-detail (optional)
Query Parameter — Supporting information found elsewhere

severity (optional)
Query Parameter — The severity of the condition

identifier (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): External ids for this item
- [CarePlan](): External Ids for this plan
- [CareTeam](): External Ids for this team
- [Composition](): Version-independent identifier for the Composition
- [Condition](): A unique identifier of the condition record
- [Consent](): Identifier for this record (external references)
- [DetectedIssue](): Unique id for the detected issue

- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

recorded-date (optional)
Query Parameter — Date record was first recorded

_security (optional)
Query Parameter — Security Labels applied to this resource

encounter (optional)
Query Parameter — Encounter created as part of

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

asserter (optional)
Query Parameter — Person who asserts this condition

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

stage (optional)
Query Parameter — Simple summary (disease specific)

abatement-string (optional)
Query Parameter — Abatement as a string

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

onset-age (optional)
Query Parameter — Onsets as age or age range

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

body-site (optional)
Query Parameter — Anatomical location, if relevant

category (optional)
Query Parameter — The category of the condition

search-type: Search for Consent instances (**consentGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Date first version of the resource instance was recorded
- **CarePlan**: Time period plan covers
- **CareTeam**: Time period team covers
- **ClinicalImpression**: When the assessment was documented
- **Composition**: Composition editing time
- **Consent**: When this Consent was created or indexed
- **DiagnosticReport**: The clinically relevant time of the report
- **Encounter**: A date within the period the Encounter lasted
- **EpisodeOfCare**: The provided date search value falls within the episode of care's period
- **FamilyMemberHistory**: When history was recorded or last updated
- **Flag**: Time period when flag is active
- **Immunization**: Vaccination (non)-Administration Date
- **List**: When the list was prepared
- **Observation**: Obtained date/time. If the obtained element is a period, a date that falls in the period
- **Procedure**: When the procedure was performed
- **RiskAssessment**: When was assessment made?
- **SupplyRequest**: When the request was made

data (optional)
Query Parameter — The actual data reference

purpose (optional)
Query Parameter — Context of activities covered by this rule

_lastUpdated (optional)
Query Parameter — When the resource version last changed

source-reference (optional)
Query Parameter — Search by reference to a Consent, DocumentReference, Contract or QuestionnaireResponse

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
- [DetectedIssue](): Associated patient

Success [Object](#)

GET /Contract   Up

search-type: Search for Contract instances (**contractGet**)

This is a search type

Query parameters

identifier (optional)
Query Parameter — The identity of the contract

instantiates (optional)
Query Parameter — A source definition of the contract

subject (optional)
Query Parameter — The identity of the subject of the contract

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

url (optional)
Query Parameter — The basal contract definition

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter — The identity of the subject of the contract (if a patient)

_tag (optional)
Query Parameter — Tags applied to this resource

authority (optional)
Query Parameter — The authority of the contract

domain (optional)
Query Parameter — The domain of the contract

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)

Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

issued (optional)
Query Parameter — The date/time the contract was issued

signer (optional)
Query Parameter — Contract Signatory Party

status (optional)
Query Parameter — The status of the contract

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /Contract/_history

type-history: Fetch the resource change history for all resources of type Contract (**contractHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

DELETE /Contract/{id}

GET /CoverageEligibilityResponse

search-type: Search for CoverageEligibilityResponse instances (**coverageEligibilityResponseGet**)

This is a search type

Query parameters

identifier (optional)
Query Parameter — The business identifier

request (optional)
Query Parameter — The EligibilityRequest reference

created (optional)
Query Parameter — The creation date

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

requestor (optional)
Query Parameter — The EligibilityRequest provider

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

disposition (optional)
Query Parameter — The contents of the disposition message

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

insurer (optional)
Query Parameter — The organization which generated this resource

patient (optional)
Query Parameter — The reference to the patient

_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

outcome (optional)
Query Parameter — The processing outcome

status (optional)
Query Parameter — The EligibilityRequest status

Return type

GET /DetectedIssue   <u>Up</u>

search-type: Search for DetectedIssue instances (**detectedIssueGet**)

This is a search type

Query parameters

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

code (optional)
Query Parameter — Issue Category, e.g. drug-drug, duplicate therapy, etc.

author (optional)
Query Parameter — The provider or device that identified the issue

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

identified (optional)
Query Parameter — When identified

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Who the sensitivity is for
- **CarePlan**: Who the care plan is for
- **CareTeam**: Who care team is for
- **ClinicalImpression**: Patient or group assessed
- **Composition**: Who and/or what the composition is about
- **Condition**: Who has the condition?
- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document

- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

implicated (optional)
Query Parameter — Problem resource

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

GET /Device

search-type: Search for Device instances (**deviceGet**)

This is a search type

Query parameters

udi-di (optional)
Query Parameter — The udi Device Identifier (DI)

identifier (optional)
Query Parameter — Instance id from manufacturer, owner, and others

udi-carrier (optional)
Query Parameter — UDI Barcode (RFID or other technology) string in *HRF* format.

device-name (optional)
Query Parameter — A server defined search that may match any of the string fields in Device.deviceName or Device.type.

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

type (optional)
Query Parameter — The type of the device

url (optional)
Query Parameter — Network address to contact device

manufacturer (optional)
Query Parameter — The manufacturer of the device

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter — Patient information, if the resource is affixed to a person

_tag (optional)
Query Parameter — Tags applied to this resource

organization (optional)
Query Parameter — The organization responsible for the device

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

location (optional)
Query Parameter — A location, where the resource is found

model (optional)
Query Parameter — The model of the device

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — active | inactive | entered-in-error | unknown

Return type

Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /Device/_history   [Up](Up)

type-history: Fetch the resource change history for all resources of type Device (**deviceHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

DELETE /Device/{id}   [Up](Up)

instance-delete: Perform a logical delete on a resource instance (**deviceIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /Device/{id}/$expunge   [Up](Up)

(**deviceIdExpungePost**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success <u>Object</u>

GET /Device/{id}   <u>Up</u>

read-instance: Read Device instance (**deviceIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success <u>Object</u>

GET /Device/{id}/_history   <u>Up</u>

instance-history: Fetch the resource change history for all resources of type Device (**deviceIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`

- `application/fhir+xml`

Responses
200
Success [Object](#)

GET /Device/{id}/_history/{version_id}

vread-instance: Read Device instance with specific version (**deviceIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

POST /Device/{id}/$meta-add

(**deviceIdMetaAddPost**)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body [object](#) (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

200
Success [Object](#)

POST /Device/{id}/$meta-delete   [Up](#)

(**deviceIdMetaDeletePost**)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body [object](#) (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

GET /Device/{id}/$meta   [Up](#)

(**deviceIdMetaGet**)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

PATCH /Device/{id}   Up

instance-patch: Patch a resource instance of type Device by ID (**deviceIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`
- `application/fhir+xml`

Request body

body [object](#) (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

PUT /Device/{id}   Up

update-instance: Update an existing Device instance, or create using a client-assigned ID (**deviceIdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`
- `application/fhir+xml`

Request body

body [object](#) (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /Device/{id}/$validate   Up

(**deviceIdValidateGet**)

Path parameters

   id (required)
   Path Parameter — The resource ID default: null

Query parameters

   resource (optional)
   Query Parameter —

   mode (optional)
   Query Parameter —

   profile (optional)
   Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /Device/$meta   Up

(**deviceMetaGet**)

Request a list of tags, profiles, and security labels for a specfic resource instance

Query parameters

   return (optional)
   Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /Device

create-type: Create a new Device instance (**devicePost**)

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`
- `application/fhir+xml`

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /Device/$validate

(**deviceValidateGet**)

Query parameters

resource (optional)
Query Parameter —

mode (optional)
Query Parameter —

profile (optional)
Query Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

DeviceDefinition

POST /DeviceDefinition/$expunge

(**deviceDefinitionExpungePost**)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body **object** (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success **Object**

GET /DeviceDefinition

search-type: Search for DeviceDefinition instances (**deviceDefinitionGet**)

This is a search type

Query parameters

identifier (optional)
Query Parameter — The identifier of the component

parent (optional)
Query Parameter — The parent DeviceDefinition resource

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

type (optional)
Query Parameter — The device component type

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)

GET /DeviceRequest

search-type: Search for DeviceRequest instances (**deviceRequestGet**)

This is a search type

Query parameters

insurance (optional)
Query Parameter — Associated insurance coverage

code (optional)
Query Parameter —

Multiple Resources:

- AllergyIntolerance: Code that identifies the allergy or intolerance
- Condition: Code for the condition
- DeviceRequest: Code for what is being requested/ordered
- DiagnosticReport: The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result

- **FamilyMemberHistory**: A search by a condition code
- **List**: What the purpose of this list is
- **Medication**: Returns medications for a specific code
- **MedicationAdministration**: Return administrations of this medication code
- **MedicationDispense**: Returns dispenses of this medicine code
- **MedicationRequest**: Return prescriptions of this medication code
- **MedicationStatement**: Return statements of this medication code
- **Observation**: The code of the observation type
- **Procedure**: A code to identify a procedure
- **ServiceRequest**: What is being requested/ordered

subject (optional)
Query Parameter — Individual the service is ordered for

_lastUpdated (optional)
Query Parameter — When the resource version last changed

group-identifier (optional)
Query Parameter — Composite request this is part of

based-on (optional)
Query Parameter — Plan/proposal/order fulfilled by this request

patient (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Who the sensitivity is for
- **CarePlan**: Who the care plan is for
- **CareTeam**: Who care team is for
- **ClinicalImpression**: Patient or group assessed
- **Composition**: Who and/or what the composition is about
- **Condition**: Who has the condition?
- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

instantiates-uri (optional)
Query Parameter — Instantiates external protocol or definition

requester (optional)
Query Parameter — Who/what is requesting service

identifier (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): External ids for this item
- [CarePlan](): External Ids for this plan
- [CareTeam](): External Ids for this team
- [Composition](): Version-independent identifier for the Composition
- [Condition](): A unique identifier of the condition record
- [Consent](): Identifier for this record (external references)
- [DetectedIssue](): Unique id for the detected issue
- [DeviceRequest](): Business identifier for request/order
- [DiagnosticReport](): An identifier for the report
- [DocumentManifest](): Unique Identifier for the set of documents
- [DocumentReference](): Master Version Specific Identifier
- [Encounter](): Identifier(s) by which this encounter is known
- [EpisodeOfCare](): Business Identifier(s) relevant for this EpisodeOfCare
- [FamilyMemberHistory](): A search by a record identifier
- [Goal](): External Ids for this goal
- [ImagingStudy](): Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- [Immunization](): Business identifier
- [List](): Business identifier
- [MedicationAdministration](): Return administrations with this external identifier
- [MedicationDispense](): Returns dispenses with this external identifier
- [MedicationRequest](): Return prescriptions with this external identifier
- [MedicationStatement](): Return statements with this external identifier
- [NutritionOrder](): Return nutrition orders with this external identifier
- [Observation](): The unique id for a particular observation
- [Procedure](): A unique identifier for a procedure
- [RiskAssessment](): Unique identifier for the assessment
- [ServiceRequest](): Identifiers assigned to this order
- [SupplyDelivery](): External identifier
- [SupplyRequest](): Business Identifier for SupplyRequest
- [VisionPrescription](): Return prescriptions with this external identifier

performer (optional)
Query Parameter — Desired performer for service

event-date (optional)
Query Parameter — When service should occur

_security (optional)
Query Parameter — Security Labels applied to this resource

instantiates-canonical (optional)
Query Parameter — Instantiates FHIR protocol or definition

encounter (optional)
Query Parameter —

Multiple Resources:

- [Composition](): Context of the Composition
- [DeviceRequest](): Encounter during which request was created
- [DiagnosticReport](): The Encounter when the order was made
- [DocumentReference](): Context of the document content
- [Flag](): Alert relevant during encounter
- [List](): Context in which list created
- [NutritionOrder](): Return nutrition orders with this encounter identifier
- [Observation](): Encounter related to the observation
- [Procedure](): Encounter created as part of
- [RiskAssessment](): Where was assessment performed?
- [ServiceRequest](): An encounter in which this request is made
- [VisionPrescription](): Return prescriptions with this encounter identifier

authored-on (optional)
Query Parameter — When the request transitioned to being actionable

intent (optional)
Query Parameter — proposal | plan | original-order |reflex-order

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

device (optional)
Query Parameter — Reference to resource that is being requested/ordered

prior-request (optional)
Query Parameter — Request takes the place of referenced completed or terminated requests

status (optional)
Query Parameter — entered-in-error | draft | active |suspended | completed

Responses
200
Success Object

GET /DeviceRequest/{id}/_history   Up

instance-history: Fetch the resource change history for all resources of type DeviceRequest (**deviceRequestIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /DeviceRequest/{id}/_history/{version_id}   Up

vread-instance: Read DeviceRequest instance with specific version (**deviceRequestIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /DeviceRequest/{id}/$meta-add   Up

(**deviceRequestIdMetaAddPost**)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

200
Success **Object**

POST /DeviceRequest/{id}/$meta-delete   Up

(deviceRequestIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

200
Success **Object**

GET /DeviceRequest/{id}/$meta

(**deviceRequestIdMetaGet**)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json

search-type: Search for DiagnosticReport instances (**diagnosticReportGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](#): Date first version of the resource instance was recorded
- [CarePlan](#): Time period plan covers
- [CareTeam](#): Time period team covers
- [ClinicalImpression](#): When the assessment was documented
- [Composition](#): Composition editing time
- [Consent](#): When this Consent was created or indexed
- [DiagnosticReport](#): The clinically relevant time of the report
- [Encounter](#): A date within the period the Encounter lasted
- [EpisodeOfCare](#): The provided date search value falls within the episode of care's period
- [FamilyMemberHistory](#): When history was recorded or last updated
- [Flag](#): Time period when flag is active
- [Immunization](#): Vaccination (non)-Administration Date
- [List](#): When the list was prepared
- [Observation](#): Obtained date/time. If the obtained element is a period, a date that falls in the period
- [Procedure](#): When the procedure was performed
- [RiskAssessment](#): When was assessment made?
- [SupplyRequest](#): When the request was made

code (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Code that identifies the allergy or intolerance
- [Condition](): Code for the condition
- [DeviceRequest](): Code for what is being requested/ordered
- [DiagnosticReport](): The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- [FamilyMemberHistory](): A search by a condition code
- [List](): What the purpose of this list is
- [Medication](): Returns medications for a specific code
- [MedicationAdministration](): Return administrations of this medication code
- [MedicationDispense](): Returns dispenses of this medicine code
- [MedicationRequest](): Return prescriptions of this medication code
- [MedicationStatement](): Return statements of this medication code
- [Observation](): The code of the observation type
- [Procedure](): A code to identify a procedure
- [ServiceRequest](): What is being requested/ordered

subject (optional)
Query Parameter — The subject of the report

_lastUpdated (optional)
Query Parameter — When the resource version last changed

media (optional)
Query Parameter — A reference to the image source.

conclusion (optional)
Query Parameter — A coded conclusion (interpretation/impression) on the report

result (optional)
Query Parameter — Link to an atomic result (observation resource)

based-on (optional)
Query Parameter — Reference to the service request.

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
- [DetectedIssue](): Associated patient
- [DeviceRequest](): Individual the service is ordered for
- [DeviceUseStatement](): Search by subject - a patient
- [DiagnosticReport](): The subject of the report if a patient
- [DocumentManifest](): The subject of the set of documents
- [DocumentReference](): Who/what is the subject of the document
- [Encounter](): The patient or group present at the encounter
- [EpisodeOfCare](): The patient who is the focus of this episode of care
- [FamilyMemberHistory](): The identity of a subject to list family member history items for
- [Flag](): The identity of a subject to list flags for
- [Goal](): Who this goal is intended for
- [ImagingStudy](): Who the study is about
- [Immunization](): The patient for the vaccination record
- [List](): If all resources have the same subject
- [MedicationAdministration](): The identity of a patient to list administrations for
- [MedicationDispense](): The identity of a patient to list dispenses for
- [MedicationRequest](): Returns prescriptions for a specific patient
- [MedicationStatement](): Returns statements for a specific patient.

- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

specimen (optional)
Query Parameter — The specimen details

issued (optional)
Query Parameter — When the report was issued

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

performer (optional)
Query Parameter — Who is responsible for the report

_security (optional)
Query Parameter — Security Labels applied to this resource

encounter (optional)
Query Parameter —

Multiple Resources:

- **Composition**: Context of the Composition
- **DeviceRequest**: Encounter during which request was created
- **DiagnosticReport**: The Encounter when the order was made
- **DocumentReference**: Context of the document content
- **Flag**: Alert relevant during encounter
- **List**: Context in which list created
- **NutritionOrder**: Return nutrition orders with this encounter identifier
- **Observation**: Encounter related to the observation

- **Procedure**: Encounter created as part of
  - **RiskAssessment**: Where was assessment performed?
  - **ServiceRequest**: An encounter in which this request is made
  - **VisionPrescription**: Return prescriptions with this encounter identifier

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — Which diagnostic discipline/department created the report

results-interpreter (optional)
Query Parameter — Who was the source of the report

status (optional)
Query Parameter — The status of the report

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /DiagnosticReport/_history

type-history: Fetch the resource change history for all resources of type DiagnosticReport (**diagnosticReportHistoryGet**)

Query parameters

identifier (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): External ids for this item
- [CarePlan](): External Ids for this plan
- [CareTeam](): External Ids for this team
- [Composition](): Version-independent identifier for the Composition
- [Condition](): A unique identifier of the condition record
- [Consent](): Identifier for this record (external references)
- [DetectedIssue](): Unique id for the detected issue
- [DeviceRequest](): Business identifier for request/order
- [DiagnosticReport](): An identifier for the report
- [DocumentManifest](): Unique Identifier for the set of documents
- [DocumentReference](): Master Version Specific Identifier
- [Encounter](): Identifier(s) by which this encounter is known
- [EpisodeOfCare](): Business Identifier(s) relevant for this EpisodeOfCare
- [FamilyMemberHistory](): A search by a record identifier
- [Goal](): External Ids for this goal
- [ImagingStudy](): Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- [Immunization](): Business identifier
- [List](): Business identifier
- [MedicationAdministration](): Return administrations with this external identifier
- [MedicationDispense](): Returns dispenses with this external identifier
- [MedicationRequest](): Return prescriptions with this external identifier
- [MedicationStatement](): Return statements with this external identifier
- [NutritionOrder](): Return nutrition orders with this external identifier
- [Observation](): The unique id for a particular observation
- [Procedure](): A unique identifier for a procedure
- [RiskAssessment](): Unique identifier for the assessment
- [ServiceRequest](): Identifiers assigned to this order
- [SupplyDelivery](): External identifier
- [SupplyRequest](): Business Identifier for SupplyRequest
- [VisionPrescription](): Return prescriptions with this external identifier

item (optional)
Query Parameter — Items in manifest

related-id (optional)
Query Parameter — Identifiers of things that are related

author (optional)
Query Parameter — Who and/or what authored the DocumentManifest

created (optional)
Query Parameter — When this document manifest created

subject (optional)
Query Parameter — The subject of the set of documents

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

description (optional)
Query Parameter — Human-readable description (title)

source (optional)
Query Parameter — The source system/application/software

type (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: allergy | intolerance - Underlying mechanism (if known)
- **Composition**: Kind of composition (LOINC if possible)
- **DocumentManifest**: Kind of document set
- **DocumentReference**: Kind of document (LOINC if possible)
- **Encounter**: Specific type of encounter
- **EpisodeOfCare**: Type/class - e.g. specialist referral, disease management

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

related-ref (optional)
Query Parameter — Related Resource

patient (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Who the sensitivity is for
- **CarePlan**: Who the care plan is for
- **CareTeam**: Who care team is for
- **ClinicalImpression**: Patient or group assessed
- **Composition**: Who and/or what the composition is about
- **Condition**: Who has the condition?
- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

recipient (optional)
Query Parameter — Intended to get notified about this set of documents

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — current | superseded | entered-in-error

Query parameters

date (optional)
Query Parameter — When this document reference was created

subject (optional)
Query Parameter — Who/what is the subject of the document

_lastUpdated (optional)
Query Parameter — When the resource version last changed

description (optional)
Query Parameter — Human-readable description

language (optional)
Query Parameter — Human language of the content (BCP-47)

type (optional)
Query Parameter —

Multiple Resources:

- AllergyIntolerance: allergy | intolerance - Underlying mechanism (if known)
- Composition: Kind of composition (LOINC if possible)

- **DocumentManifest**: Kind of document set
- **DocumentReference**: Kind of document (LOINC if possible)
- **Encounter**: Specific type of encounter
- **EpisodeOfCare**: Type/class - e.g. specialist referral, disease management

relation (optional)
Query Parameter — replaces | transforms | signs | appends

setting (optional)
Query Parameter — Additional details about where the content was created (e.g. clinical specialty)

related (optional)
Query Parameter — Related identifiers or resources

patient (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Who the sensitivity is for
- **CarePlan**: Who the care plan is for
- **CareTeam**: Who care team is for
- **ClinicalImpression**: Patient or group assessed
- **Composition**: Who and/or what the composition is about
- **Condition**: Who has the condition?
- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

event (optional)
Query Parameter — Main clinical acts documented

relationship (optional)
Query Parameter — Combination of relation and relatesTo

authenticator (optional)
Query Parameter — Who/what authenticated the document

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition

- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

period (optional)
Query Parameter — Time of service that is being documented

custodian (optional)
Query Parameter — Organization which maintains the document

author (optional)
Query Parameter — Who and/or what authored the document

_security (optional)
Query Parameter — Security Labels applied to this resource

format (optional)
Query Parameter — Format/content rules for the document

encounter (optional)
Query Parameter —

Multiple Resources:

- **Composition**: Context of the Composition
- **DeviceRequest**: Encounter during which request was created
- **DiagnosticReport**: The Encounter when the order was made
- **DocumentReference**: Context of the document content
- **Flag**: Alert relevant during encounter
- **List**: Context in which list created
- **NutritionOrder**: Return nutrition orders with this encounter identifier
- **Observation**: Encounter related to the observation
- **Procedure**: Encounter created as part of
- **RiskAssessment**: Where was assessment performed?
- **ServiceRequest**: An encounter in which this request is made
- **VisionPrescription**: Return prescriptions with this encounter identifier

contenttype (optional)
Query Parameter — Mime type of the content, with charset etc.

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

security-label (optional)
Query Parameter — Document security-tags

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

location (optional)
Query Parameter — Uri where the data can be found

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — Categorization of document

relatesto (optional)
Query Parameter — Target of the relationship

facility (optional)
Query Parameter — Kind of facility where patient was seen

status (optional)
Query Parameter — current | superseded | entered-in-error

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /DocumentReference/_history   Up

type-history: Fetch the resource change history for all resources of type DocumentReference
(**documentReferenceHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

DELETE /DocumentReference/{id}   Up

instance-delete: Perform a logical delete on a resource instance (**documentReferenceIdDelete**)

Path parameters

   id (required)
   Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

POST /DocumentReference/{id}/$expunge Up

(**documentReferenceIdExpungePost**)

Path parameters

   id (required)
   Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

   body [object](#) **(optional)**
   Body Parameter —

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /DocumentReference/{id}/_history   Up

instance-history: Fetch the resource change history for all resources of type DocumentReference (**documentReferenceIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /DocumentReference/{id}/_history/{version_id}   Up

vread-instance: Read DocumentReference instance with specific version (**documentReferenceIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /DocumentReference/{id}/$meta-add

(documentReferenceIdMetaAddPost)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

200
Success Object

POST /DocumentReference/{id}/$meta-delete

(documentReferenceIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

GET /EffectEvidenceSynthesis

search-type: Search for EffectEvidenceSynthesis instances (**effectEvidenceSynthesisGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — The effect evidence synthesis publication date

context-type-value (optional)
Query Parameter — A use context type and value assigned to the effect evidence synthesis

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter — Intended jurisdiction for the effect evidence synthesis

description (optional)
Query Parameter — The description of the effect evidence synthesis

context-type (optional)
Query Parameter — A type of use context assigned to the effect evidence synthesis

title (optional)
Query Parameter — The human-friendly name of the effect evidence synthesis

context-quantity (optional)
Query Parameter — A quantity- or range-valued use context assigned to the effect evidence synthesis

effective (optional)
Query Parameter — The time during which the effect evidence synthesis is intended to be in use

context (optional)
Query Parameter — A use context assigned to the effect evidence synthesis

context-type-quantity (optional)
Query Parameter — A use context type and quantity- or range-based value assigned to the effect evidence synthesis

identifier (optional)
Query Parameter — External identifier for the effect evidence synthesis

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter — The business version of the effect evidence synthesis

url (optional)
Query Parameter — The uri that identifies the effect evidence synthesis

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — Computationally friendly name of the effect evidence synthesis

publisher (optional)
Query Parameter — Name of the publisher of the effect evidence synthesis

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)

Query Parameter — The current status of the effect evidence synthesis

Return type

GET /Encounter   Up

search-type: Search for Encounter instances (**encounterGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- AllergyIntolerance: Date first version of the resource instance was recorded
- CarePlan: Time period plan covers
- CareTeam: Time period team covers
- ClinicalImpression: When the assessment was documented
- Composition: Composition editing time
- Consent: When this Consent was created or indexed
- DiagnosticReport: The clinically relevant time of the report
- Encounter: A date within the period the Encounter lasted
- EpisodeOfCare: The provided date search value falls within the episode of care's period
- FamilyMemberHistory: When history was recorded or last updated
- Flag: Time period when flag is active
- Immunization: Vaccination (non)-Administration Date
- List: When the list was prepared
- Observation: Obtained date/time. If the obtained element is a period, a date that falls in the period
- Procedure: When the procedure was performed
- RiskAssessment: When was assessment made?
- SupplyRequest: When the request was made

participant-type (optional)
Query Parameter — Role of participant in encounter

subject (optional)
Query Parameter — The patient or group present at the encounter

_lastUpdated (optional)
Query Parameter — When the resource version last changed

appointment (optional)
Query Parameter — The appointment that scheduled this encounter

part-of (optional)
Query Parameter — Another Encounter this encounter is part of

type (optional)

Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): allergy | intolerance - Underlying mechanism (if known)
- [Composition](): Kind of composition (LOINC if possible)
- [DocumentManifest](): Kind of document set
- [DocumentReference](): Kind of document (LOINC if possible)
- [Encounter](): Specific type of encounter
- [EpisodeOfCare](): Type/class - e.g. specialist referral, disease management

participant (optional)
Query Parameter — Persons involved in the encounter other than the patient

reason-code (optional)
Query Parameter — Coded reason the encounter takes place

based-on (optional)
Query Parameter — The ServiceRequest that initiated this encounter

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
- [DetectedIssue](): Associated patient
- [DeviceRequest](): Individual the service is ordered for
- [DeviceUseStatement](): Search by subject - a patient
- [DiagnosticReport](): The subject of the report if a patient
- [DocumentManifest](): The subject of the set of documents
- [DocumentReference](): Who/what is the subject of the document
- [Encounter](): The patient or group present at the encounter
- [EpisodeOfCare](): The patient who is the focus of this episode of care
- [FamilyMemberHistory](): The identity of a subject to list family member history items for
- [Flag](): The identity of a subject to list flags for
- [Goal](): Who this goal is intended for
- [ImagingStudy](): Who the study is about
- [Immunization](): The patient for the vaccination record
- [List](): If all resources have the same subject
- [MedicationAdministration](): The identity of a patient to list administrations for
- [MedicationDispense](): The identity of a patient to list dispenses for
- [MedicationRequest](): Returns prescriptions for a specific patient
- [MedicationStatement](): Returns statements for a specific patient.
- [NutritionOrder](): The identity of the person who requires the diet, formula or nutritional supplement
- [Observation](): The subject that the observation is about (if patient)
- [Procedure](): Search by subject - a patient
- [RiskAssessment](): Who/what does assessment apply to?
- [ServiceRequest](): Search by subject - a patient
- [SupplyDelivery](): Patient for whom the item is supplied
- [VisionPrescription](): The identity of a patient to list dispenses for

location-period (optional)
Query Parameter — Time period during which the patient was present at the location

special-arrangement (optional)
Query Parameter — Wheelchair, translator, stretcher, etc.

class (optional)
Query Parameter — Classification of patient encounter

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

practitioner (optional)
Query Parameter — Persons involved in the encounter other than the patient

_security (optional)
Query Parameter — Security Labels applied to this resource

episode-of-care (optional)
Query Parameter — Episode(s) of care that this encounter should be recorded against

length (optional)
Query Parameter — Length of encounter in days

diagnosis (optional)
Query Parameter — The diagnosis or procedure relevant to the encounter

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

reason-reference (optional)
Query Parameter — Reason the encounter takes place (reference)

_source (optional)
Query Parameter — Identifies where the resource comes from

location (optional)
Query Parameter — Location the encounter takes place

service-provider (optional)
Query Parameter — The organization (facility) responsible for this encounter

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

account (optional)
Query Parameter — The set of accounts that may be used for billing for this Encounter

status (optional)
Query Parameter — planned | arrived | triaged | in-progress | onleave | finished | cancelled +

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /Encounter/_history   Up

type-history: Fetch the resource change history for all resources of type Encounter (**encounterHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

Responses
200

GET /Encounter/{id}/$everything

(**encounterIdEverythingGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

_count (optional)
Query Parameter — Results from this method are returned across multiple pages. This parameter controls the size of those pages.

_offset (optional)
Query Parameter — Results from this method are returned across multiple pages. This parameter controls the offset when fetching a page.

_lastUpdated (optional)
Query Parameter — Only return resources which were last updated as specified by the given range

_content (optional)
Query Parameter — Filter the resources to return only resources matching the given _content filter (note that this filter is applied only to results which link to the given patient, not to the patient itself or to supporting resources linked to by the matched resources)

_text (optional)
Query Parameter — Filter the resources to return only resources matching the given _text filter (note that this filter is applied only to results which link to the given patient, not to the patient itself or to supporting resources linked to by the matched resources)

_filter (optional)
Query Parameter — Filter the resources to return only resources matching the given _filter filter (note that this filter is applied only to results which link to the given patient, not to the patient itself or to supporting resources linked to by the matched resources)

_type (optional)
Query Parameter — Filter the resources to return only resources matching the given _type filter (note that this filter is applied only to results which link to the given patient, not to the patient itself or to supporting resources linked to by the matched resources)

_id (optional)
Query Parameter — Filter the resources to return based on the patient ids provided.

GET /Endpoint

search-type: Search for Endpoint instances (**endpointGet**)

This is a search type

Query parameters

identifier (optional)
Query Parameter — Identifies this endpoint across multiple systems

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

payload-type (optional)
Query Parameter — The type of content that may be used at this endpoint (e.g. XDS Discharge summaries)

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

connection-type (optional)
Query Parameter — Protocol/Profile/Standard to be used with this endpoint connection

organization (optional)
Query Parameter — The organization that is managing the endpoint

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — A name that this endpoint can be identified by

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — The current status of the Endpoint (usually expected to be active)

Return type
Object

Responses
200
Success Object

GET /EnrollmentRequest/{id}/_history

instance-history: Fetch the resource change history for all resources of type EnrollmentRequest (**enrollmentRequestIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /EnrollmentRequest/{id}/_history/{version_id}

vread-instance: Read EnrollmentRequest instance with specific version (**enrollmentRequestIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /EnrollmentRequest/{id}/$meta-add

(**enrollmentRequestIdMetaAddPost**)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

200
Success Object

POST /EnrollmentRequest/{id}/$meta-delete   Up

(enrollmentRequestIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

200
Success Object

GET /EnrollmentRequest/{id}/$meta

(**enrollmentRequestIdMetaGet**)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

PATCH /EnrollmentRequest/{id}

instance-patch: Patch a resource instance of type EnrollmentRequest by ID (**enrollmentRequestIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body [object](#) (optional)
Body Parameter —

Return type

search-type: Search for EpisodeOfCare instances (**episodeOfCareGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Date first version of the resource instance was recorded
- [CarePlan](): Time period plan covers
- [CareTeam](): Time period team covers
- [ClinicalImpression](): When the assessment was documented
- [Composition](): Composition editing time
- [Consent](): When this Consent was created or indexed
- [DiagnosticReport](): The clinically relevant time of the report
- [Encounter](): A date within the period the Encounter lasted
- [EpisodeOfCare](): The provided date search value falls within the episode of care's period
- [FamilyMemberHistory](): When history was recorded or last updated
- [Flag](): Time period when flag is active
- [Immunization](): Vaccination (non)-Administration Date
- [List](): When the list was prepared
- [Observation](): Obtained date/time. If the obtained element is a period, a date that falls in the period
- [Procedure](): When the procedure was performed
- [RiskAssessment](): When was assessment made?
- [SupplyRequest](): When the request was made

identifier (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): External ids for this item
- [CarePlan](): External Ids for this plan
- [CareTeam](): External Ids for this team
- [Composition](): Version-independent identifier for the Composition
- [Condition](): A unique identifier of the condition record
- [Consent](): Identifier for this record (external references)
- [DetectedIssue](): Unique id for the detected issue
- [DeviceRequest](): Business identifier for request/order
- [DiagnosticReport](): An identifier for the report
- [DocumentManifest](): Unique Identifier for the set of documents
- [DocumentReference](): Master Version Specific Identifier
- [Encounter](): Identifier(s) by which this encounter is known
- [EpisodeOfCare](): Business Identifier(s) relevant for this EpisodeOfCare
- [FamilyMemberHistory](): A search by a record identifier
- [Goal](): External Ids for this goal
- [ImagingStudy](): Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- [Immunization](): Business identifier
- [List](): Business identifier
- [MedicationAdministration](): Return administrations with this external identifier
- [MedicationDispense](): Returns dispenses with this external identifier
- [MedicationRequest](): Return prescriptions with this external identifier
- [MedicationStatement](): Return statements with this external identifier
- [NutritionOrder](): Return nutrition orders with this external identifier
- [Observation](): The unique id for a particular observation
- [Procedure](): A unique identifier for a procedure
- [RiskAssessment](): Unique identifier for the assessment
- [ServiceRequest](): Identifiers assigned to this order
- [SupplyDelivery](): External identifier
- [SupplyRequest](): Business Identifier for SupplyRequest
- [VisionPrescription](): Return prescriptions with this external identifier

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

type (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): allergy | intolerance - Underlying mechanism (if known)
- [Composition](): Kind of composition (LOINC if possible)
- [DocumentManifest](): Kind of document set
- [DocumentReference](): Kind of document (LOINC if possible)
- [Encounter](): Specific type of encounter
- [EpisodeOfCare](): Type/class - e.g. specialist referral, disease management

incoming-referral (optional)
Query Parameter — Incoming Referral Request

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

condition (optional)
Query Parameter — Conditions/problems/diagnoses this episode of care is for

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
- [DetectedIssue](): Associated patient
- [DeviceRequest](): Individual the service is ordered for
- [DeviceUseStatement](): Search by subject - a patient
- [DiagnosticReport](): The subject of the report if a patient
- [DocumentManifest](): The subject of the set of documents
- [DocumentReference](): Who/what is the subject of the document
- [Encounter](): The patient or group present at the encounter
- [EpisodeOfCare](): The patient who is the focus of this episode of care
- [FamilyMemberHistory](): The identity of a subject to list family member history items for
- [Flag](): The identity of a subject to list flags for
- [Goal](): Who this goal is intended for
- [ImagingStudy](): Who the study is about
- [Immunization](): The patient for the vaccination record
- [List](): If all resources have the same subject
- [MedicationAdministration](): The identity of a patient to list administrations for
- [MedicationDispense](): The identity of a patient to list dispenses for
- [MedicationRequest](): Returns prescriptions for a specific patient
- [MedicationStatement](): Returns statements for a specific patient.
- [NutritionOrder](): The identity of the person who requires the diet, formula or nutritional supplement
- [Observation](): The subject that the observation is about (if patient)
- [Procedure](): Search by subject - a patient
- [RiskAssessment](): Who/what does assessment apply to?
- [ServiceRequest](): Search by subject - a patient
- [SupplyDelivery](): Patient for whom the item is supplied
- [VisionPrescription](): The identity of a patient to list dispenses for

_tag (optional)
Query Parameter — Tags applied to this resource

organization (optional)

Query Parameter — The organization that has assumed the specific responsibilities of this EpisodeOfCare

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

care-manager (optional)
Query Parameter — Care manager/care coordinator for the patient

status (optional)
Query Parameter — The current status of the Episode of Care as provided (does not check the status history collection)

PUT /EpisodeOfCare/{id}

update-instance: Update an existing EpisodeOfCare instance, or create using a client-assigned ID (**episodeOfCareIdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`
- `application/fhir+xml`

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /EpisodeOfCare/{id}/$validate

(**episodeOfCareIdValidateGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

resource (optional)
Query Parameter —

mode (optional)
Query Parameter —

profile (optional)
Query Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

200
Success Object

GET /EpisodeOfCare/$meta [Up](Up)

(episodeOfCareMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /EpisodeOfCare [Up](Up)

create-type: Create a new EpisodeOfCare instance (**episodeOfCarePost**)

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

Success Object

GET /EventDefinition

search-type: Search for EventDefinition instances (**eventDefinitionGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — The event definition publication date

successor (optional)
Query Parameter — What resource is being referenced

context-type-value (optional)
Query Parameter — A use context type and value assigned to the event definition

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter — Intended jurisdiction for the event definition

derived-from (optional)
Query Parameter — What resource is being referenced

description (optional)
Query Parameter — The description of the event definition

context-type (optional)
Query Parameter — A type of use context assigned to the event definition

predecessor (optional)
Query Parameter — What resource is being referenced

composed-of (optional)
Query Parameter — What resource is being referenced

title (optional)
Query Parameter — The human-friendly name of the event definition

context-quantity (optional)
Query Parameter — A quantity- or range-valued use context assigned to the event definition

depends-on (optional)
Query Parameter — What resource is being referenced

effective (optional)
Query Parameter — The time during which the event definition is intended to be in use

context (optional)
Query Parameter — A use context assigned to the event definition

context-type-quantity (optional)
Query Parameter — A use context type and quantity- or range-based value assigned to the event definition

identifier (optional)
Query Parameter — External identifier for the event definition

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter — The business version of the event definition

url (optional)
Query Parameter — The uri that identifies the event definition

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — Computationally friendly name of the event definition

publisher (optional)
Query Parameter — Name of the publisher of the event definition

topic (optional)
Query Parameter — Topics associated with the module

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — The current status of the event definition

POST /EvidenceVariable/{id}/$expunge [Up](Up)

(**evidenceVariableIdExpungePost**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)

Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /EvidenceVariable/{id}

read-instance: Read EvidenceVariable instance (**evidenceVariableIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /EvidenceVariable/{id}/_history

instance-history: Fetch the resource change history for all resources of type EvidenceVariable
(**evidenceVariableIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /EvidenceVariable/{id}/_history/{version_id}

vread-instance: Read EvidenceVariable instance with specific version (**evidenceVariableIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /EvidenceVariable/{id}/$meta-add

(evidenceVariableIdMetaAddPost)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /EvidenceVariable/{id}/$meta-delete

(evidenceVariableIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

200
Success Object

GET /EvidenceVariable/{id}/$meta   Up

(evidenceVariableIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

200
Success Object

PATCH /EvidenceVariable/{id}   Up

instance-patch: Patch a resource instance of type EvidenceVariable by ID (**evidenceVariableIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`
- `application/fhir+xml`

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses

GET /FamilyMemberHistory

search-type: Search for FamilyMemberHistory instances (**familyMemberHistoryGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Date first version of the resource instance was recorded
- **CarePlan**: Time period plan covers
- **CareTeam**: Time period team covers
- **ClinicalImpression**: When the assessment was documented
- **Composition**: Composition editing time
- **Consent**: When this Consent was created or indexed
- **DiagnosticReport**: The clinically relevant time of the report
- **Encounter**: A date within the period the Encounter lasted
- **EpisodeOfCare**: The provided date search value falls within the episode of care's period
- **FamilyMemberHistory**: When history was recorded or last updated
- **Flag**: Time period when flag is active
- **Immunization**: Vaccination (non)-Administration Date
- **List**: When the list was prepared
- **Observation**: Obtained date/time. If the obtained element is a period, a date that falls in the period
- **Procedure**: When the procedure was performed
- **RiskAssessment**: When was assessment made?
- **SupplyRequest**: When the request was made

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

code (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Code that identifies the allergy or intolerance
- **Condition**: Code for the condition
- **DeviceRequest**: Code for what is being requested/ordered
- **DiagnosticReport**: The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- **FamilyMemberHistory**: A search by a condition code
- **List**: What the purpose of this list is
- **Medication**: Returns medications for a specific code
- **MedicationAdministration**: Return administrations of this medication code
- **MedicationDispense**: Returns dispenses of this medicine code
- **MedicationRequest**: Return prescriptions of this medication code
- **MedicationStatement**: Return statements of this medication code
- **Observation**: The code of the observation type
- **Procedure**: A code to identify a procedure
- **ServiceRequest**: What is being requested/ordered

_lastUpdated (optional)
Query Parameter — When the resource version last changed

sex (optional)
Query Parameter — A search by a sex code of a family member

_security (optional)
Query Parameter — Security Labels applied to this resource

instantiates-canonical (optional)
Query Parameter — Instantiates FHIR protocol or definition

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
- [DetectedIssue](): Associated patient
- [DeviceRequest](): Individual the service is ordered for
- [DeviceUseStatement](): Search by subject - a patient
- [DiagnosticReport](): The subject of the report if a patient
- [DocumentManifest](): The subject of the set of documents
- [DocumentReference](): Who/what is the subject of the document
- [Encounter](): The patient or group present at the encounter
- [EpisodeOfCare](): The patient who is the focus of this episode of care
- [FamilyMemberHistory](): The identity of a subject to list family member history items for
- [Flag](): The identity of a subject to list flags for
- [Goal](): Who this goal is intended for
- [ImagingStudy](): Who the study is about
- [Immunization](): The patient for the vaccination record
- [List](): If all resources have the same subject
- [MedicationAdministration](): The identity of a patient to list administrations for
- [MedicationDispense](): The identity of a patient to list dispenses for
- [MedicationRequest](): Returns prescriptions for a specific patient
- [MedicationStatement](): Returns statements for a specific patient.
- [NutritionOrder](): The identity of the person who requires the diet, formula or nutritional supplement
- [Observation](): The subject that the observation is about (if patient)
- [Procedure](): Search by subject - a patient
- [RiskAssessment](): Who/what does assessment apply to?
- [ServiceRequest](): Search by subject - a patient
- [SupplyDelivery](): Patient for whom the item is supplied
- [VisionPrescription](): The identity of a patient to list dispenses for

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

instantiates-uri (optional)
Query Parameter — Instantiates external protocol or definition

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

relationship (optional)
Query Parameter — A search by a relationship type

status (optional)
Query Parameter — partial | completed | entered-in-error | health-unknown

GET /Flag

search-type: Search for Flag instances (**flagGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- AllergyIntolerance: Date first version of the resource instance was recorded
- CarePlan: Time period plan covers
- CareTeam: Time period team covers
- ClinicalImpression: When the assessment was documented
- Composition: Composition editing time
- Consent: When this Consent was created or indexed
- DiagnosticReport: The clinically relevant time of the report
- Encounter: A date within the period the Encounter lasted
- EpisodeOfCare: The provided date search value falls within the episode of care's period
- FamilyMemberHistory: When history was recorded or last updated
- Flag: Time period when flag is active
- Immunization: Vaccination (non)-Administration Date
- List: When the list was prepared
- Observation: Obtained date/time. If the obtained element is a period, a date that falls in the period
- Procedure: When the procedure was performed
- RiskAssessment: When was assessment made?
- SupplyRequest: When the request was made

identifier (optional)
Query Parameter — Business identifier

author (optional)
Query Parameter — Flag creator

subject (optional)

Query Parameter — The identity of a subject to list flags for

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

encounter (optional)
Query Parameter —

Multiple Resources:

- [Composition](): Context of the Composition
- [DeviceRequest](): Encounter during which request was created
- [DiagnosticReport](): The Encounter when the order was made
- [DocumentReference](): Context of the document content
- [Flag](): Alert relevant during encounter
- [List](): Context in which list created
- [NutritionOrder](): Return nutrition orders with this encounter identifier
- [Observation](): Encounter related to the observation
- [Procedure](): Encounter created as part of
- [RiskAssessment](): Where was assessment performed?
- [ServiceRequest](): An encounter in which this request is made
- [VisionPrescription](): Return prescriptions with this encounter identifier

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
- [DetectedIssue](): Associated patient

- [AllergyIntolerance](#): External ids for this item
- [CarePlan](#): External Ids for this plan
- [CareTeam](#): External Ids for this team
- [Composition](#): Version-independent identifier for the Composition
- [Condition](#): A unique identifier of the condition record
- [Consent](#): Identifier for this record (external references)
- [DetectedIssue](#): Unique id for the detected issue
- [DeviceRequest](#): Business identifier for request/order

- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

subject (optional)
Query Parameter — Who this goal is intended for

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

start-date (optional)
Query Parameter — When goal pursuit begins

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

lifecycle-status (optional)
Query Parameter — proposed | planned | accepted | active | on-hold | completed | cancelled | entered-in-error | rejected

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

achievement-status (optional)
Query Parameter — in-progress | improving | worsening | no-change | achieved | sustaining | not-achieved | no-progress | not-attainable

patient (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Who the sensitivity is for
- **CarePlan**: Who the care plan is for
- **CareTeam**: Who care team is for
- **ClinicalImpression**: Patient or group assessed
- **Composition**: Who and/or what the composition is about
- **Condition**: Who has the condition?
- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for

- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — E.g. Treatment, dietary, behavioral, etc.

target-date (optional)
Query Parameter — Reach goal on or before

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /Goal/_history   Up

type-history: Fetch the resource change history for all resources of type Goal (**goalHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

200
Success Object

DELETE /Goal/{id}

instance-delete: Perform a logical delete on a resource instance (**goalIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /Goal/{id}/$expunge

(**goalIdExpungePost**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /Goal/{id}

read-instance: Read Goal instance (**goalIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /Goal/{id}/_history

instance-history: Fetch the resource change history for all resources of type Goal (**goalIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /Goal/{id}/_history/{version_id}

vread-instance: Read Goal instance with specific version (**goalIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

POST /Goal/{id}/$meta-add

(goalIdMetaAddPost)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

GET /GraphDefinition

search-type: Search for GraphDefinition instances (**graphDefinitionGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The capability statement publication date
- **CodeSystem**: The code system publication date
- **CompartmentDefinition**: The compartment definition publication date
- **ConceptMap**: The concept map publication date
- **GraphDefinition**: The graph definition publication date
- **ImplementationGuide**: The implementation guide publication date
- **MessageDefinition**: The message definition publication date
- **NamingSystem**: The naming system publication date
- **OperationDefinition**: The operation definition publication date
- **SearchParameter**: The search parameter publication date
- **StructureDefinition**: The structure definition publication date
- **StructureMap**: The structure map publication date
- **TerminologyCapabilities**: The terminology capabilities publication date
- **ValueSet**: The value set publication date

context-type-value (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and value assigned to the capability statement
- **CodeSystem**: A use context type and value assigned to the code system
- **CompartmentDefinition**: A use context type and value assigned to the compartment definition
- **ConceptMap**: A use context type and value assigned to the concept map
- **GraphDefinition**: A use context type and value assigned to the graph definition
- **ImplementationGuide**: A use context type and value assigned to the implementation guide
- **MessageDefinition**: A use context type and value assigned to the message definition
- **NamingSystem**: A use context type and value assigned to the naming system
- **OperationDefinition**: A use context type and value assigned to the operation definition
- **SearchParameter**: A use context type and value assigned to the search parameter
- **StructureDefinition**: A use context type and value assigned to the structure definition
- **StructureMap**: A use context type and value assigned to the structure map
- **TerminologyCapabilities**: A use context type and value assigned to the terminology capabilities
- **ValueSet**: A use context type and value assigned to the value set

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Intended jurisdiction for the capability statement
- **CodeSystem**: Intended jurisdiction for the code system
- **ConceptMap**: Intended jurisdiction for the concept map
- **GraphDefinition**: Intended jurisdiction for the graph definition
- **ImplementationGuide**: Intended jurisdiction for the implementation guide
- **MessageDefinition**: Intended jurisdiction for the message definition
- **NamingSystem**: Intended jurisdiction for the naming system
- **OperationDefinition**: Intended jurisdiction for the operation definition
- **SearchParameter**: Intended jurisdiction for the search parameter
- **StructureDefinition**: Intended jurisdiction for the structure definition
- **StructureMap**: Intended jurisdiction for the structure map
- **TerminologyCapabilities**: Intended jurisdiction for the terminology capabilities

- **ValueSet**: Intended jurisdiction for the value set

_security (optional)
Query Parameter — Security Labels applied to this resource

start (optional)
Query Parameter — Type of resource at which the graph starts

description (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The description of the capability statement
- **CodeSystem**: The description of the code system
- **CompartmentDefinition**: The description of the compartment definition
- **ConceptMap**: The description of the concept map
- **GraphDefinition**: The description of the graph definition
- **ImplementationGuide**: The description of the implementation guide
- **MessageDefinition**: The description of the message definition
- **NamingSystem**: The description of the naming system
- **OperationDefinition**: The description of the operation definition
- **SearchParameter**: The description of the search parameter
- **StructureDefinition**: The description of the structure definition
- **StructureMap**: The description of the structure map
- **TerminologyCapabilities**: The description of the terminology capabilities
- **ValueSet**: The description of the value set

context-type (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A type of use context assigned to the capability statement
- **CodeSystem**: A type of use context assigned to the code system
- **CompartmentDefinition**: A type of use context assigned to the compartment definition
- **ConceptMap**: A type of use context assigned to the concept map
- **GraphDefinition**: A type of use context assigned to the graph definition
- **ImplementationGuide**: A type of use context assigned to the implementation guide
- **MessageDefinition**: A type of use context assigned to the message definition
- **NamingSystem**: A type of use context assigned to the naming system
- **OperationDefinition**: A type of use context assigned to the operation definition
- **SearchParameter**: A type of use context assigned to the search parameter
- **StructureDefinition**: A type of use context assigned to the structure definition
- **StructureMap**: A type of use context assigned to the structure map
- **TerminologyCapabilities**: A type of use context assigned to the terminology capabilities
- **ValueSet**: A type of use context assigned to the value set

version (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The business version of the capability statement
- **CodeSystem**: The business version of the code system
- **CompartmentDefinition**: The business version of the compartment definition
- **ConceptMap**: The business version of the concept map
- **GraphDefinition**: The business version of the graph definition
- **ImplementationGuide**: The business version of the implementation guide
- **MessageDefinition**: The business version of the message definition
- **OperationDefinition**: The business version of the operation definition
- **SearchParameter**: The business version of the search parameter
- **StructureDefinition**: The business version of the structure definition
- **StructureMap**: The business version of the structure map
- **TerminologyCapabilities**: The business version of the terminology capabilities
- **ValueSet**: The business version of the value set

url (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The uri that identifies the capability statement
- **CodeSystem**: The uri that identifies the code system
- **CompartmentDefinition**: The uri that identifies the compartment definition
- **ConceptMap**: The uri that identifies the concept map
- **GraphDefinition**: The uri that identifies the graph definition
- **ImplementationGuide**: The uri that identifies the implementation guide
- **MessageDefinition**: The uri that identifies the message definition
- **OperationDefinition**: The uri that identifies the operation definition
- **SearchParameter**: The uri that identifies the search parameter
- **StructureDefinition**: The uri that identifies the structure definition
- **StructureMap**: The uri that identifies the structure map
- **TerminologyCapabilities**: The uri that identifies the terminology capabilities
- **ValueSet**: The uri that identifies the value set

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

context-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A quantity- or range-valued use context assigned to the capability statement
- **CodeSystem**: A quantity- or range-valued use context assigned to the code system
- **CompartmentDefinition**: A quantity- or range-valued use context assigned to the compartment definition
- **ConceptMap**: A quantity- or range-valued use context assigned to the concept map
- **GraphDefinition**: A quantity- or range-valued use context assigned to the graph definition
- **ImplementationGuide**: A quantity- or range-valued use context assigned to the implementation guide
- **MessageDefinition**: A quantity- or range-valued use context assigned to the message definition
- **NamingSystem**: A quantity- or range-valued use context assigned to the naming system
- **OperationDefinition**: A quantity- or range-valued use context assigned to the operation definition
- **SearchParameter**: A quantity- or range-valued use context assigned to the search parameter
- **StructureDefinition**: A quantity- or range-valued use context assigned to the structure definition
- **StructureMap**: A quantity- or range-valued use context assigned to the structure map
- **TerminologyCapabilities**: A quantity- or range-valued use context assigned to the terminology capabilities
- **ValueSet**: A quantity- or range-valued use context assigned to the value set

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

context (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context assigned to the capability statement
- **CodeSystem**: A use context assigned to the code system
- **CompartmentDefinition**: A use context assigned to the compartment definition
- **ConceptMap**: A use context assigned to the concept map
- **GraphDefinition**: A use context assigned to the graph definition
- **ImplementationGuide**: A use context assigned to the implementation guide
- **MessageDefinition**: A use context assigned to the message definition
- **NamingSystem**: A use context assigned to the naming system
- **OperationDefinition**: A use context assigned to the operation definition
- **SearchParameter**: A use context assigned to the search parameter
- **StructureDefinition**: A use context assigned to the structure definition
- **StructureMap**: A use context assigned to the structure map
- **TerminologyCapabilities**: A use context assigned to the terminology capabilities
- **ValueSet**: A use context assigned to the value set

name (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): Computationally friendly name of the capability statement
- [CodeSystem](): Computationally friendly name of the code system
- [CompartmentDefinition](): Computationally friendly name of the compartment definition
- [ConceptMap](): Computationally friendly name of the concept map
- [GraphDefinition](): Computationally friendly name of the graph definition
- [ImplementationGuide](): Computationally friendly name of the implementation guide
- [MessageDefinition](): Computationally friendly name of the message definition
- [NamingSystem](): Computationally friendly name of the naming system
- [OperationDefinition](): Computationally friendly name of the operation definition
- [SearchParameter](): Computationally friendly name of the search parameter
- [StructureDefinition](): Computationally friendly name of the structure definition
- [StructureMap](): Computationally friendly name of the structure map
- [TerminologyCapabilities](): Computationally friendly name of the terminology capabilities
- [ValueSet](): Computationally friendly name of the value set

publisher (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): Name of the publisher of the capability statement
- [CodeSystem](): Name of the publisher of the code system
- [CompartmentDefinition](): Name of the publisher of the compartment definition
- [ConceptMap](): Name of the publisher of the concept map
- [GraphDefinition](): Name of the publisher of the graph definition
- [ImplementationGuide](): Name of the publisher of the implementation guide
- [MessageDefinition](): Name of the publisher of the message definition
- [NamingSystem](): Name of the publisher of the naming system
- [OperationDefinition](): Name of the publisher of the operation definition
- [SearchParameter](): Name of the publisher of the search parameter
- [StructureDefinition](): Name of the publisher of the structure definition
- [StructureMap](): Name of the publisher of the structure map
- [TerminologyCapabilities](): Name of the publisher of the terminology capabilities
- [ValueSet](): Name of the publisher of the value set

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

context-type-quantity (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): A use context type and quantity- or range-based value assigned to the capability statement
- [CodeSystem](): A use context type and quantity- or range-based value assigned to the code system
- [CompartmentDefinition](): A use context type and quantity- or range-based value assigned to the compartment definition
- [ConceptMap](): A use context type and quantity- or range-based value assigned to the concept map
- [GraphDefinition](): A use context type and quantity- or range-based value assigned to the graph definition
- [ImplementationGuide](): A use context type and quantity- or range-based value assigned to the implementation guide
- [MessageDefinition](): A use context type and quantity- or range-based value assigned to the message definition

- **NamingSystem**: A use context type and quantity- or range-based value assigned to the naming system
- **OperationDefinition**: A use context type and quantity- or range-based value assigned to the operation definition
- **SearchParameter**: A use context type and quantity- or range-based value assigned to the search parameter
- **StructureDefinition**: A use context type and quantity- or range-based value assigned to the structure definition
- **StructureMap**: A use context type and quantity- or range-based value assigned to the structure map
- **TerminologyCapabilities**: A use context type and quantity- or range-based value assigned to the terminology capabilities
- **ValueSet**: A use context type and quantity- or range-based value assigned to the value set

status (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The current status of the capability statement
- **CodeSystem**: The current status of the code system
- **CompartmentDefinition**: The current status of the compartment definition
- **ConceptMap**: The current status of the concept map
- **GraphDefinition**: The current status of the graph definition
- **ImplementationGuide**: The current status of the implementation guide
- **MessageDefinition**: The current status of the message definition
- **NamingSystem**: The current status of the naming system
- **OperationDefinition**: The current status of the operation definition
- **SearchParameter**: The current status of the search parameter
- **StructureDefinition**: The current status of the structure definition
- **StructureMap**: The current status of the structure map
- **TerminologyCapabilities**: The current status of the terminology capabilities
- **ValueSet**: The current status of the value set

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /GraphDefinition/{id}/$meta   [Up](#)

(graphDefinitionIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

PATCH /GraphDefinition/{id}   [Up](#)

instance-patch: Patch a resource instance of type GraphDefinition by ID **(graphDefinitionIdPatch)**

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body [object](#) (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

PUT /GraphDefinition/{id}   [Up](#)

update-instance: Update an existing GraphDefinition instance, or create using a client-assigned ID (**graphDefinitionIdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body [object](#) (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

Success [Object](#)

GET /Group   [Up](#)

search-type: Search for Group instances (**groupGet**)

This is a search type

Query parameters

actual (optional)
Query Parameter — Descriptive or actual

identifier (optional)
Query Parameter — Unique id

managing-entity (optional)
Query Parameter — Entity that is the custodian of the Group's definition

code (optional)
Query Parameter — The kind of resources contained

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

type (optional)
Query Parameter — The type of resources the group contains

characteristic (optional)
Query Parameter — Kind of characteristic

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

characteristic-value (optional)
Query Parameter — A composite of both characteristic and value

_profile (optional)

Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

member (optional)
Query Parameter — Reference to the group member

_source (optional)
Query Parameter — Identifies where the resource comes from

exclude (optional)
Query Parameter — Group includes or excludes

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

value (optional)
Query Parameter — Value held by characteristic

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

GET /HealthcareService

search-type: Search for HealthcareService instances (**healthcareServiceGet**)

This is a search type

Query parameters

identifier (optional)
Query Parameter — External identifiers for this item

specialty (optional)
Query Parameter — The specialty of the service provided by this healthcare service

service-category (optional)
Query Parameter — Service Category of the Healthcare Service

_lastUpdated (optional)
Query Parameter — When the resource version last changed

service-type (optional)
Query Parameter — The type of service provided by this healthcare service

_security (optional)
Query Parameter — Security Labels applied to this resource

active (optional)
Query Parameter — The Healthcare Service is currently marked as active

program (optional)
Query Parameter — One of the Programs supported by this HealthcareService

characteristic (optional)
Query Parameter — One of the HealthcareService's characteristics

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

endpoint (optional)
Query Parameter — Technical endpoints providing access to electronic services operated for the healthcare service

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

coverage-area (optional)
Query Parameter — Location(s) service is intended for/available to

_tag (optional)
Query Parameter — Tags applied to this resource

organization (optional)
Query Parameter — The organization that provides this Healthcare Service

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — A portion of the Healthcare service name

_source (optional)
Query Parameter — Identifies where the resource comes from

location (optional)
Query Parameter — The location of the Healthcare Service

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

search-type: Search for ImagingStudy instances (**imagingStudyGet**)

This is a search type

Query parameters

reason (optional)
Query Parameter — The reason for the study

dicom-class (optional)
Query Parameter — The type of the instance

instance (optional)
Query Parameter — SOP Instance UID for an instance

modality (optional)
Query Parameter — The modality of the series

subject (optional)
Query Parameter — Who the study is about

_lastUpdated (optional)
Query Parameter — When the resource version last changed

endpoint (optional)
Query Parameter — The endpoint for the study or series

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](#): Who the sensitivity is for
- [CarePlan](#): Who the care plan is for
- [CareTeam](#): Who care team is for
- [ClinicalImpression](#): Patient or group assessed
- [Composition](#): Who and/or what the composition is about
- [Condition](#): Who has the condition?
- [Consent](#): Who the consent applies to
- [DetectedIssue](#): Associated patient
- [DeviceRequest](#): Individual the service is ordered for
- [DeviceUseStatement](#): Search by subject - a patient
- [DiagnosticReport](#): The subject of the report if a patient
- [DocumentManifest](#): The subject of the set of documents
- [DocumentReference](#): Who/what is the subject of the document
- [Encounter](#): The patient or group present at the encounter
- [EpisodeOfCare](#): The patient who is the focus of this episode of care
- [FamilyMemberHistory](#): The identity of a subject to list family member history items for
- [Flag](#): The identity of a subject to list flags for
- [Goal](#): Who this goal is intended for
- [ImagingStudy](#): Who the study is about
- [Immunization](#): The patient for the vaccination record
- [List](#): If all resources have the same subject
- [MedicationAdministration](#): The identity of a patient to list administrations for
- [MedicationDispense](#): The identity of a patient to list dispenses for
- [MedicationRequest](#): Returns prescriptions for a specific patient
- [MedicationStatement](#): Returns statements for a specific patient.
- [NutritionOrder](#): The identity of the person who requires the diet, formula or nutritional supplement
- [Observation](#): The subject that the observation is about (if patient)
- [Procedure](#): Search by subject - a patient

- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

bodysite (optional)
Query Parameter — The body site studied

performer (optional)
Query Parameter — The person who performed the study

_security (optional)
Query Parameter — Security Labels applied to this resource

interpreter (optional)
Query Parameter — Who interpreted the images

started (optional)
Query Parameter — When the study was started

encounter (optional)
Query Parameter — The context of the study

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

referrer (optional)
Query Parameter — The referring physician

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

series (optional)
Query Parameter — DICOM Series Instance UID for a series

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

basedon (optional)
Query Parameter — The order for the image

status (optional)
Query Parameter — The status of the study

GET /ImmunizationEvaluation

search-type: Search for ImmunizationEvaluation instances (**immunizationEvaluationGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — Date the evaluation was generated

identifier (optional)
Query Parameter — ID of the evaluation

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

dose-status (optional)
Query Parameter — The status of the dose relative to published recommendations

immunization-event (optional)
Query Parameter — The vaccine administration event being evaluated

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

target-disease (optional)
Query Parameter — The vaccine preventable disease being evaluated against

patient (optional)
Query Parameter — The patient being evaluated

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — Immunization evaluation status

- [StructureMap](#): The structure map publication date
- [TerminologyCapabilities](#): The terminology capabilities publication date
- [ValueSet](#): The value set publication date

context-type-value (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](#): A use context type and value assigned to the capability statement
- [CodeSystem](#): A use context type and value assigned to the code system
- [CompartmentDefinition](#): A use context type and value assigned to the compartment definition
- [ConceptMap](#): A use context type and value assigned to the concept map
- [GraphDefinition](#): A use context type and value assigned to the graph definition
- [ImplementationGuide](#): A use context type and value assigned to the implementation guide
- [MessageDefinition](#): A use context type and value assigned to the message definition
- [NamingSystem](#): A use context type and value assigned to the naming system
- [OperationDefinition](#): A use context type and value assigned to the operation definition
- [SearchParameter](#): A use context type and value assigned to the search parameter

- **StructureDefinition**: A use context type and value assigned to the structure definition
- **StructureMap**: A use context type and value assigned to the structure map
- **TerminologyCapabilities**: A use context type and value assigned to the terminology capabilities
- **ValueSet**: A use context type and value assigned to the value set

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Intended jurisdiction for the capability statement
- **CodeSystem**: Intended jurisdiction for the code system
- **ConceptMap**: Intended jurisdiction for the concept map
- **GraphDefinition**: Intended jurisdiction for the graph definition
- **ImplementationGuide**: Intended jurisdiction for the implementation guide
- **MessageDefinition**: Intended jurisdiction for the message definition
- **NamingSystem**: Intended jurisdiction for the naming system
- **OperationDefinition**: Intended jurisdiction for the operation definition
- **SearchParameter**: Intended jurisdiction for the search parameter
- **StructureDefinition**: Intended jurisdiction for the structure definition
- **StructureMap**: Intended jurisdiction for the structure map
- **TerminologyCapabilities**: Intended jurisdiction for the terminology capabilities
- **ValueSet**: Intended jurisdiction for the value set

description (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The description of the capability statement
- **CodeSystem**: The description of the code system
- **CompartmentDefinition**: The description of the compartment definition
- **ConceptMap**: The description of the concept map
- **GraphDefinition**: The description of the graph definition
- **ImplementationGuide**: The description of the implementation guide
- **MessageDefinition**: The description of the message definition
- **NamingSystem**: The description of the naming system
- **OperationDefinition**: The description of the operation definition
- **SearchParameter**: The description of the search parameter
- **StructureDefinition**: The description of the structure definition
- **StructureMap**: The description of the structure map
- **TerminologyCapabilities**: The description of the terminology capabilities
- **ValueSet**: The description of the value set

context-type (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A type of use context assigned to the capability statement
- **CodeSystem**: A type of use context assigned to the code system
- **CompartmentDefinition**: A type of use context assigned to the compartment definition
- **ConceptMap**: A type of use context assigned to the concept map
- **GraphDefinition**: A type of use context assigned to the graph definition
- **ImplementationGuide**: A type of use context assigned to the implementation guide
- **MessageDefinition**: A type of use context assigned to the message definition
- **NamingSystem**: A type of use context assigned to the naming system
- **OperationDefinition**: A type of use context assigned to the operation definition
- **SearchParameter**: A type of use context assigned to the search parameter
- **StructureDefinition**: A type of use context assigned to the structure definition
- **StructureMap**: A type of use context assigned to the structure map
- **TerminologyCapabilities**: A type of use context assigned to the terminology capabilities
- **ValueSet**: A type of use context assigned to the value set

experimental (optional)

Query Parameter — For testing purposes, not real usage

global (optional)
Query Parameter — Profile that all resources must conform to

title (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The human-friendly name of the capability statement
- **CodeSystem**: The human-friendly name of the code system
- **ConceptMap**: The human-friendly name of the concept map
- **ImplementationGuide**: The human-friendly name of the implementation guide
- **MessageDefinition**: The human-friendly name of the message definition
- **OperationDefinition**: The human-friendly name of the operation definition
- **StructureDefinition**: The human-friendly name of the structure definition
- **StructureMap**: The human-friendly name of the structure map
- **TerminologyCapabilities**: The human-friendly name of the terminology capabilities
- **ValueSet**: The human-friendly name of the value set

context-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A quantity- or range-valued use context assigned to the capability statement
- **CodeSystem**: A quantity- or range-valued use context assigned to the code system
- **CompartmentDefinition**: A quantity- or range-valued use context assigned to the compartment definition
- **ConceptMap**: A quantity- or range-valued use context assigned to the concept map
- **GraphDefinition**: A quantity- or range-valued use context assigned to the graph definition
- **ImplementationGuide**: A quantity- or range-valued use context assigned to the implementation guide
- **MessageDefinition**: A quantity- or range-valued use context assigned to the message definition
- **NamingSystem**: A quantity- or range-valued use context assigned to the naming system
- **OperationDefinition**: A quantity- or range-valued use context assigned to the operation definition
- **SearchParameter**: A quantity- or range-valued use context assigned to the search parameter
- **StructureDefinition**: A quantity- or range-valued use context assigned to the structure definition
- **StructureMap**: A quantity- or range-valued use context assigned to the structure map
- **TerminologyCapabilities**: A quantity- or range-valued use context assigned to the terminology capabilities
- **ValueSet**: A quantity- or range-valued use context assigned to the value set

depends-on (optional)
Query Parameter — Identity of the IG that this depends on

context (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context assigned to the capability statement
- **CodeSystem**: A use context assigned to the code system
- **CompartmentDefinition**: A use context assigned to the compartment definition
- **ConceptMap**: A use context assigned to the concept map
- **GraphDefinition**: A use context assigned to the graph definition
- **ImplementationGuide**: A use context assigned to the implementation guide
- **MessageDefinition**: A use context assigned to the message definition
- **NamingSystem**: A use context assigned to the naming system
- **OperationDefinition**: A use context assigned to the operation definition
- **SearchParameter**: A use context assigned to the search parameter
- **StructureDefinition**: A use context assigned to the structure definition
- **StructureMap**: A use context assigned to the structure map
- **TerminologyCapabilities**: A use context assigned to the terminology capabilities
- **ValueSet**: A use context assigned to the value set

context-type-quantity (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and quantity- or range-based value assigned to the capability statement
- **CodeSystem**: A use context type and quantity- or range-based value assigned to the code system
- **CompartmentDefinition**: A use context type and quantity- or range-based value assigned to the compartment definition
- **ConceptMap**: A use context type and quantity- or range-based value assigned to the concept map
- **GraphDefinition**: A use context type and quantity- or range-based value assigned to the graph definition
- **ImplementationGuide**: A use context type and quantity- or range-based value assigned to the implementation guide
- **MessageDefinition**: A use context type and quantity- or range-based value assigned to the message definition
- **NamingSystem**: A use context type and quantity- or range-based value assigned to the naming system
- **OperationDefinition**: A use context type and quantity- or range-based value assigned to the operation definition
- **SearchParameter**: A use context type and quantity- or range-based value assigned to the search parameter
- **StructureDefinition**: A use context type and quantity- or range-based value assigned to the structure definition
- **StructureMap**: A use context type and quantity- or range-based value assigned to the structure map
- **TerminologyCapabilities**: A use context type and quantity- or range-based value assigned to the terminology capabilities
- **ValueSet**: A use context type and quantity- or range-based value assigned to the value set

resource (optional)
Query Parameter — Location of the resource

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The business version of the capability statement
- **CodeSystem**: The business version of the code system
- **CompartmentDefinition**: The business version of the compartment definition
- **ConceptMap**: The business version of the concept map
- **GraphDefinition**: The business version of the graph definition
- **ImplementationGuide**: The business version of the implementation guide
- **MessageDefinition**: The business version of the message definition
- **OperationDefinition**: The business version of the operation definition
- **SearchParameter**: The business version of the search parameter
- **StructureDefinition**: The business version of the structure definition
- **StructureMap**: The business version of the structure map
- **TerminologyCapabilities**: The business version of the terminology capabilities
- **ValueSet**: The business version of the value set

url (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The uri that identifies the capability statement
- **CodeSystem**: The uri that identifies the code system
- **CompartmentDefinition**: The uri that identifies the compartment definition
- **ConceptMap**: The uri that identifies the concept map
- **GraphDefinition**: The uri that identifies the graph definition
- **ImplementationGuide**: The uri that identifies the implementation guide
- **MessageDefinition**: The uri that identifies the message definition
- **OperationDefinition**: The uri that identifies the operation definition
- **SearchParameter**: The uri that identifies the search parameter

- **StructureDefinition**: The uri that identifies the structure definition
- **StructureMap**: The uri that identifies the structure map
- **TerminologyCapabilities**: The uri that identifies the terminology capabilities
- **ValueSet**: The uri that identifies the value set

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Computationally friendly name of the capability statement
- **CodeSystem**: Computationally friendly name of the code system
- **CompartmentDefinition**: Computationally friendly name of the compartment definition
- **ConceptMap**: Computationally friendly name of the concept map
- **GraphDefinition**: Computationally friendly name of the graph definition
- **ImplementationGuide**: Computationally friendly name of the implementation guide
- **MessageDefinition**: Computationally friendly name of the message definition
- **NamingSystem**: Computationally friendly name of the naming system
- **OperationDefinition**: Computationally friendly name of the operation definition
- **SearchParameter**: Computationally friendly name of the search parameter
- **StructureDefinition**: Computationally friendly name of the structure definition
- **StructureMap**: Computationally friendly name of the structure map
- **TerminologyCapabilities**: Computationally friendly name of the terminology capabilities
- **ValueSet**: Computationally friendly name of the value set

publisher (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Name of the publisher of the capability statement
- **CodeSystem**: Name of the publisher of the code system
- **CompartmentDefinition**: Name of the publisher of the compartment definition
- **ConceptMap**: Name of the publisher of the concept map
- **GraphDefinition**: Name of the publisher of the graph definition
- **ImplementationGuide**: Name of the publisher of the implementation guide
- **MessageDefinition**: Name of the publisher of the message definition
- **NamingSystem**: Name of the publisher of the naming system
- **OperationDefinition**: Name of the publisher of the operation definition
- **SearchParameter**: Name of the publisher of the search parameter
- **StructureDefinition**: Name of the publisher of the structure definition
- **StructureMap**: Name of the publisher of the structure map
- **TerminologyCapabilities**: Name of the publisher of the terminology capabilities
- **ValueSet**: Name of the publisher of the value set

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The current status of the capability statement
- **CodeSystem**: The current status of the code system
- **CompartmentDefinition**: The current status of the compartment definition
- **ConceptMap**: The current status of the concept map
- **GraphDefinition**: The current status of the graph definition
- **ImplementationGuide**: The current status of the implementation guide
- **MessageDefinition**: The current status of the message definition
- **NamingSystem**: The current status of the naming system
- **OperationDefinition**: The current status of the operation definition
- **SearchParameter**: The current status of the search parameter
- **StructureDefinition**: The current status of the structure definition
- **StructureMap**: The current status of the structure map
- **TerminologyCapabilities**: The current status of the terminology capabilities
- **ValueSet**: The current status of the value set

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success **Object**

GET /ImplementationGuide/_history   Up

type-history: Fetch the resource change history for all resources of type ImplementationGuide (**implementationGuideHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success **Object**

DELETE /ImplementationGuide/{id}   Up

instance-delete: Perform a logical delete on a resource instance (**implementationGuideIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /ImplementationGuide/{id}/$expunge

(implementationGuideIdExpungePost)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /ImplementationGuide/{id}

read-instance: Read ImplementationGuide instance (**implementationGuideIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200

Success Object

GET /ImplementationGuide/{id}/_history

instance-history: Fetch the resource change history for all resources of type ImplementationGuide (**implementationGuideIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /ImplementationGuide/{id}/_history/{version_id}

vread-instance: Read ImplementationGuide instance with specific version (**implementationGuideIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

POST /ImplementationGuide/{id}/$meta-add

(**implementationGuideIdMetaAddPost**)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

200

Success Object

POST /ImplementationGuide/{id}/$meta-delete   Up

(implementationGuideIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

200

Success Object

GET /ImplementationGuide/{id}/$meta   Up

(implementationGuideIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

PATCH /ImplementationGuide/{id}   Up

instance-patch: Patch a resource instance of type ImplementationGuide by ID (**implementationGuideIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

PUT /ImplementationGuide/{id}   Up

update-instance: Update an existing ImplementationGuide instance, or create using a client-assigned ID (**implementationGuideIdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

Success <u>Object</u>

GET /InsurancePlan   <u>Up</u>

search-type: Search for InsurancePlan instances **(insurancePlanGet)**

This is a search type

Query parameters

identifier (optional)
Query Parameter — Any identifier for the organization (not the accreditation issuer's identifier)

address (optional)
Query Parameter — A server defined search that may match any of the string fields in the Address,
including line, city, district, state, country, postalCode, and/or text

address-state (optional)

Query Parameter — A state specified in an address

owned-by (optional)
Query Parameter — An organization of which this organization forms a part

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

type (optional)
Query Parameter — A code for the type of organization

address-postalcode (optional)
Query Parameter — A postal code specified in an address

address-country (optional)
Query Parameter — A country specified in an address

administered-by (optional)
Query Parameter — Product administrator

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

endpoint (optional)
Query Parameter — Technical endpoint

phonetic (optional)
Query Parameter — A portion of the organization's name using some kind of phonetic matching algorithm

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

address-use (optional)
Query Parameter — A use code specified in an address

name (optional)
Query Parameter — A portion of the organization's name or alias

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

address-city (optional)
Query Parameter — A city specified in an address

status (optional)
Query Parameter — Is the Organization record active

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /InsurancePlan/_history

GET /Invoice   [Up](#)

search-type: Search for Invoice instances (**invoiceGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — Invoice date / posting date

identifier (optional)
Query Parameter — Business Identifier for item

totalgross (optional)
Query Parameter — Gross total of this Invoice

participant-role (optional)
Query Parameter — Type of involvement in creation of this Invoice

subject (optional)
Query Parameter — Recipient(s) of goods and services

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

type (optional)
Query Parameter — Type of Invoice

issuer (optional)
Query Parameter — Issuing Organization of Invoice

participant (optional)
Query Parameter — Individual who was involved

totalnet (optional)
Query Parameter — Net total of this Invoice

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter — Recipient(s) of goods and services

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

recipient (optional)
Query Parameter — Recipient of this invoice

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

account (optional)
Query Parameter — Account that is being balanced

status (optional)
Query Parameter — draft | issued | balanced | cancelled | entered-in-error

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /Invoice/_history   [Up](Up)

type-history: Fetch the resource change history for all resources of type Invoice (**invoiceHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

DELETE /Invoice/{id}   [Up](Up)

instance-delete: Perform a logical delete on a resource instance (**invoiceIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200

GET /Library Up

search-type: Search for Library instances (**libraryGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — The library publication date

successor (optional)
Query Parameter — What resource is being referenced

context-type-value (optional)
Query Parameter — A use context type and value assigned to the library

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter — Intended jurisdiction for the library

derived-from (optional)
Query Parameter — What resource is being referenced

description (optional)
Query Parameter — The description of the library

context-type (optional)
Query Parameter — A type of use context assigned to the library

predecessor (optional)
Query Parameter — What resource is being referenced

composed-of (optional)
Query Parameter — What resource is being referenced

title (optional)
Query Parameter — The human-friendly name of the library

type (optional)
Query Parameter — The type of the library (e.g. logic-library, model-definition, asset-collection, module-definition)

context-quantity (optional)
Query Parameter — A quantity- or range-valued use context assigned to the library

depends-on (optional)
Query Parameter — What resource is being referenced

effective (optional)
Query Parameter — The time during which the library is intended to be in use

context (optional)
Query Parameter — A use context assigned to the library

content-type (optional)
Query Parameter — The type of content in the library (e.g. text/cql)

context-type-quantity (optional)
Query Parameter — A use context type and quantity- or range-based value assigned to the library

identifier (optional)
Query Parameter — External identifier for the library

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter — The business version of the library

url (optional)
Query Parameter — The uri that identifies the library

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — Computationally friendly name of the library

publisher (optional)
Query Parameter — Name of the publisher of the library

topic (optional)
Query Parameter — Topics associated with the module

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — The current status of the library

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

Delete tags, profiles, and/or security labels from a resource

Path parameters

    id (required)
    Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

    body [object](#) (optional)
    Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

GET /Linkage/{id}/$meta   [Up](#)

(linkageIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success **Object**

PATCH /Linkage/{id}

instance-patch: Patch a resource instance of type Linkage by ID (**linkageIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success **Object**

PUT /Linkage/{id}

update-instance: Update an existing Linkage instance, or create using a client-assigned ID (**linkageIdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

200
Success Object

GET /Linkage/{id}/$validate   Up

(linkageIdValidateGet)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

resource (optional)
Query Parameter —

mode (optional)
Query Parameter —

profile (optional)
Query Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

200
Success Object

Up

GET /Linkage/$meta

(linkageMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /Linkage   [Up](Up)

create-type: Create a new Linkage instance (**linkagePost**)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

List

POST /List/$expunge

(**listExpungePost**)

Consumes
This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /List

search-type: Search for List instances (**listGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- AllergyIntolerance: Date first version of the resource instance was recorded
- CarePlan: Time period plan covers

- **CareTeam**: Time period team covers
- **ClinicalImpression**: When the assessment was documented
- **Composition**: Composition editing time
- **Consent**: When this Consent was created or indexed
- **DiagnosticReport**: The clinically relevant time of the report
- **Encounter**: A date within the period the Encounter lasted
- **EpisodeOfCare**: The provided date search value falls within the episode of care's period
- **FamilyMemberHistory**: When history was recorded or last updated
- **Flag**: Time period when flag is active
- **Immunization**: Vaccination (non)-Administration Date
- **List**: When the list was prepared
- **Observation**: Obtained date/time. If the obtained element is a period, a date that falls in the period
- **Procedure**: When the procedure was performed
- **RiskAssessment**: When was assessment made?
- **SupplyRequest**: When the request was made

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

empty-reason (optional)
Query Parameter — Why list is empty

item (optional)
Query Parameter — Actual entry

code (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Code that identifies the allergy or intolerance
- **Condition**: Code for the condition
- **DeviceRequest**: Code for what is being requested/ordered
- **DiagnosticReport**: The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- **FamilyMemberHistory**: A search by a condition code

- **List**: What the purpose of this list is
- **Medication**: Returns medications for a specific code
- **MedicationAdministration**: Return administrations of this medication code
- **MedicationDispense**: Returns dispenses of this medicine code
- **MedicationRequest**: Return prescriptions of this medication code
- **MedicationStatement**: Return statements of this medication code
- **Observation**: The code of the observation type
- **Procedure**: A code to identify a procedure
- **ServiceRequest**: What is being requested/ordered

notes (optional)
Query Parameter — The annotation - text content (as markdown)

subject (optional)
Query Parameter — If all resources have the same subject

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

encounter (optional)
Query Parameter —

Multiple Resources:

- **Composition**: Context of the Composition
- **DeviceRequest**: Encounter during which request was created
- **DiagnosticReport**: The Encounter when the order was made
- **DocumentReference**: Context of the document content
- **Flag**: Alert relevant during encounter
- **List**: Context in which list created
- **NutritionOrder**: Return nutrition orders with this encounter identifier
- **Observation**: Encounter related to the observation
- **Procedure**: Encounter created as part of
- **RiskAssessment**: Where was assessment performed?
- **ServiceRequest**: An encounter in which this request is made
- **VisionPrescription**: Return prescriptions with this encounter identifier

source (optional)
Query Parameter — Who and/or what defined the list contents (aka Author)

title (optional)
Query Parameter — Descriptive name for the list

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Who the sensitivity is for
- **CarePlan**: Who the care plan is for
- **CareTeam**: Who care team is for
- **ClinicalImpression**: Patient or group assessed
- **Composition**: Who and/or what the composition is about
- **Condition**: Who has the condition?
- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care

- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — current | retired | entered-in-error

GET /Location

search-type: Search for Location instances (**locationGet**)

This is a search type

Query parameters

address-state (optional)
Query Parameter — A state specified in an address

_lastUpdated (optional)
Query Parameter — When the resource version last changed

operational-status (optional)
Query Parameter — Searches for locations (typically bed/room) that have an operational status (e.g. contaminated, housekeeping)

type (optional)
Query Parameter — A code for the type of location

address-country (optional)
Query Parameter — A country specified in an address

endpoint (optional)
Query Parameter — Technical endpoints providing access to services operated for the location

near (optional)
Query Parameter —

Search for locations where the location.position is near to, or within a specified distance of, the provided coordinates expressed as [latitude]|[longitude]|[distance]|[units] (using the WGS84 datum, see notes). If the units are omitted, then kms should be assumed. If the distance is omitted, then the server can use its own discretion as to what distances should be considered near (and units are irrelevant)

Servers may search using various techniques that might have differing accuracies, depending on implementation efficiency.

Requires the near-distance parameter to be provided also

address-city (optional)
Query Parameter — A city specified in an address

identifier (optional)
Query Parameter — An identifier for the location

partof (optional)
Query Parameter — A location of which this location is a part

address (optional)
Query Parameter — A (part of the) address of the location

_security (optional)
Query Parameter — Security Labels applied to this resource

address-postalcode (optional)
Query Parameter — A postal code specified in an address

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

organization (optional)
Query Parameter — Searches for locations that are managed by the provided organization

_has (optional)
Query Parameter — Return resources linked to by the given target

address-use (optional)

Query Parameter — A use code specified in an address

name (optional)
Query Parameter — A portion of the location's name or alias

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — Searches for locations with a specific kind of status

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

GET /Measure

search-type: Search for Measure instances (**measureGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — The measure publication date

successor (optional)
Query Parameter — What resource is being referenced

context-type-value (optional)
Query Parameter — A use context type and value assigned to the measure

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter — Intended jurisdiction for the measure

derived-from (optional)
Query Parameter — What resource is being referenced

description (optional)
Query Parameter — The description of the measure

context-type (optional)
Query Parameter — A type of use context assigned to the measure

predecessor (optional)
Query Parameter — What resource is being referenced

composed-of (optional)
Query Parameter — What resource is being referenced

title (optional)
Query Parameter — The human-friendly name of the measure

context-quantity (optional)
Query Parameter — A quantity- or range-valued use context assigned to the measure

depends-on (optional)
Query Parameter — What resource is being referenced

effective (optional)
Query Parameter — The time during which the measure is intended to be in use

context (optional)
Query Parameter — A use context assigned to the measure

context-type-quantity (optional)
Query Parameter — A use context type and quantity- or range-based value assigned to the measure

identifier (optional)
Query Parameter — External identifier for the measure

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter — The business version of the measure

url (optional)
Query Parameter — The uri that identifies the measure

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — Computationally friendly name of the measure

publisher (optional)
Query Parameter — Name of the publisher of the measure

topic (optional)
Query Parameter — Topics associated with the measure

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — The current status of the measure

Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

GET /Media/{id}/$meta   Up

(mediaIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success Object

PATCH /Media/{id}

instance-patch: Patch a resource instance of type Media by ID (**medialdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

PUT /Media/{id}

update-instance: Update an existing Media instance, or create using a client-assigned ID (**medialdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/Mion/fhir+json
- application/fhir+xml

Responses
200
Success [Object](#)

GET /Medication   [Up](#)

search-type: Search for Medication instances (**medicationGet**)

This is a search type

Query parameters

identifier (optional)
Query Parameter — Returns medications with this external identifier

code (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](#): Code that identifies the allergy or intolerance
- [Condition](#): Code for the condition
- [DeviceRequest](#): Code for what is being requested/ordered
- [DiagnosticReport](#): The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- [FamilyMemberHistory](#): A search by a condition code
- [List](#): What the purpose of this list is
- [Medication](#): Returns medications for a specific code
- [MedicationAdministration](#): Return administrations of this medication code
- [MedicationDispense](#): Returns dispenses of this medicine code
- [MedicationRequest](#): Return prescriptions of this medication code
- [MedicationStatement](#): Return statements of this medication code
- [Observation](#): The code of the observation type
- [Procedure](#): A code to identify a procedure
- [ServiceRequest](#): What is being requested/ordered

ingredient (optional)
Query Parameter — Returns medications for this ingredient reference

lot-number (optional)
Query Parameter — Returns medications in a batch with this lot number

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

manufacturer (optional)

Query Parameter — Returns medications made or sold for this manufacturer

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

ingredient-code (optional)
Query Parameter — Returns medications for this ingredient code

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

form (optional)
Query Parameter — Returns medications for a specific dose form

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

expiration-date (optional)
Query Parameter — Returns medications in a batch with this expiration date

status (optional)
Query Parameter — Returns medications for this status

GET /MedicationAdministration

search-type: Search for MedicationAdministration instances **(medicationAdministrationGet)**

This is a search type

Query parameters

identifier (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): External ids for this item
- [CarePlan](): External Ids for this plan
- [CareTeam](): External Ids for this team
- [Composition](): Version-independent identifier for the Composition
- [Condition](): A unique identifier of the condition record
- [Consent](): Identifier for this record (external references)
- [DetectedIssue](): Unique id for the detected issue
- [DeviceRequest](): Business identifier for request/order
- [DiagnosticReport](): An identifier for the report
- [DocumentManifest](): Unique Identifier for the set of documents
- [DocumentReference](): Master Version Specific Identifier
- [Encounter](): Identifier(s) by which this encounter is known
- [EpisodeOfCare](): Business Identifier(s) relevant for this EpisodeOfCare
- [FamilyMemberHistory](): A search by a record identifier
- [Goal](): External Ids for this goal
- [ImagingStudy](): Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- [Immunization](): Business identifier
- [List](): Business identifier
- [MedicationAdministration](): Return administrations with this external identifier
- [MedicationDispense](): Returns dispenses with this external identifier
- [MedicationRequest](): Return prescriptions with this external identifier
- [MedicationStatement](): Return statements with this external identifier
- [NutritionOrder](): Return nutrition orders with this external identifier
- [Observation](): The unique id for a particular observation
- [Procedure](): A unique identifier for a procedure
- [RiskAssessment](): Unique identifier for the assessment
- [ServiceRequest](): Identifiers assigned to this order
- [SupplyDelivery](): External identifier
- [SupplyRequest](): Business Identifier for SupplyRequest
- [VisionPrescription](): Return prescriptions with this external identifier

request (optional)
Query Parameter — The identity of a request to list administrations from

code (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Code that identifies the allergy or intolerance
- [Condition](): Code for the condition
- [DeviceRequest](): Code for what is being requested/ordered
- [DiagnosticReport](): The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- [FamilyMemberHistory](): A search by a condition code
- [List](): What the purpose of this list is
- [Medication](): Returns medications for a specific code
- [MedicationAdministration](): Return administrations of this medication code
- [MedicationDispense](): Returns dispenses of this medicine code
- [MedicationRequest](): Return prescriptions of this medication code
- [MedicationStatement](): Return statements of this medication code
- [Observation](): The code of the observation type
- [Procedure](): A code to identify a procedure
- [ServiceRequest](): What is being requested/ordered

performer (optional)
Query Parameter — The identity of the individual who administered the medication

subject (optional)
Query Parameter — The identity of the individual or group to list administrations for

_lastUpdated (optional)

Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

medication (optional)
Query Parameter —

Multiple Resources:

- [MedicationAdministration](): Return administrations of this medication resource
- [MedicationDispense](): Returns dispenses of this medicine resource
- [MedicationRequest](): Return prescriptions for this medication reference
- [MedicationStatement](): Return statements of this medication reference

reason-given (optional)
Query Parameter — Reasons for administering the medication

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
- [DetectedIssue](): Associated patient
- [DeviceRequest](): Individual the service is ordered for
- [DeviceUseStatement](): Search by subject - a patient
- [DiagnosticReport](): The subject of the report if a patient
- [DocumentManifest](): The subject of the set of documents
- [DocumentReference](): Who/what is the subject of the document
- [Encounter](): The patient or group present at the encounter
- [EpisodeOfCare](): The patient who is the focus of this episode of care
- [FamilyMemberHistory](): The identity of a subject to list family member history items for
- [Flag](): The identity of a subject to list flags for
- [Goal](): Who this goal is intended for
- [ImagingStudy](): Who the study is about
- [Immunization](): The patient for the vaccination record
- [List](): If all resources have the same subject
- [MedicationAdministration](): The identity of a patient to list administrations for
- [MedicationDispense](): The identity of a patient to list dispenses for
- [MedicationRequest](): Returns prescriptions for a specific patient
- [MedicationStatement](): Returns statements for a specific patient.
- [NutritionOrder](): The identity of the person who requires the diet, formula or nutritional supplement
- [Observation](): The subject that the observation is about (if patient)
- [Procedure](): Search by subject - a patient
- [RiskAssessment](): Who/what does assessment apply to?
- [ServiceRequest](): Search by subject - a patient
- [SupplyDelivery](): Patient for whom the item is supplied
- [VisionPrescription](): The identity of a patient to list dispenses for

effective-time (optional)
Query Parameter — Date administration happened (or did not happen)

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

context (optional)
Query Parameter — Return administrations that share this encounter or episode of care

reason-not-given (optional)
Query Parameter — Reasons for not administering the medication

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

device (optional)
Query Parameter — Return administrations with this administration device identity

status (optional)
Query Parameter —

Multiple Resources:

- [MedicationAdministration](#): MedicationAdministration event status (for example one of active/paused/completed/nullified)
- [MedicationDispense](#): Returns dispenses with a specified dispense status
- [MedicationRequest](#): Status of the prescription
- [MedicationStatement](#): Return statements that match the given status

GET /MedicationDispense

search-type: Search for MedicationDispense instances (**medicationDispenseGet**)

This is a search type

Query parameters

code (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Code that identifies the allergy or intolerance
- [Condition](): Code for the condition
- [DeviceRequest](): Code for what is being requested/ordered
- [DiagnosticReport](): The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- [FamilyMemberHistory](): A search by a condition code
- [List](): What the purpose of this list is
- [Medication](): Returns medications for a specific code
- [MedicationAdministration](): Return administrations of this medication code
- [MedicationDispense](): Returns dispenses of this medicine code
- [MedicationRequest](): Return prescriptions of this medication code
- [MedicationStatement](): Return statements of this medication code
- [Observation](): The code of the observation type
- [Procedure](): A code to identify a procedure
- [ServiceRequest](): What is being requested/ordered

subject (optional)
Query Parameter — The identity of a patient for whom to list dispenses

_lastUpdated (optional)
Query Parameter — When the resource version last changed

destination (optional)
Query Parameter — Returns dispenses that should be sent to a specific destination

type (optional)
Query Parameter — Returns dispenses of a specific type

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
- [DetectedIssue](): Associated patient
- [DeviceRequest](): Individual the service is ordered for
- [DeviceUseStatement](): Search by subject - a patient
- [DiagnosticReport](): The subject of the report if a patient
- [DocumentManifest](): The subject of the set of documents
- [DocumentReference](): Who/what is the subject of the document
- [Encounter](): The patient or group present at the encounter
- [EpisodeOfCare](): The patient who is the focus of this episode of care
- [FamilyMemberHistory](): The identity of a subject to list family member history items for
- [Flag](): The identity of a subject to list flags for
- [Goal](): Who this goal is intended for
- [ImagingStudy](): Who the study is about
- [Immunization](): The patient for the vaccination record
- [List](): If all resources have the same subject
- [MedicationAdministration](): The identity of a patient to list administrations for
- [MedicationDispense](): The identity of a patient to list dispenses for
- [MedicationRequest](): Returns prescriptions for a specific patient

- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

context (optional)
Query Parameter — Returns dispenses with a specific context (episode or episode of care)

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

performer (optional)
Query Parameter — Returns dispenses performed by a specific individual

receiver (optional)
Query Parameter — The identity of a receiver to list dispenses for

_security (optional)
Query Parameter — Security Labels applied to this resource

medication (optional)
Query Parameter —

Multiple Resources:

- **MedicationAdministration**: Return administrations of this medication resource
- **MedicationDispense**: Returns dispenses of this medicine resource
- **MedicationRequest**: Return prescriptions for this medication reference
- **MedicationStatement**: Return statements of this medication reference

responsibleparty (optional)
Query Parameter — Returns dispenses with the specified responsible party

whenhandedover (optional)
Query Parameter — Returns dispenses handed over on this date

whenprepared (optional)
Query Parameter — Returns dispenses prepared on this date

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

prescription (optional)
Query Parameter —

Multiple Resources:

- [MedicationDispense](): The identity of a prescription to list dispenses from

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter —

Multiple Resources:

- [MedicationAdministration](): MedicationAdministration event status (for example one of active/paused/completed/nullified)
- [MedicationDispense](): Returns dispenses with a specified dispense status
- [MedicationRequest](): Status of the prescription
- [MedicationStatement](): Return statements that match the given status

code (optional)
Query Parameter —

Multiple Resources:

- AllergyIntolerance: Code that identifies the allergy or intolerance
- Condition: Code for the condition

- **DeviceRequest**: Code for what is being requested/ordered
- **DiagnosticReport**: The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- **FamilyMemberHistory**: A search by a condition code
- **List**: What the purpose of this list is
- **Medication**: Returns medications for a specific code
- **MedicationAdministration**: Return administrations of this medication code
- **MedicationDispense**: Returns dispenses of this medicine code
- **MedicationRequest**: Return prescriptions of this medication code
- **MedicationStatement**: Return statements of this medication code
- **Observation**: The code of the observation type
- **Procedure**: A code to identify a procedure
- **ServiceRequest**: What is being requested/ordered

authoredon (optional)
Query Parameter — Return prescriptions written on this date

subject (optional)
Query Parameter — The identity of a patient to list orders for

_lastUpdated (optional)
Query Parameter — When the resource version last changed

patient (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Who the sensitivity is for
- **CarePlan**: Who the care plan is for
- **CareTeam**: Who care team is for
- **ClinicalImpression**: Patient or group assessed
- **Composition**: Who and/or what the composition is about
- **Condition**: Who has the condition?
- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

intended-performer (optional)
Query Parameter — Returns the intended performer of the administration of the medication request

intended-performertype (optional)
Query Parameter — Returns requests for a specific type of performer

requester (optional)
Query Parameter — Returns prescriptions prescribed by this prescriber

identifier (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](#): External ids for this item
- [CarePlan](#): External Ids for this plan
- [CareTeam](#): External Ids for this team
- [Composition](#): Version-independent identifier for the Composition
- [Condition](#): A unique identifier of the condition record
- [Consent](#): Identifier for this record (external references)
- [DetectedIssue](#): Unique id for the detected issue
- [DeviceRequest](#): Business identifier for request/order
- [DiagnosticReport](#): An identifier for the report
- [DocumentManifest](#): Unique Identifier for the set of documents
- [DocumentReference](#): Master Version Specific Identifier
- [Encounter](#): Identifier(s) by which this encounter is known
- [EpisodeOfCare](#): Business Identifier(s) relevant for this EpisodeOfCare
- [FamilyMemberHistory](#): A search by a record identifier
- [Goal](#): External Ids for this goal
- [ImagingStudy](#): Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- [Immunization](#): Business identifier
- [List](#): Business identifier
- [MedicationAdministration](#): Return administrations with this external identifier
- [MedicationDispense](#): Returns dispenses with this external identifier
- [MedicationRequest](#): Return prescriptions with this external identifier
- [MedicationStatement](#): Return statements with this external identifier
- [NutritionOrder](#): Return nutrition orders with this external identifier
- [Observation](#): The unique id for a particular observation
- [Procedure](#): A unique identifier for a procedure
- [RiskAssessment](#): Unique identifier for the assessment
- [ServiceRequest](#): Identifiers assigned to this order
- [SupplyDelivery](#): External identifier
- [SupplyRequest](#): Business Identifier for SupplyRequest
- [VisionPrescription](#): Return prescriptions with this external identifier

intended-dispenser (optional)
Query Parameter — Returns prescriptions intended to be dispensed by this Organization

_security (optional)
Query Parameter — Security Labels applied to this resource

medication (optional)
Query Parameter —

Multiple Resources:

- [MedicationAdministration](#): Return administrations of this medication resource
- [MedicationDispense](#): Returns dispenses of this medicine resource
- [MedicationRequest](#): Return prescriptions for this medication reference
- [MedicationStatement](#): Return statements of this medication reference

encounter (optional)
Query Parameter —

Multiple Resources:

- [MedicationRequest](#): Return prescriptions with this encounter identifier

priority (optional)
Query Parameter — Returns prescriptions with different priorities

intent (optional)
Query Parameter — Returns prescriptions with different intents

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)

Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — Returns prescriptions with different categories

status (optional)
Query Parameter —

Multiple Resources:

- [MedicationAdministration](): MedicationAdministration event status (for example one of active/paused/completed/nullified)
- [MedicationDispense](): Returns dispenses with a specified dispense status
- [MedicationRequest](): Status of the prescription
- [MedicationStatement](): Return statements that match the given status

Query parameters

identifier (optional)
Query Parameter —

Multiple Resources:

- AllergyIntolerance: External ids for this item
- CarePlan: External Ids for this plan
- CareTeam: External Ids for this team
- Composition: Version-independent identifier for the Composition
- Condition: A unique identifier of the condition record
- Consent: Identifier for this record (external references)
- DetectedIssue: Unique id for the detected issue
- DeviceRequest: Business identifier for request/order
- DiagnosticReport: An identifier for the report
- DocumentManifest: Unique Identifier for the set of documents
- DocumentReference: Master Version Specific Identifier
- Encounter: Identifier(s) by which this encounter is known
- EpisodeOfCare: Business Identifier(s) relevant for this EpisodeOfCare
- FamilyMemberHistory: A search by a record identifier
- Goal: External Ids for this goal
- ImagingStudy: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- Immunization: Business identifier
- List: Business identifier
- MedicationAdministration: Return administrations with this external identifier
- MedicationDispense: Returns dispenses with this external identifier
- MedicationRequest: Return prescriptions with this external identifier
- MedicationStatement: Return statements with this external identifier
- NutritionOrder: Return nutrition orders with this external identifier
- Observation: The unique id for a particular observation
- Procedure: A unique identifier for a procedure
- RiskAssessment: Unique identifier for the assessment
- ServiceRequest: Identifiers assigned to this order
- SupplyDelivery: External identifier
- SupplyRequest: Business Identifier for SupplyRequest
- VisionPrescription: Return prescriptions with this external identifier

code (optional)
Query Parameter —

Multiple Resources:

- AllergyIntolerance: Code that identifies the allergy or intolerance
- Condition: Code for the condition
- DeviceRequest: Code for what is being requested/ordered
- DiagnosticReport: The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- FamilyMemberHistory: A search by a condition code
- List: What the purpose of this list is
- Medication: Returns medications for a specific code
- MedicationAdministration: Return administrations of this medication code
- MedicationDispense: Returns dispenses of this medicine code
- MedicationRequest: Return prescriptions of this medication code
- MedicationStatement: Return statements of this medication code
- Observation: The code of the observation type
- Procedure: A code to identify a procedure
- ServiceRequest: What is being requested/ordered

subject (optional)
Query Parameter — The identity of a patient, animal or group to list statements for

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

medication (optional)
Query Parameter —

Multiple Resources:

- [MedicationAdministration](): Return administrations of this medication resource
- [MedicationDispense](): Returns dispenses of this medicine resource
- [MedicationRequest](): Return prescriptions for this medication reference
- [MedicationStatement](): Return statements of this medication reference

part-of (optional)
Query Parameter — Returns statements that are part of another event.

source (optional)
Query Parameter — Who or where the information in the statement came from

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

effective (optional)
Query Parameter — Date when patient was taking (or not taking) the medication

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
- [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
- [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
- [DetectedIssue](): Associated patient
- [DeviceRequest](): Individual the service is ordered for
- [DeviceUseStatement](): Search by subject - a patient
- [DiagnosticReport](): The subject of the report if a patient
- [DocumentManifest](): The subject of the set of documents
- [DocumentReference](): Who/what is the subject of the document
- [Encounter](): The patient or group present at the encounter
- [EpisodeOfCare](): The patient who is the focus of this episode of care
- [FamilyMemberHistory](): The identity of a subject to list family member history items for
- [Flag](): The identity of a subject to list flags for
- [Goal](): Who this goal is intended for
- [ImagingStudy](): Who the study is about
- [Immunization](): The patient for the vaccination record
- [List](): If all resources have the same subject
- [MedicationAdministration](): The identity of a patient to list administrations for
- [MedicationDispense](): The identity of a patient to list dispenses for
- [MedicationRequest](): Returns prescriptions for a specific patient
- [MedicationStatement](): Returns statements for a specific patient.
- [NutritionOrder](): The identity of the person who requires the diet, formula or nutritional supplement
- [Observation](): The subject that the observation is about (if patient)
- [Procedure](): Search by subject - a patient
- [RiskAssessment](): Who/what does assessment apply to?
- [ServiceRequest](): Search by subject - a patient
- [SupplyDelivery](): Patient for whom the item is supplied
- [VisionPrescription](): The identity of a patient to list dispenses for

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

context (optional)
Query Parameter — Returns statements for a specific context (episode or episode of Care).

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — Returns statements of this category of medicationstatement

status (optional)
Query Parameter —

Multiple Resources:

- [MedicationAdministration](): MedicationAdministration event status (for example one of active/paused/completed/nullified)
- [MedicationDispense](): Returns dispenses with a specified dispense status
- [MedicationRequest](): Status of the prescription
- [MedicationStatement](): Return statements that match the given status

GET /MessageDefinition

search-type: Search for MessageDefinition instances (**messageDefinitionGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

<u>CapabilityStatement</u>: The capability statement publication date
- <u>CodeSystem</u>: The code system publication date
- <u>CompartmentDefinition</u>: The compartment definition publication date
- <u>ConceptMap</u>: The concept map publication date
- <u>GraphDefinition</u>: The graph definition publication date
- <u>ImplementationGuide</u>: The implementation guide publication date
  <u>MessageDefinition</u>: The message definition publication date
  <u>NamingSystem</u>: The naming system publication date
- <u>OperationDefinition</u>: The operation definition publication date

SearchParameter: The search parameter publication date

- **StructureDefinition**: The structure definition publication date
- **StructureMap**: The structure map publication date

TerminologyCapabilities: The terminology capabilities publication date
ValueSet: The value set publication date

parent (optional)

Query Parameter — A resource that is the parent of the definition

context-type-value (optional)

Query Parameter —

Multiple Resources:

CapabilityStatement: A use context type and value assigned to the capability statement
- **CodeSystem**: A use context type and value assigned to the code system
- **CompartmentDefinition**: A use context type and value assigned to the compartment definition
ConceptMap: A use context type and value assigned to the concept map
GraphDefinition: A use context type and value assigned to the graph definition
- **ImplementationGuide**: A use context type and value assigned to the implementation guide
MessageDefinition: A use context type and value assigned to the message definition
NamingSystem: A use context type and value assigned to the naming system
- **OperationDefinition**: A use context type and value assigned to the operation definition
SearchParameter: A use context type and value assigned to the search parameter
StructureDefinition: A use context type and value assigned to the structure definition
- **StructureMap**: A use context type and value assigned to the structure map
- **TerminologyCapabilities**: A use context type and value assigned to the terminology capabilities
ValueSet: A use context type and value assigned to the value set

lastUpdated (optional)

Query Parameter — When the resource version last changed

jurisdiction (optional)

Query Parameter —

Multiple Resources:

CapabilityStatement: Intended jurisdiction for the capability statement
- **CodeSystem**: Intended jurisdiction for the code system
ConceptMap: Intended jurisdiction for the concept map
GraphDefinition: Intended jurisdiction for the graph definition
- **ImplementationGuide**: Intended jurisdiction for the implementation guide
MessageDefinition: Intended jurisdiction for the message definition
NamingSystem: Intended jurisdiction for the naming system
- **OperationDefinition**: Intended jurisdiction for the operation definition
- **SearchParameter**: Intended jurisdiction for the search parameter
StructureDefinition: Intended jurisdiction for the structure definition
StructureMap: Intended jurisdiction for the structure map
- **TerminologyCapabilities**: Intended jurisdiction for the terminology capabilities
ValueSet: Intended jurisdiction for the value set

description (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The description of the capability statement
CodeSystem: The description of the code system
CompartmentDefinition: The description of the compartment definition
- **ConceptMap**: The description of the concept map
GraphDefinition: The description of the graph definition
ImplementationGuide: The description of the implementation guide
- **MessageDefinition**: The description of the message definition
- **NamingSystem**: The description of the naming system
OperationDefinition: The description of the operation definition
SearchParameter: The description of the search parameter
- **StructureDefinition**: The description of the structure definition
StructureMap: The description of the structure map
TerminologyCapabilities: The description of the terminology capabilities

ValueSet: The description of the value set

focus (optional)
Query Parameter — A resource that is a permitted focus of the message

context-type (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: A type of use context assigned to the capability statement
- CodeSystem: A type of use context assigned to the code system
- CompartmentDefinition: A type of use context assigned to the compartment definition
- ConceptMap: A type of use context assigned to the concept map
- GraphDefinition: A type of use context assigned to the graph definition
- ImplementationGuide: A type of use context assigned to the implementation guide
- MessageDefinition: A type of use context assigned to the message definition
- NamingSystem: A type of use context assigned to the naming system
- OperationDefinition: A type of use context assigned to the operation definition
- SearchParameter: A type of use context assigned to the search parameter
- StructureDefinition: A type of use context assigned to the structure definition
- StructureMap: A type of use context assigned to the structure map
- TerminologyCapabilities: A type of use context assigned to the terminology capabilities
- ValueSet: A type of use context assigned to the value set

title (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: The human-friendly name of the capability statement
- CodeSystem: The human-friendly name of the code system
- ConceptMap: The human-friendly name of the concept map
- ImplementationGuide: The human-friendly name of the implementation guide
- MessageDefinition: The human-friendly name of the message definition
- OperationDefinition: The human-friendly name of the operation definition
- StructureDefinition: The human-friendly name of the structure definition
- StructureMap: The human-friendly name of the structure map
- TerminologyCapabilities: The human-friendly name of the terminology capabilities
- ValueSet: The human-friendly name of the value set

context-quantity (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: A quantity- or range-valued use context assigned to the capability statement
- CodeSystem: A quantity- or range-valued use context assigned to the code system
- CompartmentDefinition: A quantity- or range-valued use context assigned to the compartment definition
- ConceptMap: A quantity- or range-valued use context assigned to the concept map
- GraphDefinition: A quantity- or range-valued use context assigned to the graph definition
- ImplementationGuide: A quantity- or range-valued use context assigned to the implementation guide
- MessageDefinition: A quantity- or range-valued use context assigned to the message definition
- NamingSystem: A quantity- or range-valued use context assigned to the naming system
- OperationDefinition: A quantity- or range-valued use context assigned to the operation definition
- SearchParameter: A quantity- or range-valued use context assigned to the search parameter
- StructureDefinition: A quantity- or range-valued use context assigned to the structure definition
- StructureMap: A quantity- or range-valued use context assigned to the structure map
- TerminologyCapabilities: A quantity- or range-valued use context assigned to the terminology capabilities
- ValueSet: A quantity- or range-valued use context assigned to the value set

context (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: A use context assigned to the capability statement

CodeSystem: A use context assigned to the code system

CompartmentDefinition: A use context assigned to the compartment definition

ConceptMap: A use context assigned to the concept map

GraphDefinition: A use context assigned to the graph definition

ImplementationGuide: A use context assigned to the implementation guide

MessageDefinition: A use context assigned to the message definition

NamingSystem: A use context assigned to the naming system

OperationDefinition: A use context assigned to the operation definition

SearchParameter: A use context assigned to the search parameter

StructureDefinition: A use context assigned to the structure definition

StructureMap: A use context assigned to the structure map

TerminologyCapabilities: A use context assigned to the terminology capabilities

ValueSet: A use context assigned to the value set

event (optional)

Query Parameter — The event that triggers the message or link to the event definition.

context-type-quantity (optional)

Query Parameter —

Multiple Resources:

CapabilityStatement: A use context type and quantity- or range-based value assigned to the capability statement

CodeSystem: A use context type and quantity- or range-based value assigned to the code system

CompartmentDefinition: A use context type and quantity- or range-based value assigned to the compartment definition

ConceptMap: A use context type and quantity- or range-based value assigned to the concept map

GraphDefinition: A use context type and quantity- or range-based value assigned to the graph definition

ImplementationGuide: A use context type and quantity- or range-based value assigned to the implementation guide

MessageDefinition: A use context type and quantity- or range-based value assigned to the message definition

NamingSystem: A use context type and quantity- or range-based value assigned to the naming system

OperationDefinition: A use context type and quantity- or range-based value assigned to the operation definition

SearchParameter: A use context type and quantity- or range-based value assigned to the search parameter

StructureDefinition: A use context type and quantity- or range-based value assigned to the structure definition

StructureMap: A use context type and quantity- or range-based value assigned to the structure map

TerminologyCapabilities: A use context type and quantity- or range-based value assigned to the terminology capabilities

ValueSet: A use context type and quantity- or range-based value assigned to the value set

identifier (optional)

Query Parameter —

Multiple Resources:

CodeSystem: External identifier for the code system

ConceptMap: External identifier for the concept map

MessageDefinition: External identifier for the message definition

StructureDefinition: External identifier for the structure definition

StructureMap: External identifier for the structure map

ValueSet: External identifier for the value set

security (optional)

Query Parameter — Security Labels applied to this resource

version (optional)

Query Parameter —

Multiple Resources:

CapabilityStatement: The business version of the capability statement

CodeSystem: The business version of the code system

CompartmentDefinition: The business version of the compartment definition

ConceptMap: The business version of the concept map

GraphDefinition: The business version of the graph definition

ImplementationGuide: The business version of the implementation guide

MessageDefinition: The business version of the message definition

OperationDefinition: The business version of the operation definition

SearchParameter: The business version of the search parameter

StructureDefinition: The business version of the structure definition

StructureMap: The business version of the structure map

TerminologyCapabilities: The business version of the terminology capabilities

ValueSet: The business version of the value set

url (optional)

Query Parameter —

Multiple Resources:

CapabilityStatement: The uri that identifies the capability statement

CodeSystem: The uri that identifies the code system

CompartmentDefinition: The uri that identifies the compartment definition

ConceptMap: The uri that identifies the concept map

GraphDefinition: The uri that identifies the graph definition

ImplementationGuide: The uri that identifies the implementation guide

MessageDefinition: The uri that identifies the message definition

OperationDefinition: The uri that identifies the operation definition

SearchParameter: The uri that identifies the search parameter

StructureDefinition: The uri that identifies the structure definition

StructureMap: The uri that identifies the structure map

TerminologyCapabilities: The uri that identifies the terminology capabilities

ValueSet: The uri that identifies the value set

_filter (optional)

Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)

Query Parameter — Profiles this resource claims to conform to

_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

name (optional)

Query Parameter —

Multiple Resources:

CapabilityStatement: Computationally friendly name of the capability statement

CodeSystem: Computationally friendly name of the code system

CompartmentDefinition: Computationally friendly name of the compartment definition

ConceptMap: Computationally friendly name of the concept map

GraphDefinition: Computationally friendly name of the graph definition

ImplementationGuide: Computationally friendly name of the implementation guide

MessageDefinition: Computationally friendly name of the message definition

NamingSystem: Computationally friendly name of the naming system

OperationDefinition: Computationally friendly name of the operation definition

SearchParameter: Computationally friendly name of the search parameter

StructureDefinition: Computationally friendly name of the structure definition

StructureMap: Computationally friendly name of the structure map

TerminologyCapabilities: Computationally friendly name of the terminology capabilities

ValueSet: Computationally friendly name of the value set

publisher (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Name of the publisher of the capability statement
- **CodeSystem**: Name of the publisher of the code system
- **CompartmentDefinition**: Name of the publisher of the compartment definition
- **ConceptMap**: Name of the publisher of the concept map
- **GraphDefinition**: Name of the publisher of the graph definition
- **ImplementationGuide**: Name of the publisher of the implementation guide
- **MessageDefinition**: Name of the publisher of the message definition
- **NamingSystem**: Name of the publisher of the naming system
- **OperationDefinition**: Name of the publisher of the operation definition
- **SearchParameter**: Name of the publisher of the search parameter
- **StructureDefinition**: Name of the publisher of the structure definition
- **StructureMap**: Name of the publisher of the structure map
- **TerminologyCapabilities**: Name of the publisher of the terminology capabilities
- **ValueSet**: Name of the publisher of the value set

_source (optional)

Query Parameter — Identifies where the resource comes from

_id (optional)

Query Parameter — Logical id of this artifact

_text (optional)

Query Parameter — Search on the narrative of the resource

_content (optional)

Query Parameter — Search on the entire content of the resource

category (optional)

Query Parameter — The behavior associated with the message

status (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The current status of the capability statement
- **CodeSystem**: The current status of the code system
- **CompartmentDefinition**: The current status of the compartment definition
- **ConceptMap**: The current status of the concept map
- **GraphDefinition**: The current status of the graph definition
- **ImplementationGuide**: The current status of the implementation guide
- **MessageDefinition**: The current status of the message definition
- **NamingSystem**: The current status of the naming system
- **OperationDefinition**: The current status of the operation definition
- **SearchParameter**: The current status of the search parameter
- **StructureDefinition**: The current status of the structure definition
- **StructureMap**: The current status of the structure map
- **TerminologyCapabilities**: The current status of the terminology capabilities
- **ValueSet**: The current status of the value set

Return type

GET /MessageHeader

search-type: Search for MessageHeader instances (**messageHeaderGet**)
This is a search type

Query parameters

code (optional)
Query Parameter — ok | transient-error | fatal-error

receiver (optional)
Query Parameter — Intended "real-world" recipient for the data

author (optional)
Query Parameter — The source of the decision

_lastUpdated (optional)
Query Parameter — When the resource version last changed
_security (optional)
Query Parameter — Security Labels applied to this resource

destination (optional)
Query Parameter — Name of system
focus (optional)
Query Parameter — The actual content of the message

source (optional)
Query Parameter — Name of system

target (optional)
Query Parameter — Particular delivery destination within the destination
_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

destination-uri (optional)
Query Parameter — Actual destination address or id

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

sender (optional)
Query Parameter — Real world sender of the message

source-uri (optional)
Query Parameter — Actual message source address or id
_tag (optional)
Query Parameter — Tags applied to this resource

responsible (optional)
Query Parameter — Final responsibility for event
_has (optional)
Query Parameter — Return resources linked to by the given target

enterer (optional)
Query Parameter — The source of the data entry

response-id (optional)
Query Parameter — Id of original message

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

event (optional)
Query Parameter — Code for the event this message represents or link to event definition

GET /MolecularSequence Up

search-type: Search for MolecularSequence instances (**molecularSequenceGet**)

This is a search type

Query parameters

identifier (optional)
Query Parameter — The unique identity for a particular sequence

referenceseqid-variant-coordinate (optional)

Query Parameter — Search parameter by reference sequence and variant coordinate. This will refer to part of a locus or part of a gene where search region will be represented in 1-based system. Since the coordinateSystem can either be 0-based or 1-based, this search query will include the result of both coordinateSystem that contains the equivalent segment of the gene or whole genome sequence. For example, a search for sequence can be represented as referenceSeqId-variant-coordinate=NC_000001.11$lt345$gt123, this means it will search for the MolecularSequence resource with variants on NC_000001.11 and with position >123 and <345, where in 1-based system resource, all strings within region NC_000001.11:124-344 will be revealed, while in 0-based system resource, all strings within region NC_000001.11:123-344 will be revealed. You may want to check detail about 0-based v.s. 1-based above.

_lastUpdated (optional)

Query Parameter — When the resource version last changed

chromosome (optional)

Query Parameter — Chromosome number of the reference sequence

_security (optional)

Query Parameter — Security Labels applied to this resource

type (optional)

Query Parameter — Amino Acid Sequence/ DNA Sequence / RNA Sequence

window-end (optional)

Query Parameter — End position (0-based exclusive, which menas the acid at this position will not be included, 1-based inclusive, which means the acid at this position will be included) of the reference sequence.

window-start (optional)

Query Parameter — Start position (0-based inclusive, 1-based inclusive, that means the nucleic acid or amino acid at this position will be included) of the reference sequence.

variant-end (optional)

Query Parameter — End position (0-based exclusive, which menas the acid at this position will not be included, 1-based inclusive, which means the acid at this position will be included) of the variant.

_filter (optional)

Query Parameter — Search the contents of the resource's data using a filter

chromosome-variant-coordinate (optional)

Query Parameter — Search parameter by chromosome and variant coordinate. This will refer to part of a locus or part of a gene where search region will be represented in 1-based system. Since the coordinateSystem can either be 0-based or 1-based, this search query will include the result of both coordinateSystem that contains the equivalent segment of the gene or whole genome sequence. For example, a search for sequence can be represented as `chromosome-variant-coordinate=1$lt345$gt123`, this means it will search for the MolecularSequence resource with variants on chromosome 1 and with position >123 and <345, where in 1-based system resource, all strings within region 1:124-344 will be revealed, while in 0-based system resource, all strings within region 1:123-344 will be revealed. You may want to check detail about 0-based v.s. 1-based above.

_profile (optional)

Query Parameter — Profiles this resource claims to conform to

patient (optional)

Query Parameter — The subject that the observation is about

_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

variant-start (optional)

Query Parameter — Start position (0-based inclusive, 1-based inclusive, that means the nucleic acid or amino acid at this position will be included) of the variant.

_source (optional)

Query Parameter — Identifies where the resource comes from

chromosome-window-coordinate (optional)

Query Parameter — Search parameter by chromosome and window. This will refer to part of a locus or part of a gene where search region will be represented in 1-based system. Since the coordinateSystem can either be 0-based or 1-based, this search query will include the result of both coordinateSystem that contains the equivalent segment of the gene or whole genome sequence. For example, a search for sequence can be represented as `chromosome-window-coordinate=1$lt345$gt123`, this means it will search for the MolecularSequence resource with a window on chromosome 1 and with position >123 and <345, where in 1-based system resource, all strings within region 1:124-344 will be revealed, while in 0-based system resource, all strings within region 1:123-344 will be revealed. You may want to check detail about 0-based v.s. 1-based above.

_id (optional)

Query Parameter — Logical id of this artifact

referenceseqid-window-coordinate (optional)

Query Parameter — Search parameter by reference sequence and window. This will refer to part of a locus or part of a gene where search region will be represented in 1-based system. Since the

coordinateSystem can either be 0-based or 1-based, this search query will include the result of both
coordinateSystem that contains the equivalent segment of the gene or whole genome sequence. For
example, a search for sequence can be represented as
referenceSeqId-window-coordinate=NC_000001.11$lt345$gt123, this means it will search for the
MolecularSequence resource with a window on NC_000001.11 and with position >123 and <345, where
in 1-based system resource, all strings within region NC_000001.11:124-344 will be revealed, while in
0-based system resource, all strings within region NC_000001.11:123-344 will be revealed. You may
want to check detail about 0-based v.s. 1-based above.

_text (optional)
Query Parameter — Search on the narrative of the resource
_content (optional)
Query Parameter — Search on the entire content of the resource

referenceseqid (optional)
Query Parameter — Reference Sequence of the sequence

Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses

200
Success Object

GET /MolecularSequence/{id}/$meta   Up

(molecularSequenceIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters
   id (required)
   Path Parameter — The resource ID default: null

Query parameters

   return (optional)
   Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

        application/fhir+json
        application/fhir+xml

Responses
200
Success Object

PATCH /MolecularSequence/{id}

instance-patch: Patch a resource instance of type MolecularSequence by ID (**molecularSequenceIdPatch**)

Path parameters
   id (required)
   Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

   ▌ application/fhir+json
   ⌐ application/fhir+xml

Request body

   body object (optional)
   Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

   ⌐ application/fhir+json
        application/fhir+xml

Responses
200
Success Object

PUT /MolecularSequence/{id}

update-instance: Update an existing MolecularSequence instance, or create using a client-assigned ID
(**molecularSequenceIdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
  application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses

200
Success Object

GET /MolecularSequence/{id}/$validate   Up

(molecularSequenceIdValidateGet)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

resource (optional)
Query Parameter —
mode (optional)
Query Parameter —

profile (optional)
Query Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success Object

GET /MolecularSequence/$meta

(**molecularSequenceMetaGet**)

Request a list of tags, profiles, and security labels for a specfic resource instance

Query parameters
return (optional)
Query Parameter —

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success **Object**

POST /MolecularSequence

create-type: Create a new MolecularSequence instance (**molecularSequencePost**)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body
body object (optional)
Body Parameter —

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json

GET /NamingSystem

search-type: Search for NamingSystem instances (**namingSystemGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](#): The capability statement publication date
- [CodeSystem](#): The code system publication date

CompartmentDefinition: The compartment definition publication date

- **ConceptMap**: The concept map publication date
- **GraphDefinition**: The graph definition publication date
  ImplementationGuide: The implementation guide publication date
  MessageDefinition: The message definition publication date
- **NamingSystem**: The naming system publication date
  OperationDefinition: The operation definition publication date
  SearchParameter: The search parameter publication date
- **StructureDefinition**: The structure definition publication date
  StructureMap: The structure map publication date
  TerminologyCapabilities: The terminology capabilities publication date
- **ValueSet**: The value set publication date

context-type-value (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and value assigned to the capability statement
  CodeSystem: A use context type and value assigned to the code system
  CompartmentDefinition: A use context type and value assigned to the compartment definition
- **ConceptMap**: A use context type and value assigned to the concept map
- **GraphDefinition**: A use context type and value assigned to the graph definition
  ImplementationGuide: A use context type and value assigned to the implementation guide
- **MessageDefinition**: A use context type and value assigned to the message definition
- **NamingSystem**: A use context type and value assigned to the naming system
  OperationDefinition: A use context type and value assigned to the operation definition
  SearchParameter: A use context type and value assigned to the search parameter
- **StructureDefinition**: A use context type and value assigned to the structure definition
  StructureMap: A use context type and value assigned to the structure map
  TerminologyCapabilities: A use context type and value assigned to the terminology capabilities
- **ValueSet**: A use context type and value assigned to the value set

_lastUpdated (optional)

Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Intended jurisdiction for the capability statement
  CodeSystem: Intended jurisdiction for the code system
- **ConceptMap**: Intended jurisdiction for the concept map
- **GraphDefinition**: Intended jurisdiction for the graph definition
  ImplementationGuide: Intended jurisdiction for the implementation guide
  MessageDefinition: Intended jurisdiction for the message definition
- **NamingSystem**: Intended jurisdiction for the naming system
  OperationDefinition: Intended jurisdiction for the operation definition
  SearchParameter: Intended jurisdiction for the search parameter
- **StructureDefinition**: Intended jurisdiction for the structure definition
- **StructureMap**: Intended jurisdiction for the structure map
  TerminologyCapabilities: Intended jurisdiction for the terminology capabilities
- **ValueSet**: Intended jurisdiction for the value set

description (optional)

Query Parameter —

Multiple Resources:

CapabilityStatement: The description of the capability statement
- **CodeSystem**: The description of the code system
- **CompartmentDefinition**: The description of the compartment definition
  ConceptMap: The description of the concept map
- **GraphDefinition**: The description of the graph definition
- **ImplementationGuide**: The description of the implementation guide
  MessageDefinition: The description of the message definition
  NamingSystem: The description of the naming system
- **OperationDefinition**: The description of the operation definition

SearchParameter: The description of the search parameter
- **StructureDefinition**: The description of the structure definition
- **StructureMap**: The description of the structure map
- **TerminologyCapabilities**: The description of the terminology capabilities
- **ValueSet**: The description of the value set

context-type (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A type of use context assigned to the capability statement
- **CodeSystem**: A type of use context assigned to the code system
- **CompartmentDefinition**: A type of use context assigned to the compartment definition
- **ConceptMap**: A type of use context assigned to the concept map
- **GraphDefinition**: A type of use context assigned to the graph definition
- **ImplementationGuide**: A type of use context assigned to the implementation guide
- **MessageDefinition**: A type of use context assigned to the message definition
- **NamingSystem**: A type of use context assigned to the naming system
- **OperationDefinition**: A type of use context assigned to the operation definition
- **SearchParameter**: A type of use context assigned to the search parameter
- **StructureDefinition**: A type of use context assigned to the structure definition
- **StructureMap**: A type of use context assigned to the structure map
- **TerminologyCapabilities**: A type of use context assigned to the terminology capabilities
- **ValueSet**: A type of use context assigned to the value set

type (optional)
Query Parameter — e.g. driver, provider, patient, bank etc.

context-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A quantity- or range-valued use context assigned to the capability statement
- **CodeSystem**: A quantity- or range-valued use context assigned to the code system
- **CompartmentDefinition**: A quantity- or range-valued use context assigned to the compartment definition
- **ConceptMap**: A quantity- or range-valued use context assigned to the concept map
- **GraphDefinition**: A quantity- or range-valued use context assigned to the graph definition
- **ImplementationGuide**: A quantity- or range-valued use context assigned to the implementation guide
- **MessageDefinition**: A quantity- or range-valued use context assigned to the message definition
- **NamingSystem**: A quantity- or range-valued use context assigned to the naming system
- **OperationDefinition**: A quantity- or range-valued use context assigned to the operation definition
- **SearchParameter**: A quantity- or range-valued use context assigned to the search parameter
- **StructureDefinition**: A quantity- or range-valued use context assigned to the structure definition
- **StructureMap**: A quantity- or range-valued use context assigned to the structure map
- **TerminologyCapabilities**: A quantity- or range-valued use context assigned to the terminology capabilities
- **ValueSet**: A quantity- or range-valued use context assigned to the value set

contact (optional)
Query Parameter — Name of an individual to contact
responsible (optional)
Query Parameter — Who maintains system namespace?

context (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context assigned to the capability statement
- **CodeSystem**: A use context assigned to the code system
- **CompartmentDefinition**: A use context assigned to the compartment definition
- **ConceptMap**: A use context assigned to the concept map
- **GraphDefinition**: A use context assigned to the graph definition
- **ImplementationGuide**: A use context assigned to the implementation guide

- **MessageDefinition**: A use context assigned to the message definition
  - **NamingSystem**: A use context assigned to the naming system
  - **OperationDefinition**: A use context assigned to the operation definition
  - **SearchParameter**: A use context assigned to the search parameter
  - **StructureDefinition**: A use context assigned to the structure definition
  - **StructureMap**: A use context assigned to the structure map
  - **TerminologyCapabilities**: A use context assigned to the terminology capabilities
  - **ValueSet**: A use context assigned to the value set

telecom (optional)

Query Parameter — Contact details for individual or organization

value (optional)

Query Parameter — The unique identifier

context-type-quantity (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and quantity- or range-based value assigned to the capability statement
  - **CodeSystem**: A use context type and quantity- or range-based value assigned to the code system
- **CompartmentDefinition**: A use context type and quantity- or range-based value assigned to the compartment definition
  - **ConceptMap**: A use context type and quantity- or range-based value assigned to the concept map
- **GraphDefinition**: A use context type and quantity- or range-based value assigned to the graph definition
  - **ImplementationGuide**: A use context type and quantity- or range-based value assigned to the implementation guide
- **MessageDefinition**: A use context type and quantity- or range-based value assigned to the message definition
  - **NamingSystem**: A use context type and quantity- or range-based value assigned to the naming system
  - **OperationDefinition**: A use context type and quantity- or range-based value assigned to the operation definition
- **SearchParameter**: A use context type and quantity- or range-based value assigned to the search parameter
  - **StructureDefinition**: A use context type and quantity- or range-based value assigned to the structure definition
- **StructureMap**: A use context type and quantity- or range-based value assigned to the structure map
  - **TerminologyCapabilities**: A use context type and quantity- or range-based value assigned to the terminology capabilities
  - **ValueSet**: A use context type and quantity- or range-based value assigned to the value set

period (optional)

Query Parameter — When is identifier valid?

kind (optional)

Query Parameter — codesystem | identifier | root

_security (optional)

Query Parameter — Security Labels applied to this resource

id-type (optional)

Query Parameter — oid | uuid | uri | other

_filter (optional)

Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)

Query Parameter — Profiles this resource claims to conform to

_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

name (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Computationally friendly name of the capability statement
- **CodeSystem**: Computationally friendly name of the code system
- **CompartmentDefinition**: Computationally friendly name of the compartment definition
- **ConceptMap**: Computationally friendly name of the concept map
- **GraphDefinition**: Computationally friendly name of the graph definition
- **ImplementationGuide**: Computationally friendly name of the implementation guide
- **MessageDefinition**: Computationally friendly name of the message definition
- **NamingSystem**: Computationally friendly name of the naming system
- **OperationDefinition**: Computationally friendly name of the operation definition
- **SearchParameter**: Computationally friendly name of the search parameter
- **StructureDefinition**: Computationally friendly name of the structure definition
- **StructureMap**: Computationally friendly name of the structure map
- **TerminologyCapabilities**: Computationally friendly name of the terminology capabilities
- **ValueSet**: Computationally friendly name of the value set

publisher (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Name of the publisher of the capability statement
- **CodeSystem**: Name of the publisher of the code system
- **CompartmentDefinition**: Name of the publisher of the compartment definition
- **ConceptMap**: Name of the publisher of the concept map
- **GraphDefinition**: Name of the publisher of the graph definition
- **ImplementationGuide**: Name of the publisher of the implementation guide
- **MessageDefinition**: Name of the publisher of the message definition
- **NamingSystem**: Name of the publisher of the naming system
- **OperationDefinition**: Name of the publisher of the operation definition
- **SearchParameter**: Name of the publisher of the search parameter
- **StructureDefinition**: Name of the publisher of the structure definition
- **StructureMap**: Name of the publisher of the structure map
- **TerminologyCapabilities**: Name of the publisher of the terminology capabilities
- **ValueSet**: Name of the publisher of the value set

_source (optional)

Query Parameter — Identifies where the resource comes from

_id (optional)

Query Parameter — Logical id of this artifact

_text (optional)

Query Parameter — Search on the narrative of the resource

_content (optional)

Query Parameter — Search on the entire content of the resource

status (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The current status of the capability statement
- **CodeSystem**: The current status of the code system
- **CompartmentDefinition**: The current status of the compartment definition
- **ConceptMap**: The current status of the concept map
- **GraphDefinition**: The current status of the graph definition
- **ImplementationGuide**: The current status of the implementation guide
- **MessageDefinition**: The current status of the message definition
- **NamingSystem**: The current status of the naming system
- **OperationDefinition**: The current status of the operation definition
- **SearchParameter**: The current status of the search parameter
- **StructureDefinition**: The current status of the structure definition
- **StructureMap**: The current status of the structure map
- **TerminologyCapabilities**: The current status of the terminology capabilities
- **ValueSet**: The current status of the value set

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
  application/fhir+xml

Responses

200

Success [Object](#)

GET /NamingSystem/_history

GET /NutritionOrder

search-type: Search for NutritionOrder instances (**nutritionOrderGet**)
This is a search type

Query parameters

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
  CarePlan: External Ids for this plan
  CareTeam: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
  Consent: Identifier for this record (external references)
  DetectedIssue: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
  DiagnosticReport: An identifier for the report
  DocumentManifest: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
  Encounter: Identifier(s) by which this encounter is known
  EpisodeOfCare: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
  ImagingStudy: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
  Immunization: Business identifier
- **List**: Business identifier
  MedicationAdministration: Return administrations with this external identifier
  MedicationDispense: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
  MedicationStatement: Return statements with this external identifier

NutritionOrder: Return nutrition orders with this external identifier

▮ **Observation**: The unique id for a particular observation

▮ **Procedure**: A unique identifier for a procedure

RiskAssessment: Unique identifier for the assessment
ServiceRequest: Identifiers assigned to this order

▮ **SupplyDelivery**: External identifier

SupplyRequest: Business Identifier for SupplyRequest
VisionPrescription: Return prescriptions with this external identifier

_lastUpdated (optional)

Query Parameter — When the resource version last changed

_security (optional)

Query Parameter — Security Labels applied to this resource

instantiates-canonical (optional)

Query Parameter — Instantiates FHIR protocol or definition

encounter (optional)

Query Parameter —

Multiple Resources:

Composition: Context of the Composition

▮ **DeviceRequest**: Encounter during which request was created

DiagnosticReport: The Encounter when the order was made
DocumentReference: Context of the document content

▮ **Flag**: Alert relevant during encounter

▮ **List**: Context in which list created

NutritionOrder: Return nutrition orders with this encounter identifier
Observation: Encounter related to the observation

▮ **Procedure**: Encounter created as part of

RiskAssessment: Where was assessment performed?
ServiceRequest: An encounter in which this request is made

▮ **VisionPrescription**: Return prescriptions with this encounter identifier

oraldiet (optional)

Query Parameter — Type of diet that can be consumed orally (i.e., take via the mouth).

additive (optional)
Query Parameter — Type of module component to add to the feeding

_filter (optional)

Query Parameter — Search the contents of the resource's data using a filter

datetime (optional)

Query Parameter — Return nutrition orders requested on this date

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

provider (optional)

Query Parameter — The identity of the provider who placed the nutrition order

patient (optional)
Query Parameter —

Multiple Resources:

AllergyIntolerance: Who the sensitivity is for
CarePlan: Who the care plan is for

▮ **CareTeam**: Who care team is for

▮ **ClinicalImpression**: Patient or group assessed

Composition: Who and/or what the composition is about
Condition: Who has the condition?

▮ **Consent**: Who the consent applies to

DetectedIssue: Associated patient
DeviceRequest: Individual the service is ordered for

▮ **DeviceUseStatement**: Search by subject - a patient

DiagnosticReport: The subject of the report if a patient
DocumentManifest: The subject of the set of documents

▮ **DocumentReference**: Who/what is the subject of the document

- **Encounter**: The patient or group present at the encounter
  - **EpisodeOfCare**: The patient who is the focus of this episode of care
  - **FamilyMemberHistory**: The identity of a subject to list family member history items for
    Flag: The identity of a subject to list flags for
  - **Goal**: Who this goal is intended for
  - **ImagingStudy**: Who the study is about
    Immunization: The patient for the vaccination record
    List: If all resources have the same subject
  - **MedicationAdministration**: The identity of a patient to list administrations for
    MedicationDispense: The identity of a patient to list dispenses for
    MedicationRequest: Returns prescriptions for a specific patient
  - **MedicationStatement**: Returns statements for a specific patient.
  - **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
  - **Observation**: The subject that the observation is about (if patient)
  - **Procedure**: Search by subject - a patient
    RiskAssessment: Who/what does assessment apply to?
    ServiceRequest: Search by subject - a patient
  - **SupplyDelivery**: Patient for whom the item is supplied
  - **VisionPrescription**: The identity of a patient to list dispenses for

supplement (optional)

Query Parameter — Type of supplement product requested

_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

formula (optional)
Query Parameter — Type of enteral or infant formula

_source (optional)

Query Parameter — Identifies where the resource comes from

instantiates-uri (optional)

Query Parameter — Instantiates external protocol or definition

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)

Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)

Query Parameter — Status of the nutrition order.

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
  application/fhir+xml

Responses

200
Success **Object**

GET /NutritionOrder/_history   Up

type-history: Fetch the resource change history for all resources of type NutritionOrder (**nutritionOrderHistoryGet**)

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
  application/fhir+xml

Responses
200
Success [Object](#)

DELETE /NutritionOrder/{id}

instance-delete: Perform a logical delete on a resource instance (**nutritionOrderIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json

GET /Observation

search-type: Search for Observation instances (**observationGet**)

This is a search type

Query parameters

date (optional)

Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Date first version of the resource instance was recorded
- **CarePlan**: Time period plan covers
  CareTeam: Time period team covers
  ClinicalImpression: When the assessment was documented
- **Composition**: Composition editing time
  Consent: When this Consent was created or indexed
  DiagnosticReport: The clinically relevant time of the report
- **Encounter**: A date within the period the Encounter lasted
  EpisodeOfCare: The provided date search value falls within the episode of care's period
  FamilyMemberHistory: When history was recorded or last updated
- **Flag**: Time period when flag is active
- **Immunization**: Vaccination (non)-Administration Date
  List: When the list was prepared
  Observation: Obtained date/time. If the obtained element is a period, a date that falls in the period
  Procedure: When the procedure was performed
  RiskAssessment: When was assessment made?
- **SupplyRequest**: When the request was made

combo-data-absent-reason (optional)

Query Parameter — The reason why the expected value in the element Observation.value[x] or Observation.component.value[x] is missing.

code (optional)

Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Code that identifies the allergy or intolerance
- **Condition**: Code for the condition
- **DeviceRequest**: Code for what is being requested/ordered
  DiagnosticReport: The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- **FamilyMemberHistory**: A search by a condition code
  List: What the purpose of this list is
  Medication: Returns medications for a specific code
- **MedicationAdministration**: Return administrations of this medication code
- **MedicationDispense**: Returns dispenses of this medicine code
  MedicationRequest: Return prescriptions of this medication code
- **MedicationStatement**: Return statements of this medication code
- **Observation**: The code of the observation type
  Procedure: A code to identify a procedure
  ServiceRequest: What is being requested/ordered

component-data-absent-reason (optional)

Query Parameter — The reason why the expected value in the element Observation.component.value[x] is missing.

subject (optional)

Query Parameter — The subject that the observation is about

combo-code-value-quantity (optional)
Query Parameter — Code and quantity value parameter pair, including in components

_lastUpdated (optional)

Query Parameter — When the resource version last changed

value-concept (optional)
Query Parameter — The value of the observation, if the value is a CodeableConcept

value-date (optional)

Query Parameter — The value of the observation, if the value is a date or period of time

derived-from (optional)

Query Parameter — Related measurements the observation is made from

focus (optional)

Query Parameter — The focus of an observation when the focus is not the patient of record.

part-of (optional)

Query Parameter — Part of referenced event

has-member (optional)
Query Parameter — Related resource that belongs to the Observation group

code-value-string (optional)

Query Parameter — Code and string value parameter pair

component-code-value-quantity (optional)

Query Parameter — Component code and component quantity value parameter pair

based-on (optional)
Query Parameter — Reference to the service request.

code-value-date (optional)

Query Parameter — Code and date/time value parameter pair

patient (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): Who the sensitivity is for
  [CarePlan](): Who the care plan is for
- [CareTeam](): Who care team is for
- [ClinicalImpression](): Patient or group assessed
- [Composition](): Who and/or what the composition is about
  [Condition](): Who has the condition?
- [Consent](): Who the consent applies to
  [DetectedIssue](): Associated patient
  [DeviceRequest](): Individual the service is ordered for
- [DeviceUseStatement](): Search by subject - a patient
- [DiagnosticReport](): The subject of the report if a patient
  [DocumentManifest](): The subject of the set of documents
- [DocumentReference](): Who/what is the subject of the document
- [Encounter](): The patient or group present at the encounter
  [EpisodeOfCare](): The patient who is the focus of this episode of care
  [FamilyMemberHistory](): The identity of a subject to list family member history items for
- [Flag](): The identity of a subject to list flags for
  [Goal](): Who this goal is intended for
  [ImagingStudy](): Who the study is about
- [Immunization](): The patient for the vaccination record
- [List](): If all resources have the same subject
  [MedicationAdministration](): The identity of a patient to list administrations for
- [MedicationDispense](): The identity of a patient to list dispenses for
- [MedicationRequest](): Returns prescriptions for a specific patient
  [MedicationStatement](): Returns statements for a specific patient.
  [NutritionOrder](): The identity of the person who requires the diet, formula or nutritional supplement
  [Observation](): The subject that the observation is about (if patient)
  [Procedure](): Search by subject - a patient

RiskAssessment: Who/what does assessment apply to?

- ServiceRequest: Search by subject - a patient
- SupplyDelivery: Patient for whom the item is supplied
  VisionPrescription: The identity of a patient to list dispenses for

specimen (optional)

Query Parameter — Specimen used for this observation

component-code (optional)
Query Parameter — The component code of the observation type

code-value-quantity (optional)

Query Parameter — Code and quantity value parameter pair

combo-code-value-concept (optional)

Query Parameter — Code and coded value parameter pair, including in components

value-string (optional)

Query Parameter — The value of the observation, if the value is a string, and also searches in CodeableConcept.text

identifier (optional)

Query Parameter —

Multiple Resources:

- AllergyIntolerance: External ids for this item
- CarePlan: External Ids for this plan
  CareTeam: External Ids for this team
- Composition: Version-independent identifier for the Composition
- Condition: A unique identifier of the condition record
- Consent: Identifier for this record (external references)
  DetectedIssue: Unique id for the detected issue
- DeviceRequest: Business identifier for request/order
  DiagnosticReport: An identifier for the report
  DocumentManifest: Unique Identifier for the set of documents
- DocumentReference: Master Version Specific Identifier
- Encounter: Identifier(s) by which this encounter is known
  EpisodeOfCare: Business Identifier(s) relevant for this EpisodeOfCare
- FamilyMemberHistory: A search by a record identifier
- Goal: External Ids for this goal
- ImagingStudy: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
  Immunization: Business identifier
- List: Business identifier
  MedicationAdministration: Return administrations with this external identifier
  MedicationDispense: Returns dispenses with this external identifier
- MedicationRequest: Return prescriptions with this external identifier
- MedicationStatement: Return statements with this external identifier
  NutritionOrder: Return nutrition orders with this external identifier
- Observation: The unique id for a particular observation
- Procedure: A unique identifier for a procedure
  RiskAssessment: Unique identifier for the assessment
  ServiceRequest: Identifiers assigned to this order
- SupplyDelivery: External identifier
  SupplyRequest: Business Identifier for SupplyRequest
  VisionPrescription: Return prescriptions with this external identifier

performer (optional)
Query Parameter — Who performed the observation

combo-code (optional)
Query Parameter — The code of the observation type or component type
method (optional)
Query Parameter — The method used for the observation

value-quantity (optional)
Query Parameter — The Value of the observation, if the value is a Quantity, or a SampledData (just search on the bounds of the values in sampled data)

component-value-quantity (optional)

Query Parameter — The value of the component observation, if the value is a Quantity, or a SampledData (just search on the bounds of the values in sampled data)

_security (optional)
Query Parameter — Security Labels applied to this resource

data-absent-reason (optional)

Query Parameter — The reason why the expected value in the element Observation.value[x] is missing.

combo-value-quantity (optional)
Query Parameter — The value or component value of the observation, if the value is a Quantity, or a SampledData (just search on the bounds of the values in sampled data)

encounter (optional)
Query Parameter —

Multiple Resources:

- [Composition](): Context of the Composition
- [DeviceRequest](): Encounter during which request was created
- [DiagnosticReport](): The Encounter when the order was made
- [DocumentReference](): Context of the document content
- [Flag](): Alert relevant during encounter
- [List](): Context in which list created
- [NutritionOrder](): Return nutrition orders with this encounter identifier
- [Observation](): Encounter related to the observation
- [Procedure](): Encounter created as part of
- [RiskAssessment](): Where was assessment performed?
- [ServiceRequest](): An encounter in which this request is made
- [VisionPrescription](): Return prescriptions with this encounter identifier

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

code-value-concept (optional)
Query Parameter — Code and coded value parameter pair

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource
_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

component-code-value-concept (optional)
Query Parameter — Component code and component coded value parameter pair
_id (optional)
Query Parameter — Logical id of this artifact

component-value-concept (optional)
Query Parameter — The value of the component observation, if the value is a CodeableConcept
_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — The classification of the type of observation

device (optional)
Query Parameter — The Device that generated the observation data.

combo-value-concept (optional)
Query Parameter — The value or component value of the observation, if the value is a CodeableConcept

status (optional)

Query Parameter — The status of the observation

Query parameters

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_security (optional)
Query Parameter — Security Labels applied to this resource

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses

200
Success Object

GET /ObservationDefinition/_history

type-history: Fetch the resource change history for all resources of type ObservationDefinition
(**observationDefinitionHistoryGet**)

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success [Object](#)

DELETE /ObservationDefinition/{id}

instance-delete: Perform a logical delete on a resource instance (**observationDefinitionIdDelete**)

Path parameters
id (required)
Path Parameter — The resource ID default: null

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success [Object](#)

POST /ObservationDefinition/{id}/$expunge

(**observationDefinitionIdExpungePost**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

```
application/fhir+json
```

Request body

GET /OperationDefinition

search-type: Search for OperationDefinition instances (**operationDefinitionGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The capability statement publication date
- **CodeSystem**: The code system publication date
- **CompartmentDefinition**: The compartment definition publication date
- **ConceptMap**: The concept map publication date
- **GraphDefinition**: The graph definition publication date
- **ImplementationGuide**: The implementation guide publication date
- **MessageDefinition**: The message definition publication date
- **NamingSystem**: The naming system publication date
- **OperationDefinition**: The operation definition publication date
- **SearchParameter**: The search parameter publication date
- **StructureDefinition**: The structure definition publication date
- **StructureMap**: The structure map publication date
- **TerminologyCapabilities**: The terminology capabilities publication date
- **ValueSet**: The value set publication date

code (optional)
Query Parameter — Name used to invoke the operation

instance (optional)
Query Parameter — Invoke on an instance?

context-type-value (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and value assigned to the capability statement
- **CodeSystem**: A use context type and value assigned to the code system
- **CompartmentDefinition**: A use context type and value assigned to the compartment definition
- **ConceptMap**: A use context type and value assigned to the concept map
- **GraphDefinition**: A use context type and value assigned to the graph definition
- **ImplementationGuide**: A use context type and value assigned to the implementation guide
- **MessageDefinition**: A use context type and value assigned to the message definition
- **NamingSystem**: A use context type and value assigned to the naming system
- **OperationDefinition**: A use context type and value assigned to the operation definition
- **SearchParameter**: A use context type and value assigned to the search parameter
- **StructureDefinition**: A use context type and value assigned to the structure definition
- **StructureMap**: A use context type and value assigned to the structure map
- **TerminologyCapabilities**: A use context type and value assigned to the terminology capabilities
- **ValueSet**: A use context type and value assigned to the value set

lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: Intended jurisdiction for the capability statement

- **CodeSystem**: Intended jurisdiction for the code system
- **ConceptMap**: Intended jurisdiction for the concept map
GraphDefinition: Intended jurisdiction for the graph definition
ImplementationGuide: Intended jurisdiction for the implementation guide
- **MessageDefinition**: Intended jurisdiction for the message definition
NamingSystem: Intended jurisdiction for the naming system
OperationDefinition: Intended jurisdiction for the operation definition
- **SearchParameter**: Intended jurisdiction for the search parameter
StructureDefinition: Intended jurisdiction for the structure definition
StructureMap: Intended jurisdiction for the structure map
- **TerminologyCapabilities**: Intended jurisdiction for the terminology capabilities
- **ValueSet**: Intended jurisdiction for the value set

description (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: The description of the capability statement
CodeSystem: The description of the code system
- **CompartmentDefinition**: The description of the compartment definition
ConceptMap: The description of the concept map
GraphDefinition: The description of the graph definition
- **ImplementationGuide**: The description of the implementation guide
- **MessageDefinition**: The description of the message definition
NamingSystem: The description of the naming system
OperationDefinition: The description of the operation definition
- **SearchParameter**: The description of the search parameter
StructureDefinition: The description of the structure definition
StructureMap: The description of the structure map
- **TerminologyCapabilities**: The description of the terminology capabilities
ValueSet: The description of the value set

context-type (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A type of use context assigned to the capability statement
- **CodeSystem**: A type of use context assigned to the code system
CompartmentDefinition: A type of use context assigned to the compartment definition
- **ConceptMap**: A type of use context assigned to the concept map
- **GraphDefinition**: A type of use context assigned to the graph definition
ImplementationGuide: A type of use context assigned to the implementation guide
MessageDefinition: A type of use context assigned to the message definition
- **NamingSystem**: A type of use context assigned to the naming system
OperationDefinition: A type of use context assigned to the operation definition
SearchParameter: A type of use context assigned to the search parameter
- **StructureDefinition**: A type of use context assigned to the structure definition
- **StructureMap**: A type of use context assigned to the structure map
TerminologyCapabilities: A type of use context assigned to the terminology capabilities
- **ValueSet**: A type of use context assigned to the value set

title (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: The human-friendly name of the capability statement
- **CodeSystem**: The human-friendly name of the code system
- **ConceptMap**: The human-friendly name of the concept map
ImplementationGuide: The human-friendly name of the implementation guide
MessageDefinition: The human-friendly name of the message definition
- **OperationDefinition**: The human-friendly name of the operation definition
StructureDefinition: The human-friendly name of the structure definition
StructureMap: The human-friendly name of the structure map
- **TerminologyCapabilities**: The human-friendly name of the terminology capabilities
- **ValueSet**: The human-friendly name of the value set

type (optional)
Query Parameter — Invoke at the type level?

context-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A quantity- or range-valued use context assigned to the capability statement
- **CodeSystem**: A quantity- or range-valued use context assigned to the code system
- **CompartmentDefinition**: A quantity- or range-valued use context assigned to the compartment definition
- **ConceptMap**: A quantity- or range-valued use context assigned to the concept map
- **GraphDefinition**: A quantity- or range-valued use context assigned to the graph definition
- **ImplementationGuide**: A quantity- or range-valued use context assigned to the implementation guide
- **MessageDefinition**: A quantity- or range-valued use context assigned to the message definition
- **NamingSystem**: A quantity- or range-valued use context assigned to the naming system
- **OperationDefinition**: A quantity- or range-valued use context assigned to the operation definition
- **SearchParameter**: A quantity- or range-valued use context assigned to the search parameter
- **StructureDefinition**: A quantity- or range-valued use context assigned to the structure definition
- **StructureMap**: A quantity- or range-valued use context assigned to the structure map
- **TerminologyCapabilities**: A quantity- or range-valued use context assigned to the terminology capabilities
- **ValueSet**: A quantity- or range-valued use context assigned to the value set

output-profile (optional)
Query Parameter — Validation information for out parameters

context (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context assigned to the capability statement
- **CodeSystem**: A use context assigned to the code system
- **CompartmentDefinition**: A use context assigned to the compartment definition
- **ConceptMap**: A use context assigned to the concept map
- **GraphDefinition**: A use context assigned to the graph definition
- **ImplementationGuide**: A use context assigned to the implementation guide
- **MessageDefinition**: A use context assigned to the message definition
- **NamingSystem**: A use context assigned to the naming system
- **OperationDefinition**: A use context assigned to the operation definition
- **SearchParameter**: A use context assigned to the search parameter
- **StructureDefinition**: A use context assigned to the structure definition
- **StructureMap**: A use context assigned to the structure map
- **TerminologyCapabilities**: A use context assigned to the terminology capabilities
- **ValueSet**: A use context assigned to the value set

context-type-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and quantity- or range-based value assigned to the capability statement
- **CodeSystem**: A use context type and quantity- or range-based value assigned to the code system
- **CompartmentDefinition**: A use context type and quantity- or range-based value assigned to the compartment definition
- **ConceptMap**: A use context type and quantity- or range-based value assigned to the concept map
- **GraphDefinition**: A use context type and quantity- or range-based value assigned to the graph definition
- **ImplementationGuide**: A use context type and quantity- or range-based value assigned to the implementation guide
- **MessageDefinition**: A use context type and quantity- or range-based value assigned to the message definition

NamingSystem: A use context type and quantity- or range-based value assigned to the naming system

- **OperationDefinition**: A use context type and quantity- or range-based value assigned to the operation definition

SearchParameter: A use context type and quantity- or range-based value assigned to the search parameter

StructureDefinition: A use context type and quantity- or range-based value assigned to the structure definition

- **StructureMap**: A use context type and quantity- or range-based value assigned to the structure map

TerminologyCapabilities: A use context type and quantity- or range-based value assigned to the terminology capabilities

- **ValueSet**: A use context type and quantity- or range-based value assigned to the value set

kind (optional)
Query Parameter — operation | query

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: The business version of the capability statement
- **CodeSystem**: The business version of the code system
- **CompartmentDefinition**: The business version of the compartment definition
ConceptMap: The business version of the concept map
GraphDefinition: The business version of the graph definition
- **ImplementationGuide**: The business version of the implementation guide
MessageDefinition: The business version of the message definition
OperationDefinition: The business version of the operation definition
- **SearchParameter**: The business version of the search parameter
StructureDefinition: The business version of the structure definition
StructureMap: The business version of the structure map
- **TerminologyCapabilities**: The business version of the terminology capabilities
- **ValueSet**: The business version of the value set

url (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The uri that identifies the capability statement
- **CodeSystem**: The uri that identifies the code system
CompartmentDefinition: The uri that identifies the compartment definition
ConceptMap: The uri that identifies the concept map
- **GraphDefinition**: The uri that identifies the graph definition
ImplementationGuide: The uri that identifies the implementation guide
MessageDefinition: The uri that identifies the message definition
- **OperationDefinition**: The uri that identifies the operation definition
SearchParameter: The uri that identifies the search parameter
StructureDefinition: The uri that identifies the structure definition
- **StructureMap**: The uri that identifies the structure map
- **TerminologyCapabilities**: The uri that identifies the terminology capabilities
ValueSet: The uri that identifies the value set

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

input-profile (optional)
Query Parameter — Validation information for in parameters

system (optional)
Query Parameter — Invoke at the system level?

_profile (optional)
Query Parameter — Profiles this resource claims to conform to
_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: Computationally friendly name of the capability statement
  CodeSystem: Computationally friendly name of the code system
- CompartmentDefinition: Computationally friendly name of the compartment definition
  ConceptMap: Computationally friendly name of the concept map
  GraphDefinition: Computationally friendly name of the graph definition
- ImplementationGuide: Computationally friendly name of the implementation guide
- MessageDefinition: Computationally friendly name of the message definition
  NamingSystem: Computationally friendly name of the naming system
  OperationDefinition: Computationally friendly name of the operation definition
- SearchParameter: Computationally friendly name of the search parameter
  StructureDefinition: Computationally friendly name of the structure definition
  StructureMap: Computationally friendly name of the structure map
- TerminologyCapabilities: Computationally friendly name of the terminology capabilities
  ValueSet: Computationally friendly name of the value set

publisher (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: Name of the publisher of the capability statement
  CodeSystem: Name of the publisher of the code system
  CompartmentDefinition: Name of the publisher of the compartment definition
- ConceptMap: Name of the publisher of the concept map
- GraphDefinition: Name of the publisher of the graph definition
  ImplementationGuide: Name of the publisher of the implementation guide
  MessageDefinition: Name of the publisher of the message definition
- NamingSystem: Name of the publisher of the naming system
  OperationDefinition: Name of the publisher of the operation definition
  SearchParameter: Name of the publisher of the search parameter
- StructureDefinition: Name of the publisher of the structure definition
  StructureMap: Name of the publisher of the structure map
  TerminologyCapabilities: Name of the publisher of the terminology capabilities
- ValueSet: Name of the publisher of the value set

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: The current status of the capability statement
  CodeSystem: The current status of the code system
  CompartmentDefinition: The current status of the compartment definition
- ConceptMap: The current status of the concept map
- GraphDefinition: The current status of the graph definition
  ImplementationGuide: The current status of the implementation guide
  MessageDefinition: The current status of the message definition
- NamingSystem: The current status of the naming system
  OperationDefinition: The current status of the operation definition

SearchParameter: The current status of the search parameter
- **StructureDefinition**: The current status of the structure definition
- **StructureMap**: The current status of the structure map
  TerminologyCapabilities: The current status of the terminology capabilities
  ValueSet: The current status of the value set

base (optional)
Query Parameter — Marks this as a profile of the base

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success Object

(operationDefinitionMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Query parameters

return (optional)
Query Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
  application/fhir+xml

Responses

200

Success **Object**

POST /OperationDefinition

create-type: Create a new OperationDefinition instance (**operationDefinitionPost**)

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
  application/fhir+xml

Responses

200

Success **Object**

GET /OperationDefinition/$validate

(**operationDefinitionValidateGet**)

Query parameters

resource (optional)
Query Parameter —
mode (optional)
Query Parameter —

profile (optional)
Query Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
    application/fhir+json
    application/fhir+xml
```

Responses
200
Success Object

OperationOutcome

POST /OperationOutcome/$expunge   [Up](Up)

(operationOutcomeExpungePost)

Consumes
This API call consumes the following media types via the Content-Type request header:

```
    application/fhir+json
```

Request body
body **object** (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

```
    application/fhir+json
  ▌ application/fhir+xml
```

Responses
200
Success Object

GET /OperationOutcome   [Up](Up)

search-type: Search for OperationOutcome instances (**operationOutcomeGet**)
This is a search type

Query parameters
_profile (optional)
Query Parameter — Profiles this resource claims to conform to
_lastUpdated (optional)
Query Parameter — When the resource version last changed

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target
_security (optional)
Query Parameter — Security Labels applied to this resource

_source (optional)
Query Parameter — Identifies where the resource comes from
_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)

Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success Object

GET /OperationOutcome/_history   Up

type-history: Fetch the resource change history for all resources of type OperationOutcome (**operationOutcomeHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success Object

DELETE /OperationOutcome/{id}   Up

instance-delete: Perform a logical delete on a resource instance (**operationOutcomeIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success Object

POST /OperationOutcome/{id}/$expunge

(operationOutcomeIdExpungePost)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

    application/fhir+json

Request body
body **object** (optional)
Body Parameter —

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

<div style="background-color:blue">GET /Organization</div>

search-type: Search for Organization instances (**organizationGet**)
This is a search type

Query parameters

identifier (optional)
Query Parameter — Any identifier for the organization (not the accreditation issuer's identifier)
partof (optional)
Query Parameter — An organization of which this organization forms a part

address (optional)
Query Parameter — A server defined search that may match any of the string fields in the Address,
including line, city, district, state, country, postalCode, and/or text

address-state (optional)
Query Parameter — A state specified in an address

_lastUpdated (optional)
Query Parameter — When the resource version last changed
_security (optional)
Query Parameter — Security Labels applied to this resource

active (optional)
Query Parameter — Is the Organization record active

type (optional)
Query Parameter — A code for the type of organization

address-postalcode (optional)
Query Parameter — A postal code specified in an address

address-country (optional)
Query Parameter — A country specified in an address

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

endpoint (optional)
Query Parameter — Technical endpoints providing access to services operated for the organization

phonetic (optional)
Query Parameter — A portion of the organization's name using some kind of phonetic matching algorithm

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

address-use (optional)
Query Parameter — A use code specified in an address

name (optional)
Query Parameter — A portion of the organization's name or alias

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

address-city (optional)
Query Parameter — A city specified in an address

Return type

GET /OrganizationAffiliation

search-type: Search for OrganizationAffiliation instances (**organizationAffiliationGet**)
This is a search type

Query parameters

date (optional)
Query Parameter — The period during which the participatingOrganization is affiliated with the primary organization

identifier (optional)
Query Parameter — An organization affiliation's Identifier

specialty (optional)
Query Parameter — Specific specialty of the participatingOrganization in the context of the role

role (optional)
Query Parameter — Definition of the role the participatingOrganization plays

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

active (optional)
Query Parameter — Whether this organization affiliation record is in active use

primary-organization (optional)
Query Parameter — The organization that receives the services from the participating organization

network (optional)
Query Parameter — Health insurance provider network in which the participatingOrganization provides the role's services (if defined) at the indicated locations (if defined)

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

endpoint (optional)
Query Parameter — Technical endpoints providing access to services operated for this role

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

phone (optional)
Query Parameter — A value in a phone contact

service (optional)
Query Parameter — Healthcare services provided through the role

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

participating-organization (optional)
Query Parameter — The organization that provides services to the primary organization

_source (optional)
Query Parameter — Identifies where the resource comes from

location (optional)
Query Parameter — The location(s) at which the role occurs

telecom (optional)

Query Parameter — The value in any kind of contact

_id (optional)
Query Parameter — Logical id of this artifact

GET /Patient

search-type: Search for Patient instances (**patientGet**)

This is a search type

Query parameters

birthdate (optional)

Query Parameter —

Multiple Resources:

- Patient: The patient's date of birth
- Person: The person's date of birth
- RelatedPerson: The Related Person's date of birth

deceased (optional)

Query Parameter — This patient has been marked as deceased, or as a death date entered

address-state (optional)

Query Parameter —

Multiple Resources:

- Patient: A state specified in an address
- Person: A state specified in an address
- Practitioner: A state specified in an address
- RelatedPerson: A state specified in an address

gender (optional)

Query Parameter —

Multiple Resources:

- Patient: Gender of the patient
- Person: The gender of the person
- Practitioner: Gender of the practitioner
- RelatedPerson: Gender of the related person

_lastUpdated (optional)

Query Parameter — When the resource version last changed

link (optional)

Query Parameter — All patients linked to the given patient

language (optional)

Query Parameter — Language code (irrespective of use value)

address-country (optional)

Query Parameter —

Multiple Resources:

- Patient: A country specified in an address
- Person: A country specified in an address
- Practitioner: A country specified in an address
- RelatedPerson: A country specified in an address

death-date (optional)

Query Parameter — The date of death has been provided and satisfies this search value

phonetic (optional)

Query Parameter —

Multiple Resources:

- Patient: A portion of either family or given name using some kind of phonetic matching algorithm
- Person: A portion of name using some kind of phonetic matching algorithm

Practitioner: A portion of either family or given name using some kind of phonetic matching algorithm

▌ **RelatedPerson**: A portion of name using some kind of phonetic matching algorithm

telecom (optional)
Query Parameter —

Multiple Resources:

Patient: The value in any kind of telecom details of the patient
Person: The value in any kind of contact
▌ **Practitioner**: The value in any kind of contact
▌ **PractitionerRole**: The value in any kind of contact
RelatedPerson: The value in any kind of contact

address-city (optional)
Query Parameter —

Multiple Resources:

▌ **Patient**: A city specified in an address
Person: A city specified in an address
▌ **Practitioner**: A city specified in an address
▌ **RelatedPerson**: A city specified in an address

email (optional)
Query Parameter —

Multiple Resources:

▌ **Patient**: A value in an email contact
▌ **Person**: A value in an email contact
Practitioner: A value in an email contact
▌ **PractitionerRole**: A value in an email contact
▌ **RelatedPerson**: A value in an email contact

given (optional)
Query Parameter —

Multiple Resources:

Patient: A portion of the given name of the patient
▌ **Practitioner**: A portion of the given name

identifier (optional)
Query Parameter — A patient identifier

address (optional)
Query Parameter —

Multiple Resources:

Patient: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
▌ **Person**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
Practitioner: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
▌ **RelatedPerson**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text

general-practitioner (optional)
Query Parameter — Patient's nominated general practitioner, not the organization that manages the record

security (optional)
Query Parameter — Security Labels applied to this resource

active (optional)

Query Parameter — Whether the patient record is active

address-postalcode (optional)
Query Parameter —

Multiple Resources:

> [Patient](): A postalCode specified in an address
> ▮ [Person](): A postal code specified in an address
> [Practitioner](): A postalCode specified in an address
> [RelatedPerson](): A postal code specified in an address

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

phone (optional)
Query Parameter —

Multiple Resources:

> [Patient](): A value in a phone contact
> ▮ [Person](): A value in a phone contact
> ▮ [Practitioner](): A value in a phone contact
> [PractitionerRole](): A value in a phone contact
> ▮ [RelatedPerson](): A value in a phone contact

_tag (optional)
Query Parameter — Tags applied to this resource

organization (optional)
Query Parameter — The organization that is the custodian of the patient record

_has (optional)
Query Parameter — Return resources linked to by the given target

address-use (optional)
Query Parameter —

Multiple Resources:

> [Patient](): A use code specified in an address
> [Person](): A use code specified in an address
> ▮ [Practitioner](): A use code specified in an address
> ▮ [RelatedPerson](): A use code specified in an address

name (optional)
Query Parameter — A server defined search that may match any of the string fields in the HumanName, including family, give, prefix, suffix, suffix, and/or text

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

family (optional)
Query Parameter —

Multiple Resources:

> ▮ [Patient](): A portion of the family name of the patient
> [Practitioner](): A portion of the family name

Up

GET /PaymentNotice

search-type: Search for PaymentNotice instances (**paymentNoticeGet**)

This is a search type

Query parameters

identifier (optional)
Query Parameter — The business identifier of the notice

request (optional)
Query Parameter — The Claim

created (optional)
Query Parameter — Creation date fro the notice

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

payment-status (optional)
Query Parameter — The type of payment notice

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

provider (optional)
Query Parameter — The reference to the provider

response (optional)
Query Parameter — The ClaimResponse

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — The status of the payment notice

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses

GET /Person

search-type: Search for Person instances (**personGet**)
This is a search type

Query parameters

birthdate (optional)
Query Parameter —

Multiple Resources:

- ▌ Patient: The patient's date of birth
  Person: The person's date of birth
- ⌊ RelatedPerson: The Related Person's date of birth

address-state (optional)
Query Parameter —

Multiple Resources:

   Patient: A state specified in an address
   Person: A state specified in an address
- ▌ Practitioner: A state specified in an address
   RelatedPerson: A state specified in an address

gender (optional)
Query Parameter —

Multiple Resources:

> **Patient**: Gender of the patient
> **Person**: The gender of the person
> ▌**Practitioner**: Gender of the practitioner
> **RelatedPerson**: Gender of the related person

_lastUpdated (optional)

Query Parameter — When the resource version last changed

link (optional)

Query Parameter — Any link has this Patient, Person, RelatedPerson or Practitioner reference

address-country (optional)

Query Parameter —

Multiple Resources:

> **Patient**: A country specified in an address
> ▌**Person**: A country specified in an address
> **Practitioner**: A country specified in an address
> **RelatedPerson**: A country specified in an address

phonetic (optional)
Query Parameter —

Multiple Resources:

> **Patient**: A portion of either family or given name using some kind of phonetic matching algorithm
> **Person**: A portion of name using some kind of phonetic matching algorithm
> ▌**Practitioner**: A portion of either family or given name using some kind of phonetic matching algorithm
> **RelatedPerson**: A portion of name using some kind of phonetic matching algorithm

patient (optional)
Query Parameter — The Person links to this Patient

telecom (optional)

Query Parameter —

Multiple Resources:

> **Patient**: The value in any kind of telecom details of the patient
> ▌**Person**: The value in any kind of contact
> **Practitioner**: The value in any kind of contact
> **PractitionerRole**: The value in any kind of contact
> ▌**RelatedPerson**: The value in any kind of contact

address-city (optional)

Query Parameter —

Multiple Resources:

> **Patient**: A city specified in an address
> ▌**Person**: A city specified in an address
> **Practitioner**: A city specified in an address
> **RelatedPerson**: A city specified in an address

email (optional)
Query Parameter —

Multiple Resources:

> **Patient**: A value in an email contact
> **Person**: A value in an email contact
> ▌**Practitioner**: A value in an email contact
> ▌**PractitionerRole**: A value in an email contact
> **RelatedPerson**: A value in an email contact

identifier (optional)
Query Parameter — A person Identifier

address (optional)
Query Parameter —

Multiple Resources:

- **Patient**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
  Person: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
- **Practitioner**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
- **RelatedPerson**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text

practitioner (optional)
Query Parameter — The Person links to this Practitioner

_security (optional)
Query Parameter — Security Labels applied to this resource

relatedperson (optional)
Query Parameter — The Person links to this RelatedPerson

address-postalcode (optional)
Query Parameter —

Multiple Resources:

- **Patient**: A postalCode specified in an address
- **Person**: A postal code specified in an address
  Practitioner: A postalCode specified in an address
  RelatedPerson: A postal code specified in an address

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

phone (optional)
Query Parameter —

Multiple Resources:

- **Patient**: A value in a phone contact
  Person: A value in a phone contact
- **Practitioner**: A value in a phone contact
  PractitionerRole: A value in a phone contact
  RelatedPerson: A value in a phone contact

_tag (optional)
Query Parameter — Tags applied to this resource

organization (optional)
Query Parameter — The organization at which this person record is being managed

_has (optional)
Query Parameter — Return resources linked to by the given target

address-use (optional)
Query Parameter —

Multiple Resources:

- **Patient**: A use code specified in an address
- **Person**: A use code specified in an address
- **Practitioner**: A use code specified in an address
- **RelatedPerson**: A use code specified in an address

name (optional)
Query Parameter — A server defined search that may match any of the string fields in the HumanName, including family, give, prefix, suffix, suffix, and/or text

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success **Object**

GET /Person/_history

type-history: Fetch the resource change history for all resources of type Person (**personHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

GET /PlanDefinition   Up

search-type: Search for PlanDefinition instances (**planDefinitionGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — The plan definition publication date

successor (optional)
Query Parameter — What resource is being referenced

context-type-value (optional)
Query Parameter — A use context type and value assigned to the plan definition
_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter — Intended jurisdiction for the plan definition

derived-from (optional)

Query Parameter — What resource is being referenced

description (optional)

Query Parameter — The description of the plan definition

context-type (optional)

Query Parameter — A type of use context assigned to the plan definition

predecessor (optional)
Query Parameter — What resource is being referenced

composed-of (optional)

Query Parameter — What resource is being referenced

title (optional)

Query Parameter — The human-friendly name of the plan definition

type (optional)
Query Parameter — The type of artifact the plan (e.g. order-set, eca-rule, protocol)

context-quantity (optional)

Query Parameter — A quantity- or range-valued use context assigned to the plan definition

depends-on (optional)
Query Parameter — What resource is being referenced

effective (optional)

Query Parameter — The time during which the plan definition is intended to be in use

context (optional)

Query Parameter — A use context assigned to the plan definition

definition (optional)

Query Parameter — Activity or plan definitions used by plan definition

context-type-quantity (optional)

Query Parameter — A use context type and quantity- or range-based value assigned to the plan definition

identifier (optional)

Query Parameter — External identifier for the plan definition

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)

Query Parameter — The business version of the plan definition

url (optional)

Query Parameter — The uri that identifies the plan definition

_filter (optional)

Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)

Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — Computationally friendly name of the plan definition

publisher (optional)

Query Parameter — Name of the publisher of the plan definition

topic (optional)

Query Parameter — Topics associated with the module

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)

Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource
status (optional)
Query Parameter — The current status of the plan definition

Query Parameter —

Multiple Resources:

    <u>Patient</u>: Gender of the patient
    ▮ <u>Person</u>: The gender of the person
    | <u>Practitioner</u>: Gender of the practitioner
    <u>RelatedPerson</u>: Gender of the related person

_lastUpdated (optional)
Query Parameter — When the resource version last changed

address-country (optional)
Query Parameter —

Multiple Resources:

- [Patient](#): A country specified in an address
  [Person](#): A country specified in an address
  [Practitioner](#): A country specified in an address
- [RelatedPerson](#): A country specified in an address

phonetic (optional)
Query Parameter —

Multiple Resources:

- [Patient](#): A portion of either family or given name using some kind of phonetic matching algorithm
- [Person](#): A portion of name using some kind of phonetic matching algorithm
- [Practitioner](#): A portion of either family or given name using some kind of phonetic matching algorithm
- [RelatedPerson](#): A portion of name using some kind of phonetic matching algorithm

telecom (optional)
Query Parameter —

Multiple Resources:

- [Patient](#): The value in any kind of telecom details of the patient
- [Person](#): The value in any kind of contact
- [Practitioner](#): The value in any kind of contact
  [PractitionerRole](#): The value in any kind of contact
  [RelatedPerson](#): The value in any kind of contact

address-city (optional)
Query Parameter —

Multiple Resources:

- [Patient](#): A city specified in an address
  [Person](#): A city specified in an address
- [Practitioner](#): A city specified in an address
  [RelatedPerson](#): A city specified in an address

communication (optional)
Query Parameter — One of the languages that the practitioner can communicate with

email (optional)
Query Parameter —

Multiple Resources:

- [Patient](#): A value in an email contact
- [Person](#): A value in an email contact
  [Practitioner](#): A value in an email contact
  [PractitionerRole](#): A value in an email contact
- [RelatedPerson](#): A value in an email contact

given (optional)
Query Parameter —

Multiple Resources:

- [Patient](#): A portion of the given name of the patient
- [Practitioner](#): A portion of the given name

identifier (optional)
Query Parameter — A practitioner's Identifier

address (optional)
Query Parameter —

Multiple Resources:

- **[Patient](#)**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
- **[Person](#)**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
- **[Practitioner](#)**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
- **[RelatedPerson](#)**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text

_security (optional)
Query Parameter — Security Labels applied to this resource

active (optional)
Query Parameter — Whether the practitioner record is active

address-postalcode (optional)
Query Parameter —

Multiple Resources:

- **[Patient](#)**: A postalCode specified in an address
- **[Person](#)**: A postal code specified in an address
- **[Practitioner](#)**: A postalCode specified in an address
- **[RelatedPerson](#)**: A postal code specified in an address

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

phone (optional)
Query Parameter —

Multiple Resources:

- **[Patient](#)**: A value in a phone contact
- **[Person](#)**: A value in a phone contact
- **[Practitioner](#)**: A value in a phone contact
- **[PractitionerRole](#)**: A value in a phone contact
- **[RelatedPerson](#)**: A value in a phone contact

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

address-use (optional)
Query Parameter —

Multiple Resources:

- **[Patient](#)**: A use code specified in an address
- **[Person](#)**: A use code specified in an address
- **[Practitioner](#)**: A use code specified in an address
- **[RelatedPerson](#)**: A use code specified in an address

name (optional)
Query Parameter — A server defined search that may match any of the string fields in the HumanName, including family, give, prefix, suffix, suffix, and/or text

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact
_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

family (optional)
Query Parameter —

Multiple Resources:

▐ [Patient](): A portion of the family name of the patient

GET /PractitionerRole   Up

search-type: Search for PractitionerRole instances (**practitionerRoleGet**)

This is a search type

Query parameters
date (optional)
Query Parameter — The period during which the practitioner is authorized to perform in these role(s)

identifier (optional)
Query Parameter — A practitioner's Identifier

specialty (optional)
Query Parameter — The practitioner has this specialty at an organization

role (optional)
Query Parameter — The practitioner can perform this role at for the organization

practitioner (optional)
Query Parameter — Practitioner that is able to provide the defined services for the organization
_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

active (optional)
Query Parameter — Whether this practitioner role record is in active use
_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

endpoint (optional)
Query Parameter — Technical endpoints providing access to services operated for the practitioner with this role

_profile (optional)
Query Parameter — Profiles this resource claims to conform to
phone (optional)
Query Parameter —

Multiple Resources:

> [Patient](): A value in a phone contact
> ▌ [Person](): A value in a phone contact
> ▌ [Practitioner](): A value in a phone contact
> [PractitionerRole](): A value in a phone contact
> [RelatedPerson](): A value in a phone contact

service (optional)
Query Parameter — The list of healthcare services that this worker provides for this role's Organization/Location(s)
_tag (optional)
Query Parameter — Tags applied to this resource

organization (optional)
Query Parameter — The identity of the organization the practitioner represents / acts on behalf of
_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

telecom (optional)
Query Parameter —

Multiple Resources:

> [Patient](): The value in any kind of telecom details of the patient
> ▌ [Person](): The value in any kind of contact
> [Practitioner](): The value in any kind of contact
> [PractitionerRole](): The value in any kind of contact
> ▌ [RelatedPerson](): The value in any kind of contact

location (optional)
Query Parameter — One of the locations at which this practitioner provides care

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource
_content (optional)
Query Parameter — Search on the entire content of the resource

email (optional)
Query Parameter —

Multiple Resources:

> [Patient](): A value in an email contact
> [Person](): A value in an email contact
> [Practitioner](): A value in an email contact
> [PractitionerRole](): A value in an email contact
> [RelatedPerson](): A value in an email contact

GET /Procedure   Up

search-type: Search for Procedure instances (**procedureGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- AllergyIntolerance: Date first version of the resource instance was recorded
- CarePlan: Time period plan covers
- CareTeam: Time period team covers
- ClinicalImpression: When the assessment was documented
- Composition: Composition editing time
- Consent: When this Consent was created or indexed
- DiagnosticReport: The clinically relevant time of the report
- Encounter: A date within the period the Encounter lasted
- EpisodeOfCare: The provided date search value falls within the episode of care's period
- FamilyMemberHistory: When history was recorded or last updated
- Flag: Time period when flag is active

Immunization: Vaccination (non)-Administration Date
- **List**: When the list was prepared
- **Observation**: Obtained date/time. If the obtained element is a period, a date that falls in the period
- **Procedure**: When the procedure was performed
- **RiskAssessment**: When was assessment made?
- **SupplyRequest**: When the request was made

code (optional)

Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Code that identifies the allergy or intolerance
- **Condition**: Code for the condition
- **DeviceRequest**: Code for what is being requested/ordered
- **DiagnosticReport**: The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
- **FamilyMemberHistory**: A search by a condition code
- **List**: What the purpose of this list is
- **Medication**: Returns medications for a specific code
- **MedicationAdministration**: Return administrations of this medication code
- **MedicationDispense**: Returns dispenses of this medicine code
- **MedicationRequest**: Return prescriptions of this medication code
- **MedicationStatement**: Return statements of this medication code
- **Observation**: The code of the observation type
- **Procedure**: A code to identify a procedure
- **ServiceRequest**: What is being requested/ordered

subject (optional)

Query Parameter — Search by subject

_lastUpdated (optional)

Query Parameter — When the resource version last changed

part-of (optional)

Query Parameter — Part of referenced event

reason-code (optional)

Query Parameter — Coded reason procedure performed

based-on (optional)

Query Parameter — A request for this procedure

patient (optional)

Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Who the sensitivity is for
- **CarePlan**: Who the care plan is for
- **CareTeam**: Who care team is for
- **ClinicalImpression**: Patient or group assessed
- **Composition**: Who and/or what the composition is about
- **Condition**: Who has the condition?
- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for

MedicationDispense: The identity of a patient to list dispenses for

■ **MedicationRequest**: Returns prescriptions for a specific patient

■ **MedicationStatement**: Returns statements for a specific patient.
NutritionOrder: The identity of the person who requires the diet, formula or nutritional supplement

■ **Observation**: The subject that the observation is about (if patient)
Procedure: Search by subject - a patient
RiskAssessment: Who/what does assessment apply to?

■ **ServiceRequest**: Search by subject - a patient
SupplyDelivery: Patient for whom the item is supplied
VisionPrescription: The identity of a patient to list dispenses for

instantiates-uri (optional)

Query Parameter — Instantiates external protocol or definition

identifier (optional)
Query Parameter —

Multiple Resources:

AllergyIntolerance: External ids for this item
CarePlan: External Ids for this plan

■ **CareTeam**: External Ids for this team

Composition: Version-independent identifier for the Composition
Condition: A unique identifier of the condition record

■ **Consent**: Identifier for this record (external references)

■ **DetectedIssue**: Unique id for the detected issue

DeviceRequest: Business identifier for request/order
DiagnosticReport: An identifier for the report

■ **DocumentManifest**: Unique Identifier for the set of documents

DocumentReference: Master Version Specific Identifier
Encounter: Identifier(s) by which this encounter is known

■ **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare

FamilyMemberHistory: A search by a record identifier
Goal: External Ids for this goal

■ **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number

■ **Immunization**: Business identifier

List: Business identifier
MedicationAdministration: Return administrations with this external identifier

■ **MedicationDispense**: Returns dispenses with this external identifier

MedicationRequest: Return prescriptions with this external identifier
MedicationStatement: Return statements with this external identifier

■ **NutritionOrder**: Return nutrition orders with this external identifier

Observation: The unique id for a particular observation
Procedure: A unique identifier for a procedure

■ **RiskAssessment**: Unique identifier for the assessment

■ **ServiceRequest**: Identifiers assigned to this order

SupplyDelivery: External identifier
SupplyRequest: Business Identifier for SupplyRequest

■ **VisionPrescription**: Return prescriptions with this external identifier

performer (optional)
Query Parameter — The reference to the practitioner

security (optional)
Query Parameter — Security Labels applied to this resource

instantiates-canonical (optional)
Query Parameter — Instantiates FHIR protocol or definition

encounter (optional)
Query Parameter —

Multiple Resources:

Composition: Context of the Composition

■ **DeviceRequest**: Encounter during which request was created

■ **DiagnosticReport**: The Encounter when the order was made

DocumentReference: Context of the document content
Flag: Alert relevant during encounter

List: Context in which list created
- NutritionOrder: Return nutrition orders with this encounter identifier
- Observation: Encounter related to the observation
- Procedure: Encounter created as part of
- RiskAssessment: Where was assessment performed?
- ServiceRequest: An encounter in which this request is made
- VisionPrescription: Return prescriptions with this encounter identifier

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

reason-reference (optional)
Query Parameter — The justification that the procedure was performed

_source (optional)
Query Parameter — Identifies where the resource comes from

location (optional)
Query Parameter — Where the procedure happened

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — Classification of the procedure

status (optional)
Query Parameter — preparation | in-progress | not-done | on-hold | stopped | completed | entered-in-error | unknown

GET /Provenance

search-type: Search for Provenance instances (**provenanceGet**)
This is a search type

Query parameters

agent-type (optional)
Query Parameter — How the agent participated

agent (optional)
Query Parameter — Who participated

signature-type (optional)
Query Parameter — Indication of the reason the entity signed the object(s)

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

recorded (optional)
Query Parameter — When the activity was recorded / updated

when (optional)
Query Parameter — When the activity occurred

target (optional)
Query Parameter — Target Reference(s) (usually version specific)

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

patient (optional)
Query Parameter — Target Reference(s) (usually version specific)

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

location (optional)
Query Parameter — Where the activity occurred, if relevant

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

agent-role (optional)
Query Parameter — What the agents role was

entity (optional)
Query Parameter — Identity of entity

Return type

GET /Questionnaire

search-type: Search for Questionnaire instances (**questionnaireGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — The questionnaire publication date

code (optional)
Query Parameter — A code that corresponds to one of its items in the questionnaire

context-type-value (optional)
Query Parameter — A use context type and value assigned to the questionnaire

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter — Intended jurisdiction for the questionnaire

description (optional)
Query Parameter — The description of the questionnaire

context-type (optional)
Query Parameter — A type of use context assigned to the questionnaire

title (optional)
Query Parameter — The human-friendly name of the questionnaire

context-quantity (optional)
Query Parameter — A quantity- or range-valued use context assigned to the questionnaire

effective (optional)
Query Parameter — The time during which the questionnaire is intended to be in use

context (optional)
Query Parameter — A use context assigned to the questionnaire

definition (optional)

Query Parameter — ElementDefinition - details for the item

context-type-quantity (optional)
Query Parameter — A use context type and quantity- or range-based value assigned to the questionnaire

identifier (optional)
Query Parameter — External identifier for the questionnaire

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter — The business version of the questionnaire

url (optional)
Query Parameter — The uri that identifies the questionnaire

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

subject-type (optional)
Query Parameter — Resource that can be subject of QuestionnaireResponse

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — Computationally friendly name of the questionnaire

publisher (optional)
Query Parameter — Name of the publisher of the questionnaire

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — The current status of the questionnaire

Success [Object](#)

GET /RelatedPerson   [Up](#)

search-type: Search for RelatedPerson instances (**relatedPersonGet**)
This is a search type

Query parameters

birthdate (optional)
Query Parameter —

Multiple Resources:

- ▌ [Patient](#): The patient's date of birth
  [Person](#): The person's date of birth
  [RelatedPerson](#): The Related Person's date of birth

address-state (optional)
Query Parameter —

Multiple Resources:

   [Patient](#): A state specified in an address
   [Person](#): A state specified in an address
- ▌ [Practitioner](#): A state specified in an address
   [RelatedPerson](#): A state specified in an address

gender (optional)
Query Parameter —

Multiple Resources:

- **Patient**: Gender of the patient
- **Person**: The gender of the person
- **Practitioner**: Gender of the practitioner
- **RelatedPerson**: Gender of the related person

_lastUpdated (optional)

Query Parameter — When the resource version last changed

address-country (optional)

Query Parameter —

Multiple Resources:

- **Patient**: A country specified in an address
- **Person**: A country specified in an address
- **Practitioner**: A country specified in an address
- **RelatedPerson**: A country specified in an address

phonetic (optional)

Query Parameter —

Multiple Resources:

- **Patient**: A portion of either family or given name using some kind of phonetic matching algorithm
- **Person**: A portion of name using some kind of phonetic matching algorithm
- **Practitioner**: A portion of either family or given name using some kind of phonetic matching algorithm
- **RelatedPerson**: A portion of name using some kind of phonetic matching algorithm

patient (optional)

Query Parameter — The patient this related person is related to

telecom (optional)

Query Parameter —

Multiple Resources:

- **Patient**: The value in any kind of telecom details of the patient
- **Person**: The value in any kind of contact
- **Practitioner**: The value in any kind of contact
- **PractitionerRole**: The value in any kind of contact
- **RelatedPerson**: The value in any kind of contact

address-city (optional)

Query Parameter —

Multiple Resources:

- **Patient**: A city specified in an address
- **Person**: A city specified in an address
- **Practitioner**: A city specified in an address
- **RelatedPerson**: A city specified in an address

relationship (optional)

Query Parameter — The relationship between the patient and the relatedperson

email (optional)

Query Parameter —

Multiple Resources:

- **Patient**: A value in an email contact
- **Person**: A value in an email contact
- **Practitioner**: A value in an email contact
- **PractitionerRole**: A value in an email contact
- **RelatedPerson**: A value in an email contact

identifier (optional)
Query Parameter — An Identifier of the RelatedPerson

address (optional)
Query Parameter —

Multiple Resources:

- **Patient**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
- **Person**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
- **Practitioner**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text
- **RelatedPerson**: A server defined search that may match any of the string fields in the Address, including line, city, district, state, country, postalCode, and/or text

_security (optional)
Query Parameter — Security Labels applied to this resource

active (optional)
Query Parameter — Indicates if the related person record is active

address-postalcode (optional)
Query Parameter —

Multiple Resources:

- **Patient**: A postalCode specified in an address
- **Person**: A postal code specified in an address
- **Practitioner**: A postalCode specified in an address
- **RelatedPerson**: A postal code specified in an address

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

phone (optional)
Query Parameter —

Multiple Resources:

- **Patient**: A value in a phone contact
- **Person**: A value in a phone contact
- **Practitioner**: A value in a phone contact
- **PractitionerRole**: A value in a phone contact
- **RelatedPerson**: A value in a phone contact

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

address-use (optional)
Query Parameter —

Multiple Resources:

- **Patient**: A use code specified in an address
- **Person**: A use code specified in an address
- **Practitioner**: A use code specified in an address
- **RelatedPerson**: A use code specified in an address

name (optional)
Query Parameter — A server defined search that may match any of the string fields in the HumanName, including family, give, prefix, suffix, suffix, and/or text

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

GET /ResearchDefinition

search-type: Search for ResearchDefinition instances (**researchDefinitionGet**)

This is a search type

Query parameters

date (optional)
Query Parameter — The research definition publication date

successor (optional)
Query Parameter — What resource is being referenced

context-type-value (optional)
Query Parameter — A use context type and value assigned to the research definition

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter — Intended jurisdiction for the research definition

derived-from (optional)
Query Parameter — What resource is being referenced

description (optional)
Query Parameter — The description of the research definition

context-type (optional)
Query Parameter — A type of use context assigned to the research definition

predecessor (optional)
Query Parameter — What resource is being referenced

composed-of (optional)
Query Parameter — What resource is being referenced

title (optional)
Query Parameter — The human-friendly name of the research definition

context-quantity (optional)
Query Parameter — A quantity- or range-valued use context assigned to the research definition

depends-on (optional)
Query Parameter — What resource is being referenced

effective (optional)
Query Parameter — The time during which the research definition is intended to be in use

context (optional)
Query Parameter — A use context assigned to the research definition

context-type-quantity (optional)
Query Parameter — A use context type and quantity- or range-based value assigned to the research definition

identifier (optional)
Query Parameter — External identifier for the research definition

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter — The business version of the research definition

url (optional)
Query Parameter — The uri that identifies the research definition

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to
_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — Computationally friendly name of the research definition
publisher (optional)
Query Parameter — Name of the publisher of the research definition

topic (optional)
Query Parameter — Topics associated with the ResearchDefinition
_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource
_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — The current status of the research definition

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success Object

GET /ResearchDefinition/_history   [Up](Up)

type-history: Fetch the resource change history for all resources of type ResearchDefinition
(**researchDefinitionHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
▌ application/fhir+json
  application/fhir+xml
```

Responses
200
Success Object

Query Parameter — Steps followed in executing study

site (optional)

Query Parameter — Facility where study activities are conducted

_profile (optional)

Query Parameter — Profiles this resource claims to conform to

_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

_source (optional)

Query Parameter — Identifies where the resource comes from

location (optional)

Query Parameter — Geographic region(s) for study

_id (optional)

Query Parameter — Logical id of this artifact

_text (optional)

Query Parameter — Search on the narrative of the resource

_content (optional)

Query Parameter — Search on the entire content of the resource

category (optional)

Query Parameter — Classifications for the study

keyword (optional)

Query Parameter — Used to search for the study

status (optional)

Query Parameter — active | administratively-completed | approved | closed-to-accrual | closed-to-accrual-and-intervention | completed | disapproved | in-review | temporarily-closed-to-accrual | temporarily-closed-to-accrual-and-intervention | withdrawn

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

▐ `application/fhir+json`

application/fhir+xml

Responses
200
Success Object

GET /ResearchStudy/_history

type-history: Fetch the resource change history for all resources of type ResearchStudy (**researchStudyHistoryGet**)

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

DELETE /ResearchStudy/{id}

instance-delete: Perform a logical delete on a resource instance (**researchStudyIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /ResearchStudy/{id}/$expunge

(**researchStudyIdExpungePost**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

application/fhir+json

GET /RiskAssessment

search-type: Search for RiskAssessment instances (**riskAssessmentGet**)
This is a search type

Query parameters

    date (optional)
Query Parameter —

    Multiple Resources:

- ▌ [AllergyIntolerance](#): Date first version of the resource instance was recorded
  CarePlan: Time period plan covers
- ▎ [CareTeam](#): Time period team covers
- ▌ [ClinicalImpression](#): When the assessment was documented
  [Composition](#): Composition editing time
  [Consent](#): When this Consent was created or indexed
- ▌ [DiagnosticReport](#): The clinically relevant time of the report
- ▎ [Encounter](#): A date within the period the Encounter lasted
  [EpisodeOfCare](#): The provided date search value falls within the episode of care's period
- ▌ [FamilyMemberHistory](#): When history was recorded or last updated
- ▌ [Flag](#): Time period when flag is active
  [Immunization](#): Vaccination (non)-Administration Date
- ▎ [List](#): When the list was prepared
- ▌ [Observation](#): Obtained date/time. If the obtained element is a period, a date that falls in the period
  [Procedure](#): When the procedure was performed
- ▌ [RiskAssessment](#): When was assessment made?
- ▎ [SupplyRequest](#): When the request was made

identifier (optional)

Query Parameter —

Multiple Resources:

AllergyIntolerance: External ids for this item

CarePlan: External Ids for this plan

CareTeam: External Ids for this team

Composition: Version-independent identifier for the Composition

Condition: A unique identifier of the condition record

Consent: Identifier for this record (external references)

DetectedIssue: Unique id for the detected issue

DeviceRequest: Business identifier for request/order

DiagnosticReport: An identifier for the report

DocumentManifest: Unique Identifier for the set of documents

DocumentReference: Master Version Specific Identifier

Encounter: Identifier(s) by which this encounter is known

EpisodeOfCare: Business Identifier(s) relevant for this EpisodeOfCare

FamilyMemberHistory: A search by a record identifier

Goal: External Ids for this goal

ImagingStudy: Identifiers for the Study, such as DICOM Study Instance UID and Accession number

Immunization: Business identifier

List: Business identifier

MedicationAdministration: Return administrations with this external identifier

MedicationDispense: Returns dispenses with this external identifier

MedicationRequest: Return prescriptions with this external identifier

MedicationStatement: Return statements with this external identifier

NutritionOrder: Return nutrition orders with this external identifier

Observation: The unique id for a particular observation

Procedure: A unique identifier for a procedure

RiskAssessment: Unique identifier for the assessment

ServiceRequest: Identifiers assigned to this order

SupplyDelivery: External identifier

SupplyRequest: Business Identifier for SupplyRequest

VisionPrescription: Return prescriptions with this external identifier

performer (optional)

Query Parameter — Who did assessment?

method (optional)

Query Parameter — Evaluation mechanism

probability (optional)

Query Parameter — Likelihood of specified outcome

subject (optional)

Query Parameter — Who/what does assessment apply to?

_lastUpdated (optional)

Query Parameter — When the resource version last changed

_security (optional)

Query Parameter — Security Labels applied to this resource

encounter (optional)

Query Parameter —

Multiple Resources:

Composition: Context of the Composition

DeviceRequest: Encounter during which request was created

DiagnosticReport: The Encounter when the order was made

DocumentReference: Context of the document content

Flag: Alert relevant during encounter

List: Context in which list created

NutritionOrder: Return nutrition orders with this encounter identifier

Observation: Encounter related to the observation

Procedure: Encounter created as part of

RiskAssessment: Where was assessment performed?

ServiceRequest: An encounter in which this request is made

VisionPrescription: Return prescriptions with this encounter identifier

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter
condition (optional)
Query Parameter — Condition assessed

_profile (optional)
Query Parameter — Profiles this resource claims to conform to
patient (optional)
Query Parameter —

Multiple Resources:

AllergyIntolerance: Who the sensitivity is for
▌ **CarePlan**: Who the care plan is for
▌ **CareTeam**: Who care team is for
ClinicalImpression: Patient or group assessed
Composition: Who and/or what the composition is about
▌ **Condition**: Who has the condition?
Consent: Who the consent applies to
DetectedIssue: Associated patient
▌ **DeviceRequest**: Individual the service is ordered for
▏ **DeviceUseStatement**: Search by subject - a patient
DiagnosticReport: The subject of the report if a patient
▌ **DocumentManifest**: The subject of the set of documents
▌ **DocumentReference**: Who/what is the subject of the document
Encounter: The patient or group present at the encounter
EpisodeOfCare: The patient who is the focus of this episode of care
▌ **FamilyMemberHistory**: The identity of a subject to list family member history items for
Flag: The identity of a subject to list flags for
Goal: Who this goal is intended for
▌ **ImagingStudy**: Who the study is about
▏ **Immunization**: The patient for the vaccination record
List: If all resources have the same subject
▌ **MedicationAdministration**: The identity of a patient to list administrations for
▌ **MedicationDispense**: The identity of a patient to list dispenses for
MedicationRequest: Returns prescriptions for a specific patient
MedicationStatement: Returns statements for a specific patient.
▌ **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
Observation: The subject that the observation is about (if patient)
▌ **Procedure**: Search by subject - a patient
▏ **RiskAssessment**: Who/what does assessment apply to?
ServiceRequest: Search by subject - a patient
▌ **SupplyDelivery**: Patient for whom the item is supplied
▌ **VisionPrescription**: The identity of a patient to list dispenses for

_tag (optional)
Query Parameter — Tags applied to this resource
_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from
risk (optional)
Query Parameter — Likelihood of specified outcome as a qualitative value

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource
_content (optional)
Query Parameter — Search on the entire content of the resource

GET /RiskEvidenceSynthesis

search-type: Search for RiskEvidenceSynthesis instances (**riskEvidenceSynthesisGet**)
This is a search type

Query parameters

date (optional)
Query Parameter — The risk evidence synthesis publication date
context-type-value (optional)
Query Parameter — A use context type and value assigned to the risk evidence synthesis

lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter — Intended jurisdiction for the risk evidence synthesis
description (optional)
Query Parameter — The description of the risk evidence synthesis

context-type (optional)
Query Parameter — A type of use context assigned to the risk evidence synthesis
title (optional)
Query Parameter — The human-friendly name of the risk evidence synthesis

context-quantity (optional)
Query Parameter — A quantity- or range-valued use context assigned to the risk evidence synthesis

effective (optional)
Query Parameter — The time during which the risk evidence synthesis is intended to be in use

context (optional)
Query Parameter — A use context assigned to the risk evidence synthesis

context-type-quantity (optional)

Query Parameter — A use context type and quantity- or range-based value assigned to the risk evidence synthesis

identifier (optional)
Query Parameter — External identifier for the risk evidence synthesis
_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter — The business version of the risk evidence synthesis

url (optional)
Query Parameter — The uri that identifies the risk evidence synthesis
_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — Computationally friendly name of the risk evidence synthesis
publisher (optional)
Query Parameter — Name of the publisher of the risk evidence synthesis

_source (optional)
Query Parameter — Identifies where the resource comes from
_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource
status (optional)
Query Parameter — The current status of the risk evidence synthesis

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- ▌ application/fhir+json

Query Parameter —

Multiple Resources:

> ▎ CapabilityStatement: A use context type and value assigned to the capability statement
> CodeSystem: A use context type and value assigned to the code system
> CompartmentDefinition: A use context type and value assigned to the compartment definition
> ▎ ConceptMap: A use context type and value assigned to the concept map
> ▎ GraphDefinition: A use context type and value assigned to the graph definition
> ImplementationGuide: A use context type and value assigned to the implementation guide
> MessageDefinition: A use context type and value assigned to the message definition

NamingSystem: A use context type and value assigned to the naming system
   OperationDefinition: A use context type and value assigned to the operation definition
   SearchParameter: A use context type and value assigned to the search parameter
StructureDefinition: A use context type and value assigned to the structure definition
StructureMap: A use context type and value assigned to the structure map
   TerminologyCapabilities: A use context type and value assigned to the terminology capabilities
ValueSet: A use context type and value assigned to the value set

_lastUpdated (optional)

Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter —

Multiple Resources:

   CapabilityStatement: Intended jurisdiction for the capability statement
CodeSystem: Intended jurisdiction for the code system
ConceptMap: Intended jurisdiction for the concept map
   GraphDefinition: Intended jurisdiction for the graph definition
ImplementationGuide: Intended jurisdiction for the implementation guide
MessageDefinition: Intended jurisdiction for the message definition
   NamingSystem: Intended jurisdiction for the naming system
OperationDefinition: Intended jurisdiction for the operation definition
SearchParameter: Intended jurisdiction for the search parameter
   StructureDefinition: Intended jurisdiction for the structure definition
   StructureMap: Intended jurisdiction for the structure map
TerminologyCapabilities: Intended jurisdiction for the terminology capabilities
ValueSet: Intended jurisdiction for the value set

description (optional)
Query Parameter —

Multiple Resources:

   CapabilityStatement: The description of the capability statement
CodeSystem: The description of the code system
   CompartmentDefinition: The description of the compartment definition
ConceptMap: The description of the concept map
GraphDefinition: The description of the graph definition
   ImplementationGuide: The description of the implementation guide
MessageDefinition: The description of the message definition
NamingSystem: The description of the naming system
   OperationDefinition: The description of the operation definition
   SearchParameter: The description of the search parameter
StructureDefinition: The description of the structure definition
StructureMap: The description of the structure map
   TerminologyCapabilities: The description of the terminology capabilities
ValueSet: The description of the value set

derived-from (optional)
Query Parameter — Original definition for the search parameter
context-type (optional)
Query Parameter —

Multiple Resources:

   CapabilityStatement: A type of use context assigned to the capability statement
   CodeSystem: A type of use context assigned to the code system
CompartmentDefinition: A type of use context assigned to the compartment definition
ConceptMap: A type of use context assigned to the concept map
   GraphDefinition: A type of use context assigned to the graph definition
   ImplementationGuide: A type of use context assigned to the implementation guide
MessageDefinition: A type of use context assigned to the message definition
NamingSystem: A type of use context assigned to the naming system
   OperationDefinition: A type of use context assigned to the operation definition
SearchParameter: A type of use context assigned to the search parameter
StructureDefinition: A type of use context assigned to the structure definition

- **StructureMap**: A type of use context assigned to the structure map
  - **TerminologyCapabilities**: A type of use context assigned to the terminology capabilities
  - **ValueSet**: A type of use context assigned to the value set

type (optional)
Query Parameter — number | date | string | token | reference | composite | quantity | uri | special

context-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A quantity- or range-valued use context assigned to the capability statement
  CodeSystem: A quantity- or range-valued use context assigned to the code system
- **CompartmentDefinition**: A quantity- or range-valued use context assigned to the compartment definition
  ConceptMap: A quantity- or range-valued use context assigned to the concept map
  GraphDefinition: A quantity- or range-valued use context assigned to the graph definition
- **ImplementationGuide**: A quantity- or range-valued use context assigned to the implementation guide
  MessageDefinition: A quantity- or range-valued use context assigned to the message definition
- **NamingSystem**: A quantity- or range-valued use context assigned to the naming system
  OperationDefinition: A quantity- or range-valued use context assigned to the operation definition
  SearchParameter: A quantity- or range-valued use context assigned to the search parameter
- **StructureDefinition**: A quantity- or range-valued use context assigned to the structure definition
- **StructureMap**: A quantity- or range-valued use context assigned to the structure map
  TerminologyCapabilities: A quantity- or range-valued use context assigned to the terminology capabilities
- **ValueSet**: A quantity- or range-valued use context assigned to the value set

context (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context assigned to the capability statement
- **CodeSystem**: A use context assigned to the code system
  CompartmentDefinition: A use context assigned to the compartment definition
  ConceptMap: A use context assigned to the concept map
- **GraphDefinition**: A use context assigned to the graph definition
  ImplementationGuide: A use context assigned to the implementation guide
  MessageDefinition: A use context assigned to the message definition
- **NamingSystem**: A use context assigned to the naming system
- **OperationDefinition**: A use context assigned to the operation definition
  SearchParameter: A use context assigned to the search parameter
  StructureDefinition: A use context assigned to the structure definition
- **StructureMap**: A use context assigned to the structure map
  TerminologyCapabilities: A use context assigned to the terminology capabilities
  ValueSet: A use context assigned to the value set

context-type-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and quantity- or range-based value assigned to the capability statement
- **CodeSystem**: A use context type and quantity- or range-based value assigned to the code system
  CompartmentDefinition: A use context type and quantity- or range-based value assigned to the compartment definition
- **ConceptMap**: A use context type and quantity- or range-based value assigned to the concept map
- **GraphDefinition**: A use context type and quantity- or range-based value assigned to the graph definition
  ImplementationGuide: A use context type and quantity- or range-based value assigned to the implementation guide
  MessageDefinition: A use context type and quantity- or range-based value assigned to the message definition

- **NamingSystem**: A use context type and quantity- or range-based value assigned to the naming system
- **OperationDefinition**: A use context type and quantity- or range-based value assigned to the operation definition
- **SearchParameter**: A use context type and quantity- or range-based value assigned to the search parameter
- **StructureDefinition**: A use context type and quantity- or range-based value assigned to the structure definition
- **StructureMap**: A use context type and quantity- or range-based value assigned to the structure map
- **TerminologyCapabilities**: A use context type and quantity- or range-based value assigned to the terminology capabilities
- **ValueSet**: A use context type and quantity- or range-based value assigned to the value set

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The business version of the capability statement
- **CodeSystem**: The business version of the code system
- **CompartmentDefinition**: The business version of the compartment definition
- **ConceptMap**: The business version of the concept map
- **GraphDefinition**: The business version of the graph definition
- **ImplementationGuide**: The business version of the implementation guide
- **MessageDefinition**: The business version of the message definition
- **OperationDefinition**: The business version of the operation definition
- **SearchParameter**: The business version of the search parameter
- **StructureDefinition**: The business version of the structure definition
- **StructureMap**: The business version of the structure map
- **TerminologyCapabilities**: The business version of the terminology capabilities
- **ValueSet**: The business version of the value set

url (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The uri that identifies the capability statement
- **CodeSystem**: The uri that identifies the code system
- **CompartmentDefinition**: The uri that identifies the compartment definition
- **ConceptMap**: The uri that identifies the concept map
- **GraphDefinition**: The uri that identifies the graph definition
- **ImplementationGuide**: The uri that identifies the implementation guide
- **MessageDefinition**: The uri that identifies the message definition
- **OperationDefinition**: The uri that identifies the operation definition
- **SearchParameter**: The uri that identifies the search parameter
- **StructureDefinition**: The uri that identifies the structure definition
- **StructureMap**: The uri that identifies the structure map
- **TerminologyCapabilities**: The uri that identifies the terminology capabilities
- **ValueSet**: The uri that identifies the value set

target (optional)
Query Parameter — Types of resource (if a resource reference)

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

component (optional)
Query Parameter — Defines how the part works

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): Computationally friendly name of the capability statement
- [CodeSystem](): Computationally friendly name of the code system
- [CompartmentDefinition](): Computationally friendly name of the compartment definition
- [ConceptMap](): Computationally friendly name of the concept map
- [GraphDefinition](): Computationally friendly name of the graph definition
- [ImplementationGuide](): Computationally friendly name of the implementation guide
- [MessageDefinition](): Computationally friendly name of the message definition
- [NamingSystem](): Computationally friendly name of the naming system
- [OperationDefinition](): Computationally friendly name of the operation definition
- [SearchParameter](): Computationally friendly name of the search parameter
- [StructureDefinition](): Computationally friendly name of the structure definition
- [StructureMap](): Computationally friendly name of the structure map
- [TerminologyCapabilities](): Computationally friendly name of the terminology capabilities
- [ValueSet](): Computationally friendly name of the value set

publisher (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): Name of the publisher of the capability statement
- [CodeSystem](): Name of the publisher of the code system
- [CompartmentDefinition](): Name of the publisher of the compartment definition
- [ConceptMap](): Name of the publisher of the concept map
- [GraphDefinition](): Name of the publisher of the graph definition
- [ImplementationGuide](): Name of the publisher of the implementation guide
- [MessageDefinition](): Name of the publisher of the message definition
- [NamingSystem](): Name of the publisher of the naming system
- [OperationDefinition](): Name of the publisher of the operation definition
- [SearchParameter](): Name of the publisher of the search parameter
- [StructureDefinition](): Name of the publisher of the structure definition
- [StructureMap](): Name of the publisher of the structure map
- [TerminologyCapabilities](): Name of the publisher of the terminology capabilities
- [ValueSet](): Name of the publisher of the value set

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): The current status of the capability statement
- [CodeSystem](): The current status of the code system
- [CompartmentDefinition](): The current status of the compartment definition
- [ConceptMap](): The current status of the concept map
- [GraphDefinition](): The current status of the graph definition
- [ImplementationGuide](): The current status of the implementation guide
- [MessageDefinition](): The current status of the message definition
- [NamingSystem](): The current status of the naming system
- [OperationDefinition](): The current status of the operation definition
- [SearchParameter](): The current status of the search parameter
- [StructureDefinition](): The current status of the structure definition

- **StructureMap**: The current status of the structure map
  - **TerminologyCapabilities**: The current status of the terminology capabilities
  - **ValueSet**: The current status of the value set

base (optional)
Query Parameter — The resource type(s) this search parameter applies to

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
  - application/fhir+xml

Responses
200
Success Object

GET /SearchParameter/_history   Up

type-history: Fetch the resource change history for all resources of type SearchParameter (**searchParameterHistoryGet**)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

  - application/fhir+json
    application/fhir+xml

Responses
200
Success Object

DELETE /SearchParameter/{id}   Up

instance-delete: Perform a logical delete on a resource instance (**searchParameterIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success Object

Up

POST /SearchParameter/{id}/$expunge

(searchParameterIdExpungePost)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

    application/fhir+json

Request body
body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
▌ application/fhir+xml

Responses

200

Success Object

GET /SearchParameter/{id}

read-instance: Read SearchParameter instance **(searchParameterIdGet)**

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

▌ application/fhir+json
▌ application/fhir+xml

Responses

200

Success Object

GET /SearchParameter/{id}/_history

instance-history: Fetch the resource change history for all resources of type SearchParameter **(searchParameterIdHistoryGet)**

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success <u>Object</u>

GET /SearchParameter/{id}/_history/{version_id}   <u>Up</u>

vread-instance: Read SearchParameter instance with specific version (**searchParameterIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success <u>Object</u>

POST /SearchParameter/{id}/$meta-add   <u>Up</u>

(searchParameterIdMetaAddPost)
Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

    application/fhir+json

Request body

body <u>object</u> (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
  application/fhir+xml

Responses

200
Success Object

POST /SearchParameter/{id}/$meta-delete

(searchParameterIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters
id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /SearchParameter/{id}/$meta

(searchParameterIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters
id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
  application/fhir+xml

Responses

200

Success Object

PATCH /SearchParameter/{id}

instance-patch: Patch a resource instance of type SearchParameter by ID (**searchParameterIdPatch**)

Path parameters

id (required)

Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body object (optional)

Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses

200

Success Object

PUT /SearchParameter/{id}

update-instance: Update an existing SearchParameter instance, or create using a client-assigned ID (**searchParameterIdPut**)

Path parameters

id (required)

Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

Query parameters

authored (optional)
Query Parameter — Date request signed
code (optional)
Query Parameter —

Multiple Resources:

> AllergyIntolerance: Code that identifies the allergy or intolerance
> ▌ Condition: Code for the condition
> ▌ DeviceRequest: Code for what is being requested/ordered
> DiagnosticReport: The code for the report, as opposed to codes for the atomic results, which are the names on the observation resource referred to from the result
> ▌ FamilyMemberHistory: A search by a condition code
> List: What the purpose of this list is
> Medication: Returns medications for a specific code
> ▌ MedicationAdministration: Return administrations of this medication code
> MedicationDispense: Returns dispenses of this medicine code
> MedicationRequest: Return prescriptions of this medication code
> ▌ MedicationStatement: Return statements of this medication code

Observation: The code of the observation type
- **Procedure**: A code to identify a procedure
- **ServiceRequest**: What is being requested/ordered

requisition (optional)
Query Parameter — Composite Request ID

subject (optional)
Query Parameter — Search by subject

_lastUpdated (optional)
Query Parameter — When the resource version last changed

occurrence (optional)
Query Parameter — When service should occur

based-on (optional)
Query Parameter — What request fulfills

patient (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Who the sensitivity is for
- **CarePlan**: Who the care plan is for
- **CareTeam**: Who care team is for
- **ClinicalImpression**: Patient or group assessed
- **Composition**: Who and/or what the composition is about
- **Condition**: Who has the condition?
- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
- **DeviceRequest**: Individual the service is ordered for
- **DeviceUseStatement**: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
- **DocumentManifest**: The subject of the set of documents
- **DocumentReference**: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
- **FamilyMemberHistory**: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
- **ImagingStudy**: Who the study is about
- **Immunization**: The patient for the vaccination record
- **List**: If all resources have the same subject
- **MedicationAdministration**: The identity of a patient to list administrations for
- **MedicationDispense**: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
- **NutritionOrder**: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
- **Procedure**: Search by subject - a patient
- **RiskAssessment**: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
- **SupplyDelivery**: Patient for whom the item is supplied
- **VisionPrescription**: The identity of a patient to list dispenses for

specimen (optional)
Query Parameter — Specimen to be tested

instantiates-uri (optional)
Query Parameter — Instantiates external protocol or definition

requester (optional)
Query Parameter — Who/what is requesting service

identifier (optional)
Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External Ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

performer (optional)

Query Parameter — Requested performer

replaces (optional)

Query Parameter — What request replaces

_security (optional)

Query Parameter — Security Labels applied to this resource

instantiates-canonical (optional)
Query Parameter — Instantiates FHIR protocol or definition

encounter (optional)

Query Parameter —

Multiple Resources:

- **Composition**: Context of the Composition
- **DeviceRequest**: Encounter during which request was created
- **DiagnosticReport**: The Encounter when the order was made
- **DocumentReference**: Context of the document content
- **Flag**: Alert relevant during encounter
- **List**: Context in which list created
- **NutritionOrder**: Return nutrition orders with this encounter identifier
- **Observation**: Encounter related to the observation
- **Procedure**: Encounter created as part of
- **RiskAssessment**: Where was assessment performed?
- **ServiceRequest**: An encounter in which this request is made
- **VisionPrescription**: Return prescriptions with this encounter identifier

priority (optional)

Query Parameter — routine | urgent | asap | stat

intent (optional)

Query Parameter — proposal | plan | directive | order | original-order | reflex-order | filler-order | instance-order | option

performer-type (optional)

Query Parameter — Performer role

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

body-site (optional)
Query Parameter — Where procedure is going to be done

category (optional)
Query Parameter — Classification of service

status (optional)
Query Parameter — draft | active | on-hold | revoked | completed | entered-in-error | unknown

GET /Slot   Up

search-type: Search for Slot instances (**slotGet**)
This is a search type

Query parameters

identifier (optional)

Query Parameter — A Slot Identifier

specialty (optional)
Query Parameter — The specialty of a practitioner that would be required to perform the service requested in this appointment

service-category (optional)

Query Parameter — A broad categorization of the service that is to be performed during this appointment

appointment-type (optional)

Query Parameter — The style of appointment or patient that may be booked in the slot (not service type)

_lastUpdated (optional)

Query Parameter — When the resource version last changed

service-type (optional)

Query Parameter — The type of appointments that can be booked into the slot

_security (optional)

Query Parameter — Security Labels applied to this resource

start (optional)

Query Parameter — Appointment date/time.

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

schedule (optional)

Query Parameter — The Schedule Resource that we are seeking a slot within

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)

Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)

Query Parameter — Search on the entire content of the resource

status (optional)

Query Parameter — The free/busy status of the appointment

Query parameters

    date (optional)
    Query Parameter —

    Multiple Resources:

        [CapabilityStatement](#): The capability statement publication date
        ❙ [CodeSystem](#): The code system publication date
        ❙ [CompartmentDefinition](#): The compartment definition publication date
        [ConceptMap](#): The concept map publication date
        ❙ [GraphDefinition](#): The graph definition publication date
        ❙ [ImplementationGuide](#): The implementation guide publication date
        [MessageDefinition](#): The message definition publication date
        ❙ [NamingSystem](#): The naming system publication date

OperationDefinition: The operation definition publication date
- **SearchParameter**: The search parameter publication date
- **StructureDefinition**: The structure definition publication date

StructureMap: The structure map publication date
TerminologyCapabilities: The terminology capabilities publication date
- **ValueSet**: The value set publication date

context-type-value (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: A use context type and value assigned to the capability statement
CodeSystem: A use context type and value assigned to the code system
- **CompartmentDefinition**: A use context type and value assigned to the compartment definition
- **ConceptMap**: A use context type and value assigned to the concept map

GraphDefinition: A use context type and value assigned to the graph definition
ImplementationGuide: A use context type and value assigned to the implementation guide
- **MessageDefinition**: A use context type and value assigned to the message definition

NamingSystem: A use context type and value assigned to the naming system
OperationDefinition: A use context type and value assigned to the operation definition
- **SearchParameter**: A use context type and value assigned to the search parameter

StructureDefinition: A use context type and value assigned to the structure definition
StructureMap: A use context type and value assigned to the structure map
- **TerminologyCapabilities**: A use context type and value assigned to the terminology capabilities
- **ValueSet**: A use context type and value assigned to the value set

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: Intended jurisdiction for the capability statement
CodeSystem: Intended jurisdiction for the code system
- **ConceptMap**: Intended jurisdiction for the concept map

GraphDefinition: Intended jurisdiction for the graph definition
ImplementationGuide: Intended jurisdiction for the implementation guide
- **MessageDefinition**: Intended jurisdiction for the message definition

NamingSystem: Intended jurisdiction for the naming system
OperationDefinition: Intended jurisdiction for the operation definition
- **SearchParameter**: Intended jurisdiction for the search parameter
- **StructureDefinition**: Intended jurisdiction for the structure definition

StructureMap: Intended jurisdiction for the structure map
TerminologyCapabilities: Intended jurisdiction for the terminology capabilities
- **ValueSet**: Intended jurisdiction for the value set

description (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: The description of the capability statement
- **CodeSystem**: The description of the code system

CompartmentDefinition: The description of the compartment definition
ConceptMap: The description of the concept map
- **GraphDefinition**: The description of the graph definition

ImplementationGuide: The description of the implementation guide
MessageDefinition: The description of the message definition
- **NamingSystem**: The description of the naming system
- **OperationDefinition**: The description of the operation definition

SearchParameter: The description of the search parameter
StructureDefinition: The description of the structure definition
- **StructureMap**: The description of the structure map

TerminologyCapabilities: The description of the terminology capabilities
ValueSet: The description of the value set

context-type (optional)

Query Parameter —

Multiple Resources:

- CapabilityStatement: A type of use context assigned to the capability statement
- CodeSystem: A type of use context assigned to the code system
- CompartmentDefinition: A type of use context assigned to the compartment definition
- ConceptMap: A type of use context assigned to the concept map
- GraphDefinition: A type of use context assigned to the graph definition
- ImplementationGuide: A type of use context assigned to the implementation guide
- MessageDefinition: A type of use context assigned to the message definition
- NamingSystem: A type of use context assigned to the naming system
- OperationDefinition: A type of use context assigned to the operation definition
- SearchParameter: A type of use context assigned to the search parameter
- StructureDefinition: A type of use context assigned to the structure definition
- StructureMap: A type of use context assigned to the structure map
- TerminologyCapabilities: A type of use context assigned to the terminology capabilities
- ValueSet: A type of use context assigned to the value set

experimental (optional)

Query Parameter — For testing purposes, not real usage

title (optional)

Query Parameter —

Multiple Resources:

- CapabilityStatement: The human-friendly name of the capability statement
- CodeSystem: The human-friendly name of the code system
- ConceptMap: The human-friendly name of the concept map
- ImplementationGuide: The human-friendly name of the implementation guide
- MessageDefinition: The human-friendly name of the message definition
- OperationDefinition: The human-friendly name of the operation definition
- StructureDefinition: The human-friendly name of the structure definition
- StructureMap: The human-friendly name of the structure map
- TerminologyCapabilities: The human-friendly name of the terminology capabilities
- ValueSet: The human-friendly name of the value set

type (optional)

Query Parameter — Type defined or constrained by this structure

context-quantity (optional)

Query Parameter —

Multiple Resources:

- CapabilityStatement: A quantity- or range-valued use context assigned to the capability statement
- CodeSystem: A quantity- or range-valued use context assigned to the code system
- CompartmentDefinition: A quantity- or range-valued use context assigned to the compartment definition
- ConceptMap: A quantity- or range-valued use context assigned to the concept map
- GraphDefinition: A quantity- or range-valued use context assigned to the graph definition
- ImplementationGuide: A quantity- or range-valued use context assigned to the implementation guide
- MessageDefinition: A quantity- or range-valued use context assigned to the message definition
- NamingSystem: A quantity- or range-valued use context assigned to the naming system
- OperationDefinition: A quantity- or range-valued use context assigned to the operation definition
- SearchParameter: A quantity- or range-valued use context assigned to the search parameter
- StructureDefinition: A quantity- or range-valued use context assigned to the structure definition
- StructureMap: A quantity- or range-valued use context assigned to the structure map
- TerminologyCapabilities: A quantity- or range-valued use context assigned to the terminology capabilities
- ValueSet: A quantity- or range-valued use context assigned to the value set

path (optional)

Query Parameter — A path that is constrained in the StructureDefinition

context (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context assigned to the capability statement
- **CodeSystem**: A use context assigned to the code system
- **CompartmentDefinition**: A use context assigned to the compartment definition
- **ConceptMap**: A use context assigned to the concept map
- **GraphDefinition**: A use context assigned to the graph definition
- **ImplementationGuide**: A use context assigned to the implementation guide
- **MessageDefinition**: A use context assigned to the message definition
- **NamingSystem**: A use context assigned to the naming system
- **OperationDefinition**: A use context assigned to the operation definition
- **SearchParameter**: A use context assigned to the search parameter
- **StructureDefinition**: A use context assigned to the structure definition
- **StructureMap**: A use context assigned to the structure map
- **TerminologyCapabilities**: A use context assigned to the terminology capabilities
- **ValueSet**: A use context assigned to the value set

base-path (optional)
Query Parameter — Path that identifies the base element

keyword (optional)
Query Parameter — A code for the StructureDefinition

context-type-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and quantity- or range-based value assigned to the capability statement
- **CodeSystem**: A use context type and quantity- or range-based value assigned to the code system
- **CompartmentDefinition**: A use context type and quantity- or range-based value assigned to the compartment definition
- **ConceptMap**: A use context type and quantity- or range-based value assigned to the concept map
- **GraphDefinition**: A use context type and quantity- or range-based value assigned to the graph definition
- **ImplementationGuide**: A use context type and quantity- or range-based value assigned to the implementation guide
- **MessageDefinition**: A use context type and quantity- or range-based value assigned to the message definition
- **NamingSystem**: A use context type and quantity- or range-based value assigned to the naming system
- **OperationDefinition**: A use context type and quantity- or range-based value assigned to the operation definition
- **SearchParameter**: A use context type and quantity- or range-based value assigned to the search parameter
- **StructureDefinition**: A use context type and quantity- or range-based value assigned to the structure definition
- **StructureMap**: A use context type and quantity- or range-based value assigned to the structure map
- **TerminologyCapabilities**: A use context type and quantity- or range-based value assigned to the terminology capabilities
- **ValueSet**: A use context type and quantity- or range-based value assigned to the value set

identifier (optional)
Query Parameter —

Multiple Resources:

- **CodeSystem**: External identifier for the code system
- **ConceptMap**: External identifier for the concept map
- **MessageDefinition**: External identifier for the message definition
- **StructureDefinition**: External identifier for the structure definition
- **StructureMap**: External identifier for the structure map
- **ValueSet**: External identifier for the value set

valueset (optional)

Query Parameter — A vocabulary binding reference

kind (optional)

Query Parameter — primitive-type | complex-type | resource | logical

_security (optional)

Query Parameter — Security Labels applied to this resource

abstract (optional)
Query Parameter — Whether the structure is abstract

version (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The business version of the capability statement
- **CodeSystem**: The business version of the code system
  CompartmentDefinition: The business version of the compartment definition
  ConceptMap: The business version of the concept map
- **GraphDefinition**: The business version of the graph definition
  ImplementationGuide: The business version of the implementation guide
  MessageDefinition: The business version of the message definition
- **OperationDefinition**: The business version of the operation definition
- **SearchParameter**: The business version of the search parameter
  StructureDefinition: The business version of the structure definition
- **StructureMap**: The business version of the structure map
- **TerminologyCapabilities**: The business version of the terminology capabilities
  ValueSet: The business version of the value set

url (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The uri that identifies the capability statement
  CodeSystem: The uri that identifies the code system
  CompartmentDefinition: The uri that identifies the compartment definition
- **ConceptMap**: The uri that identifies the concept map
  GraphDefinition: The uri that identifies the graph definition
  ImplementationGuide: The uri that identifies the implementation guide
- **MessageDefinition**: The uri that identifies the message definition
- **OperationDefinition**: The uri that identifies the operation definition
  SearchParameter: The uri that identifies the search parameter
- **StructureDefinition**: The uri that identifies the structure definition
- **StructureMap**: The uri that identifies the structure map
  TerminologyCapabilities: The uri that identifies the terminology capabilities
  ValueSet: The uri that identifies the value set

_filter (optional)

Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

ext-context (optional)

Query Parameter — The system is the URL for the context-type: e.g. http://hl7.org/fhir/extension-context-type#element|CodeableConcept.text

_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)

Query Parameter —

Multiple Resources:

CapabilityStatement: Computationally friendly name of the capability statement
- **CodeSystem**: Computationally friendly name of the code system
- **CompartmentDefinition**: Computationally friendly name of the compartment definition
- **ConceptMap**: Computationally friendly name of the concept map
- **GraphDefinition**: Computationally friendly name of the graph definition
- **ImplementationGuide**: Computationally friendly name of the implementation guide
- **MessageDefinition**: Computationally friendly name of the message definition
- **NamingSystem**: Computationally friendly name of the naming system
- **OperationDefinition**: Computationally friendly name of the operation definition
- **SearchParameter**: Computationally friendly name of the search parameter
- **StructureDefinition**: Computationally friendly name of the structure definition
- **StructureMap**: Computationally friendly name of the structure map
- **TerminologyCapabilities**: Computationally friendly name of the terminology capabilities
- **ValueSet**: Computationally friendly name of the value set

publisher (optional)

Query Parameter —

Multiple Resources:

CapabilityStatement: Name of the publisher of the capability statement
- **CodeSystem**: Name of the publisher of the code system
- **CompartmentDefinition**: Name of the publisher of the compartment definition
- **ConceptMap**: Name of the publisher of the concept map
- **GraphDefinition**: Name of the publisher of the graph definition
- **ImplementationGuide**: Name of the publisher of the implementation guide
- **MessageDefinition**: Name of the publisher of the message definition
- **NamingSystem**: Name of the publisher of the naming system
- **OperationDefinition**: Name of the publisher of the operation definition
- **SearchParameter**: Name of the publisher of the search parameter
- **StructureDefinition**: Name of the publisher of the structure definition
- **StructureMap**: Name of the publisher of the structure map
- **TerminologyCapabilities**: Name of the publisher of the terminology capabilities
- **ValueSet**: Name of the publisher of the value set

_source (optional)
Query Parameter — Identifies where the resource comes from

derivation (optional)

Query Parameter — specialization | constraint - How relates to base definition

_id (optional)

Query Parameter — Logical id of this artifact

_text (optional)

Query Parameter — Search on the narrative of the resource

_content (optional)

Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: The current status of the capability statement
- **CodeSystem**: The current status of the code system
- **CompartmentDefinition**: The current status of the compartment definition
- **ConceptMap**: The current status of the concept map
- **GraphDefinition**: The current status of the graph definition
- **ImplementationGuide**: The current status of the implementation guide
- **MessageDefinition**: The current status of the message definition
- **NamingSystem**: The current status of the naming system
- **OperationDefinition**: The current status of the operation definition
- **SearchParameter**: The current status of the search parameter
- **StructureDefinition**: The current status of the structure definition
- **StructureMap**: The current status of the structure map
- **TerminologyCapabilities**: The current status of the terminology capabilities
- **ValueSet**: The current status of the value set

base (optional)
Query Parameter — Definition that this type is constrained/specialized from

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
 ▌ application/fhir+xml

Responses
200
Success <u>Object</u>

GET /StructureDefinition/_history Up

GET /StructureMap

search-type: Search for StructureMap instances (**structureMapGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The capability statement publication date
- **CodeSystem**: The code system publication date
- **CompartmentDefinition**: The compartment definition publication date
- **ConceptMap**: The concept map publication date
- **GraphDefinition**: The graph definition publication date
- **ImplementationGuide**: The implementation guide publication date
- **MessageDefinition**: The message definition publication date
- **NamingSystem**: The naming system publication date
- **OperationDefinition**: The operation definition publication date
- **SearchParameter**: The search parameter publication date
- **StructureDefinition**: The structure definition publication date
- **StructureMap**: The structure map publication date
- **TerminologyCapabilities**: The terminology capabilities publication date
- **ValueSet**: The value set publication date

context-type-value (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and value assigned to the capability statement
- **CodeSystem**: A use context type and value assigned to the code system
- **CompartmentDefinition**: A use context type and value assigned to the compartment definition
- **ConceptMap**: A use context type and value assigned to the concept map
- **GraphDefinition**: A use context type and value assigned to the graph definition

- **ImplementationGuide**: A use context type and value assigned to the implementation guide
- **MessageDefinition**: A use context type and value assigned to the message definition
- **NamingSystem**: A use context type and value assigned to the naming system
- **OperationDefinition**: A use context type and value assigned to the operation definition
- **SearchParameter**: A use context type and value assigned to the search parameter
- **StructureDefinition**: A use context type and value assigned to the structure definition
- **StructureMap**: A use context type and value assigned to the structure map
- **TerminologyCapabilities**: A use context type and value assigned to the terminology capabilities
- **ValueSet**: A use context type and value assigned to the value set

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Intended jurisdiction for the capability statement
- **CodeSystem**: Intended jurisdiction for the code system
- **ConceptMap**: Intended jurisdiction for the concept map
- **GraphDefinition**: Intended jurisdiction for the graph definition
- **ImplementationGuide**: Intended jurisdiction for the implementation guide
- **MessageDefinition**: Intended jurisdiction for the message definition
- **NamingSystem**: Intended jurisdiction for the naming system
- **OperationDefinition**: Intended jurisdiction for the operation definition
- **SearchParameter**: Intended jurisdiction for the search parameter
- **StructureDefinition**: Intended jurisdiction for the structure definition
- **StructureMap**: Intended jurisdiction for the structure map
- **TerminologyCapabilities**: Intended jurisdiction for the terminology capabilities
- **ValueSet**: Intended jurisdiction for the value set

description (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The description of the capability statement
- **CodeSystem**: The description of the code system
- **CompartmentDefinition**: The description of the compartment definition
- **ConceptMap**: The description of the concept map
- **GraphDefinition**: The description of the graph definition
- **ImplementationGuide**: The description of the implementation guide
- **MessageDefinition**: The description of the message definition
- **NamingSystem**: The description of the naming system
- **OperationDefinition**: The description of the operation definition
- **SearchParameter**: The description of the search parameter
- **StructureDefinition**: The description of the structure definition
- **StructureMap**: The description of the structure map
- **TerminologyCapabilities**: The description of the terminology capabilities
- **ValueSet**: The description of the value set

context-type (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A type of use context assigned to the capability statement
- **CodeSystem**: A type of use context assigned to the code system
- **CompartmentDefinition**: A type of use context assigned to the compartment definition
- **ConceptMap**: A type of use context assigned to the concept map
- **GraphDefinition**: A type of use context assigned to the graph definition
- **ImplementationGuide**: A type of use context assigned to the implementation guide
- **MessageDefinition**: A type of use context assigned to the message definition
- **NamingSystem**: A type of use context assigned to the naming system
- **OperationDefinition**: A type of use context assigned to the operation definition
- **SearchParameter**: A type of use context assigned to the search parameter
- **StructureDefinition**: A type of use context assigned to the structure definition
- **StructureMap**: A type of use context assigned to the structure map

TerminologyCapabilities: A type of use context assigned to the terminology capabilities

- ValueSet: A type of use context assigned to the value set

title (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: The human-friendly name of the capability statement
  CodeSystem: The human-friendly name of the code system
  ConceptMap: The human-friendly name of the concept map
- ImplementationGuide: The human-friendly name of the implementation guide
- MessageDefinition: The human-friendly name of the message definition
  OperationDefinition: The human-friendly name of the operation definition
- StructureDefinition: The human-friendly name of the structure definition
- StructureMap: The human-friendly name of the structure map
  TerminologyCapabilities: The human-friendly name of the terminology capabilities
  ValueSet: The human-friendly name of the value set

context-quantity (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: A quantity- or range-valued use context assigned to the capability statement
- CodeSystem: A quantity- or range-valued use context assigned to the code system
  CompartmentDefinition: A quantity- or range-valued use context assigned to the compartment definition
- ConceptMap: A quantity- or range-valued use context assigned to the concept map
- GraphDefinition: A quantity- or range-valued use context assigned to the graph definition
  ImplementationGuide: A quantity- or range-valued use context assigned to the implementation guide
- MessageDefinition: A quantity- or range-valued use context assigned to the message definition
  NamingSystem: A quantity- or range-valued use context assigned to the naming system
  OperationDefinition: A quantity- or range-valued use context assigned to the operation definition
- SearchParameter: A quantity- or range-valued use context assigned to the search parameter
  StructureDefinition: A quantity- or range-valued use context assigned to the structure definition
  StructureMap: A quantity- or range-valued use context assigned to the structure map
- TerminologyCapabilities: A quantity- or range-valued use context assigned to the terminology capabilities
  ValueSet: A quantity- or range-valued use context assigned to the value set

context (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: A use context assigned to the capability statement
  CodeSystem: A use context assigned to the code system
- CompartmentDefinition: A use context assigned to the compartment definition
- ConceptMap: A use context assigned to the concept map
- GraphDefinition: A use context assigned to the graph definition
  ImplementationGuide: A use context assigned to the implementation guide
- MessageDefinition: A use context assigned to the message definition
  NamingSystem: A use context assigned to the naming system
  OperationDefinition: A use context assigned to the operation definition
- SearchParameter: A use context assigned to the search parameter
- StructureDefinition: A use context assigned to the structure definition
  StructureMap: A use context assigned to the structure map
- TerminologyCapabilities: A use context assigned to the terminology capabilities
- ValueSet: A use context assigned to the value set

context-type-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and quantity- or range-based value assigned to the capability statement
- **CodeSystem**: A use context type and quantity- or range-based value assigned to the code system
- **CompartmentDefinition**: A use context type and quantity- or range-based value assigned to the compartment definition
- **ConceptMap**: A use context type and quantity- or range-based value assigned to the concept map
- **GraphDefinition**: A use context type and quantity- or range-based value assigned to the graph definition
- **ImplementationGuide**: A use context type and quantity- or range-based value assigned to the implementation guide
- **MessageDefinition**: A use context type and quantity- or range-based value assigned to the message definition
- **NamingSystem**: A use context type and quantity- or range-based value assigned to the naming system
- **OperationDefinition**: A use context type and quantity- or range-based value assigned to the operation definition
- **SearchParameter**: A use context type and quantity- or range-based value assigned to the search parameter
- **StructureDefinition**: A use context type and quantity- or range-based value assigned to the structure definition
- **StructureMap**: A use context type and quantity- or range-based value assigned to the structure map
- **TerminologyCapabilities**: A use context type and quantity- or range-based value assigned to the terminology capabilities
- **ValueSet**: A use context type and quantity- or range-based value assigned to the value set

identifier (optional)

Query Parameter —

Multiple Resources:

- **CodeSystem**: External identifier for the code system
- **ConceptMap**: External identifier for the concept map
- **MessageDefinition**: External identifier for the message definition
- **StructureDefinition**: External identifier for the structure definition
- **StructureMap**: External identifier for the structure map
- **ValueSet**: External identifier for the value set

security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The business version of the capability statement
- **CodeSystem**: The business version of the code system
- **CompartmentDefinition**: The business version of the compartment definition
- **ConceptMap**: The business version of the concept map
- **GraphDefinition**: The business version of the graph definition
- **ImplementationGuide**: The business version of the implementation guide
- **MessageDefinition**: The business version of the message definition
- **OperationDefinition**: The business version of the operation definition
- **SearchParameter**: The business version of the search parameter
- **StructureDefinition**: The business version of the structure definition
- **StructureMap**: The business version of the structure map
- **TerminologyCapabilities**: The business version of the terminology capabilities
- **ValueSet**: The business version of the value set

url (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The uri that identifies the capability statement
- **CodeSystem**: The uri that identifies the code system
- **CompartmentDefinition**: The uri that identifies the compartment definition
- **ConceptMap**: The uri that identifies the concept map

GraphDefinition: The uri that identifies the graph definition

- ImplementationGuide: The uri that identifies the implementation guide
- MessageDefinition: The uri that identifies the message definition

OperationDefinition: The uri that identifies the operation definition
SearchParameter: The uri that identifies the search parameter

- StructureDefinition: The uri that identifies the structure definition

StructureMap: The uri that identifies the structure map
TerminologyCapabilities: The uri that identifies the terminology capabilities

- ValueSet: The uri that identifies the value set

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: Computationally friendly name of the capability statement
- CodeSystem: Computationally friendly name of the code system
- CompartmentDefinition: Computationally friendly name of the compartment definition

ConceptMap: Computationally friendly name of the concept map
- GraphDefinition: Computationally friendly name of the graph definition
- ImplementationGuide: Computationally friendly name of the implementation guide

MessageDefinition: Computationally friendly name of the message definition
NamingSystem: Computationally friendly name of the naming system
- OperationDefinition: Computationally friendly name of the operation definition

SearchParameter: Computationally friendly name of the search parameter
StructureDefinition: Computationally friendly name of the structure definition
- StructureMap: Computationally friendly name of the structure map
- TerminologyCapabilities: Computationally friendly name of the terminology capabilities

ValueSet: Computationally friendly name of the value set

publisher (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: Name of the publisher of the capability statement

CodeSystem: Name of the publisher of the code system
- CompartmentDefinition: Name of the publisher of the compartment definition
- ConceptMap: Name of the publisher of the concept map

GraphDefinition: Name of the publisher of the graph definition
ImplementationGuide: Name of the publisher of the implementation guide

- MessageDefinition: Name of the publisher of the message definition

NamingSystem: Name of the publisher of the naming system
OperationDefinition: Name of the publisher of the operation definition

- SearchParameter: Name of the publisher of the search parameter
- StructureDefinition: Name of the publisher of the structure definition

StructureMap: Name of the publisher of the structure map
TerminologyCapabilities: Name of the publisher of the terminology capabilities

- ValueSet: Name of the publisher of the value set

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter —

Multiple Resources:

- [CapabilityStatement](): The current status of the capability statement
  [CodeSystem](): The current status of the code system
  [CompartmentDefinition](): The current status of the compartment definition
- [ConceptMap](): The current status of the concept map
  [GraphDefinition](): The current status of the graph definition
  [ImplementationGuide](): The current status of the implementation guide
- [MessageDefinition](): The current status of the message definition
- [NamingSystem](): The current status of the naming system
  [OperationDefinition](): The current status of the operation definition
  [SearchParameter](): The current status of the search parameter
- [StructureDefinition](): The current status of the structure definition
  [StructureMap](): The current status of the structure map
  [TerminologyCapabilities](): The current status of the terminology capabilities
- [ValueSet](): The current status of the value set

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success [Object]()

GET /StructureMap/_history [Up]()

type-history: Fetch the resource change history for all resources of type StructureMap (**structureMapHistoryGet**)

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success [Object]()

DELETE /StructureMap/{id} [Up]()

instance-delete: Perform a logical delete on a resource instance (**structureMapIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success <u>Object</u>

POST /Subscription/{id}/$meta-add   <u>Up</u>

(subscriptionIdMetaAddPost)
Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

```
application/fhir+json
```

Request body

body <u>object</u> (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success <u>Object</u>

POST /Subscription/{id}/$meta-delete   <u>Up</u>

(subscriptionIdMetaDeletePost)
Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

```
application/fhir+json
```

Request body

body <u>object</u> (optional)

Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success [Object](#)

GET /Subscription/{id}/$meta

(subscriptionIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

Success Object

GET /Substance

search-type: Search for Substance instances (**substanceGet**)

This is a search type

Query parameters
identifier (optional)
Query Parameter — Unique identifier for the substance

container-identifier (optional)
Query Parameter — Identifier of the package/container

code (optional)
Query Parameter — The code of the substance or ingredient

quantity (optional)
Query Parameter — Amount of substance in the package

_lastUpdated (optional)
Query Parameter — When the resource version last changed
_security (optional)
Query Parameter — Security Labels applied to this resource

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to
_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target
substance-reference (optional)
Query Parameter — A component of the substance

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

expiry (optional)
Query Parameter — Expiry date of package or container of substance

_text (optional)
Query Parameter — Search on the narrative of the resource
_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — The category of the substance

status (optional)
Query Parameter — active | inactive | entered-in-error

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- `application/fhir+json`
- `application/fhir+xml`

Responses
200
Success [Object](#)

instance-delete: Perform a logical delete on a resource instance (**substancePolymerIdDelete**)

Path parameters
   id (required)
   Path Parameter — The resource ID default: null

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
  | application/fhir+json
  ▊ application/fhir+xml
```

Responses
200
Success Object

POST /SubstancePolymer/{id}/$expunge

(**substancePolymerIdExpungePost**)

Path parameters

   id (required)
   Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

```
    application/fhir+json
```

Request body

   body object (optional)
   Body Parameter —

Return type

Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /SubstancePolymer/{id}

read-instance: Read SubstancePolymer instance (**substancePolymerIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

GET /SubstancePolymer/{id}/_history

instance-history: Fetch the resource change history for all resources of type SubstancePolymer
(**substancePolymerIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success Object

GET /SubstancePolymer/{id}/_history/{version_id}

vread-instance: Read SubstancePolymer instance with specific version (**substancePolymerIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success Object

POST /SubstancePolymer/{id}/$meta-add

(substancePolymerIdMetaAddPost)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

    application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success Object

POST /SubstancePolymer/{id}/$meta-delete

(substancePolymerIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

▌ `application/fhir+json`

Request body

body [object](optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

▌ `application/fhir+json`
▏ `application/fhir+xml`

Responses
200
Success [Object]

GET /SubstancePolymer/{id}/$meta

(substancePolymerIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

`application/fhir+json`
`application/fhir+xml`

Responses
200
Success [Object]

PATCH /SubstancePolymer/{id}

instance-patch: Patch a resource instance of type SubstancePolymer by ID (**substancePolymerIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

▮ `application/fhir+json`
    `application/fhir+xml`

Request body
body object (optional)
Body Parameter —

Return type

Success <u>Object</u>

GET /SupplyRequest

search-type: Search for SupplyRequest instances (**supplyRequestGet**)
This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- <u>AllergyIntolerance</u>: Date first version of the resource instance was recorded
  <u>CarePlan</u>: Time period plan covers
  <u>CareTeam</u>: Time period team covers
- <u>ClinicalImpression</u>: When the assessment was documented
- <u>Composition</u>: Composition editing time
  <u>Consent</u>: When this Consent was created or indexed
- <u>DiagnosticReport</u>: The clinically relevant time of the report
- <u>Encounter</u>: A date within the period the Encounter lasted
  <u>EpisodeOfCare</u>: The provided date search value falls within the episode of care's period
  <u>FamilyMemberHistory</u>: When history was recorded or last updated
- <u>Flag</u>: Time period when flag is active
  <u>Immunization</u>: Vaccination (non)-Administration Date
  <u>List</u>: When the list was prepared
- <u>Observation</u>: Obtained date/time. If the obtained element is a period, a date that falls in the
  period

Procedure: When the procedure was performed
- **RiskAssessment**: When was assessment made?
- **SupplyRequest**: When the request was made

requester (optional)

Query Parameter — Individual making the request

identifier (optional)

Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: External ids for this item
- **CarePlan**: External Ids for this plan
- **CareTeam**: External Ids for this team
- **Composition**: Version-independent identifier for the Composition
- **Condition**: A unique identifier of the condition record
- **Consent**: Identifier for this record (external references)
- **DetectedIssue**: Unique id for the detected issue
- **DeviceRequest**: Business identifier for request/order
- **DiagnosticReport**: An identifier for the report
- **DocumentManifest**: Unique Identifier for the set of documents
- **DocumentReference**: Master Version Specific Identifier
- **Encounter**: Identifier(s) by which this encounter is known
- **EpisodeOfCare**: Business Identifier(s) relevant for this EpisodeOfCare
- **FamilyMemberHistory**: A search by a record identifier
- **Goal**: External Ids for this goal
- **ImagingStudy**: Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- **Immunization**: Business identifier
- **List**: Business identifier
- **MedicationAdministration**: Return administrations with this external identifier
- **MedicationDispense**: Returns dispenses with this external identifier
- **MedicationRequest**: Return prescriptions with this external identifier
- **MedicationStatement**: Return statements with this external identifier
- **NutritionOrder**: Return nutrition orders with this external identifier
- **Observation**: The unique id for a particular observation
- **Procedure**: A unique identifier for a procedure
- **RiskAssessment**: Unique identifier for the assessment
- **ServiceRequest**: Identifiers assigned to this order
- **SupplyDelivery**: External identifier
- **SupplyRequest**: Business Identifier for SupplyRequest
- **VisionPrescription**: Return prescriptions with this external identifier

subject (optional)
Query Parameter — The destination of the supply

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

supplier (optional)
Query Parameter — Who is intended to fulfill the request

_has (optional)
Query Parameter — Return resources linked to by the given target

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

category (optional)
Query Parameter — The kind of supply (central, non-stock, etc.)

status (optional)
Query Parameter — draft | active | suspended +
