search-type: Search for Task instances (**taskGet**)

This is a search type

Query parameters

code (optional)
Query Parameter — Search by task code

subject (optional)
Query Parameter — Search by subject

_lastUpdated (optional)
Query Parameter — When the resource version last changed

focus (optional)
Query Parameter — Search by task focus

part-of (optional)
Query Parameter — Search by task this task is part of

group-identifier (optional)
Query Parameter — Search by group identifier

based-on (optional)
Query Parameter — Search by requests this task is based on

patient (optional)
Query Parameter — Search by patient

modified (optional)
Query Parameter — Search by last modification date

owner (optional)
Query Parameter — Search by task owner

requester (optional)
Query Parameter — Search by task requester

business-status (optional)
Query Parameter — Search by business status

identifier (optional)
Query Parameter — Search for a task instance by its business identifier

period (optional)
Query Parameter — Search by period Task is/was underway

performer (optional)
Query Parameter — Search by recommended type of performer (e.g., Requester, Performer, Scheduler).

_security (optional)
Query Parameter — Security Labels applied to this resource

encounter (optional)
Query Parameter — Search by encounter

authored-on (optional)
Query Parameter — Search by creation date

priority (optional)
Query Parameter — Search by task priority

intent (optional)
Query Parameter — Search by task intent

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target
_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource
_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — Search by task status

- **StructureDefinition**: Intended jurisdiction for the structure definition
- **StructureMap**: Intended jurisdiction for the structure map
- **TerminologyCapabilities**: Intended jurisdiction for the terminology capabilities
- **ValueSet**: Intended jurisdiction for the value set

_security (optional)
Query Parameter — Security Labels applied to this resource

description (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The description of the capability statement
- **CodeSystem**: The description of the code system
- **CompartmentDefinition**: The description of the compartment definition
- **ConceptMap**: The description of the concept map
- **GraphDefinition**: The description of the graph definition
- **ImplementationGuide**: The description of the implementation guide

- **MessageDefinition**: The description of the message definition
- **NamingSystem**: The description of the naming system
- **OperationDefinition**: The description of the operation definition
- **SearchParameter**: The description of the search parameter
- **StructureDefinition**: The description of the structure definition
- **StructureMap**: The description of the structure map
- **TerminologyCapabilities**: The description of the terminology capabilities
- **ValueSet**: The description of the value set

context-type (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A type of use context assigned to the capability statement
- **CodeSystem**: A type of use context assigned to the code system
- **CompartmentDefinition**: A type of use context assigned to the compartment definition
- **ConceptMap**: A type of use context assigned to the concept map
- **GraphDefinition**: A type of use context assigned to the graph definition
- **ImplementationGuide**: A type of use context assigned to the implementation guide
- **MessageDefinition**: A type of use context assigned to the message definition
- **NamingSystem**: A type of use context assigned to the naming system
- **OperationDefinition**: A type of use context assigned to the operation definition
- **SearchParameter**: A type of use context assigned to the search parameter
- **StructureDefinition**: A type of use context assigned to the structure definition
- **StructureMap**: A type of use context assigned to the structure map
- **TerminologyCapabilities**: A type of use context assigned to the terminology capabilities
- **ValueSet**: A type of use context assigned to the value set

title (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The human-friendly name of the capability statement
- **CodeSystem**: The human-friendly name of the code system
- **ConceptMap**: The human-friendly name of the concept map
- **ImplementationGuide**: The human-friendly name of the implementation guide
- **MessageDefinition**: The human-friendly name of the message definition
- **OperationDefinition**: The human-friendly name of the operation definition
- **StructureDefinition**: The human-friendly name of the structure definition
- **StructureMap**: The human-friendly name of the structure map
- **TerminologyCapabilities**: The human-friendly name of the terminology capabilities
- **ValueSet**: The human-friendly name of the value set

version (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The business version of the capability statement
- **CodeSystem**: The business version of the code system
- **CompartmentDefinition**: The business version of the compartment definition
- **ConceptMap**: The business version of the concept map
- **GraphDefinition**: The business version of the graph definition
- **ImplementationGuide**: The business version of the implementation guide
- **MessageDefinition**: The business version of the message definition
- **OperationDefinition**: The business version of the operation definition
- **SearchParameter**: The business version of the search parameter
- **StructureDefinition**: The business version of the structure definition
- **StructureMap**: The business version of the structure map
- **TerminologyCapabilities**: The business version of the terminology capabilities
- **ValueSet**: The business version of the value set

url (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The uri that identifies the capability statement
- **CodeSystem**: The uri that identifies the code system
- **CompartmentDefinition**: The uri that identifies the compartment definition
- **ConceptMap**: The uri that identifies the concept map
- **GraphDefinition**: The uri that identifies the graph definition
- **ImplementationGuide**: The uri that identifies the implementation guide
- **MessageDefinition**: The uri that identifies the message definition
- **OperationDefinition**: The uri that identifies the operation definition
- **SearchParameter**: The uri that identifies the search parameter
- **StructureDefinition**: The uri that identifies the structure definition
- **StructureMap**: The uri that identifies the structure map
- **TerminologyCapabilities**: The uri that identifies the terminology capabilities
- **ValueSet**: The uri that identifies the value set

_filter (optional)

Query Parameter — Search the contents of the resource's data using a filter

context-quantity (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A quantity- or range-valued use context assigned to the capability statement
- **CodeSystem**: A quantity- or range-valued use context assigned to the code system
- **CompartmentDefinition**: A quantity- or range-valued use context assigned to the compartment definition
- **ConceptMap**: A quantity- or range-valued use context assigned to the concept map
- **GraphDefinition**: A quantity- or range-valued use context assigned to the graph definition
- **ImplementationGuide**: A quantity- or range-valued use context assigned to the implementation guide
- **MessageDefinition**: A quantity- or range-valued use context assigned to the message definition
- **NamingSystem**: A quantity- or range-valued use context assigned to the naming system
- **OperationDefinition**: A quantity- or range-valued use context assigned to the operation definition
- **SearchParameter**: A quantity- or range-valued use context assigned to the search parameter
- **StructureDefinition**: A quantity- or range-valued use context assigned to the structure definition
- **StructureMap**: A quantity- or range-valued use context assigned to the structure map
- **TerminologyCapabilities**: A quantity- or range-valued use context assigned to the terminology capabilities
- **ValueSet**: A quantity- or range-valued use context assigned to the value set

_profile (optional)

Query Parameter — Profiles this resource claims to conform to

_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

context (optional)

Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context assigned to the capability statement
- **CodeSystem**: A use context assigned to the code system
- **CompartmentDefinition**: A use context assigned to the compartment definition
- **ConceptMap**: A use context assigned to the concept map
- **GraphDefinition**: A use context assigned to the graph definition
- **ImplementationGuide**: A use context assigned to the implementation guide
- **MessageDefinition**: A use context assigned to the message definition
- **NamingSystem**: A use context assigned to the naming system
- **OperationDefinition**: A use context assigned to the operation definition
- **SearchParameter**: A use context assigned to the search parameter
- **StructureDefinition**: A use context assigned to the structure definition
- **StructureMap**: A use context assigned to the structure map
- **TerminologyCapabilities**: A use context assigned to the terminology capabilities
- **ValueSet**: A use context assigned to the value set

name (optional)

Query Parameter —

Multiple Resources:

- CapabilityStatement: Computationally friendly name of the capability statement
- CodeSystem: Computationally friendly name of the code system
- CompartmentDefinition: Computationally friendly name of the compartment definition
- ConceptMap: Computationally friendly name of the concept map
- GraphDefinition: Computationally friendly name of the graph definition
- ImplementationGuide: Computationally friendly name of the implementation guide
- MessageDefinition: Computationally friendly name of the message definition
- NamingSystem: Computationally friendly name of the naming system
- OperationDefinition: Computationally friendly name of the operation definition
- SearchParameter: Computationally friendly name of the search parameter
- StructureDefinition: Computationally friendly name of the structure definition
- StructureMap: Computationally friendly name of the structure map
- TerminologyCapabilities: Computationally friendly name of the terminology capabilities
- ValueSet: Computationally friendly name of the value set

publisher (optional)

Query Parameter —

Multiple Resources:

- CapabilityStatement: Name of the publisher of the capability statement
- CodeSystem: Name of the publisher of the code system
- CompartmentDefinition: Name of the publisher of the compartment definition
- ConceptMap: Name of the publisher of the concept map
- GraphDefinition: Name of the publisher of the graph definition
- ImplementationGuide: Name of the publisher of the implementation guide
- MessageDefinition: Name of the publisher of the message definition
- NamingSystem: Name of the publisher of the naming system
- OperationDefinition: Name of the publisher of the operation definition
- SearchParameter: Name of the publisher of the search parameter
- StructureDefinition: Name of the publisher of the structure definition
- StructureMap: Name of the publisher of the structure map
- TerminologyCapabilities: Name of the publisher of the terminology capabilities
- ValueSet: Name of the publisher of the value set

_source (optional)

Query Parameter — Identifies where the resource comes from

_id (optional)

Query Parameter — Logical id of this artifact

_text (optional)

Query Parameter — Search on the narrative of the resource

_content (optional)

Query Parameter — Search on the entire content of the resource

context-type-quantity (optional)

Query Parameter —

Multiple Resources:

- CapabilityStatement: A use context type and quantity- or range-based value assigned to the capability statement
- CodeSystem: A use context type and quantity- or range-based value assigned to the code system
- CompartmentDefinition: A use context type and quantity- or range-based value assigned to the compartment definition
- ConceptMap: A use context type and quantity- or range-based value assigned to the concept map
- GraphDefinition: A use context type and quantity- or range-based value assigned to the graph definition
- ImplementationGuide: A use context type and quantity- or range-based value assigned to the implementation guide
- MessageDefinition: A use context type and quantity- or range-based value assigned to the message definition

NamingSystem: A use context type and quantity- or range-based value assigned to the naming system
- OperationDefinition: A use context type and quantity- or range-based value assigned to the operation definition
SearchParameter: A use context type and quantity- or range-based value assigned to the search parameter
StructureDefinition: A use context type and quantity- or range-based value assigned to the structure definition
- StructureMap: A use context type and quantity- or range-based value assigned to the structure map
TerminologyCapabilities: A use context type and quantity- or range-based value assigned to the terminology capabilities
- ValueSet: A use context type and quantity- or range-based value assigned to the value set

status (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: The current status of the capability statement
CodeSystem: The current status of the code system
- CompartmentDefinition: The current status of the compartment definition
ConceptMap: The current status of the concept map
GraphDefinition: The current status of the graph definition
- ImplementationGuide: The current status of the implementation guide
- MessageDefinition: The current status of the message definition
NamingSystem: The current status of the naming system
OperationDefinition: The current status of the operation definition
- SearchParameter: The current status of the search parameter
StructureDefinition: The current status of the structure definition
StructureMap: The current status of the structure map
- TerminologyCapabilities: The current status of the terminology capabilities
- ValueSet: The current status of the value set

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
- `application/fhir+xml`

Responses
200
Success Object

GET /TerminologyCapabilities/_history Up

type-history: Fetch the resource change history for all resources of type TerminologyCapabilities
(terminologyCapabilitiesHistoryGet)

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success Object

DELETE /TerminologyCapabilities/{id}

instance-delete: Perform a logical delete on a resource instance (**terminologyCapabilitiesIdDelete**)

Path parameters
id (required)
Path Parameter — The resource ID default: null

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/fhir+json
- application/fhir+xml

Responses
200
Success Object

POST /TerminologyCapabilities/{id}/$expunge

(**terminologyCapabilitiesIdExpungePost**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

    application/fhir+json

Request body

body object **(optional)**
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success Object

GET /TerminologyCapabilities/{id}

read-instance: Read TerminologyCapabilities instance (**terminologyCapabilitiesIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
▌ application/fhir+xml

Responses
200
Success Object

GET /TerminologyCapabilities/{id}/_history

instance-history: Fetch the resource change history for all resources of type TerminologyCapabilities
(**terminologyCapabilitiesIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    ▏ application/fhir+json
    application/fhir+xml

Responses
200
Success Object

GET /TerminologyCapabilities/{id}/_history/{version_id}

vread-instance: Read TerminologyCapabilities instance with specific version
(**terminologyCapabilitiesIdHistoryVersionIdGet**)

Path parameters
id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success **Object**

POST /TerminologyCapabilities/{id}/$meta-add   Up

(terminologyCapabilitiesIdMetaAddPost)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

    application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success **Object**

POST /TerminologyCapabilities/{id}/$meta-delete   Up

(terminologyCapabilitiesIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

    application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success Object

GET /TerminologyCapabilities/{id}/$meta   Up

(terminologyCapabilitiesIdMetaGet)
Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters

id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success Object

PATCH /TerminologyCapabilities/{id}   Up

instance-patch: Patch a resource instance of type TerminologyCapabilities by ID (**terminologyCapabilitiesIdPatch**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

```
application/fhir+json
application/fhir+xml
```

Request body
body object (optional)
Body Parameter —

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json
▌ application/fhir+xml

Responses
200
Success [Object](#)

PUT /TerminologyCapabilities/{id}   Up

update-instance: Update an existing TerminologyCapabilities instance, or create using a client-assigned ID
(**terminologyCapabilitiesIdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

    application/fhir+json
    application/fhir+xml

Request body
body object (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

    application/fhir+json

[Up](#)

GET /TestReport

search-type: Search for TestReport instances (**testReportGet**)

This is a search type

Query parameters

identifier (optional)
Query Parameter — An external identifier for the test report

_lastUpdated (optional)
Query Parameter — When the resource version last changed

_security (optional)
Query Parameter — Security Labels applied to this resource

tester (optional)
Query Parameter — The name of the testing organization

participant (optional)
Query Parameter — The reference to a participant in the test execution
_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

result (optional)
Query Parameter — The result disposition of the test execution

_profile (optional)
Query Parameter — Profiles this resource claims to conform to
_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target
_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

testscript (optional)
Query Parameter — The test script executed to produce this report

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource
issued (optional)
Query Parameter — The test report generation date

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- ▌ application/fhir+json

Success Object

GET /TestScript

search-type: Search for TestScript instances (**testScriptGet**)
This is a search type

Query parameters

date (optional)
Query Parameter — The test script publication date

context-type-value (optional)
Query Parameter — A use context type and value assigned to the test script

_lastUpdated (optional)
Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter — Intended jurisdiction for the test script

description (optional)
Query Parameter — The description of the test script

testscript-capability (optional)
Query Parameter — TestScript required and validated capability

context-type (optional)
Query Parameter — A type of use context assigned to the test script

title (optional)
Query Parameter — The human-friendly name of the test script

context-quantity (optional)
Query Parameter — A quantity- or range-valued use context assigned to the test script

context (optional)
Query Parameter — A use context assigned to the test script

context-type-quantity (optional)
Query Parameter — A use context type and quantity- or range-based value assigned to the test script

identifier (optional)
Query Parameter — External identifier for the test script

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter — The business version of the test script

url (optional)
Query Parameter — The uri that identifies the test script

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)
Query Parameter — Profiles this resource claims to conform to

_tag (optional)
Query Parameter — Tags applied to this resource

_has (optional)
Query Parameter — Return resources linked to by the given target

name (optional)
Query Parameter — Computationally friendly name of the test script

publisher (optional)
Query Parameter — Name of the publisher of the test script
_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource
_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter — The current status of the test script

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success [Object](#)

GET /TestScript/_history   [Up](#)

type-history: Fetch the resource change history for all resources of type TestScript (**testScriptHistoryGet**)

Return type
Object
Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- ▌ application/fhir+json
- ▌ application/fhir+xml

Responses
200
Success [Object](#)

DELETE /TestScript/{id}   [Up](#)

instance-delete: Perform a logical delete on a resource instance (**testScriptIdDelete**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
    application/fhir+json
▌ application/fhir+xml
```

Responses
200
Success [Object](#)

POST /TestScript/{id}/$expunge

(**testScriptIdExpungePost**)

Path parameters
id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

▌ application/fhir+json

Request body

body [object](#) **(optional)**
Body Parameter —

Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

▌ application/fhir+json
    application/fhir+xml

Responses
200
Success [Object](#)

GET /TestScript/{id}

read-instance: Read TestScript instance (**testScriptIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
    application/fhir+json
    application/fhir+xml
```

Responses
200

Success Object

GET /TestScript/{id}/_history

instance-history: Fetch the resource change history for all resources of type TestScript (**testScriptIdHistoryGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

        application/fhir+json
        application/fhir+xml

Responses
200
Success Object

GET /TestScript/{id}/_history/{version_id}

vread-instance: Read TestScript instance with specific version (**testScriptIdHistoryVersionIdGet**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

version_id (required)
Path Parameter — The resource version ID default: null

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

        application/fhir+json
        application/fhir+xml

Responses
200
Success Object

POST /TestScript/{id}/$meta-add

(**testScriptIdMetaAddPost**)

Add tags, profiles, and/or security labels to a resource

Path parameters
id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

        application/fhir+json

Request body

    body object (optional)
    Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

        application/fhir+json
        application/fhir+xml

Responses
200
Success Object

POST /TestScript/{id}/$meta-delete   Up

(testScriptIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

    id (required)
    Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

        application/fhir+json

Request body

    body object (optional)
    Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

        application/fhir+json
        application/fhir+xml

Responses
200
Success Object

GET /TestScript/{id}/$meta   Up

(testScriptIdMetaGet)

Request a list of tags, profiles, and security labels for a specfic resource instance

Path parameters
id (required)
Path Parameter — The resource ID default: null

Query parameters

return (optional)
Query Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success [Object](#)

PATCH /TestScript/{id}

instance-patch: Patch a resource instance of type TestScript by ID (**testScriptIdPatch**)

Path parameters
id (required)
Path Parameter — The resource ID default: null

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/fhir+json
- application/fhir+xml

Request body

body [object](#) (optional)
Body Parameter —

Return type
Object

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

```
application/fhir+json
application/fhir+xml
```

Responses
200
Success [Object](#)

PUT /TestScript/{id}

update-instance: Update an existing TestScript instance, or create using a client-assigned ID (**testScriptIdPut**)

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

- `application/fhir+json`
  `application/fhir+xml`

Request body

body object (optional)
Body Parameter —

GET /ValueSet

search-type: Search for ValueSet instances (**valueSetGet**)

This is a search type

Query parameters

date (optional)
Query Parameter —

Multiple Resources:

- CapabilityStatement: The capability statement publication date
  CodeSystem: The code system publication date
- CompartmentDefinition: The compartment definition publication date
  ConceptMap: The concept map publication date
  GraphDefinition: The graph definition publication date
- ImplementationGuide: The implementation guide publication date
- MessageDefinition: The message definition publication date
  NamingSystem: The naming system publication date
  OperationDefinition: The operation definition publication date
- SearchParameter: The search parameter publication date
  StructureDefinition: The structure definition publication date
  StructureMap: The structure map publication date
- TerminologyCapabilities: The terminology capabilities publication date
  ValueSet: The value set publication date

code (optional)
Query Parameter — This special parameter searches for codes in the value set. See additional notes on the ValueSet resource

context-type-value (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context type and value assigned to the capability statement
  CodeSystem: A use context type and value assigned to the code system
- **CompartmentDefinition**: A use context type and value assigned to the compartment definition
  ConceptMap: A use context type and value assigned to the concept map
  GraphDefinition: A use context type and value assigned to the graph definition
- **ImplementationGuide**: A use context type and value assigned to the implementation guide
- **MessageDefinition**: A use context type and value assigned to the message definition
  NamingSystem: A use context type and value assigned to the naming system
  OperationDefinition: A use context type and value assigned to the operation definition
- **SearchParameter**: A use context type and value assigned to the search parameter
  StructureDefinition: A use context type and value assigned to the structure definition
  StructureMap: A use context type and value assigned to the structure map
- **TerminologyCapabilities**: A use context type and value assigned to the terminology capabilities
- **ValueSet**: A use context type and value assigned to the value set

_lastUpdated (optional)

Query Parameter — When the resource version last changed

jurisdiction (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: Intended jurisdiction for the capability statement
  CodeSystem: Intended jurisdiction for the code system
  ConceptMap: Intended jurisdiction for the concept map
- **GraphDefinition**: Intended jurisdiction for the graph definition
- **ImplementationGuide**: Intended jurisdiction for the implementation guide
  MessageDefinition: Intended jurisdiction for the message definition
- **NamingSystem**: Intended jurisdiction for the naming system
- **OperationDefinition**: Intended jurisdiction for the operation definition
  SearchParameter: Intended jurisdiction for the search parameter
  StructureDefinition: Intended jurisdiction for the structure definition
- **StructureMap**: Intended jurisdiction for the structure map
  TerminologyCapabilities: Intended jurisdiction for the terminology capabilities
  ValueSet: Intended jurisdiction for the value set

description (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The description of the capability statement
  CodeSystem: The description of the code system
- **CompartmentDefinition**: The description of the compartment definition
  ConceptMap: The description of the concept map
  GraphDefinition: The description of the graph definition
- **ImplementationGuide**: The description of the implementation guide
- **MessageDefinition**: The description of the message definition
  NamingSystem: The description of the naming system
  OperationDefinition: The description of the operation definition
- **SearchParameter**: The description of the search parameter
  StructureDefinition: The description of the structure definition
  StructureMap: The description of the structure map
- **TerminologyCapabilities**: The description of the terminology capabilities
  ValueSet: The description of the value set

context-type (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A type of use context assigned to the capability statement
  CodeSystem: A type of use context assigned to the code system
  CompartmentDefinition: A type of use context assigned to the compartment definition
- **ConceptMap**: A type of use context assigned to the concept map
- **GraphDefinition**: A type of use context assigned to the graph definition

- **ImplementationGuide**: A type of use context assigned to the implementation guide
- **MessageDefinition**: A type of use context assigned to the message definition
- **NamingSystem**: A type of use context assigned to the naming system
- **OperationDefinition**: A type of use context assigned to the operation definition
- **SearchParameter**: A type of use context assigned to the search parameter
- **StructureDefinition**: A type of use context assigned to the structure definition
- **StructureMap**: A type of use context assigned to the structure map
- **TerminologyCapabilities**: A type of use context assigned to the terminology capabilities
- **ValueSet**: A type of use context assigned to the value set

title (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The human-friendly name of the capability statement
- **CodeSystem**: The human-friendly name of the code system
- **ConceptMap**: The human-friendly name of the concept map
- **ImplementationGuide**: The human-friendly name of the implementation guide
- **MessageDefinition**: The human-friendly name of the message definition
- **OperationDefinition**: The human-friendly name of the operation definition
- **StructureDefinition**: The human-friendly name of the structure definition
- **StructureMap**: The human-friendly name of the structure map
- **TerminologyCapabilities**: The human-friendly name of the terminology capabilities
- **ValueSet**: The human-friendly name of the value set

reference (optional)
Query Parameter — A code system included or excluded in the value set or an imported value set

context-quantity (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A quantity- or range-valued use context assigned to the capability statement
- **CodeSystem**: A quantity- or range-valued use context assigned to the code system
- **CompartmentDefinition**: A quantity- or range-valued use context assigned to the compartment definition
- **ConceptMap**: A quantity- or range-valued use context assigned to the concept map
- **GraphDefinition**: A quantity- or range-valued use context assigned to the graph definition
- **ImplementationGuide**: A quantity- or range-valued use context assigned to the implementation guide
- **MessageDefinition**: A quantity- or range-valued use context assigned to the message definition
- **NamingSystem**: A quantity- or range-valued use context assigned to the naming system
- **OperationDefinition**: A quantity- or range-valued use context assigned to the operation definition
- **SearchParameter**: A quantity- or range-valued use context assigned to the search parameter
- **StructureDefinition**: A quantity- or range-valued use context assigned to the structure definition
- **StructureMap**: A quantity- or range-valued use context assigned to the structure map
- **TerminologyCapabilities**: A quantity- or range-valued use context assigned to the terminology capabilities
- **ValueSet**: A quantity- or range-valued use context assigned to the value set

context (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: A use context assigned to the capability statement
- **CodeSystem**: A use context assigned to the code system
- **CompartmentDefinition**: A use context assigned to the compartment definition
- **ConceptMap**: A use context assigned to the concept map
- **GraphDefinition**: A use context assigned to the graph definition
- **ImplementationGuide**: A use context assigned to the implementation guide
- **MessageDefinition**: A use context assigned to the message definition
- **NamingSystem**: A use context assigned to the naming system
- **OperationDefinition**: A use context assigned to the operation definition
- **SearchParameter**: A use context assigned to the search parameter
- **StructureDefinition**: A use context assigned to the structure definition

StructureMap: A use context assigned to the structure map
- **TerminologyCapabilities**: A use context assigned to the terminology capabilities
- **ValueSet**: A use context assigned to the value set

context-type-quantity (optional)
Query Parameter —

Multiple Resources:

CapabilityStatement: A use context type and quantity- or range-based value assigned to the capability statement
- **CodeSystem**: A use context type and quantity- or range-based value assigned to the code system
- **CompartmentDefinition**: A use context type and quantity- or range-based value assigned to the compartment definition
- **ConceptMap**: A use context type and quantity- or range-based value assigned to the concept map
- **GraphDefinition**: A use context type and quantity- or range-based value assigned to the graph definition
- **ImplementationGuide**: A use context type and quantity- or range-based value assigned to the implementation guide
MessageDefinition: A use context type and quantity- or range-based value assigned to the message definition
- **NamingSystem**: A use context type and quantity- or range-based value assigned to the naming system
OperationDefinition: A use context type and quantity- or range-based value assigned to the operation definition
- **SearchParameter**: A use context type and quantity- or range-based value assigned to the search parameter
- **StructureDefinition**: A use context type and quantity- or range-based value assigned to the structure definition
StructureMap: A use context type and quantity- or range-based value assigned to the structure map
- **TerminologyCapabilities**: A use context type and quantity- or range-based value assigned to the terminology capabilities
ValueSet: A use context type and quantity- or range-based value assigned to the value set

identifier (optional)
Query Parameter —

Multiple Resources:

CodeSystem: External identifier for the code system
ConceptMap: External identifier for the concept map
- **MessageDefinition**: External identifier for the message definition
- **StructureDefinition**: External identifier for the structure definition
StructureMap: External identifier for the structure map
- **ValueSet**: External identifier for the value set

_security (optional)
Query Parameter — Security Labels applied to this resource

version (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The business version of the capability statement
CodeSystem: The business version of the code system
CompartmentDefinition: The business version of the compartment definition
- **ConceptMap**: The business version of the concept map
GraphDefinition: The business version of the graph definition
ImplementationGuide: The business version of the implementation guide
- **MessageDefinition**: The business version of the message definition
- **OperationDefinition**: The business version of the operation definition
SearchParameter: The business version of the search parameter
StructureDefinition: The business version of the structure definition
- **StructureMap**: The business version of the structure map
TerminologyCapabilities: The business version of the terminology capabilities
ValueSet: The business version of the value set

url (optional)

Query Parameter —

Multiple Resources:

- CapabilityStatement: The uri that identifies the capability statement
- CodeSystem: The uri that identifies the code system
- CompartmentDefinition: The uri that identifies the compartment definition
- ConceptMap: The uri that identifies the concept map
- GraphDefinition: The uri that identifies the graph definition
- ImplementationGuide: The uri that identifies the implementation guide
- MessageDefinition: The uri that identifies the message definition
- OperationDefinition: The uri that identifies the operation definition
- SearchParameter: The uri that identifies the search parameter
- StructureDefinition: The uri that identifies the structure definition
- StructureMap: The uri that identifies the structure map
- TerminologyCapabilities: The uri that identifies the terminology capabilities
- ValueSet: The uri that identifies the value set

expansion (optional)

Query Parameter — Identifies the value set expansion (business identifier)

_filter (optional)

Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)

Query Parameter — Profiles this resource claims to conform to

_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

name (optional)

Query Parameter —

Multiple Resources:

- CapabilityStatement: Computationally friendly name of the capability statement
- CodeSystem: Computationally friendly name of the code system
- CompartmentDefinition: Computationally friendly name of the compartment definition
- ConceptMap: Computationally friendly name of the concept map
- GraphDefinition: Computationally friendly name of the graph definition
- ImplementationGuide: Computationally friendly name of the implementation guide
- MessageDefinition: Computationally friendly name of the message definition
- NamingSystem: Computationally friendly name of the naming system
- OperationDefinition: Computationally friendly name of the operation definition
- SearchParameter: Computationally friendly name of the search parameter
- StructureDefinition: Computationally friendly name of the structure definition
- StructureMap: Computationally friendly name of the structure map
- TerminologyCapabilities: Computationally friendly name of the terminology capabilities
- ValueSet: Computationally friendly name of the value set

publisher (optional)

Query Parameter —

Multiple Resources:

- CapabilityStatement: Name of the publisher of the capability statement
- CodeSystem: Name of the publisher of the code system
- CompartmentDefinition: Name of the publisher of the compartment definition
- ConceptMap: Name of the publisher of the concept map
- GraphDefinition: Name of the publisher of the graph definition
- ImplementationGuide: Name of the publisher of the implementation guide
- MessageDefinition: Name of the publisher of the message definition
- NamingSystem: Name of the publisher of the naming system
- OperationDefinition: Name of the publisher of the operation definition
- SearchParameter: Name of the publisher of the search parameter
- StructureDefinition: Name of the publisher of the structure definition

- **StructureMap**: Name of the publisher of the structure map
  - **TerminologyCapabilities**: Name of the publisher of the terminology capabilities
  - **ValueSet**: Name of the publisher of the value set

_source (optional)
Query Parameter — Identifies where the resource comes from

_id (optional)
Query Parameter — Logical id of this artifact

_text (optional)
Query Parameter — Search on the narrative of the resource

_content (optional)
Query Parameter — Search on the entire content of the resource

status (optional)
Query Parameter —

Multiple Resources:

- **CapabilityStatement**: The current status of the capability statement
- **CodeSystem**: The current status of the code system
  CompartmentDefinition: The current status of the compartment definition
  ConceptMap: The current status of the concept map
- **GraphDefinition**: The current status of the graph definition
- **ImplementationGuide**: The current status of the implementation guide
  MessageDefinition: The current status of the message definition
- **NamingSystem**: The current status of the naming system
- **OperationDefinition**: The current status of the operation definition
  SearchParameter: The current status of the search parameter
  StructureDefinition: The current status of the structure definition
- **StructureMap**: The current status of the structure map
  TerminologyCapabilities: The current status of the terminology capabilities
  ValueSet: The current status of the value set

Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success [Object]

POST /ValueSet/{id}/$meta-add

(valueSetIdMetaAddPost)

Add tags, profiles, and/or security labels to a resource

Path parameters

id (required)
Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

    application/fhir+json

Request body

body object (optional)
Body Parameter —

Return type

Object

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed
by the Content-Type response header.

    application/fhir+json
    application/fhir+xml

Responses
200
Success [Object]

POST /ValueSet/{id}/$meta-delete

(valueSetIdMetaDeletePost)

Delete tags, profiles, and/or security labels from a resource

Path parameters

id (required)

Path Parameter — The resource ID default: null

Consumes

This API call consumes the following media types via the Content-Type request header:

    application/fhir+json

Request body

GET /VisionPrescription

search-type: Search for VisionPrescription instances (**visionPrescriptionGet**)
This is a search type

Query parameters

prescriber (optional)
Query Parameter — Who authorized the vision prescription

identifier (optional)
Query Parameter —

Multiple Resources:

- [AllergyIntolerance](): External ids for this item
- [CarePlan](): External Ids for this plan
- [CareTeam](): External Ids for this team
- [Composition](): Version-independent identifier for the Composition
- [Condition](): A unique identifier of the condition record
- [Consent](): Identifier for this record (external references)
- [DetectedIssue](): Unique id for the detected issue
- [DeviceRequest](): Business identifier for request/order
- [DiagnosticReport](): An identifier for the report
- [DocumentManifest](): Unique Identifier for the set of documents
- [DocumentReference](): Master Version Specific Identifier
- [Encounter](): Identifier(s) by which this encounter is known
- [EpisodeOfCare](): Business Identifier(s) relevant for this EpisodeOfCare
- [FamilyMemberHistory](): A search by a record identifier
- [Goal](): External Ids for this goal
- [ImagingStudy](): Identifiers for the Study, such as DICOM Study Instance UID and Accession number
- [Immunization](): Business identifier
- [List](): Business identifier
- [MedicationAdministration](): Return administrations with this external identifier
- [MedicationDispense](): Returns dispenses with this external identifier
- [MedicationRequest](): Return prescriptions with this external identifier
- [MedicationStatement](): Return statements with this external identifier
- [NutritionOrder](): Return nutrition orders with this external identifier
- [Observation](): The unique id for a particular observation
- [Procedure](): A unique identifier for a procedure
- [RiskAssessment](): Unique identifier for the assessment
- [ServiceRequest](): Identifiers assigned to this order
- [SupplyDelivery](): External identifier
- [SupplyRequest](): Business Identifier for SupplyRequest
- [VisionPrescription](): Return prescriptions with this external identifier

_lastUpdated (optional)
Query Parameter — When the resource version last changed

datewritten (optional)
Query Parameter — Return prescriptions written on this date

_security (optional)
Query Parameter — Security Labels applied to this resource

encounter (optional)
Query Parameter —

Multiple Resources:

- [Composition](): Context of the Composition
- [DeviceRequest](): Encounter during which request was created
- [DiagnosticReport](): The Encounter when the order was made
- [DocumentReference](): Context of the document content
- [Flag](): Alert relevant during encounter
- [List](): Context in which list created
- [NutritionOrder](): Return nutrition orders with this encounter identifier
- [Observation](): Encounter related to the observation
- [Procedure](): Encounter created as part of
- [RiskAssessment](): Where was assessment performed?
- [ServiceRequest](): An encounter in which this request is made
- [VisionPrescription](): Return prescriptions with this encounter identifier

_filter (optional)
Query Parameter — Search the contents of the resource's data using a filter

_profile (optional)

Query Parameter — Profiles this resource claims to conform to

patient (optional)

Query Parameter —

Multiple Resources:

- **AllergyIntolerance**: Who the sensitivity is for
  CarePlan: Who the care plan is for
  CareTeam: Who care team is for
- **ClinicalImpression**: Patient or group assessed
  Composition: Who and/or what the composition is about
  Condition: Who has the condition?
- **Consent**: Who the consent applies to
- **DetectedIssue**: Associated patient
  DeviceRequest: Individual the service is ordered for
  DeviceUseStatement: Search by subject - a patient
- **DiagnosticReport**: The subject of the report if a patient
  DocumentManifest: The subject of the set of documents
  DocumentReference: Who/what is the subject of the document
- **Encounter**: The patient or group present at the encounter
- **EpisodeOfCare**: The patient who is the focus of this episode of care
  FamilyMemberHistory: The identity of a subject to list family member history items for
- **Flag**: The identity of a subject to list flags for
- **Goal**: Who this goal is intended for
  ImagingStudy: Who the study is about
  Immunization: The patient for the vaccination record
- **List**: If all resources have the same subject
  MedicationAdministration: The identity of a patient to list administrations for
  MedicationDispense: The identity of a patient to list dispenses for
- **MedicationRequest**: Returns prescriptions for a specific patient
- **MedicationStatement**: Returns statements for a specific patient.
  NutritionOrder: The identity of the person who requires the diet, formula or nutritional supplement
- **Observation**: The subject that the observation is about (if patient)
  Procedure: Search by subject - a patient
  RiskAssessment: Who/what does assessment apply to?
- **ServiceRequest**: Search by subject - a patient
  SupplyDelivery: Patient for whom the item is supplied
  VisionPrescription: The identity of a patient to list dispenses for

_tag (optional)

Query Parameter — Tags applied to this resource

_has (optional)

Query Parameter — Return resources linked to by the given target

_source (optional)

Query Parameter — Identifies where the resource comes from

_id (optional)

Query Parameter — Logical id of this artifact

_text (optional)

Query Parameter — Search on the narrative of the resource

_content (optional)

Query Parameter — Search on the entire content of the resource

status (optional)

Query Parameter — The status of the vision prescription

Table of Contents

Account -   **Up**

A financial tool for tracking value accrued for a particular purpose. In the healthcare field, used to track charges for a patient, cost centers, etc.

resourceType
oas_any_type_not_mapped This is a Account resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Unique identifier used to reference the account. Might or might not be intended for human use (e.g. credit card number).

status (optional)
String Indicates whether the account is presently used/usable or not.

Enum:

    active
    inactive
    entered-in-error
    on-hold
    unknown

_status (optional)
Element

type (optional)
CodeableConcept
name (optional)
String A sequence of Unicode characters

_name (optional)
Element

subject (optional)
array[Reference] Identifies the entity which incurs the expenses. While the immediate recipients of services or goods might be entities related to the subject, the expenses were ultimately incurred by the subject of the Account.

servicePeriod (optional)
Period
coverage (optional)
array[Account_Coverage] The party(s) that are responsible for covering the payment of this account, and what order should they be applied to the account.
owner (optional)
Reference

description (optional)
String A sequence of Unicode characters
_description (optional)
Element

guarantor (optional)
array[Account_Guarantor] The parties responsible for balancing the account if other payment options fall short.

partOf (optional)
Reference

Account_Coverage -

A financial tool for tracking value accrued for a particular purpose. In the healthcare field, used to track charges for a patient, cost centers, etc.
    id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

identifier (optional)
array[Identifier] A formal identifier that is used to identify this activity definition when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)
String A sequence of Unicode characters
_version (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

title (optional)
String A sequence of Unicode characters

_title (optional)
Element
subtitle (optional)
String A sequence of Unicode characters

_subtitle (optional)
Element
status (optional)
String The status of this activity definition. Enables tracking the life-cycle of the content.

Enum:
draft
active
retired
unknown

_status (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"

_experimental (optional)
Element

subjectCodeableConcept (optional)
CodeableConcept

subjectReference (optional)
Reference

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate activity definition instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the activity definition is intended to be used.

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

usage (optional)
String A sequence of Unicode characters

_usage (optional)
Element

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

approvalDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_approvalDate (optional)
Element

lastReviewDate (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_lastReviewDate (optional)

Element

effectivePeriod (optional)

Period

topic (optional)

array[CodeableConcept] Descriptive topics related to the content of the activity. Topics provide a high-level categorization of the activity that can be useful for filtering and searching.

author (optional)

array[ContactDetail] An individiual or organization primarily involved in the creation and maintenance of the content.

editor (optional)

array[ContactDetail] An individual or organization primarily responsible for internal coherence of the content.

reviewer (optional)

array[ContactDetail] An individual or organization primarily responsible for review of some aspect of the content.

endorser (optional)

array[ContactDetail] An individual or organization responsible for officially endorsing the content for use in some setting.

relatedArtifact (optional)

array[RelatedArtifact] Related artifacts such as additional documentation, justification, or bibliographic references.

library (optional)

array[String] A reference to a Library resource containing any formal logic used by the activity definition.

kind (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_kind (optional)

Element

profile (optional)

String A URI that is a reference to a canonical URL on a FHIR resource

code (optional)

CodeableConcept

intent (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_intent (optional)

Element

priority (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_priority (optional)

Element

doNotPerform (optional)

Boolean Value of "true" or "false"

_doNotPerform (optional)

Element

timingTiming (optional)

Timing

timingDateTime (optional)

String The period, timing or frequency upon which the described activity is to occur.

_timingDateTime (optional)

Element

timingAge (optional)

Age

timingPeriod (optional)

Period

timingRange (optional)

Range

timingDuration (optional)

Duration

location (optional)

Reference

participant (optional)

array[ActivityDefinition_Participant] Indicates who should participate in performing the action
described.

productReference (optional)

Reference

productCodeableConcept (optional)

CodeableConcept

quantity (optional)

Quantity

dosage (optional)

array[Dosage] Provides detailed dosage instructions in the same way that they are described for
MedicationRequest resources.

bodySite (optional)

array[CodeableConcept] Indicates the sites on the subject's body where the procedure should be
performed (I.e. the target sites).

specimenRequirement (optional)

array[Reference] Defines specimen requirements for the action to be performed, such as required
specimens for a lab test.

observationRequirement (optional)

array[Reference] Defines observation requirements for the action to be performed, such as body
weight or surface area.

observationResultRequirement (optional)

array[Reference] Defines the observations that are expected to be produced by the action.

transform (optional)

String A URI that is a reference to a canonical URL on a FHIR resource

dynamicValue (optional)

array[ActivityDefinition_DynamicValue] Dynamic values that will be evaluated to produce values for
elements of the resulting resource. For example, if the dosage of a medication must be computed
based on the patient's weight, a dynamic value would be used to specify an expression that calculated
the weight, and the path on the request resource that would contain the result.

ActivityDefinition_DynamicValue -   **Up**

This resource allows for the definition of some activity to be performed, independent of a particular patient, practitioner,
or other performance context.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

path (optional)
String A sequence of Unicode characters

_path (optional)
Element

expression
Expression

ActivityDefinition_Participant -   **Up**

This resource allows for the definition of some activity to be performed, independent of a particular patient, practitioner, or other performance context.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_type (optional)
Element

role (optional)
CodeableConcept

Address -   **Up**

An address expressed using postal conventions (as opposed to GPS or other location definition formats). This data type may be used to convey addresses for use in delivering mail as well as for visiting locations which might not be valid for mail delivery. There are a variety of postal address formats defined around the world.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

use (optional)
String The purpose of this address.
    Enum:
       home
       work
       temp
       old
       billing

_use (optional)
Element

type (optional)
String Distinguishes between physical addresses (those you can visit) and mailing addresses (e.g. PO Boxes and care-of addresses). Most addresses are both.
    Enum:
       postal
       physical
       both

_type (optional)
Element

text (optional)
String A sequence of Unicode characters
_text (optional)
Element

line (optional)
array[String] This component contains the house number, apartment number, street name, street direction, P.O. Box number, delivery hints, and similar address information.

_line (optional)
array[Element] Extensions for line
city (optional)
String A sequence of Unicode characters

_city (optional)
Element
district (optional)
String A sequence of Unicode characters

_district (optional)
Element

state (optional)
String A sequence of Unicode characters
_state (optional)
Element

postalCode (optional)
String A sequence of Unicode characters

_postalCode (optional)
Element

country (optional)
String A sequence of Unicode characters

_country (optional)
Element
period (optional)
Period

AdverseEvent -   **Up**

Actual or potential/avoided event causing unintended physical injury resulting from or contributed to by medical care, a research study or other healthcare setting factors that requires additional monitoring, treatment, or hospitalization, or that results in death.

resourceType
oas_any_type_not_mapped This is a AdverseEvent resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
Identifier

actuality (optional)
String Whether the event actually happened, or just had the potential to. Note that this is independent of whether anyone was affected or harmed or how severely.

Enum:
actual
potential

_actuality (optional)
Element

category (optional)
array[CodeableConcept] The overall type of event, intended for search and filtering purposes.

event (optional)
CodeableConcept

subject

Reference

encounter (optional)

Reference

date (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)

Element

detected (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_detected (optional)

Element

recordedDate (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_recordedDate (optional)

Element

resultingCondition (optional)

array[Reference] Includes information about the reaction that occurred as a result of exposure to a substance (for example, a drug or a chemical).

CodeableConcept

severity (optional)

CodeableConcept

outcome (optional)

CodeableConcept

recorder (optional)

Reference

contributor (optional)

array[Reference] Parties that may or should contribute or have contributed information to the adverse event, which can consist of one or more activities. Such information includes information leading to the decision to perform the activity and how to perform the activity (e.g. consultant), information that the activity itself seeks to reveal (e.g. informant of clinical history), or information about what activity was performed (e.g. informant witness).

suspectEntity (optional)

array[AdverseEvent_SuspectEntity] Describes the entity that is suspected to have caused the adverse event.

subjectMedicalHistory (optional)

array[Reference] AdverseEvent.subjectMedicalHistory.

referenceDocument (optional)

array[Reference] AdverseEvent.referenceDocument.

study (optional)

array[Reference] AdverseEvent.study.

`AdverseEvent_Causality -`   **Up**

Actual or potential/avoided event causing unintended physical injury resulting from or contributed to by medical care, a research study or other healthcare setting factors that requires additional monitoring, treatment, or hospitalization, or that results in death.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

instance
Reference

causality (optional)
array[AdverseEvent_Causality] Information on the possible cause of the event.

Age -   **Up**

A duration of time during which an organism (or a process) has existed.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

value (optional)
BigDecimal A rational number with implicit precision

_value (optional)
Element

comparator (optional)
String How the value should be understood and represented - whether the actual value is greater or less than the stated value due to measurement issues; e.g. if the comparator is "<" , then the real value is < stated value.

    Enum:

        <
        <=
        >=
        >

_comparator (optional)
Element

unit (optional)
String A sequence of Unicode characters

_unit (optional)
Element

system (optional)
String String of characters used to identify a name or a resource

_system (optional)
Element

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

AllergyIntolerance -   **Up**

Risk of harmful or undesirable, physiological response which is unique to an individual and associated with exposure to a substance.

resourceType
oas_any_type_not_mapped This is a AllergyIntolerance resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)

Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] Business identifiers assigned to this AllergyIntolerance by the performer or other systems which remain constant as the resource is updated and propagates from server to server.

clinicalStatus (optional)

CodeableConcept

verificationStatus (optional)

CodeableConcept

type (optional)

String Identification of the underlying physiological mechanism for the reaction risk.

> **Enum:**
>> *allergy*
>> *intolerance*

_type (optional)

Element

category (optional)

array[String] Category of the identified substance.

> **Enum:**

_category (optional)

array[Element] Extensions for category

criticality (optional)

String Estimate of the potential clinical harm, or seriousness, of the reaction to the identified substance.

> **Enum:**
>> *low*
>> *high*

unable-to-assess

_criticality (optional)
Element
code (optional)
CodeableConcept

patient
Reference
encounter (optional)
Reference

onsetDateTime (optional)
String Estimated or actual date, date-time, or age when allergy or intolerance was identified.

_onsetDateTime (optional)
Element

onsetAge (optional)
Age

onsetPeriod (optional)
Period
onsetRange (optional)
Range

onsetString (optional)
String Estimated or actual date, date-time, or age when allergy or intolerance was identified.

_onsetString (optional)
Element
recordedDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_recordedDate (optional)
Element
recorder (optional)
Reference

asserter (optional)
Reference

lastOccurrence (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_lastOccurrence (optional)
Element

note (optional)
array[Annotation] Additional narrative about the propensity for the Adverse Reaction, not captured in other fields.

reaction (optional)
array[AllergyIntolerance_Reaction] Details about each adverse reaction event linked to exposure to the identified substance.

AllergyIntolerance_Reaction -   **Up**

Risk of harmful or undesirable, physiological response which is unique to an individual and associated with exposure to a substance.

id (optional)
String A sequence of Unicode characters

extension (optional)

—

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

substance (optional)
CodeableConcept

manifestation
array[CodeableConcept] Clinical symptoms and/or signs that are observed or associated with the adverse reaction event.

description (optional)
String A sequence of Unicode characters
_description (optional)
Element

onset (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.
_onset (optional)
Element

severity (optional)
String Clinical assessment of the severity of the reaction event as a whole, potentially considering multiple different manifestations.

> Enum:
> > *mild*
> > *moderate*
> > *severe*

_severity (optional)
Element

exposureRoute (optional)
CodeableConcept
note (optional)
array[Annotation] Additional text about the adverse reaction event not captured in other fields.

Annotation -   **Up**

A text note which also contains information about who made the statement and when.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

authorReference (optional)
Reference

authorString (optional)
String The individual responsible for making the annotation.

_authorString (optional)
Element

time (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_time (optional)
Element

text (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_text (optional)
Element

Appointment -   **Up**

A booking of a healthcare event among patient(s), practitioner(s), related person(s) and/or device(s) for a specific date/time. This may result in one or more Encounter(s).

resourceType
oas_any_type_not_mapped This is a Appointment resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a

set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] This records identifiers associated with this appointment concern that are defined by business processes and/or used to refer to it when a direct URL reference to the resource itself is not appropriate (e.g. in CDA documents, or in written / printed documentation).

status (optional)
String The overall status of the Appointment. Each of the participants has their own participation status which indicates their involvement in the process, however this status indicates the shared status

Enum:

proposed
pending
booked

arrived

fulfilled

cancelled
noshow

entered-in-error

checked-in
waitlist

_status (optional)
Element
cancelationReason (optional)
CodeableConcept

serviceCategory (optional)
array[CodeableConcept] A broad categorization of the service that is to be performed during this appointment.

serviceType (optional)
array[CodeableConcept] The specific service that is to be performed during this appointment.
specialty (optional)
array[CodeableConcept] The specialty of a practitioner that would be required to perform the service requested in this appointment.
appointmentType (optional)
CodeableConcept

reasonCode (optional)
array[CodeableConcept] The coded reason that this appointment is being scheduled. This is more clinical than administrative.

reasonReference (optional)
array[Reference] Reason the appointment has been scheduled to take place, as specified using information from another resource. When the patient arrives and the encounter begins it may be used as the admission diagnosis. The indication will typically be a Condition (with other resources referenced in the evidence.detail), or a Procedure.
priority (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)

_priority (optional)
Element
description (optional)
String A sequence of Unicode characters

_description (optional)
Element

supportingInformation (optional)
array[Reference] Additional information to support the appointment provided when making the appointment.

start (optional)
String An instant in time - known at least to the second

_start (optional)
Element

end (optional)
String An instant in time - known at least to the second

_end (optional)
Element

minutesDuration (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_minutesDuration (optional)
Element
slot (optional)
array[Reference] The slots from the participants' schedules that will be filled by the appointment.

created (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_created (optional)
Element

comment (optional)
String A sequence of Unicode characters

_comment (optional)
Element

patientInstruction (optional)
String A sequence of Unicode characters

_patientInstruction (optional)
Element
basedOn (optional)
array[Reference] The service request this appointment is allocated to assess (e.g. incoming referral or procedure request).
participant
array[Appointment_Participant] List of participants involved in the appointment.

requestedPeriod (optional)
array[Period]

A set of date ranges (potentially including times) that the appointment is preferred to be scheduled within.

The duration (usually in minutes) could also be provided to indicate the length of the appointment to fill and populate the start/end times for the actual allocated time. However, in other situations the duration may be calculated by the scheduling system.

AppointmentResponse -   **Up**

A reply to an appointment request for a patient and/or practitioner(s), such as a confirmation or rejection.
resourceType
oas_any_type_not_mapped This is a AppointmentResponse resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element
text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] This records identifiers associated with this appointment response concern that are defined by business processes and/ or used to refer to it when a direct URL reference to the resource itself is not appropriate.

appointment
Reference
start (optional)
String An instant in time - known at least to the second

_start (optional)
Element
end (optional)
String An instant in time - known at least to the second

_end (optional)
Element

participantType (optional)
array[CodeableConcept] Role of participant in the appointment.
actor (optional)
Reference

participantStatus (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_participantStatus (optional)
Element
comment (optional)
String A sequence of Unicode characters

_comment (optional)

Element

Appointment_Participant -

A booking of a healthcare event among patient(s), practitioner(s), related person(s) and/or device(s) for a specific date/time. This may result in one or more Encounter(s).

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
array[CodeableConcept] Role of participant in the appointment.

actor (optional)
Reference

required (optional)
String Whether this participant is required to be present at the meeting. This covers a use-case where two doctors need to meet to discuss the results for a specific patient, and the patient is not required to be present.

> **Enum:**
> *required*
> *optional*
> *information-only*

_required (optional)
Element

status (optional)
String Participation status of the actor.

> **Enum:**
> *accepted*
> *declined*
> *tentative*
> *needs-action*

_status (optional)
Element

period (optional)
Period

Attachment -

For referring to data content defined in other formats.

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type
Coding

subtype (optional)
array[Coding] Identifier for the category of event.

action (optional)
String Indicator for type of action performed during the event that generated the audit.
Enum:
C
R
U
D
E

_action (optional)
Element

period (optional)
Period

recorded (optional)
String An instant in time - known at least to the second

_recorded (optional)
Element

outcome (optional)
String Indicates whether the event succeeded or failed.
Enum:
0
4
8
12

_outcome (optional)
Element

outcomeDesc (optional)
String A sequence of Unicode characters
_outcomeDesc (optional)
Element

purposeOfEvent (optional)
array[CodeableConcept] The purposeOfUse (reason) that was used during the event being recorded.

agent
array[AuditEvent_Agent] An actor taking an active role in the event or activity that is logged.
source
AuditEvent_Source

entity (optional)
array[AuditEvent_Entity] Specific instances of data or objects that have been accessed.

AuditEvent_Agent -   **Up**

A record of an event made for purposes of maintaining a security log. Typical uses include detection of intrusion attempts and monitoring for inappropriate usage.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
CodeableConcept

role (optional)
array[CodeableConcept] The security role that the user was acting under, that come from local codes defined by the access control security system (e.g. RBAC, ABAC) used in the local context.

who (optional)
Reference
altId (optional)
String A sequence of Unicode characters

_altId (optional)
Element

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

requestor (optional)
Boolean Value of "true" or "false"

_requestor (optional)
Element

location (optional)
Reference

policy (optional)
array[String] The policy or plan that authorized the activity being recorded. Typically, a single activity may have multiple applicable policies, such as patient consent, guarantor funding, etc. The policy would also indicate the security token used.

_policy (optional)
array[Element] Extensions for policy

media (optional)
Coding

network (optional)
AuditEvent_Network

purposeOfUse (optional)
array[CodeableConcept] The reason (purpose of use), specific to this agent, that was used during the event being recorded.

AuditEvent_Detail -

A record of an event made for purposes of maintaining a security log. Typical uses include detection of intrusion attempts and monitoring for inappropriate usage.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
String A sequence of Unicode characters

_type (optional)
Element

valueString (optional)
String The value of the extra detail.

_valueString (optional)
Element

valueBase64Binary (optional)
String The value of the extra detail.

_valueBase64Binary (optional)
Element

AuditEvent_Entity -

A record of an event made for purposes of maintaining a security log. Typical uses include detection of intrusion attempts and monitoring for inappropriate usage.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

what (optional)
Reference
type (optional)
Coding

role (optional)
Coding

lifecycle (optional)
Coding

securityLabel (optional)
array[Coding] Security labels for the identified entity.

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element
query (optional)
String A stream of bytes

_query (optional)
Element
detail (optional)
array[AuditEvent_Detail] Tagged value pairs for conveying additional information about the entity.

AuditEvent_Network -   **Up**

A record of an event made for purposes of maintaining a security log. Typical uses include detection of intrusion attempts and monitoring for inappropriate usage.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

address (optional)
String A sequence of Unicode characters
_address (optional)
Element

type (optional)
String An identifier for the type of network access point that originated the audit event.
Enum:
>   1
>   2
>   3
>   4
>   5
_type (optional)
Element

AuditEvent_Source -

A record of an event made for purposes of maintaining a security log. Typical uses include detection of intrusion attempts and monitoring for inappropriate usage.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

site (optional)
String A sequence of Unicode characters
_site (optional)
Element

observer
Reference

type (optional)

array[Coding] Code specifying the type of source where event originated.

Basic -   Up

Basic is used for handling concepts not yet defined in FHIR, narrative-only resources that don't map to an existing resource, and custom resources not appropriate for inclusion in the FHIR specification.

resourceType

oas_any_type_not_mapped This is a Basic resource

id (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)

Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)

Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] Identifier assigned to the resource for business purposes, outside the context of FHIR.

code

CodeableConcept

subject (optional)

Reference

created (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_created (optional)
Element

author (optional)
Reference

Binary -

A resource that represents the data of a single raw artifact as digital content accessible in its native format. A Binary resource can contain any content, whether text, image, pdf, zip archive, etc.

resourceType
oas_any_type_not_mapped This is a Binary resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

contentType (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_contentType (optional)
Element

securityContext (optional)
Reference

data (optional)
String A stream of bytes

_data (optional)
Element

BiologicallyDerivedProduct -

A material substance originating from a biological entity intended to be transplanted or infused into another (possibly the same) biological entity.

resourceType
oas_any_type_not_mapped This is a BiologicallyDerivedProduct resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element
text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] This records identifiers associated with this biologically derived product instance that are defined by business processes and/or used to refer to it when a direct URL reference to the resource itself is not appropriate (e.g. in CDA documents, or in written / printed documentation).

productCategory (optional)
String Broad category of this product.
Enum:
    organ
    tissue
    fluid
    cells
    biologicalAgent

_productCategory (optional)
Element

productCode (optional)
CodeableConcept
status (optional)
String Whether the product is currently available.
Enum:
    available
    unavailable

_status (optional)
Element
request (optional)
array[Reference] Procedure request to obtain this biologically derived product.

quantity (optional)
BigDecimal A whole number

_quantity (optional)
Element
parent (optional)
array[Reference] Parent product (if any).

collection (optional)
BiologicallyDerivedProduct_Collection

processing (optional)
array[BiologicallyDerivedProduct_Processing] Any processing of the product during collection that does not change the fundamental nature of the product. For example adding anti-coagulants during the collection of Peripheral Blood Stem Cells.

manipulation (optional)
BiologicallyDerivedProduct_Manipulation

storage (optional)
array[BiologicallyDerivedProduct_Storage] Product storage.

BiologicallyDerivedProduct_Collection -   **Up**

A material substance originating from a biological entity intended to be transplanted or infused into another (possibly the same) biological entity.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

collector (optional)
Reference

source (optional)
Reference
collectedDateTime (optional)
String Time of product collection.

collectedDateTime (optional)
Element

collectedPeriod (optional)
Period

BiologicallyDerivedProduct_Manipulation -   **Up**

A material substance originating from a biological entity intended to be transplanted or infused into another (possibly the same) biological entity.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters

_description (optional)
Element
timeDateTime (optional)
String Time of manipulation.

_timeDateTime (optional)
Element
timePeriod (optional)
Period

BiologicallyDerivedProduct_Processing -   **Up**

A material substance originating from a biological entity intended to be transplanted or infused into another (possibly the same) biological entity.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

procedure (optional)
CodeableConcept

additive (optional)
Reference
timeDateTime (optional)
String Time of processing.

_timeDateTime (optional)
Element

timePeriod (optional)
Period

BiologicallyDerivedProduct_Storage -

A material substance originating from a biological entity intended to be transplanted or infused into another (possibly the same) biological entity.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

temperature (optional)
BigDecimal A rational number with implicit precision

_temperature (optional)
Element

scale (optional)
String Temperature scale used.
Enum:
　　farenheit
　　celsius
　　kelvin

_scale (optional)
Element

duration (optional)
Period

BodyStructure -

Record details about an anatomical structure. This resource may be used when a coded concept does not provide the necessary detail needed for the use case.

resourceType
oas_any_type_not_mapped This is a BodyStructure resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifier for this instance of the anatomical structure.
active (optional)
Boolean Value of "true" or "false"

_active (optional)
Element
morphology (optional)
CodeableConcept

location (optional)
CodeableConcept

locationQualifier (optional)
array[CodeableConcept] Qualifier to refine the anatomical location. These include qualifiers for laterality, relative location, directionality, number, and plane.

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

image (optional)
array[Attachment] Image or images used to identify a location.
patient
Reference

Bundle -

A container for a collection of resources.

resourceType
oas_any_type_not_mapped This is a Bundle resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

identifier (optional)
Identifier

type (optional)
String Indicates the purpose of this bundle - how it is intended to be used.
Enum:

    document

    message
    transaction

    transaction-response

    batch
    batch-response

    history

    searchset

    collection

_type (optional)
Element

timestamp (optional)
String An instant in time - known at least to the second

_timestamp (optional)
Element

total (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)

_total (optional)
Element

link (optional)
array[Bundle_Link] A series of links that provide context to this bundle.

entry (optional)
array[Bundle_Entry] An entry in a bundle resource - will either contain a resource or information about a resource (transactions and history only).

signature (optional)
Signature

Bundle_Entry -

A container for a collection of resources.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

link (optional)
array[Bundle_Link] A series of links that provide context to this entry.

fullUrl (optional)
String String of characters used to identify a name or a resource

_fullUrl (optional)
Element
resource (optional)
ResourceList

search (optional)
Bundle_Search

request (optional)
Bundle_Request
response (optional)
Bundle_Response

Bundle_Link -

A container for a collection of resources.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

relation (optional)
String A sequence of Unicode characters

_relation (optional)
Element

url (optional)
String String of characters used to identify a name or a resource
_url (optional)
Element

Bundle_Request -

A container for a collection of resources.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.
To make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer can define an extension, there is a set of
requirements that SHALL be met as part of the definition of the extension. Applications processing a
resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

method (optional)
String In a transaction or batch, this is the HTTP action to be executed for this entry. In a history
bundle, this indicates the HTTP action that occurred.
    Enum:
       GET
       HEAD
       POST
       PUT
       DELETE
       PATCH

_method (optional)
Element
url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element
ifNoneMatch (optional)
String A sequence of Unicode characters

_ifNoneMatch (optional)
Element

ifModifiedSince (optional)
String An instant in time - known at least to the second
_ifModifiedSince (optional)
Element

ifMatch (optional)
String A sequence of Unicode characters

_ifMatch (optional)

Element

ifNoneExist (optional)
String A sequence of Unicode characters
_ifNoneExist (optional)
Element

Bundle_Response -

A container for a collection of resources.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

status (optional)
String A sequence of Unicode characters

_status (optional)
Element

location (optional)
String String of characters used to identify a name or a resource
_location (optional)
Element

etag (optional)
String A sequence of Unicode characters
_etag (optional)
Element

lastModified (optional)
String An instant in time - known at least to the second

_lastModified (optional)
Element

outcome (optional)
ResourceList

Bundle_Search -

A container for a collection of resources.
id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

mode (optional)
String Why this entry is in the result set - whether it's included as a match or because of an _include requirement, or to convey information or warning information about the search process.
>   **Enum:**
>   *match*
>   *include*
>   *outcome*

_mode (optional)
Element

score (optional)
BigDecimal A rational number with implicit precision

_score (optional)
Element

CapabilityStatement -

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

resourceType
oas_any_type_not_mapped This is a CapabilityStatement resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)

String String of characters used to identify a name or a resource

_url (optional)

Element

version (optional)

String A sequence of Unicode characters

_version (optional)

Element

name (optional)

String A sequence of Unicode characters

_name (optional)

Element

title (optional)

String A sequence of Unicode characters

_title (optional)

Element

status (optional)

String The status of this capability statement. Enables tracking the life-cycle of the content.

> **Enum:**
> > *draft*
> > *active*
> > *retired*
> > *unknown*

_status (optional)

Element

experimental (optional)

Boolean Value of "true" or "false"

_experimental (optional)

Element

date (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)

Element

publisher (optional)

String A sequence of Unicode characters

_publisher (optional)

Element

contact (optional)

array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)

Element

useContext (optional)

array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate capability statement instances.

jurisdiction (optional)

array[CodeableConcept] A legal or geographic region in which the capability statement is intended to be used.

purpose (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)

Element

copyright (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)

Element

kind (optional)

String The way that this statement is intended to be used, to describe an actual running instance of software, a particular product (kind, not instance of software) or a class of implementation (e.g. a desired purchase).

> Enum;
> > *instance*
> > *capability*
> > *requirements*

_kind (optional)

Element

instantiates (optional)

array[String] Reference to a canonical URL of another CapabilityStatement that this software implements. This capability statement is a published API description that corresponds to a business service. The server may actually implement a subset of the capability statement it claims to implement, so the capability statement must specify the full capability details.

imports (optional)

array[String] Reference to a canonical URL of another CapabilityStatement that this software adds to. The capability statement automatically includes everything in the other statement, and it is not duplicated, though the server may repeat the same resources, interactions and operations to add additional details to them.

software (optional)

CapabilityStatement_Software

implementation (optional)

CapabilityStatement_Implementation

fhirVersion (optional)

String The version of the FHIR specification that this CapabilityStatement describes (which SHALL be the same as the FHIR version of the CapabilityStatement itself). There is no default value.

> Enum:
> > *0.01*
> > *0.05*
> > *0.06*
> > *0.11*
> > *0.0.80*
> > *0.0.81*

fhirVersion (optional)
Element

format (optional)
array[String] A list of the formats supported by this implementation using their content types.
_format (optional)
array[Element] Extensions for format

patchFormat (optional)
array[String] A list of the patch formats supported by this implementation using their content types.
_patchFormat (optional)
array[Element] Extensions for patchFormat

implementationGuide (optional)
array[String] A list of implementation guides that the server does (or should) support in their entirety.

rest (optional)
array[CapabilityStatement_Rest] A definition of the restful capabilities of the solution, if any.
messaging (optional)
array[CapabilityStatement_Messaging] A description of the messaging capabilities of the solution.

document (optional)
array[CapabilityStatement_Document] A document definition.

`CapabilityStatement_Document -`   **Up**

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

mode (optional)

String Mode of this document declaration - whether an application is a producer or consumer.

   Enum:

   producer
   consumer

_mode (optional)

Element

documentation (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_documentation (optional)

Element

profile

String A URI that is a reference to a canonical URL on a FHIR resource

CapabilityStatement_Endpoint -

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

protocol

Coding

address (optional)

String A URI that is a literal reference

_address (optional)

Element

CapabilityStatement_Implementation -

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters
_description (optional)
Element

url (optional)
String A URI that is a literal reference

_url (optional)
Element
custodian (optional)
Reference

CapabilityStatement_Interaction -

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String Coded identifier of the operation, supported by the system resource.
Enum:
    read
    vread
    update
    patch
    delete
    history-instance
    history-type
    create
    search-type
_code (optional)

Element

documentation (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_documentation (optional)
Element

CapabilityStatement_Interaction1 -   **Up**

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String A coded identifier of the operation, supported by the system.
> **Enum:**
> > *transaction*
> > *batch*
> > *search-system*
> > *history-system*

_code (optional)
Element

documentation (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_documentation (optional)
Element

CapabilityStatement_Messaging -   **Up**

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

endpoint (optional)
array[CapabilityStatement_Endpoint] An endpoint (network accessible address) to which messages and/or replies are to be sent.

reliableCache (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)

_reliableCache (optional)
Element

documentation (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_documentation (optional)
Element

supportedMessage (optional)
array[CapabilityStatement_SupportedMessage] References to message definitions for messages this system can send or receive.

CapabilityStatement_Operation -

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

definition
String A URI that is a reference to a canonical URL on a FHIR resource

documentation (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_documentation (optional)
Element

CapabilityStatement_Resource -

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_type (optional)
Element

profile (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

supportedProfile (optional)
array[String] A list of profiles that represent different use cases supported by the system. For a server, "supported by the system" means the system hosts/produces a set of resources that are conformant to a particular profile, and allows clients that use its services to search using this profile and to find appropriate data. For a client, it means the system will search by this profile and process data according to the guidance implicit in the profile. See further discussion in Using Profiles.

documentation (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_documentation (optional)
Element

interaction (optional)
array[CapabilityStatement_Interaction] Identifies a restful operation supported by the solution.

versioning (optional)
String This field is set to no-version to specify that the system does not support (server) or use (client) versioning for this resource type. If this has some other value, the server must at least correctly track and populate the versionId meta-property on resources. If the value is 'versioned-update', then the server supports all the versioning features, including using e-tags for version integrity in the API.
Enum:
  no-version
  versioned
  versioned-update

_versioning (optional)
Element

readHistory (optional)

Boolean Value of "true" or "false"

_readHistory (optional)
Element
updateCreate (optional)
Boolean Value of "true" or "false"

_updateCreate (optional)
Element
conditionalCreate (optional)
Boolean Value of "true" or "false"

_conditionalCreate (optional)
Element
conditionalRead (optional)
String A code that indicates how the server supports conditional read.
　　　　Enum:
　　　　　　not-supported
　　　　　　modified-since
　　　　　　not-match
　　　　　　full-support

_conditionalRead (optional)
Element
conditionalUpdate (optional)
Boolean Value of "true" or "false"

_conditionalUpdate (optional)
Element
conditionalDelete (optional)
String A code that indicates how the server supports conditional delete.
　　　　Enum:
　　　　　　not-supported
　　　　　　single
　　　　　　multiple
_conditionalDelete (optional)
Element

referencePolicy (optional)
array[String] A set of flags that defines how references are supported.
　　　　Enum:

_referencePolicy (optional)
array[Element] Extensions for referencePolicy
searchInclude (optional)
array[String] A list of _include values supported by the server.

_searchInclude (optional)
array[Element] Extensions for searchInclude

searchRevInclude (optional)
array[String] A list of _revinclude (reverse include) values supported by the server.

_searchRevInclude (optional)
array[Element] Extensions for searchRevInclude

searchParam (optional)
array[CapabilityStatement_SearchParam] Search parameters for implementations to support and/or make use of - either references to ones defined in the specification, or additional ones defined for/by the implementation.

operation (optional)
array[CapabilityStatement_Operation] Definition of an operation or a named query together with its parameters and their meaning and type. Consult the definition of the operation for details about how to invoke the operation, and the parameters.

`CapabilityStatement_Rest -`   **Up**

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

mode (optional)
String Identifies whether this portion of the statement is describing the ability to initiate or receive restful operations.
> **Enum:**
> *client*
> *server*

_mode (optional)
Element

documentation (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_documentation (optional)
Element

security (optional)
CapabilityStatement_Security

resource (optional)
array[CapabilityStatement_Resource] A specification of the restful capabilities of the solution for a specific resource type.

interaction (optional)
array[CapabilityStatement_Interaction1] A specification of restful operations supported by the system.

searchParam (optional)
array[CapabilityStatement_SearchParam] Search parameters that are supported for searching all resources for implementations to support and/or make use of - either references to ones defined in the specification, or additional ones defined for/by the implementation.

operation (optional)
array[CapabilityStatement_Operation] Definition of an operation or a named query together with its parameters and their meaning and type.

compartment (optional)
array[String] An absolute URI which is a reference to the definition of a compartment that the system supports. The reference is to a CompartmentDefinition resource by its canonical URL .

CapabilityStatement_SearchParam -   **Up**

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

definition (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

type (optional)
String The type of value a search parameter refers to, and how the content is interpreted.

> **Enum:**
> *number*
> *date*
> *string*
> *token*
> *reference*
> *composite*
> *quantity*
> *uri*
> *special*

_type (optional)
Element

documentation (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_documentation (optional)
Element

CapabilityStatement_Security -

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding

of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

cors (optional)
Boolean Value of "true" or "false"
_cors (optional)
Element

service (optional)
array[CodeableConcept] Types of security services that are supported/required by the system.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

CapabilityStatement_Software -   Up

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters

_name (optional)
Element
version (optional)
String A sequence of Unicode characters

_version (optional)
Element
releaseDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_releaseDate (optional)

Element

CapabilityStatement_SupportedMessage -   **Up**

A Capability Statement documents a set of capabilities (behaviors) of a FHIR Server for a particular version of FHIR that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

mode (optional)
String The mode of this event declaration - whether application is sender or receiver.
>   **Enum:**
>   *sender*
>   *receiver*

_mode (optional)
Element

definition
String A URI that is a reference to a canonical URL on a FHIR resource

CarePlan -   **Up**

Describes the intention of how one or more practitioners intend to deliver care for a particular patient, group or community for a period of time, possibly limited to care for a specific condition or set of conditions.

resourceType
oas_any_type_not_mapped This is a CarePlan resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)

Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifiers assigned to this care plan by the performer or other systems which remain constant as the resource is updated and propagates from server to server.

instantiatesCanonical (optional)
array[String] The URL pointing to a FHIR-defined protocol, guideline, questionnaire or other definition that is adhered to in whole or in part by this CarePlan.

instantiatesUri (optional)
array[String] The URL pointing to an externally maintained protocol, guideline, questionnaire or other definition that is adhered to in whole or in part by this CarePlan.

_instantiatesUri (optional)
array[Element] Extensions for instantiatesUri

basedOn (optional)
array[Reference] A care plan that is fulfilled in whole or in part by this care plan.

replaces (optional)
array[Reference] Completed or terminated care plan whose function is taken by this new care plan.

partOf (optional)
array[Reference] A larger care plan of which this particular care plan is a component or step.

status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

intent (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_intent (optional)
Element

category (optional)
array[CodeableConcept] Identifies what "kind" of plan this is to support differentiation between multiple co-existing plans; e.g. "Home health", "psychiatric", "asthma", "disease management", "wellness plan", etc.

title (optional)
String A sequence of Unicode characters

_title (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element
subject
Reference

encounter (optional)
Reference

period (optional)
Period
created (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_created (optional)
Element
author (optional)
Reference

contributor (optional)
array[Reference] Identifies the individual(s) or organization who provided the contents of the care plan.

careTeam (optional)
array[Reference] Identifies all people and organizations who are expected to be involved in the care envisioned by this plan.

addresses (optional)
array[Reference] Identifies the conditions/problems/concerns/diagnoses/etc. whose management and/or mitigation are handled by this plan.

supportingInfo (optional)
array[Reference] Identifies portions of the patient's record that specifically influenced the formation of the plan. These might include comorbidities, recent procedures, limitations, recent assessments, etc.

goal (optional)
array[Reference] Describes the intended objective(s) of carrying out the care plan.
activity (optional)
array[CarePlan_Activity] Identifies a planned action to occur as part of the plan. For example, a medication to be used, lab tests to perform, self-monitoring, education, etc.
note (optional)
array[Annotation] General notes about the care plan not covered elsewhere.

`CarePlan_Activity -`   [Up](#)

Describes the intention of how one or more practitioners intend to deliver care for a particular patient, group or community for a period of time, possibly limited to care for a specific condition or set of conditions.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification.

To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

outcomeCodeableConcept (optional)
array[CodeableConcept] Identifies the outcome at the point when the status of the activity is assessed. For example, the outcome of an education activity could be patient understands (or not).

outcomeReference (optional)
array[Reference] Details of the outcome or action resulting from the activity. The reference to an "event" resource, such as Procedure or Encounter or Observation, is the result/outcome of the activity itself. The activity can be conveyed using CarePlan.activity.detail OR using the CarePlan.activity.reference (a reference to a "request" resource).

progress (optional)
array[Annotation] Notes about the adherence/status/progress of the activity.

reference (optional)
Reference

detail (optional)
CarePlan_Detail

CarePlan_Detail -   **Up**

Describes the intention of how one or more practitioners intend to deliver care for a particular patient, group or community for a period of time, possibly limited to care for a specific condition or set of conditions.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

kind (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_kind (optional)
Element

instantiatesCanonical (optional)
array[String] The URL pointing to a FHIR-defined protocol, guideline, questionnaire or other definition that is adhered to in whole or in part by this CarePlan activity.

instantiatesUri (optional)
array[String] The URL pointing to an externally maintained protocol, guideline, questionnaire or other definition that is adhered to in whole or in part by this CarePlan activity.

_instantiatesUri (optional)
array[Element] Extensions for instantiatesUri

code (optional)
CodeableConcept

reasonCode (optional)
array[CodeableConcept] Provides the rationale that drove the inclusion of this particular activity as part of the plan or the reason why the activity was prohibited.

reasonReference (optional)
array[Reference] Indicates another resource, such as the health condition(s), whose existence justifies this request and drove the inclusion of this particular activity as part of the plan.

goal (optional)
array[Reference] Internal reference that identifies the goals that this activity is intended to contribute towards meeting.

status (optional)
String Identifies what progress is being made for the specific activity.
>   Enum:
>   *not-started*
>   *scheduled*
>   *in-progress*
>   *on-hold*
>   *completed*
>   *cancelled*
>   *stopped*
>   *unknown*
>   *entered-in-error*

_status (optional)
Element

statusReason (optional)
CodeableConcept
doNotPerform (optional)
Boolean Value of "true" or "false"

_doNotPerform (optional)
Element

scheduledTiming (optional)
Timing

scheduledPeriod (optional)
Period

scheduledString (optional)
String The period, timing or frequency upon which the described activity is to occur.
_scheduledString (optional)
Element

location (optional)
Reference

performer (optional)
array[Reference] Identifies who's expected to be involved in the activity.

productCodeableConcept (optional)
CodeableConcept

productReference (optional)
Reference
dailyAmount (optional)
Quantity

quantity (optional)
Quantity

description (optional)
String A sequence of Unicode characters
_description (optional)
Element

CareTeam -

The Care Team includes all the people and organizations who plan to participate in the coordination and delivery of care for a patient.

resourceType
oas_any_type_not_mapped This is a CareTeam resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifiers assigned to this care team by the performer or other systems which remain constant as the resource is updated and propagates from server to server.
status (optional)
String Indicates the current state of the care team.
> **Enum:**
> *proposed*
> *active*
> *suspended*
> *inactive*
> *entered-in-error*

_status (optional)
Element

category (optional)

array[CodeableConcept] Identifies what kind of team. This is to support differentiation between multiple co-existing teams, such as care plan team, episode of care team, longitudinal care team.

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

subject (optional)
Reference

encounter (optional)
Reference
period (optional)
Period

participant (optional)
array[CareTeam_Participant] Identifies all people and organizations who are expected to be involved in the care team.

reasonCode (optional)
array[CodeableConcept] Describes why the care team exists.
reasonReference (optional)
array[Reference] Condition(s) that this care team addresses.

managingOrganization (optional)
array[Reference] The organization responsible for the care team.

telecom (optional)
array[ContactPoint] A central contact detail for the care team (that applies to all members).
note (optional)
array[Annotation] Comments made about the CareTeam.

CareTeam_Participant -   **Up**

The Care Team includes all the people and organizations who plan to participate in the coordination and delivery of care for a patient.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

role (optional)
array[CodeableConcept] Indicates specific responsibility of an individual within the care team, such as "Primary care physician", "Trained social worker counselor", "Caregiver", etc.

member (optional)
Reference

onBehalfOf (optional)
Reference

period (optional)
Period

CatalogEntry -

Catalog entries are wrappers that contextualize items included in a catalog.

resourceType
oas_any_type_not_mapped This is a CatalogEntry resource
id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.
meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative
contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Used in supporting different identifiers for the same product, e.g. manufacturer code and retailer code.

type (optional)
CodeableConcept
orderable (optional)
Boolean Value of "true" or "false"

_orderable (optional)
Element

referencedItem

Reference

additionalIdentifier (optional)
array[Identifier] Used in supporting related concepts, e.g. NDC to RxNorm.

classification (optional)
array[CodeableConcept] Classes of devices, or ATC for medication.

status (optional)
String Used to support catalog exchange even for unsupported products, e.g. getting list of medications even if not prescribable.

> **Enum:**
>> *draft*
>> *active*
>> *retired*
>> *unknown*

_status (optional)
Element

validityPeriod (optional)
Period

validTo (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_validTo (optional)
Element

lastUpdated (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_lastUpdated (optional)
Element

additionalCharacteristic (optional)
array[CodeableConcept] Used for examplefor Out of Formulary, or any specifics.
additionalClassification (optional)
array[CodeableConcept] User for example for ATC classification, or.

relatedEntry (optional)
array[CatalogEntry_RelatedEntry] Used for example, to point to a substance, or to a device used to administer a medication.

`CatalogEntry_RelatedEntry -`   **Up**

Catalog entries are wrappers that contextualize items included in a catalog.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

relationtype (optional)
String The type of relation to the related item: child, parent, packageContent, containerPackage,
usedin, uses, requires, etc.

> **Enum:**
>> *triggers*
>> *is-replaced-by*

_relationtype (optional)
Element
item
Reference

ChargeItem -   **Up**

The resource ChargeItem describes the provision of healthcare provider products for a certain patient, therefore referring
not only to the product, but containing in addition details of the provision, like date, time, amounts and participating
organizations and persons. Main Usage of the ChargeItem is to enable the billing process and internal cost allocation.

resourceType
oas_any_type_not_mapped This is a ChargeItem resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This
might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these
constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents

_language (optional)
Element
text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource
that contains them - they cannot be identified independently, and nor can they have their own
independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the resource. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource
and that modifies the understanding of the element that contains it and/or the understanding of the
containing element's descendants. Usually modifier elements provide negation or qualification. To
make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer is allowed to define an extension, there is a
set of requirements that SHALL be met as part of the definition of the extension. Applications
processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] Identifiers assigned to this event performer or other systems.

definitionUri (optional)

array[String] References the (external) source of pricing information, rules of application for the code this ChargeItem uses.

_definitionUri (optional)

array[Element] Extensions for definitionUri

definitionCanonical (optional)

array[String] References the source of pricing information, rules of application for the code this ChargeItem uses.

status (optional)

String The current state of the ChargeItem.

> **Enum:**
>> *planned*
>> *billable*
>> *not-billable*
>> *aborted*
>> *billed*
>> *entered-in-error*
>> *unknown*

_status (optional)

Element

partOf (optional)

array[Reference] ChargeItems can be grouped to larger ChargeItems covering the whole set.

code

CodeableConcept

subject

Reference

context (optional)

Reference

occurrenceDateTime (optional)

String Date/time(s) or duration when the charged service was applied.

_occurrenceDateTime (optional)

Element

occurrencePeriod (optional)

Period

occurrenceTiming (optional)

Timing

performer (optional)

array[ChargeItem_Performer] Indicates who or what performed or participated in the charged service.

performingOrganization (optional)

Reference

requestingOrganization (optional)

Reference

costCenter (optional)

Reference

quantity (optional)

Quantity

bodysite (optional)

array[CodeableConcept] The anatomical location where the related service has been applied.

factorOverride (optional)

BigDecimal A rational number with implicit precision

_factorOverride (optional)

Element

priceOverride (optional)

Money

overrideReason (optional)
String A sequence of Unicode characters
_overrideReason (optional)
Element

enterer (optional)
Reference
enteredDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_enteredDate (optional)
Element

reason (optional)
array[CodeableConcept] Describes why the event occurred in coded or textual form.

service (optional)
array[Reference] Indicated the rendered service that caused this charge.

productReference (optional)
Reference
productCodeableConcept (optional)
CodeableConcept

account (optional)
array[Reference] Account into which this ChargeItems belongs.
note (optional)
array[Annotation] Comments made about the event by the performer, subject or other participants.

supportingInformation (optional)
array[Reference] Further information supporting this charge.

```
ChargeItemDefinition -                                                              Up
```

The ChargeItemDefinition resource provides the properties that apply to the (billing) codes necessary to calculate costs and prices. The properties may differ largely depending on type and realm, therefore this resource gives only a rough structure and requires profiling for each type of billing code system.

resourceType
oas_any_type_not_mapped This is a ChargeItemDefinition resource

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

identifier (optional)
array[Identifier] A formal identifier that is used to identify this charge item definition when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)
String A sequence of Unicode characters
_version (optional)
Element

title (optional)
String A sequence of Unicode characters
_title (optional)
Element

derivedFromUri (optional)
array[String] The URL pointing to an externally-defined charge item definition that is adhered to in whole or in part by this definition.

_derivedFromUri (optional)
array[Element] Extensions for derivedFromUri

partOf (optional)
array[String] A larger definition of which this particular definition is a component or step.

replaces (optional)
array[String] As new versions of a protocol or guideline are defined, allows identification of what versions are replaced by a new instance.

status (optional)
String The current state of the ChargeItemDefinition.
Enum:
  draft
  active
  retired
  unknown

_status (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"
_experimental (optional)

Element

date (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)

Element

publisher (optional)

String A sequence of Unicode characters

_publisher (optional)

Element

contact (optional)

array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)

Element

useContext (optional)

array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate charge item definition instances.

jurisdiction (optional)

array[CodeableConcept] A legal or geographic region in which the charge item definition is intended to be used.

copyright (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)

Element

approvalDate (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_approvalDate (optional)

Element

lastReviewDate (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_lastReviewDate (optional)

Element

effectivePeriod (optional)

Period

code (optional)

CodeableConcept

instance (optional)

array[Reference] The defined billing details in this resource pertain to the given product instance(s).

applicability (optional)

array[ChargeItemDefinition_Applicability] Expressions that describe applicability criteria for the billing code.

propertyGroup (optional)

array[ChargeItemDefinition_PropertyGroup] Group of properties which are applicable under the same conditions. If no applicability rules are established for the group, then all properties always apply.

ChargeItemDefinition_Applicability -   **Up**

The ChargeItemDefinition resource provides the properties that apply to the (billing) codes necessary to calculate costs and prices. The properties may differ largely depending on type and realm, therefore this resource gives only a rough structure and requires profiling for each type of billing code system.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

Money

ChargeItemDefinition_PropertyGroup -   **Up**

The ChargeItemDefinition resource provides the properties that apply to the (billing) codes necessary to calculate costs
and prices. The properties may differ largely depending on type and realm, therefore this resource gives only a rough
structure and requires profiling for each type of billing code system.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.
To make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer can define an extension, there is a set of
requirements that SHALL be met as part of the definition of the extension. Applications processing a
resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

applicability (optional)
array[ChargeItemDefinition_Applicability] Expressions that describe applicability criteria for the
priceComponent.

priceComponent (optional)
array[ChargeItemDefinition_PriceComponent] The price for a ChargeItem may be calculated as a base
price with surcharges/deductions that apply in certain conditions. A ChargeItemDefinition resource
that defines the prices, factors and conditions that apply to a billing code is currently under
development. The priceComponent element can be used to offer transparency to the recipient of the
Invoice of how the prices have been calculated.

ChargeItem_Performer -   **Up**

The resource ChargeItem describes the provision of healthcare provider products for a certain patient, therefore referring
not only to the product, but containing in addition details of the provision, like date, time, amounts and participating
organizations and persons. Main Usage of the ChargeItem is to enable the billing process and internal cost allocation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate code system instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the code system is intended to be used.

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

caseSensitive (optional)
Boolean Value of "true" or "false"

_caseSensitive (optional)
Element

valueSet (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

hierarchyMeaning (optional)
String The meaning of the hierarchy of concepts as represented in this resource.
    Enum:
       grouped-by
       is-a
       part-of
       classified-with

_hierarchyMeaning (optional)
Element

compositional (optional)
Boolean Value of "true" or "false"

_compositional (optional)
Element

versionNeeded (optional)
Boolean Value of "true" or "false"

_versionNeeded (optional)
Element

content (optional)
String The extent of the content of the code system (the concepts and codes it defines) are represented in this resource instance.
    Enum:
       not-present
       example
       fragment
       complete
       supplement

_content (optional)
Element

supplements (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

count (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)

_count (optional)
Element

filter (optional)
array[CodeSystem_Filter] A filter that can be used in a value set compose statement when selecting concepts using a filter.

property (optional)
array[CodeSystem_Property] A property defines an additional slot through which additional information can be provided about a concept.

concept (optional)
array[CodeSystem_Concept] Concepts that are in the code system. The concept definitions are inherently hierarchical, but the definitions must be consulted to determine what the meanings of the hierarchical relationships are.

CodeSystem_Concept -   **Up**

The CodeSystem resource is used to declare the existence of and describe a code system or code system supplement and its key properties, and optionally define a part or all of its content.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe hand manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element
display (optional)
String A sequence of Unicode characters

_display (optional)
Element

definition (optional)
String A sequence of Unicode characters

_definition (optional)
Element

designation (optional)
array[CodeSystem_Designation] Additional representations for the concept - other languages, aliases, specialized purposes, used for particular purposes, etc.

property (optional)
array[CodeSystem_Property1] A property value for this concept.

concept (optional)
array[CodeSystem_Concept] Defines children of a concept to produce a hierarchy of concepts. The nature of the relationships is variable (is-a/contains/categorizes) - see hierarchyMeaning.

CodeSystem_Designation -   **Up**

The CodeSystem resource is used to declare the existence of and describe a code system or code system supplement and its key properties, and optionally define a part or all of its content.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

language (optional)
Element

use (optional)
Coding

value (optional)
String A sequence of Unicode characters

_value (optional)
Element

CodeSystem_Filter -

The CodeSystem resource is used to declare the existence of and describe a code system or code system supplement and its key properties, and optionally define a part or all of its content.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

operator (optional)
array[String] A list of operators that can be used with the filter.

_operator (optional)
array[Element] Extensions for operator

value (optional)
String A sequence of Unicode characters

_value (optional)
Element

CodeSystem_Property -

The CodeSystem resource is used to declare the existence of and describe a code system or code system supplement and its key properties, and optionally define a part or all of its content.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

uri (optional)
String String of characters used to identify a name or a resource

_uri (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

type (optional)
String The type of the property value. Properties of type "code" contain a code defined by the code system (e.g. a reference to another defined concept).

> **Enum:**
> *code*
> *Coding*
> *string*
> *integer*
> *boolean*
> *dateTime*
> *decimal*

_type (optional)
Element

CodeSystem_Property1 -

The CodeSystem resource is used to declare the existence of and describe a code system or code system supplement and its key properties, and optionally define a part or all of its content.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element
valueCode (optional)
String The value of this property.

_valueCode (optional)
Element
valueCoding (optional)
Coding

valueString (optional)
String The value of this property.

_valueString (optional)
Element
valueInteger (optional)
BigDecimal The value of this property.

_valueInteger (optional)
Element

valueBoolean (optional)
Boolean The value of this property.

_valueBoolean (optional)
Element

valueDateTime (optional)
String The value of this property.
_valueDateTime (optional)
Element

valueDecimal (optional)
BigDecimal The value of this property.
_valueDecimal (optional)
Element

`CodeableConcept -`   **Up**

A concept that may be defined by a formal reference to a terminology or ontology or may be provided by text.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

coding (optional)
array[Coding] A reference to a code defined by a terminology system.

text (optional)
String A sequence of Unicode characters

_text (optional)
Element

Coding -

A reference to a code defined by a terminology system.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

system (optional)
String String of characters used to identify a name or a resource

_system (optional)
Element

version (optional)
String A sequence of Unicode characters

_version (optional)
Element

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

display (optional)
String A sequence of Unicode characters

_display (optional)
Element

userSelected (optional)
Boolean Value of "true" or "false"

_userSelected (optional)
Element

Communication -

An occurrence of information being transmitted; e.g. an alert that was sent to a responsible provider, a public health agency that was notified about a reportable condition.

resourceType
oas_any_type_not_mapped This is a Communication resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifiers assigned to this communication by the performer or other systems which remain constant as the resource is updated and propagates from server to server.

instantiatesCanonical (optional)
array[String] The URL pointing to a FHIR-defined protocol, guideline, orderset or other definition that is adhered to in whole or in part by this Communication.

instantiatesUri (optional)
array[String] The URL pointing to an externally maintained protocol, guideline, orderset or other definition that is adhered to in whole or in part by this Communication.

_instantiatesUri (optional)
array[Element] Extensions for instantiatesUri

basedOn (optional)
array[Reference] An order, proposal or plan fulfilled in whole or in part by this Communication.

partOf (optional)
array[Reference] Part of this action.

inResponseTo (optional)
array[Reference] Prior communication that this communication is in response to.

status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

statusReason (optional)
CodeableConcept

category (optional)
array[CodeableConcept] The type of message conveyed such as alert, notification, reminder, instruction, etc.

priority (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_priority (optional)
Element

medium (optional)
array[CodeableConcept] A channel that was used for this communication (e.g. email, fax).
subject (optional)
Reference

topic (optional)
CodeableConcept

about (optional)
array[Reference] Other resources that pertain to this communication and to which this communication should be associated.

encounter (optional)
Reference

sent (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_sent (optional)
Element
received (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_received (optional)
Element
recipient (optional)
array[Reference] The entity (e.g. person, organization, clinical information system, care team or device) which was the target of the communication. If receipts need to be tracked by an individual, a separate resource instance will need to be created for each recipient. Multiple recipient communications are intended where either receipts are not tracked (e.g. a mass mail-out) or a receipt is captured in aggregate (all emails confirmed received by a particular time).

sender (optional)
Reference

reasonCode (optional)
array[CodeableConcept] The reason or justification for the communication.
reasonReference (optional)
array[Reference] Indicates another resource whose existence justifies this communication.

payload (optional)
array[Communication_Payload] Text, attachment(s), or resource(s) that was communicated to the recipient.

note (optional)
array[Annotation] Additional notes or commentary about the communication by the sender, receiver or other interested parties.

CommunicationRequest -   **Up**

A request to convey information; e.g. the CDS system proposes that an alert be sent to a responsible provider, the CDS system proposes that the public health agency be notified about a reportable condition.

resourceType
oas_any_type_not_mapped This is a CommunicationRequest resource
id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource
that contains them - they cannot be identified independently, and nor can they have their own
independent transaction scope.
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the resource. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource
and that modifies the understanding of the element that contains it and/or the understanding of the
containing element's descendants. Usually modifier elements provide negation or qualification. To
make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer is allowed to define an extension, there is a
set of requirements that SHALL be met as part of the definition of the extension. Applications
processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifiers assigned to this communication request by the performer or other
systems which remain constant as the resource is updated and propagates from server to server.

basedOn (optional)
array[Reference] A plan or proposal that is fulfilled in whole or in part by this request.
replaces (optional)
array[Reference] Completed or terminated request(s) whose function is taken by this new request.

groupIdentifier (optional)
Identifier
status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents
_status (optional)
Element

statusReason (optional)
CodeableConcept
category (optional)
array[CodeableConcept] The type of message to be sent such as alert, notification, reminder,
instruction, etc.
priority (optional)
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents

_priority (optional)
Element

doNotPerform (optional)
Boolean Value of "true" or "false"

_doNotPerform (optional)
Element

medium (optional)
array[CodeableConcept] A channel that was used for this communication (e.g. email, fax).

subject (optional)
Reference

about (optional)
array[Reference] Other resources that pertain to this communication request and to which this communication request should be associated.

encounter (optional)
Reference

payload (optional)
array[CommunicationRequest_Payload] Text, attachment(s), or resource(s) to be communicated to the recipient.

occurrenceDateTime (optional)
String The time when this communication is to occur.

_occurrenceDateTime (optional)
Element

occurrencePeriod (optional)
Period

authoredOn (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_authoredOn (optional)
Element

requester (optional)
Reference

recipient (optional)
array[Reference] The entity (e.g. person, organization, clinical information system, device, group, or care team) which is the intended target of the communication.

sender (optional)
Reference

reasonCode (optional)
array[CodeableConcept] Describes why the request is being made in coded or textual form.

reasonReference (optional)
array[Reference] Indicates another resource whose existence justifies this request.

note (optional)
array[Annotation] Comments made about the request by the requester, sender, recipient, subject or other participants.

CommunicationRequest_Payload -

A request to convey information; e.g. the CDS system proposes that an alert be sent to a responsible provider, the CDS system proposes that the public health agency be notified about a reportable condition.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

contentString (optional)
String The communicated content (or for multi-part communications, one portion of the communication).

_contentString (optional)
Element

contentAttachment (optional)
Attachment

contentReference (optional)
Reference

Communication_Payload -   <u>**Up**</u>

An occurrence of information being transmitted; e.g. an alert that was sent to a responsible provider, a public health agency that was notified about a reportable condition.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

contentString (optional)
String A communicated content (or for multi-part communications, one portion of the communication).

_contentString (optional)
Element

contentAttachment (optional)
Attachment

contentReference (optional)
Reference

CompartmentDefinition -

A compartment definition that defines how resources are accessed on a server.

resourceType
oas_any_type_not_mapped This is a CompartmentDefinition resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

version (optional)
String A sequence of Unicode characters

_version (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

status (optional)

String The status of this compartment definition. Enables tracking the life-cycle of the content.

Enum:

> *draft*
> *active*
> *retired*
> *unknown*

_status (optional)

Element

experimental (optional)

Boolean Value of "true" or "false"

_experimental (optional)

Element

date (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)

Element

publisher (optional)

String A sequence of Unicode characters

_publisher (optional)

Element

contact (optional)

array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)

Element

useContext (optional)

array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate compartment definition instances.

purpose (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)

Element

code (optional)

String Which compartment this definition describes.

> **Enum:**
> *Patient*
> *Encounter*
> *RelatedPerson*
> *Practitioner*
> *Device*

_code (optional)

Element

search (optional)

Boolean Value of "true" or "false"

_search (optional)

Element

resource (optional)

array[CompartmentDefinition_Resource] Information about how a resource is related to the compartment.

CompartmentDefinition_Resource -

A compartment definition that defines how resources are accessed on a server.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element
param (optional)
array[String] The name of a search parameter that represents the link to the compartment. More than one may be listed because a resource may be linked to a compartment in more than one way,.
_param (optional)
array[Element] Extensions for param

documentation (optional)
String A sequence of Unicode characters

_documentation (optional)
Element

Composition -

A set of healthcare-related information that is assembled together into a single logical package that provides a single coherent statement of meaning, establishes its own context and that has clinical attestation with regard to who is making the statement. A Composition defines the structure and narrative content necessary for a document. However, a Composition alone does not constitute a document. Rather, the Composition must be the first entry in a Bundle where Bundle.type=document, and any other resources referenced from Composition must be included as subsequent entries in the Bundle (for example Patient, Practitioner, Encounter, etc.).

resourceType
oas_any_type_not_mapped This is a Composition resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.
meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

Identifier

status (optional)

String The workflow/clinical status of this composition. The status is a marker for the clinical standing of the document.
Enum:

> *preliminary*
>
> *final*
> *amended*
>
> *entered-in-error*

_status (optional)

Element

type

CodeableConcept

category (optional)

array[CodeableConcept] A categorization for the type of the composition - helps for indexing and searching. This may be implied by or derived from the code specified in the Composition Type.

subject (optional)

Reference

encounter (optional)

Reference

date (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)

Element

author

array[Reference] Identifies who is responsible for the information in the composition, not necessarily who typed it in.

title (optional)
String A sequence of Unicode characters
_title (optional)
Element

confidentiality (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_confidentiality (optional)
Element

attester (optional)
array[Composition_Attester] A participant who has attested to the accuracy of the composition/document.

custodian (optional)
Reference

relatesTo (optional)
array[Composition_RelatesTo] Relationships that this composition has with other compositions or documents that already exist.

event (optional)
array[Composition_Event] The clinical service, such as a colonoscopy or an appendectomy, being documented.

section (optional)
array[Composition_Section] The root of the sections that make up the composition.

Composition_Attester -   **Up**

A set of healthcare-related information that is assembled together into a single logical package that provides a single coherent statement of meaning, establishes its own context and that has clinical attestation with regard to who is making the statement. A Composition defines the structure and narrative content necessary for a document. However, a Composition alone does not constitute a document. Rather, the Composition must be the first entry in a Bundle where Bundle.type=document, and any other resources referenced from Composition must be included as subsequent entries in the Bundle (for example Patient, Practitioner, Encounter, etc.).

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

mode (optional)
String The type of attestation the authenticator offers.
Enum:
    personal
    professional
    legal

official

_mode (optional)
Element

time (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_time (optional)
Element
party (optional)
Reference

Composition_Event - Up

A set of healthcare-related information that is assembled together into a single logical package that provides a single coherent statement of meaning, establishes its own context and that has clinical attestation with regard to who is making the statement. A Composition defines the structure and narrative content necessary for a document. However, a Composition alone does not constitute a document. Rather, the Composition must be the first entry in a Bundle where Bundle.type=document, and any other resources referenced from Composition must be included as subsequent entries in the Bundle (for example Patient, Practitioner, Encounter, etc.).

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
array[CodeableConcept] This list of codes represents the main clinical acts, such as a colonoscopy or an appendectomy, being documented. In some cases, the event is inherent in the typeCode, such as a "History and Physical Report" in which the procedure being documented is necessarily a "History and Physical" act.

period (optional)
Period

detail (optional)
array[Reference] The description and/or reference of the event(s) being documented. For example, this could be used to document such a colonoscopy or an appendectomy.

Composition_RelatesTo - Up

A set of healthcare-related information that is assembled together into a single logical package that provides a single coherent statement of meaning, establishes its own context and that has clinical attestation with regard to who is making the statement. A Composition defines the structure and narrative content necessary for a document. However, a Composition alone does not constitute a document. Rather, the Composition must be the first entry in a Bundle where Bundle.type=document, and any other resources referenced from Composition must be included as subsequent entries in the Bundle (for example Patient, Practitioner, Encounter, etc.).

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.
To make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer can define an extension, there is a set of
requirements that SHALL be met as part of the definition of the extension. Applications processing a
resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents

_code (optional)
Element

targetIdentifier (optional)
Identifier
targetReference (optional)
Reference

Composition_Section -

A set of healthcare-related information that is assembled together into a single logical package that provides a single
coherent statement of meaning, establishes its own context and that has clinical attestation with regard to who is making
the statement. A Composition defines the structure and narrative content necessary for a document. However, a
Composition alone does not constitute a document. Rather, the Composition must be the first entry in a Bundle where
Bundle.type=document, and any other resources referenced from Composition must be included as subsequent entries in
the Bundle (for example Patient, Practitioner, Encounter, etc.).

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.
To make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer can define an extension, there is a set of
requirements that SHALL be met as part of the definition of the extension. Applications processing a
resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

title (optional)
String A sequence of Unicode characters

_title (optional)
Element

code (optional)
CodeableConcept

author (optional)
array[Reference] Identifies who is responsible for the information in this section, not necessarily who typed it in.

focus (optional)
Reference

text (optional)
Narrative

mode (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_mode (optional)
Element

orderedBy (optional)
CodeableConcept

entry (optional)
array[Reference] A reference to the actual resource from which the narrative in the section is derived.

emptyReason (optional)
CodeableConcept

section (optional)
array[Composition_Section] A nested sub-section within this section.

ConceptMap -   **Up**

A statement of relationships from one set of concepts to one or more other concepts - either concepts in code systems, or data element/data element concepts, or classes in class models.

resourceType
oas_any_type_not_mapped This is a ConceptMap resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource
_url (optional)
Element

identifier (optional)
Identifier
version (optional)
String A sequence of Unicode characters

_version (optional)
Element

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

title (optional)
String A sequence of Unicode characters

_title (optional)
Element

status (optional)
String The status of this concept map. Enables tracking the life-cycle of the content.
    Enum:
        draft
        active
        retired
        unknown
_status (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"
_experimental (optional)
Element

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.
_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate concept map instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the concept map is intended to be used.

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

sourceUri (optional)
String Identifier for the source value set that contains the concepts that are being mapped and provides context for the mappings.

_sourceUri (optional)
Element

sourceCanonical (optional)
String Identifier for the source value set that contains the concepts that are being mapped and provides context for the mappings.

_sourceCanonical (optional)
Element

targetUri (optional)
String The target value set provides context for the mappings. Note that the mapping is made between concepts, not between value sets, but the value set provides important context about how the concept mapping choices are made.

_targetUri (optional)
Element

targetCanonical (optional)
String The target value set provides context for the mappings. Note that the mapping is made between concepts, not between value sets, but the value set provides important context about how the concept mapping choices are made.

_targetCanonical (optional)
Element

group (optional)
array[ConceptMap_Group] A group of mappings that all have the same source and target system.

ConceptMap_DependsOn -   **Up**

A statement of relationships from one set of concepts to one or more other concepts - either concepts in code systems, or data element/data element concepts, or classes in class models.

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

property (optional)
String String of characters used to identify a name or a resource

_property (optional)
Element

system (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

value (optional)
String A sequence of Unicode characters

_value (optional)
Element

display (optional)
String A sequence of Unicode characters

_display (optional)
Element

ConceptMap_Element -

A statement of relationships from one set of concepts to one or more other concepts - either concepts in code systems, or data element/data element concepts, or classes in class models.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

display (optional)
String A sequence of Unicode characters
_display (optional)
Element

target (optional)
array[ConceptMap_Target] A concept from the target value set that this concept maps to.

ConceptMap_Group -   **Up**

A statement of relationships from one set of concepts to one or more other concepts - either concepts in code systems, or data element/data element concepts, or classes in class models.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

source (optional)
String String of characters used to identify a name or a resource

_source (optional)
Element

sourceVersion (optional)
String A sequence of Unicode characters
_sourceVersion (optional)
Element

target (optional)
String String of characters used to identify a name or a resource

_target (optional)
Element
targetVersion (optional)
String A sequence of Unicode characters

_targetVersion (optional)
Element
element
array[ConceptMap_Element] Mappings for an individual concept in the source to one or more concepts in the target.
unmapped (optional)
ConceptMap_Unmapped

ConceptMap_Target -   **Up**

A statement of relationships from one set of concepts to one or more other concepts - either concepts in code systems, or data element/data element concepts, or classes in class models.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

display (optional)
String A sequence of Unicode characters

_display (optional)
Element

equivalence (optional)
String The equivalence between the source and target concepts (counting for the dependencies and products). The equivalence is read from target to source (e.g. the target is 'wider' than the source).
     Enum:
          relatedto
          equivalent
          equal
          wider
          subsumes
          narrower
          specializes
          inexact
          unmatched
          disjoint

_equivalence (optional)
Element

comment (optional)
String A sequence of Unicode characters

_comment (optional)
Element

dependsOn (optional)
array[ConceptMap_DependsOn] A set of additional dependencies for this mapping to hold. This mapping is only applicable if the specified element can be resolved, and it has the specified value.

product (optional)
array[ConceptMap_DependsOn] A set of additional outcomes from this mapping to other elements. To properly execute this mapping, the specified element must be mapped to some data element or source that is in context. The mapping may still be useful without a place for the additional data elements, but the equivalence cannot be relied on.

ConceptMap_Unmapped -

A statement of relationships from one set of concepts to one or more other concepts - either concepts in code systems, or data element/data element concepts, or classes in class models.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

mode (optional)
String Defines which action to take if there is no match for the source concept in the target system designated for the group. One of 3 actions are possible: use the unmapped code (this is useful when doing a mapping between versions, and only a few codes have changed), use a fixed code (a default code), or alternatively, a reference to a different concept map can be provided (by canonical URL).

    Enum:
       provided
       fixed
       other-map

_mode (optional)
Element

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

display (optional)
String A sequence of Unicode characters

_display (optional)
Element

url (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

Condition -

A clinical condition, problem, diagnosis, or other event, situation, issue, or clinical concept that has risen to a level of concern.

resourceType
oas_any_type_not_mapped This is a Condition resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element
language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifiers assigned to this condition by the performer or other systems which remain constant as the resource is updated and propagates from server to server.

clinicalStatus (optional)
CodeableConcept

verificationStatus (optional)
CodeableConcept
category (optional)
array[CodeableConcept] A category assigned to the condition.

severity (optional)
CodeableConcept
code (optional)
CodeableConcept

bodySite (optional)
array[CodeableConcept] The anatomical location where this condition manifests itself.

subject
Reference

encounter (optional)
Reference

onsetDateTime (optional)
String Estimated or actual date or date-time the condition began, in the opinion of the clinician.
_onsetDateTime (optional)
Element

onsetAge (optional)
Age

onsetPeriod (optional)
Period

onsetRange (optional)
Range

onsetString (optional)
String Estimated or actual date or date-time the condition began, in the opinion of the clinician.

_onsetString (optional)
Element

abatementDateTime (optional)
String The date or estimated date that the condition resolved or went into remission. This is called "abatement" because of the many overloaded connotations associated with "remission" or "resolution" - Conditions are never really resolved, but they can abate.

_abatementDateTime (optional)
Element

abatementAge (optional)
Age

abatementPeriod (optional)
Period

abatementRange (optional)
Range

abatementString (optional)
String The date or estimated date that the condition resolved or went into remission. This is called "abatement" because of the many overloaded connotations associated with "remission" or "resolution" - Conditions are never really resolved, but they can abate.

_abatementString (optional)
Element

recordedDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_recordedDate (optional)
Element

recorder (optional)
Reference

asserter (optional)
Reference

stage (optional)
array[Condition_Stage] Clinical stage or grade of a condition. May include formal severity assessments.

evidence (optional)
array[Condition_Evidence] Supporting evidence / manifestations that are the basis of the Condition's verification status, such as evidence that confirmed or refuted the condition.

note (optional)
array[Annotation] Additional information about the Condition. This is a general notes/comments entry for description of the Condition, its diagnosis and prognosis.

Condition_Evidence -   **Up**

A clinical condition, problem, diagnosis, or other event, situation, issue, or clinical concept that has risen to a level of concern.

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
array[CodeableConcept] A manifestation or symptom that led to the recording of this condition.

detail (optional)
array[Reference] Links to other relevant information, including pathology reports.

Condition_Stage -   **Up**

A clinical condition, problem, diagnosis, or other event, situation, issue, or clinical concept that has risen to a level of concern.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

summary (optional)
CodeableConcept

assessment (optional)
array[Reference] Reference to a formal record of the evidence on which the staging assessment is based.

type (optional)
CodeableConcept

Consent -   **Up**

A record of a healthcare consumer's choices, which permits or denies identified recipient(s) or recipient role(s) to perform one or more actions within a given policy context, for specific purposes and periods of time.

resourceType

oas_any_type_not_mapped This is a Consent resource

id (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)

Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)

Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] Unique identifier for this copy of the Consent Statement.

status (optional)

String Indicates the current state of this consent.
Enum:

    draft

    proposed

    active

    rejected

    inactive

    entered-in-error

_status (optional)

Element

scope

CodeableConcept

category

array[CodeableConcept] A classification of the type of consents found in the statement. This element supports indexing and retrieval of consent statements.

patient (optional)
Reference

dateTime (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_dateTime (optional)
Element

performer (optional)
array[Reference] Either the Grantor, which is the entity responsible for granting the rights listed in a Consent Directive or the Grantee, which is the entity responsible for complying with the Consent Directive, including any obligations or limitations on authorizations and enforcement of prohibitions.

organization (optional)
array[Reference] The organization that manages the consent, and the framework within which it is executed.

sourceAttachment (optional)
Attachment

sourceReference (optional)
Reference
policy (optional)
array[Consent_Policy] The references to the policies that are included in this consent scope. Policies may be organizational, but are often defined jurisdictionally, or in law.

policyRule (optional)
CodeableConcept

verification (optional)
array[Consent_Verification] Whether a treatment instruction (e.g. artificial respiration yes or no) was verified with the patient, his/her family or another authorized person.

provision (optional)
Consent_Provision

Consent_Actor -   **Up**

A record of a healthcare consumerâ€™s choices, which permits or denies identified recipient(s) or recipient role(s) to perform one or more actions within a given policy context, for specific purposes and periods of time.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

role
CodeableConcept

reference
Reference

Consent_Data -

A record of a healthcare consumer's choices, which permits or denies identified recipient(s) or recipient role(s) to perform one or more actions within a given policy context, for specific purposes and periods of time.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

meaning (optional)
String How the resource reference is interpreted when testing consent restrictions.
Enum:

> *instance*
> *related*
> *dependents*
> *authoredby*

_meaning (optional)
Element
reference
Reference

Consent_Policy -

A record of a healthcare consumer's choices, which permits or denies identified recipient(s) or recipient role(s) to perform one or more actions within a given policy context, for specific purposes and periods of time.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

authority (optional)
String String of characters used to identify a name or a resource

_authority (optional)
Element

uri (optional)
String String of characters used to identify a name or a resource

_uri (optional)
Element

Consent_Provision -   **Up**

A record of a healthcare consumerâ€™s choices, which permits or denies identified recipient(s) or recipient role(s) to perform one or more actions within a given policy context, for specific purposes and periods of time.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
String Action to take - permit or deny - when the rule conditions are met. Not permitted in root rule, required in all nested rules.

> **Enum:**
> *deny*
> *permit*

_type (optional)
Element

period (optional)
Period

actor (optional)
array[Consent_Actor] Who or what is controlled by this rule. Use group to identify a set of actors by some property they share (e.g. 'admitting officers').

action (optional)
array[CodeableConcept] Actions controlled by this Rule.

securityLabel (optional)
array[Coding] A security label, comprised of 0..* security label fields (Privacy tags), which define which resources are controlled by this exception.

purpose (optional)
array[Coding] The context of the activities a user is taking - why the user is accessing the data - that are controlled by this rule.

class (optional)

array[Coding] The class of information covered by this rule. The type can be a FHIR resource type, a profile on a type, or a CDA document, or some other type that indicates what sort of information the consent relates to.

code (optional)
array[CodeableConcept] If this code is found in an instance, then the rule applies.

dataPeriod (optional)
Period
data (optional)
array[Consent_Data] The resources controlled by this rule if specific resources are referenced.

provision (optional)
array[Consent_Provision] Rules which provide exceptions to the base rule or subrules.

Consent_Verification -   **Up**

A record of a healthcare consumerâ€™s choices, which permits or denies identified recipient(s) or recipient role(s) to perform one or more actions within a given policy context, for specific purposes and periods of time.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

verified (optional)
Boolean Value of "true" or "false"

_verified (optional)
Element

verifiedWith (optional)
Reference
verificationDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_verificationDate (optional)
Element

ContactDetail -   **Up**

Specifies contact information for a person or organization.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

telecom (optional)
array[ContactPoint] The contact details for the individual (if a name was provided) or the organization.

ContactPoint -

Details for all kinds of technology mediated contact points for a person or organization, including telephone, email, etc.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

system (optional)
String Telecommunications form for contact point - what communications system is required to make use of the contact.

> **Enum:**
> > *phone*
> > *fax*
> > *email*
> > *pager*
> > *url*
> > *sms*
> > *other*

_system (optional)
Element

value (optional)
String A sequence of Unicode characters

_value (optional)
Element

use (optional)
String Identifies the purpose for the contact point.

> **Enum:**
> > *home*
> > *work*
> > *temp*
> > *old*
> > *mobile*

_use (optional)
Element

rank (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_rank (optional)
Element

period (optional)
Period

Contract -

Legally enforceable, formally recorded unilateral or bilateral directive i.e., a policy or agreement.

resourceType

oas_any_type_not_mapped This is a Contract resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta
implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Unique identifier for this Contract or a derivative that references a Source Contract.

url (optional)
String String of characters used to identify a name or a resource
_url (optional)
Element

version (optional)
String A sequence of Unicode characters

_version (optional)
Element
status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

legalState (optional)
CodeableConcept

instantiatesCanonical (optional)
Reference

instantiatesUri (optional)
String String of characters used to identify a name or a resource

_instantiatesUri (optional)
Element

contentDerivative (optional)
CodeableConcept

issued (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_issued (optional)
Element

applies (optional)
Period

expirationType (optional)
CodeableConcept

subject (optional)
array[Reference] The target entity impacted by or of interest to parties to the agreement.

authority (optional)
array[Reference] A formally or informally recognized grouping of people, principals, organizations, or jurisdictions formed for the purpose of achieving some form of collective action such as the promulgation, administration and enforcement of contracts and policies.

domain (optional)
array[Reference] Recognized governance framework or system operating with a circumscribed scope in accordance with specified principles, policies, processes or procedures for managing rights, actions, or behaviors of parties or principals relative to resources.

site (optional)
array[Reference] Sites in which the contract is complied with, exercised, or in force.

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

title (optional)
String A sequence of Unicode characters
_title (optional)
Element

subtitle (optional)
String A sequence of Unicode characters

_subtitle (optional)
Element

alias (optional)
array[String] Alternative representation of the title for this Contract definition, derivative, or instance in any legal state., e.g., a domain specific contract number related to legislation.

_alias (optional)
array[Element] Extensions for alias

author (optional)
Reference
scope (optional)
CodeableConcept

topicCodeableConcept (optional)
CodeableConcept

topicReference (optional)
Reference

type (optional)
CodeableConcept

subType (optional)
array[CodeableConcept] Sub-category for the Contract that distinguishes the kinds of systems that would be interested in the Contract within the context of the Contract's scope.

contentDefinition (optional)
Contract_ContentDefinition

term (optional)
array[Contract_Term] One or more Contract Provisions, which may be related and conveyed as a group, and may contain nested groups.

supportingInfo (optional)
array[Reference] Information that may be needed by/relevant to the performer in their execution of this term action.

relevantHistory (optional)
array[Reference] Links to Provenance records for past versions of this Contract definition, derivative, or instance, which identify key state transitions or updates that are likely to be relevant to a user looking at the current version of the Contract. The Provence.entity indicates the target that was changed in the update. http://build.fhir.org/provenance-definitions.html#Provenance.entity.

signer (optional)
array[Contract_Signer] Parties with legal standing in the Contract, including the principal parties, the grantor(s) and grantee(s), which are any person or organization bound by the contract, and any ancillary parties, which facilitate the execution of the contract such as a notary or witness.

friendly (optional)
array[Contract_Friendly] The "patient friendly language" versionof the Contract in whole or in parts. "Patient friendly language" means the representation of the Contract and Contract Provisions in a manner that is readily accessible and understandable by a layperson in accordance with best practices for communication styles that ensure that those agreeing to or signing the Contract understand the roles, actions, obligations, responsibilities, and implication of the agreement.

legal (optional)
array[Contract_Legal] List of Legal expressions or representations of this Contract.

rule (optional)
array[Contract_Rule] List of Computable Policy Rule Language Representations of this Contract.

legallyBindingAttachment (optional)
Attachment

legallyBindingReference (optional)
Reference

Contract_Action -   **Up**

Legally enforceable, formally recorded unilateral or bilateral directive i.e., a policy or agreement.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of

requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

doNotPerform (optional)
Boolean Value of "true" or "false"

_doNotPerform (optional)
Element

type
CodeableConcept

subject (optional)
array[Contract_Subject] Entity of the action.
intent
CodeableConcept

linkId (optional)
array[String] Id [identifier??] of the clause or question text related to this action in the referenced form or QuestionnaireResponse.

_linkId (optional)
array[Element] Extensions for linkId
status
CodeableConcept

context (optional)
Reference

contextLinkId (optional)
array[String] Id [identifier??] of the clause or question text related to the requester of this action in the referenced form or QuestionnaireResponse.

_contextLinkId (optional)
array[Element] Extensions for contextLinkId
occurrenceDateTime (optional)
String When action happens.

_occurrenceDateTime (optional)
Element
occurrencePeriod (optional)
Period

occurrenceTiming (optional)
Timing

requester (optional)
array[Reference] Who or what initiated the action and has responsibility for its activation.

requesterLinkId (optional)
array[String] Id [identifier??] of the clause or question text related to the requester of this action in the referenced form or QuestionnaireResponse.

_requesterLinkId (optional)
array[Element] Extensions for requesterLinkId

performerType (optional)
array[CodeableConcept] The type of individual that is desired or required to perform or not perform the action.

performerRole (optional)
CodeableConcept

performer (optional)
Reference

performerLinkId (optional)
array[String] Id [identifier??] of the clause or question text related to the reason type or reference of this action in the referenced form or QuestionnaireResponse.

_performerLinkId (optional)

array[Element] Extensions for performerLinkId

reasonCode (optional)
array[CodeableConcept] Rationale for the action to be performed or not performed. Describes why the action is permitted or prohibited.

reasonReference (optional)
array[Reference] Indicates another resource whose existence justifies permitting or not permitting this action.

reason (optional)
array[String] Describes why the action is to be performed or not performed in textual form.

_reason (optional)
array[Element] Extensions for reason

reasonLinkId (optional)
array[String] Id [identifier??] of the clause or question text related to the reason type or reference of this action in the referenced form or QuestionnaireResponse.

_reasonLinkId (optional)
array[Element] Extensions for reasonLinkId

note (optional)
array[Annotation] Comments made about the term action made by the requester, performer, subject or other participants.

securityLabelNumber (optional)
array[BigDecimal] Security labels that protects the action.

_securityLabelNumber (optional)
array[Element] Extensions for securityLabelNumber

Contract_Answer -   **Up**

Legally enforceable, formally recorded unilateral or bilateral directive i.e., a policy or agreement.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

valueBoolean (optional)
Boolean Response to an offer clause or question text, which enables selection of values to be agreed to, e.g., the period of participation, the date of occupancy of a rental, warrenty duration, or whether biospecimen may be used for further research.

_valueBoolean (optional)
Element

valueDecimal (optional)
BigDecimal Response to an offer clause or question text, which enables selection of values to be agreed to, e.g., the period of participation, the date of occupancy of a rental, warrenty duration, or whether biospecimen may be used for further research.

_valueDecimal (optional)
Element

valueInteger (optional)
BigDecimal Response to an offer clause or question text, which enables selection of values to be agreed to, e.g., the period of participation, the date of occupancy of a rental, warrently duration, or whether biospecimen may be used for further research.

_valueInteger (optional)
Element

valueDate (optional)
String Response to an offer clause or question text, which enables selection of values to be agreed to, e.g., the period of participation, the date of occupancy of a rental, warrently duration, or whether biospecimen may be used for further research.

_valueDate (optional)
Element

valueDateTime (optional)
String Response to an offer clause or question text, which enables selection of values to be agreed to, e.g., the period of participation, the date of occupancy of a rental, warrently duration, or whether biospecimen may be used for further research.

_valueDateTime (optional)
Element

valueTime (optional)
String Response to an offer clause or question text, which enables selection of values to be agreed to, e.g., the period of participation, the date of occupancy of a rental, warrently duration, or whether biospecimen may be used for further research.

_valueTime (optional)
Element

valueString (optional)
String Response to an offer clause or question text, which enables selection of values to be agreed to, e.g., the period of participation, the date of occupancy of a rental, warrently duration, or whether biospecimen may be used for further research.

_valueString (optional)
Element

valueUri (optional)
String Response to an offer clause or question text, which enables selection of values to be agreed to, e.g., the period of participation, the date of occupancy of a rental, warrently duration, or whether biospecimen may be used for further research.

_valueUri (optional)

valueQuantity (optional)
Quantity

valueReference (optional)
Reference

Contract_Asset -   **Up**

Legally enforceable, formally recorded unilateral or bilateral directive i.e., a policy or agreement.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

scope (optional)
CodeableConcept
type (optional)
array[CodeableConcept] Target entity type about which the term may be concerned.

typeReference (optional)
array[Reference] Associated entities.
subtype (optional)
array[CodeableConcept] May be a subtype or part of an offered asset.

relationship (optional)
Coding

context (optional)
array[Contract_Context] Circumstance of the asset.
condition (optional)
String A sequence of Unicode characters

_condition (optional)
Element

periodType (optional)
array[CodeableConcept] Type of Asset availability for use or ownership.

period (optional)
array[Period] Asset relevant contractual time period.

usePeriod (optional)
array[Period] Time period of asset use.
text (optional)
String A sequence of Unicode characters

_text (optional)
Element

linkId (optional)
array[String] Id [identifier??] of the clause or question text about the asset in the referenced form or QuestionnaireResponse.
_linkId (optional)
array[Element] Extensions for linkId

answer (optional)
array[Contract_Answer] Response to assets.

securityLabelNumber (optional)
array[BigDecimal] Security labels that protects the asset.

_securityLabelNumber (optional)
array[Element] Extensions for securityLabelNumber

valuedItem (optional)
array[Contract_ValuedItem] Contract Valued Item List.

Contract_ContentDefinition - Up

Legally enforceable, formally recorded unilateral or bilateral directive i.e., a policy or agreement.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

array[Element] Extensions for securityLabelNumber

Contributor -   **Up**

A contributor to the content of a knowledge asset, including authors, editors, reviewers, and endorsers.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

type (optional)
String The type of contributor.
> **Enum:**
>> *author*
>> *editor*
>> *reviewer*
>> *endorser*

_type (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the contributor.

Count -   **Up**

A measured amount (or an amount that can potentially be measured). Note that measured amounts include amounts that are not precisely quantified, including amounts involving arbitrary units and floating currencies.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

value (optional)
BigDecimal A rational number with implicit precision

_value (optional)
Element

comparator (optional)
String How the value should be understood and represented - whether the actual value is greater or less than the stated value due to measurement issues; e.g. if the comparator is "<" , then the real value is < stated value.
> **Enum:**
>> <
>> <=
>> >=
>> >

_comparator (optional)
Element

unit (optional)
String A sequence of Unicode characters

_unit (optional)
Element

system (optional)
String String of characters used to identify a name or a resource

_system (optional)
Element

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

Coverage -   **Up**

Financial instrument which may be used to reimburse or pay for health care products and services. Includes both insurance and self-payment.

resourceType
oas_any_type_not_mapped This is a Coverage resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a

set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] A unique identifier assigned to this coverage.

relationship (optional)
CodeableConcept
period (optional)
Period

payor
array[Reference] The program or plan underwriter or payor including both insurance and non-insurance agreements, such as patient-pay agreements.

class (optional)
array[Coverage_Class] A suite of underwriter specific classifiers.

order (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_order (optional)
Element

network (optional)
String A sequence of Unicode characters
_network (optional)
Element

costToBeneficiary (optional)
array[Coverage_CostToBeneficiary] A suite of codes indicating the cost category and associated amount which have been detailed in the policy and may have been included on the health card.

subrogation (optional)
Boolean Value of "true" or "false"
_subrogation (optional)
Element

contract (optional)
array[Reference] The policy(s) which constitute this insurance coverage.

CoverageEligibilityRequest -

The CoverageEligibilityRequest provides patient and insurance coverage information to an insurer for them to respond, in the form of an CoverageEligibilityResponse, with information regarding whether the stated coverage is valid and in-force and optionally to provide the insurance details of the policy.

resourceType
oas_any_type_not_mapped This is a CoverageEligibilityRequest resource
id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] A unique identifier assigned to this coverage eligiblity request.
status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_status (optional)
Element

priority (optional)
CodeableConcept

purpose (optional)
array[String] Code to specify whether requesting: prior authorization requirements for some service categories or billing codes; benefits for coverages specified or discovered; discovery and return of

coverages for the patient; and/or validation that the specified coverage is in-force at the date/period specified or 'now' if not specified.

Enum:

purpose (optional)
array[Element] Extensions for purpose

patient
Reference

servicedDate (optional)
String The date or dates when the enclosed suite of services were performed or completed.

_servicedDate (optional)
Element

servicedPeriod (optional)
Period

created (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

DataRequirement -

Describes a required data item for evaluation in terms of the type of data, and optional code or date-based filters of the
data.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

type (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_type (optional)
Element

profile (optional)
array[String] The profile of the required data, specified as the uri of the profile definition.
subjectCodeableConcept (optional)
CodeableConcept

subjectReference (optional)
Reference

mustSupport (optional)
array[String]

Indicates that specific elements of the type are referenced by the knowledge module and must be supported by the consumer in order to obtain an effective evaluation. This does not mean that a value is required for this element, only that the consuming system must understand the element and be able to provide values for it if they are available.

The value of mustSupport SHALL be a FHIRPath resolveable on the type of the DataRequirement. The path SHALL consist only of identifiers, constant indexers, and .resolve() (see the Simple FHIRPath Profile for full details).

_mustSupport (optional)
array[Element] Extensions for mustSupport
codeFilter (optional)
array[DataRequirement_CodeFilter] Code filters specify additional constraints on the data, specifying the value set of interest for a particular element of the data. Each code filter defines an additional constraint on the data, i.e. code filters are AND'ed, not OR'ed.

dateFilter (optional)
array[DataRequirement_DateFilter] Date filters specify additional constraints on the data in terms of the applicable date range for specific elements. Each date filter specifies an additional constraint on the data, i.e. date filters are AND'ed, not OR'ed.

limit (optional)
BigDecimal An integer with a value that is positive (e.g. >0)
_limit (optional)
Element

sort (optional)
array[DataRequirement_Sort] Specifies the order of the results to be returned.

DataRequirement_CodeFilter -   **Up**

Describes a required data item for evaluation in terms of the type of data, and optional code or date-based filters of the data.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of

requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

path (optional)
String A sequence of Unicode characters

_path (optional)
Element

searchParam (optional)
String A sequence of Unicode characters

_searchParam (optional)
Element

valueSet (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

code (optional)
array[Coding] The codes for the code filter. If values are given, the filter will return only those data items for which the code-valued attribute specified by the path has a value that is one of the specified codes. If codes are specified in addition to a value set, the filter returns items matching a code in the value set or one of the specified codes.

DataRequirement_DateFilter -   **Up**

Describes a required data item for evaluation in terms of the type of data, and optional code or date-based filters of the data.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

path (optional)
String A sequence of Unicode characters

_path (optional)
Element

searchParam (optional)
String A sequence of Unicode characters

_searchParam (optional)
Element

valueDateTime (optional)
String The value of the filter. If period is specified, the filter will return only those data items that fall within the bounds determined by the Period, inclusive of the period boundaries. If dateTime is specified, the filter will return only those data items that are equal to the specified dateTime. If a Duration is specified, the filter will return only those data items that fall within Duration before now.

_valueDateTime (optional)
Element

valuePeriod (optional)
Period

valueDuration (optional)
Duration

DataRequirement_Sort -   **Up**

Describes a required data item for evaluation in terms of the type of data, and optional code or date-based filters of the data.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

path (optional)
String A sequence of Unicode characters

_path (optional)
Element

direction (optional)
String The direction of the sort, ascending or descending.
> **Enum:**
>> *ascending*
>> *descending*

_direction (optional)
Element

DetectedIssue -   **Up**

Indicates an actual or potential clinical issue with or between one or more active or proposed clinical actions for a patient; e.g. Drug-drug interaction, Ineffective treatment frequency, Procedure-condition conflict, etc.

resourceType
oas_any_type_not_mapped This is a DetectedIssue resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifier associated with the detected issue record.

status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

code (optional)
CodeableConcept

severity (optional)
String Indicates the degree of importance associated with the identified issue based on the potential impact on the patient.

    Enum:
      high
      moderate
      low

_severity (optional)
Element

patient (optional)
Reference

identifiedDateTime (optional)
String The date or period when the detected issue was initially identified.

_identifiedDateTime (optional)
Element

identifiedPeriod (optional)
Period

author (optional)
Reference

implicated (optional)
array[Reference] Indicates the resource representing the current activity or proposed activity that is potentially problematic.

evidence (optional)
array[DetectedIssue_Evidence] Supporting evidence or manifestations that provide the basis for identifying the detected issue such as a GuidanceResponse or MeasureReport.

detail (optional)
String A sequence of Unicode characters
_detail (optional)
Element

reference (optional)
String String of characters used to identify a name or a resource

_reference (optional)
Element

mitigation (optional)
array[DetectedIssue_Mitigation] Indicates an action that has been taken or is committed to reduce or eliminate the likelihood of the risk identified by the detected issue from manifesting. Can also reflect an observation of known mitigating factors that may reduce/eliminate the need for any action.

DetectedIssue_Evidence -   **Up**

Indicates an actual or potential clinical issue with or between one or more active or proposed clinical actions for a patient; e.g. Drug-drug interaction, Ineffective treatment frequency, Procedure-condition conflict, etc.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
array[CodeableConcept] A manifestation that led to the recording of this detected issue.

detail (optional)
array[Reference] Links to resources that constitute evidence for the detected issue such as a GuidanceResponse or MeasureReport.

DetectedIssue_Mitigation -   **Up**

Indicates an actual or potential clinical issue with or between one or more active or proposed clinical actions for a patient; e.g. Drug-drug interaction, Ineffective treatment frequency, Procedure-condition conflict, etc.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

action
CodeableConcept
date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element
author (optional)
Reference

Device -   [Up]

A type of a manufactured item that is used in the provision of healthcare without being substantially changed through that activity. The device may be a medical or non-medical device.

resourceType
oas_any_type_not_mapped This is a Device resource
id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta
implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element
language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] Unique instance identifiers assigned to a device by manufacturers other organizations or owners.

definition (optional)

Reference

udiCarrier (optional)

array[Device_UdiCarrier] Unique device identifier (UDI) assigned to device label or package. Note that the Device may include multiple udiCarriers as it either may include just the udiCarrier for the jurisdiction it is sold, or for multiple jurisdictions it could have been sold.

status (optional)

String Status of the Device availability.

> **Enum:**
>
>> *active*
>> *inactive*
>>
>> *entered-in-error*
>>
>> *unknown*

_status (optional)

Element

statusReason (optional)

array[CodeableConcept] Reason for the dtatus of the Device availability.

distinctIdentifier (optional)

String A sequence of Unicode characters

_distinctIdentifier (optional)

Element

manufacturer (optional)

String A sequence of Unicode characters

_manufacturer (optional)

Element

manufactureDate (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_manufactureDate (optional)

Element

expirationDate (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_expirationDate (optional)
Element

lotNumber (optional)
String A sequence of Unicode characters
_lotNumber (optional)
Element

serialNumber (optional)
String A sequence of Unicode characters

_serialNumber (optional)
Element
deviceName (optional)
array[Device_DeviceName] This represents the manufacturer's name of the device as provided by the device, from a UDI label, or by a person describing the Device. This typically would be used when a person provides the name(s) or when the device represents one of the names available from DeviceDefinition.

modelNumber (optional)
String A sequence of Unicode characters
_modelNumber (optional)
Element

partNumber (optional)
String A sequence of Unicode characters

_partNumber (optional)
Element
type (optional)
CodeableConcept

specialization (optional)
array[Device_Specialization] The capabilities supported on a device, the standards to which the device conforms for a particular purpose, and used for the communication.

version (optional)
array[Device_Version] The actual design of the device or software version running on the device.
property (optional)
array[Device_Property] The actual configuration settings of a device as it actually operates, e.g., regulation status, time properties.

patient (optional)
Reference

owner (optional)
Reference
contact (optional)
array[ContactPoint] Contact details for an organization or a particular human that is responsible for the device.
location (optional)
Reference

url (optional)
String String of characters used to identify a name or a resource
_url (optional)
Element

note (optional)
array[Annotation] Descriptive information, usage information or implantation information that is not captured in an existing element.

safety (optional)
array[CodeableConcept] Provides additional safety characteristics about a medical device. For example devices containing latex.

parent (optional)
Reference

DeviceDefinition -

The characteristics, operational status and capabilities of a medical-related component of a medical device.

resourceType
oas_any_type_not_mapped This is a DeviceDefinition resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Unique instance identifiers assigned to a device by the software, manufacturers, other organizations or owners. For example: handle ID.

udiDeviceIdentifier (optional)
array[DeviceDefinition_UdiDeviceIdentifier] Unique device identifier (UDI) assigned to device label or package. Note that the Device may include multiple udiCarriers as it either may include just the udiCarrier for the jurisdiction it is sold, or for multiple jurisdictions it could have been sold.

manufacturerString (optional)
String A name of the manufacturer.

_manufacturerString (optional)
Element

manufacturerReference (optional)
Reference

deviceName (optional)

array[DeviceDefinition_DeviceName] A name given to the device to identify it.

modelNumber (optional)
String A sequence of Unicode characters

_modelNumber (optional)
Element

type (optional)
CodeableConcept

specialization (optional)
array[DeviceDefinition_Specialization] The capabilities supported on a device, the standards to which the device conforms for a particular purpose, and used for the communication.

version (optional)
array[String] The available versions of the device, e.g., software versions.

_version (optional)
array[Element] Extensions for version

safety (optional)
array[CodeableConcept] Safety characteristics of the device.

shelfLifeStorage (optional)
array[ProductShelfLife] Shelf Life and storage information.

physicalCharacteristics (optional)
ProdCharacteristic

languageCode (optional)
array[CodeableConcept] Language code for the human-readable text strings produced by the device (all supported).

capability (optional)
array[DeviceDefinition_Capability] Device capabilities.

property (optional)
array[DeviceDefinition_Property] The actual configuration settings of a device as it actually operates, e.g., regulation status, time properties.

owner (optional)
Reference

contact (optional)
array[ContactPoint] Contact details for an organization or a particular human that is responsible for the device.

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

onlineInformation (optional)
String String of characters used to identify a name or a resource

_onlineInformation (optional)
Element

note (optional)
array[Annotation] Descriptive information, usage information or implantation information that is not captured in an existing element.

quantity (optional)
Quantity

parentDevice (optional)
Reference

material (optional)
array[DeviceDefinition_Material] A substance used to create the material(s) of which the device is made.

`DeviceDefinition_Capability -`   Up

The characteristics, operational status and capabilities of a medical-related component of a medical device.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type
CodeableConcept

description (optional)
array[CodeableConcept] Description of capability.

DeviceDefinition_DeviceName -   **Up**

The characteristics, operational status and capabilities of a medical-related component of a medical device.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

type (optional)
String The type of deviceName. UDILabelName | UserFriendlyName | PatientReportedName | ManufactureDeviceName | ModelName.
    Enum:
        udi-label-name
        user-friendly-name
        patient-reported-name
        manufacturer-name

model-name
other

_type (optional)
Element

DeviceDefinition_Material -

The characteristics, operational status and capabilities of a medical-related component of a medical device.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

substance
CodeableConcept

alternate (optional)
Boolean Value of "true" or "false"

_alternate (optional)
Element

allergenicIndicator (optional)
Boolean Value of "true" or "false"

_allergenicIndicator (optional)
Element

DeviceDefinition_Property -

The characteristics, operational status and capabilities of a medical-related component of a medical device.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type
CodeableConcept

valueQuantity (optional)
array[Quantity] Property value as a quantity.

valueCode (optional)
array[CodeableConcept] Property value as a code, e.g., NTP4 (synced to NTP).

DeviceDefinition_Specialization -   **Up**

The characteristics, operational status and capabilities of a medical-related component of a medical device.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

systemType (optional)
String A sequence of Unicode characters

_systemType (optional)
Element
version (optional)
String A sequence of Unicode characters

_version (optional)
Element

DeviceDefinition_UdiDeviceIdentifier -   **Up**

The characteristics, operational status and capabilities of a medical-related component of a medical device.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the

definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

deviceIdentifier (optional)
String A sequence of Unicode characters

_deviceIdentifier (optional)
Element

issuer (optional)
String String of characters used to identify a name or a resource

_issuer (optional)
Element

jurisdiction (optional)
String String of characters used to identify a name or a resource

_jurisdiction (optional)
Element

DeviceMetric -   [Up](#)

Describes a measurement, calculation or setting capability of a medical device.

resourceType
oas_any_type_not_mapped This is a DeviceMetric resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a

set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Unique instance identifiers assigned to a device by the device or gateway software, manufacturers, other organizations or owners. For example: handle ID.

type
CodeableConcept

unit (optional)
CodeableConcept

source (optional)
Reference

parent (optional)
Reference

operationalStatus (optional)
String Indicates current operational state of the device. For example: On, Off, Standby, etc.

> **Enum:**
> > *on*
> > *off*
> > *standby*
> > *entered-in-error*

_operationalStatus (optional)
Element

color (optional)
String Describes the color representation for the metric. This is often used to aid clinicians to track and identify parameter types by color. In practice, consider a Patient Monitor that has ECG/HR and Pleth for example; the parameters are displayed in different characteristic colors, such as HR-blue, BP-green, and PR and SpO2- magenta.

> **Enum:**
> > *black*
> > *red*
> > *green*
> > *yellow*
> > *blue*
> > *magenta*
> > *cyan*
> > *white*

_color (optional)
Element

category (optional)
String Indicates the category of the observation generation process. A DeviceMetric can be for example a setting, measurement, or calculation.

> **Enum:**
> > *measurement*
> > *setting*
> > *calculation*
> > *unspecified*

_category (optional)
Element

measurementPeriod (optional)
Timing

calibration (optional)
array[DeviceMetric_Calibration] Describes the calibrations that have been performed or that are required to be performed.

DeviceMetric_Calibration -

Describes a measurement, calculation or setting capability of a medical device.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)

String Describes the type of the calibration method.

    Enum:

        unspecified
        offset
        gain
        two-point

_type (optional)

Element

state (optional)

String Describes the state of the calibration.

    Enum:

        not-calibrated
        calibration-required
        calibrated
        unspecified

_state (optional)

Element

time (optional)

String An instant in time - known at least to the second

_time (optional)

Element

DeviceRequest -   Up

Represents a request for a patient to employ a medical device. The device may be an implantable device, or an external assistive device, such as a walker.

resourceType

oas_any_type_not_mapped This is a DeviceRequest resource

id (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)

Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)

Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifiers assigned to this order by the orderer or by the receiver.

instantiatesCanonical (optional)
array[String] The URL pointing to a FHIR-defined protocol, guideline, orderset or other definition that is adhered to in whole or in part by this DeviceRequest.

instantiatesUri (optional)
array[String] The URL pointing to an externally maintained protocol, guideline, orderset or other definition that is adhered to in whole or in part by this DeviceRequest.

_instantiatesUri (optional)
array[Element] Extensions for instantiatesUri

basedOn (optional)
array[Reference] Plan/proposal/order fulfilled by this request.

priorRequest (optional)
array[Reference] The request takes the place of the referenced completed or terminated request(s).

groupIdentifier (optional)
Identifier

status (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

intent (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_intent (optional)
Element

priority (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_priority (optional)
Element

codeReference (optional)
Reference

codeCodeableConcept (optional)
CodeableConcept

parameter (optional)
array[DeviceRequest_Parameter] Specific parameters for the ordered item. For example, the prism value for lenses.

subject
Reference

encounter (optional)
Reference

occurrenceDateTime (optional)
String The timing schedule for the use of the device. The Schedule data type allows many different expressions, for example. "Every 8 hours"; "Three times a day"; "1/2 an hour before breakfast for 10 days from 23-Dec 2011:"; "15 Oct 2013, 17 Oct 2013 and 1 Nov 2013".

_occurrenceDateTime (optional)
Element

occurrencePeriod (optional)
Period

occurrenceTiming (optional)
Timing

authoredOn (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_authoredOn (optional)
Element

requester (optional)
Reference

performerType (optional)
CodeableConcept

performer (optional)
Reference

reasonCode (optional)
array[CodeableConcept] Reason or justification for the use of this device.

reasonReference (optional)
array[Reference] Reason or justification for the use of this device.

insurance (optional)
array[Reference] Insurance plans, coverage extensions, pre-authorizations and/or pre-determinations that may be required for delivering the requested service.

supportingInfo (optional)
array[Reference] Additional clinical information about the patient that may influence the request fulfilment. For example, this may include where on the subject's body the device will be used (i.e. the target site).

note (optional)
array[Annotation] Details about this request that were not represented at all or sufficiently in one of the attributes provided in a class. These may include for example a comment, an instruction, or a note associated with the statement.

relevantHistory (optional)
array[Reference] Key events in the history of the request.

DeviceRequest_Parameter -

Represents a request for a patient to employ a medical device. The device may be an implantable device, or an external assistive device, such as a walker.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)

CodeableConcept

valueCodeableConcept (optional)

CodeableConcept

valueQuantity (optional)

Quantity

valueRange (optional)

Range

valueBoolean (optional)

Boolean The value of the device detail.

_valueBoolean (optional)

Element

DeviceUseStatement -

A record of a device being used by a patient where the record is the result of a report from the patient or another clinician.

resourceType

oas_any_type_not_mapped This is a DeviceUseStatement resource

id (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)

Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)

Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] An external identifier for this statement such as an IRI.

basedOn (optional)
array[Reference] A plan, proposal or order that is fulfilled in whole or in part by this DeviceUseStatement.

status (optional)
String A code representing the patient or other source's judgment about the state of the device used that this statement is about. Generally this will be active or completed.

> **Enum:**
> *active*
> *completed*
> *entered-in-error*
> *intended*
> *stopped*
> *on-hold*

_status (optional)
Element

subject
Reference

derivedFrom (optional)
array[Reference] Allows linking the DeviceUseStatement to the underlying Request, or to other information that supports or is used to derive the DeviceUseStatement.

timingTiming (optional)
Timing

timingPeriod (optional)
Period

timingDateTime (optional)
String How often the device was used.

_timingDateTime (optional)
Element

recordedOn (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear,

gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_recordedOn (optional)
Element
source (optional)
Reference

device
Reference

reasonCode (optional)
array[CodeableConcept] Reason or justification for the use of the device.
reasonReference (optional)
array[Reference] Indicates another resource whose existence justifies this DeviceUseStatement.

bodySite (optional)
CodeableConcept
note (optional)
array[Annotation] Details about the device statement that were not represented at all or sufficiently in one of the attributes provided in a class. These may include for example a comment, an instruction, or a note associated with the statement.

Device_DeviceName -

A type of a manufactured item that is used in the provision of healthcare without being substantially changed through that activity. The device may be a medical or non-medical device.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

type (optional)
String The type of deviceName. UDILabelName | UserFriendlyName | PatientReportedName | ManufactureDeviceName | ModelName.
  Enum:
   udi-label-name
   user-friendly-name
   patient-reported-name
   manufacturer-name
   model-name
   other

_type (optional)

Element

Device_Property -

A type of a manufactured item that is used in the provision of healthcare without being substantially changed through that activity. The device may be a medical or non-medical device.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type
CodeableConcept

valueQuantity (optional)
array[Quantity] Property value as a quantity.

valueCode (optional)
array[CodeableConcept] Property value as a code, e.g., NTP4 (synced to NTP).

Device_Specialization -

A type of a manufactured item that is used in the provision of healthcare without being substantially changed through that activity. The device may be a medical or non-medical device.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

systemType
CodeableConcept

version (optional)
String A sequence of Unicode characters

_version (optional)
Element

Device_UdiCarrier -   **Up**

A type of a manufactured item that is used in the provision of healthcare without being substantially changed through that activity. The device may be a medical or non-medical device.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

deviceIdentifier (optional)
String A sequence of Unicode characters

_deviceIdentifier (optional)
Element

issuer (optional)
String String of characters used to identify a name or a resource
_issuer (optional)
Element

jurisdiction (optional)
String String of characters used to identify a name or a resource
_jurisdiction (optional)
Element

carrierAIDC (optional)
String A stream of bytes

_carrierAIDC (optional)
Element

carrierHRF (optional)
String A sequence of Unicode characters

_carrierHRF (optional)
Element

entryType (optional)
String A coded entry to indicate how the data was entered.
      Enum:
          barcode
          rfid
          manual
          card
          self-reported

unknown

_entryType (optional)
Element

Device_Version -

A type of a manufactured item that is used in the provision of healthcare without being substantially changed through that activity. The device may be a medical or non-medical device.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
CodeableConcept

component (optional)
Identifier
value (optional)
String A sequence of Unicode characters

_value (optional)
Element

DiagnosticReport -

The findings and interpretation of diagnostic tests performed on patients, groups of patients, devices, and locations, and/or specimens derived from these. The report includes clinical context such as requesting and provider information, and some mix of atomic results, images, textual and coded interpretations, and formatted representation of diagnostic reports.

resourceType
oas_any_type_not_mapped This is a DiagnosticReport resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta
implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifiers assigned to this report by the performer or other systems.

basedOn (optional)
array[Reference] Details concerning a service requested.

status (optional)
String The status of the diagnostic report.
> **Enum:**
>> *registered*
>> *partial*
>> *preliminary*
>> *final*
>> *amended*
>> *corrected*
>> *appended*
>> *cancelled*
>> *entered-in-error*
>> *unknown*

_status (optional)
Element

category (optional)
array[CodeableConcept] A code that classifies the clinical discipline, department or diagnostic service that created the report (e.g. cardiology, biochemistry, hematology, MRI). This is used for searching, sorting and display purposes.

code
CodeableConcept

subject (optional)
Reference

encounter (optional)
Reference

effectiveDateTime (optional)
String The time or time-period the observed values are related to. When the subject of the report is a patient, this is usually either the time of the procedure or of specimen collection(s), but very often the source of the date/time is not known, only the date/time itself.

_effectiveDateTime (optional)
Element

effectivePeriod (optional)
Period

issued (optional)
String An instant in time - known at least to the second

_issued (optional)
Element

performer (optional)
array[Reference] The diagnostic service that is responsible for issuing the report.

resultsInterpreter (optional)
array[Reference] The practitioner or organization that is responsible for the report's conclusions and interpretations.

specimen (optional)
array[Reference] Details about the specimens on which this diagnostic report is based.

result (optional)
array[Reference] Observations that are part of this diagnostic report.

imagingStudy (optional)
array[Reference] One or more links to full details of any imaging performed during the diagnostic investigation. Typically, this is imaging performed by DICOM enabled modalities, but this is not required. A fully enabled PACS viewer can use this information to provide views of the source images.

media (optional)
array[DiagnosticReport_Media] A list of key images associated with this report. The images are generally created during the diagnostic process, and may be directly of the patient, or of treated specimens (i.e. slides of interest).

conclusion (optional)
String A sequence of Unicode characters

_conclusion (optional)
Element

conclusionCode (optional)
array[CodeableConcept] One or more codes that represent the summary conclusion (interpretation/impression) of the diagnostic report.

presentedForm (optional)
array[Attachment] Rich text representation of the entire result as issued by the diagnostic service. Multiple formats are allowed but they SHALL be semantically equivalent.

DiagnosticReport_Media -   **Up**

The findings and interpretation of diagnostic tests performed on patients, groups of patients, devices, and locations, and/or specimens derived from these. The report includes clinical context such as requesting and provider information, and some mix of atomic results, images, textual and coded interpretations, and formatted representation of diagnostic reports.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of

requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

comment (optional)
String A sequence of Unicode characters

_comment (optional)
Element

link
Reference

Distance -   **Up**

A length - a value with a unit that is a physical distance.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

value (optional)
BigDecimal A rational number with implicit precision

_value (optional)
Element

comparator (optional)
String How the value should be understood and represented - whether the actual value is greater or less than the stated value due to measurement issues; e.g. if the comparator is "<" , then the real value is < stated value.

> **Enum:**
> <
> <=
> >=
> >

_comparator (optional)
Element

unit (optional)
String A sequence of Unicode characters

_unit (optional)
Element

system (optional)
String String of characters used to identify a name or a resource

_system (optional)
Element

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

DocumentManifest -   **Up**

A collection of documents compiled for a purpose together with metadata that applies to the collection.

resourceType
oas_any_type_not_mapped This is a DocumentManifest resource

id (optional)

String Any combination of letters, numerals, '-' and '.', with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element
text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

masterIdentifier (optional)
Identifier
identifier (optional)
array[Identifier] Other identifiers associated with the document manifest, including version independent identifiers.

status (optional)
String The status of this document manifest.
    Enum:
        current
        superseded
        entered-in-error

_status (optional)
Element

type (optional)
CodeableConcept

subject (optional)
Reference

created (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear,

gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_created (optional)
Element
author (optional)
array[Reference] Identifies who is the author of the manifest. Manifest author is not necessarily the author of the references included.
recipient (optional)
array[Reference] A patient, practitioner, or organization for which this set of documents is intended.

source (optional)
String String of characters used to identify a name or a resource

_source (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element
content
array[Reference] The list of Resources that consist of the parts of this manifest.

related (optional)
array[DocumentManifest_Related] Related identifiers or resources associated with the DocumentManifest.

DocumentManifest_Related -   **Up**

A collection of documents compiled for a purpose together with metadata that applies to the collection.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
Identifier

ref (optional)
Reference

DocumentReference -   **Up**

A reference to a document of any kind for any purpose. Provides metadata about the document so that the document can be discovered and managed. The scope of a document is any serialized object with a mime-type, so includes formal patient centric documents (CDA), cliical notes, scanned paper, and non-patient specific documents like policy text.

resourceType

bus_any_type_not_mapped This is a DocumentReference resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

masterIdentifier (optional)
Identifier

identifier (optional)
array[Identifier] Other identifiers associated with the document, including version independent identifiers.

status (optional)
String The status of this document reference.
Enum:
    current
    superseded
    entered-in-error

_status (optional)
Element

docStatus (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_docStatus (optional)
Element

type (optional)
CodeableConcept

category (optional)
array[CodeableConcept] A categorization for the type of document referenced - helps for indexing and searching. This may be implied by or derived from the code specified in the DocumentReference.type.

subject (optional)
Reference

date (optional)
String An instant in time - known at least to the second

_date (optional)
Element

author (optional)
array[Reference] Identifies who is responsible for adding the information to the document.

authenticator (optional)
Reference

custodian (optional)
Reference

relatesTo (optional)
array[DocumentReference_RelatesTo] Relationships that this document has with other document references that already exist.

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

securityLabel (optional)
array[CodeableConcept] A set of Security-Tag codes specifying the level of privacy/security of the Document. Note that DocumentReference.meta.security contains the security labels of the "reference" to the document, while DocumentReference.securityLabel contains a snapshot of the security labels on the document the reference refers to.

content
array[DocumentReference_Content] The document and format referenced. There may be multiple content element repetitions, each with a different format.

context (optional)
DocumentReference_Context

DocumentReference_Content -

A reference to a document of any kind for any purpose. Provides metadata about the document so that the document can be discovered and managed. The scope of a document is any serialized object with a mime-type, so includes formal patient centric documents (CDA), cliical notes, scanned paper, and non-patient specific documents like policy text.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

attachment
Attachment
format (optional)
Coding

DocumentReference_Context -

A reference to a document of any kind for any purpose. Provides metadata about the document so that the document can be discovered and managed. The scope of a document is any seralized object with a mime-type, so includes formal patient centric documents (CDA), cliical notes, scanned paper, and non-patient specific documents like policy text.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

encounter (optional)
array[Reference] Describes the clinical encounter or type of care that the document content is associated with.
event (optional)
array[CodeableConcept] This list of codes represents the main clinical acts, such as a colonoscopy or an appendectomy, being documented. In some cases, the event is inherent in the type Code, such as a "History and Physical Report" in which the procedure being documented is necessarily a "History and Physical" act.

period (optional)
Period
facilityType (optional)
CodeableConcept

practiceSetting (optional)
CodeableConcept
sourcePatientInfo (optional)
Reference

related (optional)
array[Reference] Related identifiers or resources associated with the DocumentReference.

DocumentReference_RelatesTo -

A reference to a document of any kind for any purpose. Provides metadata about the document so that the document can be discovered and managed. The scope of a document is any seralized object with a mime-type, so includes formal patient centric documents (CDA), cliical notes, scanned paper, and non-patient specific documents like policy text.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String The type of relationship that this document has with anther document.
> **Enum:**
>> *replaces*
>> *transforms*
>> *signs*
>> *appends*

_code (optional)
Element
target
Reference

Dosage -   <u>Up</u>

Indicates how the medication is/was taken or should be taken by the patient.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

sequence (optional)
BigDecimal A whole number

_sequence (optional)
Element

text (optional)
String A sequence of Unicode characters

_text (optional)
Element

additionalInstruction (optional)
array[CodeableConcept] Supplemental instructions to the patient on how to take the medication (e.g. "with meals" or "take half to one hour before food") or warnings for the patient about the medication (e.g. "may cause drowsiness" or "avoid exposure of skin to direct sunlight or sunlamps").

patientInstruction (optional)
String A sequence of Unicode characters

_patientInstruction (optional)
Element
timing (optional)
Timing

asNeededBoolean (optional)
Boolean Indicates whether the Medication is only taken when needed within a specific dosing schedule (Boolean option), or it indicates the precondition for taking the Medication (CodeableConcept).

_asNeededBoolean (optional)
Element
asNeededCodeableConcept (optional)
CodeableConcept

site (optional)
CodeableConcept

route (optional)
CodeableConcept

method (optional)
CodeableConcept

doseAndRate (optional)
array[Dosage_DoseAndRate] The amount of medication administered.
maxDosePerPeriod (optional)
Ratio

maxDosePerAdministration (optional)
Quantity

maxDosePerLifetime (optional)
Quantity

Dosage_DoseAndRate -   **Up**

Indicates how the medication is/was taken or should be taken by the patient.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
CodeableConcept

doseRange (optional)
Range

doseQuantity (optional)
Quantity

rateRatio (optional)
Ratio

rateRange (optional)
Range

rateQuantity (optional)
Quantity

Duration -   Up

A length of time.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

value (optional)
BigDecimal A rational number with implicit precision

_value (optional)
Element

comparator (optional)
String How the value should be understood and represented - whether the actual value is greater or less than the stated value due to measurement issues; e.g. if the comparator is "<" , then the real value is < stated value.

    Enum:

        <

        <=

        >=

        >

_comparator (optional)
Element

unit (optional)
String A sequence of Unicode characters

_unit (optional)
Element

system (optional)
String String of characters used to identify a name or a resource

_system (optional)
Element

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

EffectEvidenceSynthesis -   Up

The EffectEvidenceSynthesis resource describes the difference in an outcome between exposures states in a population where the effect estimate is derived from a combination of research studies.

resourceType
oas_any_type_not_mapped This is a EffectEvidenceSynthesis resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element
text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

identifier (optional)
array[Identifier] A formal identifier that is used to identify this effect evidence synthesis when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)
String A sequence of Unicode characters

_version (optional)
Element

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

title (optional)

String A sequence of Unicode characters

_title (optional)

Element

status (optional)

String The status of this effect evidence synthesis. Enables tracking the life-cycle of the content.

Enum:

draft
active

retired

unknown

_status (optional)

Element

date (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)

Element

publisher (optional)

String A sequence of Unicode characters

_publisher (optional)

Element

contact (optional)

array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)

Element

note (optional)

array[Annotation] A human-readable string to clarify or explain concepts about the resource.

useContext (optional)

array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate effect evidence synthesis instances.

jurisdiction (optional)

array[CodeableConcept] A legal or geographic region in which the effect evidence synthesis is intended to be used.

copyright (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)

Element

approvalDate (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_approvalDate (optional)

Element

lastReviewDate (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_lastReviewDate (optional)

Element

effectivePeriod (optional)

Period

topic (optional)
array[CodeableConcept] Descriptive topics related to the content of the EffectEvidenceSynthesis. Topics provide a high-level categorization grouping types of EffectEvidenceSynthesiss that can be useful for filtering and searching.

author (optional)
array[ContactDetail] An individiual or organization primarily involved in the creation and maintenance of the content.

editor (optional)
array[ContactDetail] An individual or organization primarily responsible for internal coherence of the content.

reviewer (optional)
array[ContactDetail] An individual or organization primarily responsible for review of some aspect of the content.

endorser (optional)
array[ContactDetail] An individual or organization responsible for officially endorsing the content for use in some setting.

relatedArtifact (optional)
array[RelatedArtifact] Related artifacts such as additional documentation, justification, or bibliographic references.

synthesisType (optional)
CodeableConcept

studyType (optional)
CodeableConcept

population
Reference

exposure
Reference

exposureAlternative
Reference

outcome
Reference

sampleSize (optional)
EffectEvidenceSynthesis_SampleSize

resultsByExposure (optional)
array[EffectEvidenceSynthesis_ResultsByExposure] A description of the results for each exposure considered in the effect estimate.

effectEstimate (optional)
array[EffectEvidenceSynthesis_EffectEstimate] The estimated effect of the exposure variant.

certainty (optional)
array[EffectEvidenceSynthesis_Certainty] A description of the certainty of the effect estimate.

`EffectEvidenceSynthesis_Certainty -`   **Up**

The EffectEvidenceSynthesis resource describes the difference in an outcome between exposures states in a population where the effect estimate is derived from a combination of research studies.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

rating (optional)
array[CodeableConcept] A rating of the certainty of the effect estimate.

note (optional)
array[Annotation] A human-readable string to clarify or explain concepts about the resource.

certaintySubcomponent (optional)
array[EffectEvidenceSynthesis_CertaintySubcomponent] A description of a component of the overall certainty.

EffectEvidenceSynthesis_CertaintySubcomponent -   **Up**

The EffectEvidenceSynthesis resource describes the difference in an outcome between exposures states in a population where the effect estimate is derived from a combination of research studies.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
CodeableConcept

rating (optional)
array[CodeableConcept] A rating of a subcomponent of rating certainty.

note (optional)
array[Annotation] A human-readable string to clarify or explain concepts about the resource.

EffectEvidenceSynthesis_EffectEstimate -   **Up**

The EffectEvidenceSynthesis resource describes the difference in an outcome between exposures states in a population where the effect estimate is derived from a combination of research studies.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

type (optional)
CodeableConcept

variantState (optional)
CodeableConcept

value (optional)
BigDecimal A rational number with implicit precision

_value (optional)
Element

unitOfMeasure (optional)
CodeableConcept

precisionEstimate (optional)
array[EffectEvidenceSynthesis_PrecisionEstimate] A description of the precision of the estimate for the effect.

`EffectEvidenceSynthesis_PrecisionEstimate -`   **Up**

The EffectEvidenceSynthesis resource describes the difference in an outcome between exposures states in a population where the effect estimate is derived from a combination of research studies.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
CodeableConcept

level (optional)

BigDecimal A rational number with implicit precision

_level (optional)
Element

from (optional)
BigDecimal A rational number with implicit precision

_from (optional)
Element

to (optional)
BigDecimal A rational number with implicit precision

_to (optional)
Element

EffectEvidenceSynthesis_ResultsByExposure -

The EffectEvidenceSynthesis resource describes the difference in an outcome between exposures states in a population where the effect estimate is derived from a combination of research studies.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

exposureState (optional)
String Whether these results are for the exposure state or alternative exposure state.
Enum:
  exposure
  exposure-alternative

_exposureState (optional)
Element

variantState (optional)
CodeableConcept
riskEvidenceSynthesis
Reference

EffectEvidenceSynthesis_SampleSize -

The EffectEvidenceSynthesis resource describes the difference in an outcome between exposures states in a population where the effect estimate is derived from a combination of research studies.

id (optional)

String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters
_description (optional)
Element

numberOfStudies (optional)
BigDecimal A whole number

_numberOfStudies (optional)
Element
numberOfParticipants (optional)
BigDecimal A whole number

_numberOfParticipants (optional)
Element

Element -

Base definition for all elements in a resource.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

ElementDefinition -

Captures constraints on each element within the resource, profile, or extension.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding

of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

path (optional)
String A sequence of Unicode characters

_path (optional)
Element

representation (optional)
array[String] Codes that define how this element is represented in instances, when the deviation varies from the normal case.
    Enum:

_representation (optional)
array[Element] Extensions for representation

sliceName (optional)
String A sequence of Unicode characters

_sliceName (optional)
Element

sliceIsConstraining (optional)
Boolean Value of "true" or "false"

_sliceIsConstraining (optional)
Element

label (optional)
String A sequence of Unicode characters

_label (optional)
Element

code (optional)
array[Coding] A code that has the same meaning as the element in a particular terminology.

slicing (optional)
ElementDefinition_Slicing

short (optional)
String A sequence of Unicode characters

_short (optional)
Element

definition (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_definition (optional)
Element

comment (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_comment (optional)
Element

requirements (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_requirements (optional)
Element

alias (optional)
array[String] Identifies additional names by which this element might also be known.

_alias (optional)

array[Element] Extensions for alias

min (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)
_min (optional)
Element

max (optional)
String A sequence of Unicode characters
_max (optional)
Element

base (optional)
ElementDefinition_Base

contentReference (optional)
String String of characters used to identify a name or a resource

_contentReference (optional)
Element

type (optional)
array[ElementDefinition_Type] The data type or resource that the value of this element is permitted to be.

defaultValueBase64Binary (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueBase64Binary (optional)
Element

defaultValueBoolean (optional)
Boolean The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueBoolean (optional)
Element

defaultValueCanonical (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueCanonical (optional)
Element

defaultValueCode (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueCode (optional)
Element

defaultValueDate (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueDate (optional)
Element

defaultValueDateTime (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueDateTime (optional)
Element

defaultValueDecimal (optional)
BigDecimal The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueDecimal (optional)
Element
defaultValueId (optional)

String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueId (optional)
Element
defaultValueInstant (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').
_defaultValueInstant (optional)
Element

defaultValueInteger (optional)
BigDecimal The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueInteger (optional)
Element
defaultValueMarkdown (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').
_defaultValueMarkdown (optional)
Element

defaultValueOid (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueOid (optional)
Element

defaultValuePositiveInt (optional)
BigDecimal The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').
_defaultValuePositiveInt (optional)
Element

defaultValueString (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueString (optional)
Element
defaultValueTime (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').
_defaultValueTime (optional)
Element

defaultValueUnsignedInt (optional)
BigDecimal The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueUnsignedInt (optional)
Element

defaultValueUri (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').
_defaultValueUri (optional)
Element

defaultValueUrl (optional)
String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

_defaultValueUrl (optional)
Element
defaultValueUuid (optional)

String The value that should be used if there is no value stated in the instance (e.g. 'if not otherwise specified, the abstract is false').

defaultValueUuid (optional)
Element

defaultValueAddress (optional)
Address

defaultValueAge (optional)
Age

defaultValueAnnotation (optional)
Annotation
defaultValueAttachment (optional)
Attachment

defaultValueCodeableConcept (optional)
CodeableConcept
defaultValueCoding (optional)
Coding

defaultValueContactPoint (optional)
ContactPoint

defaultValueCount (optional)
Count
defaultValueDistance (optional)
Distance

defaultValueDuration (optional)
Duration

defaultValueHumanName (optional)
HumanName

defaultValueIdentifier (optional)
Identifier

defaultValueMoney (optional)
Money
defaultValuePeriod (optional)
Period

defaultValueQuantity (optional)
Quantity
defaultValueRange (optional)

meaningWhenMissing (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_meaningWhenMissing (optional)

Element

orderMeaning (optional)

String A sequence of Unicode characters

_orderMeaning (optional)

Element

fixedBase64Binary (optional)

String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedBase64Binary (optional)

Element

fixedBoolean (optional)

Boolean Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedBoolean (optional)

Element

fixedCanonical (optional)

String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedCanonical (optional)

Element

fixedCode (optional)

String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedCode (optional)

Element

fixedDate (optional)

String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedDate (optional)

Element

fixedDateTime (optional)

String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedDateTime (optional)
Element

fixedDecimal (optional)
BigDecimal Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedDecimal (optional)
Element

fixedId (optional)
String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedId (optional)
Element

fixedInstant (optional)
String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedInstant (optional)
Element

fixedInteger (optional)
BigDecimal Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedInteger (optional)
Element

fixedMarkdown (optional)
String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedMarkdown (optional)
Element

fixedOid (optional)
String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedOid (optional)
Element

fixedPositiveInt (optional)
BigDecimal Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedPositiveInt (optional)
Element

fixedString (optional)
String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedString (optional)
Element

fixedTime (optional)
String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedTime (optional)
Element

fixedUnsignedInt (optional)

BigDecimal Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedUnsignedInt (optional)
Element

fixedUri (optional)
String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedUri (optional)
Element

fixedUrl (optional)
String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

_fixedUrl (optional)
Element

fixedUuid (optional)
String Specifies a value that SHALL be exactly the value for this element in the instance. For purposes of comparison, non-significant whitespace is ignored, and all values must be an exact match (case and accent sensitive). Missing elements/attributes must also be missing.

patternBase64Binary (optional)
String

Specifies a value that the value in the instance SHALL follow - that is, any value in the pattern must be found in the instance. Other additional values may be found too. This is effectively constraint by example.

When pattern[x] is used to constrain a primitive, it means that the value provided in the pattern[x] must match the instance value exactly.

When pattern[x] is used to constrain an array, it means that each element provided in the pattern[x] array must (recursively) match at least one element from the instance array.

When pattern[x] is used to constrain a complex object, it means that each property in the pattern must be present in the complex object, and its value must recursively match -- i.e.,

1. If primitive: it must match exactly the pattern value
2. If a complex object: it must match (recursively) the pattern value
3. If an array: it must match (recursively) the pattern value.

_patternBase64Binary (optional)
Element

patternBoolean (optional)
Boolean

Specifies a value that the value in the instance SHALL follow - that is, any value in the pattern must be found in the instance. Other additional values may be found too. This is effectively constraint by example.

When pattern[x] is used to constrain a primitive, it means that the value provided in the pattern[x] must match the instance value exactly.

When pattern[x] is used to constrain an array, it means that each element provided in the pattern[x] array must (recursively) match at least one element from the instance array.

When pattern[x] is used to constrain a complex object, it means that each property in the pattern must be present in the complex object, and its value must recursively match -- i.e.,

1. If primitive: it must match exactly the pattern value
2. If a complex object: it must match (recursively) the pattern value
3. If an array: it must match (recursively) the pattern value.

1. If primitive: it must match exactly the pattern value
2. If a complex object: it must match (recursively) the pattern value

3. If an array: it must match (recursively) the pattern value.

_patternString (optional)
Element
patternTime (optional)
String

Specifies a value that the value in the instance SHALL follow - that is, any value in the pattern must be found in the instance. Other additional values may be found too. This is effectively constraint by example.

When pattern[x] is used to constrain a primitive, it means that the value provided in the pattern[x] must match the instance value exactly.

When pattern[x] is used to constrain an array, it means that each element provided in the pattern[x] array must (recursively) match at least one element from the instance array.

When pattern[x] is used to constrain a complex object, it means that each property in the pattern must be present in the complex object, and its value must recursively match -- i.e.,

1. If primitive: it must match exactly the pattern value
2. If a complex object: it must match (recursively) the pattern value
3. If an array: it must match (recursively) the pattern value.

_patternTime (optional)
Element

patternUnsignedInt (optional)
BigDecimal

Specifies a value that the value in the instance SHALL follow - that is, any value in the pattern must be found in the instance. Other additional values may be found too. This is effectively constraint by example.

When pattern[x] is used to constrain a primitive, it means that the value provided in the pattern[x] must match the instance value exactly.

When pattern[x] is used to constrain an array, it means that each element provided in the pattern[x] array must (recursively) match at least one element from the instance array.

When pattern[x] is used to constrain a complex object, it means that each property in the pattern must be present in the complex object, and its value must recursively match -- i.e.,

1. If primitive: it must match exactly the pattern value
2. If a complex object: it must match (recursively) the pattern value
3. If an array: it must match (recursively) the pattern value.

_patternUnsignedInt (optional)
Element

patternUri (optional)
String

Specifies a value that the value in the instance SHALL follow - that is, any value in the pattern must be found in the instance. Other additional values may be found too. This is effectively constraint by example.

When pattern[x] is used to constrain a primitive, it means that the value provided in the pattern[x] must match the instance value exactly.

When pattern[x] is used to constrain an array, it means that each element provided in the pattern[x] array must (recursively) match at least one element from the instance array.

When pattern[x] is used to constrain a complex object, it means that each property in the pattern must be present in the complex object, and its value must recursively match -- i.e.,

1. If primitive: it must match exactly the pattern value
2. If a complex object: it must match (recursively) the pattern value
3. If an array: it must match (recursively) the pattern value.

_patternUri (optional)
Element

patternUrl (optional)
String

Specifies a value that the value in the instance SHALL follow - that is, any value in the pattern must be found in the instance. Other additional values may be found too. This is effectively constraint by example.

When pattern[x] is used to constrain a primitive, it means that the value provided in the pattern[x] must match the instance value exactly.

When pattern[x] is used to constrain an array, it means that each element provided in the pattern[x] array must (recursively) match at least one element from the instance array.

When pattern[x] is used to constrain a complex object, it means that each property in the pattern must be present in the complex object, and its value must recursively match -- i.e.,

1. If primitive: it must match exactly the pattern value
2. If a complex object: it must match (recursively) the pattern value
3. If an array: it must match (recursively) the pattern value.

_patternUrl (optional)
Element

patternUuid (optional)
String

Specifies a value that the value in the instance SHALL follow - that is, any value in the pattern must be found in the instance. Other additional values may be found too. This is effectively constraint by example.

When pattern[x] is used to constrain a primitive, it means that the value provided in the pattern[x] must match the instance value exactly.

When pattern[x] is used to constrain an array, it means that each element provided in the pattern[x] array must (recursively) match at least one element from the instance array.

When pattern[x] is used to constrain a complex object, it means that each property in the pattern must be present in the complex object, and its value must recursively match -- i.e.,

1. If primitive: it must match exactly the pattern value
2. If a complex object: it must match (recursively) the pattern value
3. If an array: it must match (recursively) the pattern value.

example (optional)
array[ElementDefinition_Example] A sample value for this element demonstrating the type of
information that would typically be found in the element.

minValueDate (optional)
String The minimum allowed value for the element. The value is inclusive. This is allowed for the types
date, dateTime, instant, time, decimal, integer, and Quantity.

_minValueDate (optional)

Element

minValueDateTime (optional)

String The minimum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_minValueDateTime (optional)

Element

minValueInstant (optional)

String The minimum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_minValueInstant (optional)

Element

minValueTime (optional)

String The minimum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_minValueTime (optional)

Element

minValueDecimal (optional)

BigDecimal The minimum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_minValueDecimal (optional)

Element

minValueInteger (optional)

BigDecimal The minimum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_minValueInteger (optional)

Element

minValuePositiveInt (optional)

BigDecimal The minimum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_minValuePositiveInt (optional)

Element

minValueUnsignedInt (optional)

BigDecimal The minimum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_minValueUnsignedInt (optional)

Element

minValueQuantity (optional)

Quantity

maxValueDate (optional)

String The maximum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_maxValueDate (optional)

Element

maxValueDateTime (optional)

String The maximum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_maxValueDateTime (optional)

Element

maxValueInstant (optional)

String The maximum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_maxValueInstant (optional)

Element

maxValueTime (optional)

String The maximum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_maxValueTime (optional)

Element

maxValueDecimal (optional)

BigDecimal The maximum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_maxValueDecimal (optional)

Element

maxValueInteger (optional)

BigDecimal The maximum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_maxValueInteger (optional)

Element

maxValuePositiveInt (optional)

BigDecimal The maximum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_maxValuePositiveInt (optional)

Element

maxValueUnsignedInt (optional)

BigDecimal The maximum allowed value for the element. The value is inclusive. This is allowed for the types date, dateTime, instant, time, decimal, integer, and Quantity.

_maxValueUnsignedInt (optional)

Element

maxValueQuantity (optional)

Quantity

maxLength (optional)

BigDecimal A whole number

_maxLength (optional)

Element

condition (optional)

array[String] A reference to an invariant that may make additional statements about the cardinality or value in the instance.

_condition (optional)

array[Element] Extensions for condition

constraint (optional)

array[ElementDefinition_Constraint] Formal constraints such as co-occurrence and other constraints that can be computationally evaluated within the context of the instance.

mustSupport (optional)

Boolean Value of "true" or "false"

_mustSupport (optional)

Element

isModifier (optional)

Boolean Value of "true" or "false"

_isModifier (optional)

Element

isModifierReason (optional)

String A sequence of Unicode characters

_isModifierReason (optional)

Element

isSummary (optional)

Boolean Value of "true" or "false"

_isSummary (optional)

Element

binding (optional)
ElementDefinition_Binding

mapping (optional)
array[ElementDefinition_Mapping] Identifies a concept from an external specification that roughly
corresponds to this element.

ElementDefinition_Base -   *Up*

Captures constraints on each element within the resource, profile, or extension.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.
To make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer can define an extension, there is a set of
requirements that SHALL be met as part of the definition of the extension. Applications processing a
resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

path (optional)
String A sequence of Unicode characters

_path (optional)
Element

min (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)
_min (optional)
Element

max (optional)
String A sequence of Unicode characters
_max (optional)
Element

ElementDefinition_Binding -   *Up*

Captures constraints on each element within the resource, profile, or extension.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.

To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

strength (optional)
String Indicates the degree of conformance expectations associated with this binding - that is, the degree to which the provided value set must be adhered to in the instances.
> **Enum:**
>> *required*
>> *extensible*
>> *preferred*
>> *example*

_strength (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

valueSet (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

ElementDefinition_Constraint -   **Up**

Captures constraints on each element within the resource, profile, or extension.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

key (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_key (optional)
Element

requirements (optional)
String A sequence of Unicode characters

_requirements (optional)
Element

severity (optional)
String Identifies the impact constraint violation has on the conformance of the instance.

Enum:
error
warning

_severity (optional)
Element

human (optional)
String A sequence of Unicode characters
_human (optional)
Element

expression (optional)
String A sequence of Unicode characters

_expression (optional)
Element

xpath (optional)
String A sequence of Unicode characters

_xpath (optional)
Element
source (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

`ElementDefinition_Discriminator -`

Captures constraints on each element within the resource, profile, or extension.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
String How the element value is interpreted when discrimination is evaluated.
Enum:
value
exists
pattern
type
profile

_type (optional)
Element

path (optional)
String A sequence of Unicode characters
_path (optional)
Element

ElementDefinition_Example -

Captures constraints on each element within the resource, profile, or extension.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

label (optional)
String A sequence of Unicode characters

_label (optional)
Element

valueBase64Binary (optional)
String The actual value for the element, which must be one of the types allowed for this element.

_valueBase64Binary (optional)
Element

valueBoolean (optional)
Boolean The actual value for the element, which must be one of the types allowed for this element.

_valueBoolean (optional)
Element

valueCanonical (optional)
String The actual value for the element, which must be one of the types allowed for this element.

_valueCanonical (optional)
Element

valueCode (optional)
String The actual value for the element, which must be one of the types allowed for this element.

_valueCode (optional)
Element

valueDate (optional)
String The actual value for the element, which must be one of the types allowed for this element.

_valueDate (optional)
Element

valueDateTime (optional)
String The actual value for the element, which must be one of the types allowed for this element.

_valueDateTime (optional)
Element

valueDecimal (optional)
BigDecimal The actual value for the element, which must be one of the types allowed for this element.

_valueDecimal (optional)
Element

valueId (optional)

String The actual value for the element, which must be one of the types allowed for this element.

_valueId (optional)

Element

valueInstant (optional)

String The actual value for the element, which must be one of the types allowed for this element.

_valueInstant (optional)

Element

valueInteger (optional)

BigDecimal The actual value for the element, which must be one of the types allowed for this element.

_valueInteger (optional)

Element

valueMarkdown (optional)

String The actual value for the element, which must be one of the types allowed for this element.

_valueMarkdown (optional)

Element

valueOid (optional)

String The actual value for the element, which must be one of the types allowed for this element.

_valueOid (optional)

Element

valuePositiveInt (optional)

BigDecimal The actual value for the element, which must be one of the types allowed for this element.

_valuePositiveInt (optional)

Element

valueString (optional)

String The actual value for the element, which must be one of the types allowed for this element.

_valueString (optional)

Element

valueTime (optional)

String The actual value for the element, which must be one of the types allowed for this element.

_valueTime (optional)

Element

valueUnsignedInt (optional)

BigDecimal The actual value for the element, which must be one of the types allowed for this element.

_valueUnsignedInt (optional)

Element

valueUri (optional)

String The actual value for the element, which must be one of the types allowed for this element.

_valueUri (optional)

Element

valueUrl (optional)

String The actual value for the element, which must be one of the types allowed for this element.

_valueUrl (optional)

Element

valueUuid (optional)

String The actual value for the element, which must be one of the types allowed for this element.

_valueUuid (optional)

Element

valueAddress (optional)

Address

valueAge (optional)

Age

valueAnnotation (optional)

Annotation

valueAttachment (optional)
Attachment

valueCodeableConcept (optional)
CodeableConcept

valueCoding (optional)
Coding

valueContactPoint (optional)
ContactPoint

valueCount (optional)
Count

valueDistance (optional)
Distance

valueDuration (optional)
Duration

valueHumanName (optional)
HumanName

valueIdentifier (optional)
Identifier

valueMoney (optional)
Money

valuePeriod (optional)
Period

valueQuantity (optional)
Quantity

valueRange (optional)
Range

valueRatio (optional)
Ratio

valueReference (optional)
Reference

valueSampledData (optional)
SampledData

valueSignature (optional)
Signature

valueTiming (optional)
Timing

valueContactDetail (optional)
ContactDetail

valueContributor (optional)
Contributor

valueDataRequirement (optional)
DataRequirement

valueExpression (optional)
Expression

valueParameterDefinition (optional)
ParameterDefinition

valueRelatedArtifact (optional)
RelatedArtifact

TriggerDefinition

valueUsageContext (optional)
UsageContext

valueDosage (optional)
Dosage

valueMeta (optional)
Meta

ElementDefinition_Mapping -

Captures constraints on each element within the resource, profile, or extension.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identity (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_identity (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

map (optional)
String A sequence of Unicode characters

_map (optional)
Element

comment (optional)
String A sequence of Unicode characters

_comment (optional)
Element

ElementDefinition_Slicing -

Captures constraints on each element within the resource, profile, or extension.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

discriminator (optional)
array[ElementDefinition_Discriminator] Designates which child elements are used to discriminate between the slices when processing an instance. If one or more discriminators are provided, the value of the child elements in the instance data SHALL completely distinguish which slice the element in the resource matches based on the allowed values for those elements in each of the slices.

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

ordered (optional)
Boolean Value of "true" or "false"

_ordered (optional)
Element

rules (optional)
String Whether additional slices are allowed or not. When the slices are ordered, profile authors can also say that additional slices are only allowed at the end.

> **Enum:**
> *closed*
> *open*
> *openAtEnd*

_rules (optional)
Element

ElementDefinition_Type -   **Up**

Captures constraints on each element within the resource, profile, or extension.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)

String String of characters used to identify a name or a resource

_code (optional)

Element

profile (optional)

array[String] Identifies a profile structure or implementation Guide that applies to the datatype this element refers to. If any profiles are specified, then the content must conform to at least one of them. The URL can be a local reference - to a contained StructureDefinition, or a reference to another StructureDefinition or Implementation Guide by a canonical URL. When an implementation guide is specified, the type SHALL conform to at least one profile defined in the implementation guide.

targetProfile (optional)

array[String] Used when the type is "Reference" or "canonical", and identifies a profile structure or implementation Guide that applies to the target of the reference this element refers to. If any profiles are specified, then the content must conform to at least one of them. The URL can be a local reference - to a contained StructureDefinition, or a reference to another StructureDefinition or Implementation Guide by a canonical URL. When an implementation guide is specified, the target resource SHALL conform to at least one profile defined in the implementation guide.

aggregation (optional)

array[String] If the type is a reference to another resource, how the resource is or can be aggregated - is it a contained resource, or a reference, and if the context is a bundle, is it included in the bundle.

Enum:

_aggregation (optional)

array[Element] Extensions for aggregation

versioning (optional)

String Whether this reference needs to be version specific or version independent, or whether either can be used.

Enum:
  either
  independent
  specific

_versioning (optional)

Element

Encounter -   **Up**

An interaction between a patient and healthcare provider(s) for the purpose of providing healthcare service(s) or assessing the health status of a patient.

resourceType

oas_any_type_not_mapped This is a Encounter resource

id (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)

Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)

Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifier(s) by which this encounter is known.

status (optional)
String planned | arrived | triaged | in-progress | onleave | finished | cancelled +.
    Enum:
        planned
        arrived
        triaged
        in-progress
        onleave
        finished
        cancelled
        entered-in-error
        unknown

_status (optional)
Element

statusHistory (optional)
array[Encounter_StatusHistory] The status history permits the encounter resource to contain the status history without needing to read through the historical versions of the resource, or even have the server store them.

class
Coding

classHistory (optional)
array[Encounter_ClassHistory] The class history permits the tracking of the encounters transitions without needing to go through the resource history. This would be used for a case where an admission starts of as an emergency encounter, then transitions into an inpatient scenario. Doing this and not restarting a new encounter ensures that any lab/diagnostic results can more easily follow the patient and not require re-processing and not get lost or cancelled during a kind of discharge from emergency to inpatient.

type (optional)
array[CodeableConcept] Specific type of encounter (e.g. e-mail consultation, surgical day-care, skilled nursing, rehabilitation).

serviceType (optional)
CodeableConcept

priority (optional)
CodeableConcept

subject (optional)
Reference

episodeOfCare (optional)

array[Reference] Where a specific encounter should be classified as a part of a specific episode(s) of care this field should be used. This association can facilitate grouping of related encounters together for a specific purpose, such as government reporting, issue tracking, association via a common problem. The association is recorded on the encounter as these are typically created after the episode of care and grouped on entry rather than editing the episode of care to append another encounter to it (the episode of care could span years).

basedOn (optional)
array[Reference] The request this encounter satisfies (e.g. incoming referral or procedure request).

participant (optional)
array[Encounter_Participant] The list of people responsible for providing the service.

appointment (optional)
array[Reference] The appointment that scheduled this encounter.

period (optional)
Period

length (optional)
Duration

reasonCode (optional)
array[CodeableConcept] Reason the encounter takes place, expressed as a code. For admissions, this can be used for a coded admission diagnosis.

reasonReference (optional)
array[Reference] Reason the encounter takes place, expressed as a code. For admissions, this can be used for a coded admission diagnosis.

diagnosis (optional)
array[Encounter_Diagnosis] The list of diagnosis relevant to this encounter.

account (optional)
array[Reference] The set of accounts that may be used for billing for this Encounter.

hospitalization (optional)
Encounter_Hospitalization

location (optional)
array[Encounter_Location] List of locations where the patient has been during this encounter.

serviceProvider (optional)
Reference

partOf (optional)
Reference

Encounter_ClassHistory -   **Up**

An interaction between a patient and healthcare provider(s) for the purpose of providing healthcare service(s) or assessing the health status of a patient.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

class
Coding

period
Period

Encounter_Diagnosis -   **Up**

An interaction between a patient and healthcare provider(s) for the purpose of providing healthcare service(s) or assessing
the health status of a patient.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.
To make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer can define an extension, there is a set of
requirements that SHALL be met as part of the definition of the extension. Applications processing a
resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

condition
Reference

use (optional)
CodeableConcept
rank (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_rank (optional)
Element

Encounter_Hospitalization -   **Up**

An interaction between a patient and healthcare provider(s) for the purpose of providing healthcare service(s) or assessing
the health status of a patient.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.
To make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer can define an extension, there is a set of

requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

preAdmissionIdentifier (optional)
Identifier

origin (optional)
Reference
admitSource (optional)
CodeableConcept

reAdmission (optional)
CodeableConcept
dietPreference (optional)
array[CodeableConcept] Diet preferences reported by the patient.

specialCourtesy (optional)
array[CodeableConcept] Special courtesies (VIP, board member).

specialArrangement (optional)
array[CodeableConcept] Any special requests that have been made for this hospitalization encounter, such as the provision of specific equipment or other things.

destination (optional)
Reference

dischargeDisposition (optional)
CodeableConcept

Encounter_Location -   **Up**

An interaction between a patient and healthcare provider(s) for the purpose of providing healthcare service(s) or assessing the health status of a patient.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

location
Reference
status (optional)
String The status of the participants' presence at the specified location during the period specified. If the participant is no longer at the location, then the period will have an end date/time.
  Enum:
    planned
    active
    reserved
    completed

_status (optional)

Endpoint -   **Up**

The technical details of an endpoint that can be used for electronic services, such as for web services providing XDS.b or a REST endpoint for another FHIR server. This may include any security context information.

resourceType
oas_any_type_not_mapped This is a Endpoint resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a

set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifier for the organization that is used to identify the endpoint across multiple disparate systems.

status (optional)
String active | suspended | error | off | test.
    Enum:
      active
      suspended
      error
      off
      entered-in-error
      test

array[Annotation] A human-readable string to clarify or explain concepts about the resource.

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate evidence instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the evidence is intended to be used.

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

approvalDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_approvalDate (optional)
Element

lastReviewDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_lastReviewDate (optional)
Element

effectivePeriod (optional)
Period

topic (optional)
array[CodeableConcept] Descriptive topics related to the content of the Evidence. Topics provide a high-level categorization grouping types of Evidences that can be useful for filtering and searching.

author (optional)
array[ContactDetail] An individiual or organization primarily involved in the creation and maintenance of the content.

editor (optional)
array[ContactDetail] An individual or organization primarily responsible for internal coherence of the content.

reviewer (optional)
array[ContactDetail] An individual or organization primarily responsible for review of some aspect of the content.

endorser (optional)
array[ContactDetail] An individual or organization responsible for officially endorsing the content for use in some setting.

relatedArtifact (optional)
array[RelatedArtifact] Related artifacts such as additional documentation, justification, or bibliographic references.

exposureBackground
Reference

exposureVariant (optional)
array[Reference] A reference to a EvidenceVariable resource that defines the exposure for the research.

outcome (optional)
array[Reference] A reference to a EvidenceVariable resomece that defines the outcome for the research.

EvidenceVariable -   [Up](#)

The EvidenceVariable resource describes a "PICO" element that knowledge (evidence, assertion, recommendation) is about.

resourceType
oas_any_type_not_mapped This is a EvidenceVariable resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)

String String of characters used to identify a name or a resource

_url (optional)

Element

identifier (optional)

array[Identifier] A formal identifier that is used to identify this evidence variable when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)

String A sequence of Unicode characters

_version (optional)

Element

name (optional)

String A sequence of Unicode characters

_name (optional)

Element

title (optional)

String A sequence of Unicode characters

_title (optional)

Element

shortTitle (optional)

String A sequence of Unicode characters

_shortTitle (optional)

Element

subtitle (optional)

String A sequence of Unicode characters

_subtitle (optional)

Element

status (optional)

String The status of this evidence variable. Enables tracking the life-cycle of the content.

    Enum:

        draft
        active
        retired
        unknown

_status (optional)
Element

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

note (optional)
array[Annotation] A human-readable string to clarify or explain concepts about the resource.

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate evidence variable instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the evidence variable is intended to be used.

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

approvalDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_approvalDate (optional)
Element

lastReviewDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_lastReviewDate (optional)
Element

effectivePeriod (optional)
Period

topic (optional)
array[CodeableConcept] Descriptive topics related to the content of the EvidenceVariable. Topics provide a high-level categorization grouping types of EvidenceVariables that can be useful for filtering and searching.

author (optional)
array[ContactDetail] An individiual or organization primarily involved in the creation and maintenance of the content.

editor (optional)

array[ContactDetail] An individual or organization primarily responsible for internal coherence of the content.

reviewer (optional)
array[ContactDetail] An individual or organization primarily responsible for review of some aspect of the content.

endorser (optional)
array[ContactDetail] An individual or organization responsible for officially endorsing the content for use in some setting.

relatedArtifact (optional)
array[RelatedArtifact] Related artifacts such as additional documentation, justification, or bibliographic references.

type (optional)
String The type of evidence element, a population, an exposure, or an outcome.
> **Enum:**
>> *dichotomous*
>> *continuous*
>> *descriptive*

_type (optional)
Element

characteristic
array[EvidenceVariable_Characteristic] A characteristic that defines the members of the evidence element. Multiple characteristics are applied with "and" semantics.

EvidenceVariable_Characteristic -   **Up**

The EvidenceVariable resource describes a "PICO" element that knowledge (evidence, assertion, recommendation) is about.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters
_description (optional)
Element

definitionReference (optional)
Reference

definitionCanonical (optional)
String Define members of the evidence element using Codes (such as condition, medication, or observation), Expressions (using an expression language such as FHIRPath or CQL) or DataRequirements (such as Diabetes diagnosis onset in the last year).

_definitionCanonical (optional)
Element

definitionCodeableConcept (optional)
CodeableConcept

definitionExpression (optional)
Expression

definitionDataRequirement (optional)
DataRequirement

definitionTriggerDefinition (optional)
TriggerDefinition

usageContext (optional)
array[UsageContext] Use UsageContext to define the members of the population, such as Age Ranges, Genders, Settings.

exclude (optional)
Boolean Value of "true" or "false"

_exclude (optional)
Element

participantEffectiveDateTime (optional)
String Indicates what effective period the study covers.
_participantEffectiveDateTime (optional)
Element

participantEffectivePeriod (optional)
Period

participantEffectiveDuration (optional)
Duration
participantEffectiveTiming (optional)
Timing

timeFromStart (optional)
Duration
groupMeasure (optional)
String Indicates how elements are aggregated within the study effective period.
        Enum:
                mean
                median
                mean-of-mean
                mean-of-median
                median-of-mean
                median-of-median

_groupMeasure (optional)
Element

`ExampleScenario -`

Example of workflow instance.
resourceType
oas_any_type_not_mapped This is a ExampleScenario resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.
meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element
text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource
_url (optional)
Element

identifier (optional)
array[Identifier] A formal identifier that is used to identify this example scenario when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)
String A sequence of Unicode characters
_version (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

status (optional)
String The status of this example scenario. Enables tracking the life-cycle of the content.
    Enum:
        draft
        active
        retired
        unknown

_status (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"
_experimental (optional)
Element

date (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate example scenario instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the example scenario is intended to be used.

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

actor (optional)
array[ExampleScenario_Actor] Actor participating in the resource.

instance (optional)
array[ExampleScenario_Instance] Each resource and each version that is present in the workflow.

process (optional)
array[ExampleScenario_Process] Each major process - a group of operations.

workflow (optional)
array[String] Another nested workflow.

`ExampleScenario_Actor -`   **Up**

Example of workflow instance.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of

requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

actorId (optional)
String A sequence of Unicode characters

_actorId (optional)
Element

type (optional)
String The type of actor - person or system.
    Enum:
       person
       entity

_type (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)

disposition (optional)
String A sequence of Unicode characters

_disposition (optional)
Element

preAuthRef (optional)
array[String] Reference from the Insurer which is used in later communications which refers to this adjudication.

_preAuthRef (optional)
array[Element] Extensions for preAuthRef

preAuthRefPeriod (optional)
array[Period] The timeframe during which the supplied preauthorization reference may be quoted on claims to obtain the adjudication as provided.

careTeam (optional)
array[ExplanationOfBenefit_CareTeam] The members of the team who provided the products and services.

supportingInfo (optional)
array[ExplanationOfBenefit_SupportingInfo] Additional information codes regarding exceptions, special considerations, the condition, situation, prior or concurrent issues.

diagnosis (optional)
array[ExplanationOfBenefit_Diagnosis] Information about diagnoses relevant to the claim items.
procedure (optional)
array[ExplanationOfBenefit_Procedure] Procedures performed on the patient relevant to the billing items with the claim.
precedence (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_precedence (optional)
Element

insurance
array[ExplanationOfBenefit_Insurance] Financial instruments for reimbursement for the health care products and services specified on the claim.

accident (optional)
ExplanationOfBenefit_Accident

item (optional)
array[ExplanationOfBenefit_Item] A claim line. Either a simple (a product or service) or a 'group' of details which can also be a simple items or groups of sub-details.

addItem (optional)
array[ExplanationOfBenefit_AddItem] The first-tier service adjudications for payor added product or service lines.

adjudication (optional)
array[ExplanationOfBenefit_Adjudication] The adjudication results which are presented at the header level rather than at the line-item or add-item levels.

total (optional)
array[ExplanationOfBenefit_Total] Categorized monetary totals for the adjudication.

payment (optional)
ExplanationOfBenefit_Payment

formCode (optional)
CodeableConcept
form (optional)
Attachment

processNote (optional)
array[ExplanationOfBenefit_ProcessNote] A note that describes or explains adjudication results in a human readable form.

benefitPeriod (optional)
Period
benefitBalance (optional)
array[ExplanationOfBenefit_BenefitBalance] Balance by Benefit Category.

ExplanationOfBenefit_Accident -   **Up**

This resource provides: the claim details; adjudication details from the processing of a Claim; and optionally account balance information, for informing the subscriber of the benefits provided.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

date (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

number (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_number (optional)
Element

type (optional)

FamilyMemberHistory -   **Up**

Significant health conditions for a person related to the patient relevant in the context of care for the patient.

resourceType
oas_any_type_not_mapped This is a FamilyMemberHistory resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative
contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifiers assigned to this family member history by the performer or other systems which remain constant as the resource is updated and propagates from server to server.

instantiatesCanonical (optional)
array[String] The URL pointing to a FHIR-defined protocol, guideline, orderset or other definition that is adhered to in whole or in part by this FamilyMemberHistory.

instantiatesUri (optional)
array[String] The URL pointing to an externally maintained protocol, guideline, orderset or other definition that is adhered to in whole or in part by this FamilyMemberHistory.
_instantiatesUri (optional)
array[Element] Extensions for instantiatesUri

status (optional)
String A code specifying the status of the record of the family history of a specific family member.
Enum:
partial
completed
entered-in-error
health-unknown

_status (optional)
Element

dataAbsentReason (optional)
CodeableConcept
patient

Reference

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

relationship
CodeableConcept

sex (optional)
CodeableConcept

bornPeriod (optional)
Period

bornDate (optional)
String The actual or approximate date of birth of the relative.

_bornDate (optional)
Element

bornString (optional)
String The actual or approximate date of birth of the relative.

_bornString (optional)
Element

ageAge (optional)
Age

ageRange (optional)
Range

ageString (optional)
String The age of the relative at the time the family member history is recorded.

_ageString (optional)
Element

estimatedAge (optional)
Boolean Value of "true" or "false"

_estimatedAge (optional)
Element

deceasedBoolean (optional)
Boolean Deceased flag or the actual or approximate age of the relative at the time of death for the family member history record.

_deceasedBoolean (optional)
Element

deceasedAge (optional)
Age

deceasedRange (optional)
Range

deceasedDate (optional)
String Deceased flag or the actual or approximate age of the relative at the time of death for the family member history record.

_deceasedDate (optional)
Element

deceasedString (optional)

String Deceased flag or the actual or approximate age of the relative at the time of death for the family member history record.

_deceasedString (optional)
Element

reasonCode (optional)
array[CodeableConcept] Describes why the family member history occurred in coded or textual form.

reasonReference (optional)
array[Reference] Indicates a Condition, Observation, AllergyIntolerance, or QuestionnaireResponse that justifies this family member history event.

note (optional)
array[Annotation] This property allows a non condition-specific note to the made about the related person. Ideally, the note would be in the condition property, but this is not always possible.

condition (optional)
array[FamilyMemberHistory_Condition] The significant Conditions (or condition) that the family member had. This is a repeating section to allow a system to represent more than one condition per resource, though there is nothing stopping multiple resources - one per condition.

FamilyMemberHistory_Condition -   **Up**

Significant health conditions for a person related to the patient relevant in the context of care for the patient.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code
CodeableConcept

outcome (optional)
CodeableConcept

contributedToDeath (optional)
Boolean Value of "true" or "false"

_contributedToDeath (optional)
Element

onsetAge (optional)
Age

onsetRange (optional)
Range

onsetPeriod (optional)
Period

onsetString (optional)
String Either the age of onset, range of approximate age or descriptive string can be recorded. For conditions with multiple occurrences, this describes the first known occurrence.

_onsetString (optional)
Element

note (optional)
array[Annotation] An area where general notes can be placed about this specific condition.

Flag -   **Up**

Prospective warnings of potential issues when providing care to the patient.

resourceType
oas_any_type_not_mapped This is a Flag resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a

set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifiers assigned to this goal by the performer or other systems which remain constant as the resource is updated and propagates from server to server.

lifecycleStatus (optional)
String The state of the goal throughout its lifecycle.
Enum:

> *proposed*
>
> *planned*
> *accepted*
>
> *active*
>
> *on-hold*
> *completed*
>
> *cancelled*
>
> *entered-in-error*
>

CodeableConcept

description
CodeableConcept
subject
Reference

startDate (optional)
String The date or event after which the goal should begin being pursued.

_startDate (optional)
Element
startCodeableConcept (optional)
CodeableConcept

target (optional)
array[Goal_Target] Indicates what should be done by when.
statusDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.
_statusDate (optional)
Element

statusReason (optional)
String A sequence of Unicode characters

_statusReason (optional)
Element

expressedBy (optional)
Reference

addresses (optional)
array[Reference] The identified conditions and other health record elements that are intended to be addressed by the goal.

note (optional)
array[Annotation] Any comments related to the goal.
outcomeCode (optional)

array[CodeableConcept] Identifies the change (or lack of change) at the point when the status of the goal is assessed.

outcomeReference (optional)
array[Reference] Details of what's changed (or not changed).

Goal_Target -

Describes the intended objective(s) for a patient, group or organization care, for example, weight loss, restoring an activity of daily living, obtaining herd immunity via immunization, meeting a process improvement objective, etc.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

measure (optional)
CodeableConcept

detailQuantity (optional)
Quantity

detailRange (optional)
Range

detailCodeableConcept (optional)
CodeableConcept

detailString (optional)
String The target value of the focus to be achieved to signify the fulfillment of the goal, e.g. 150 pounds, 7.0%. Either the high or low or both values of the range can be specified. When a low value is missing, it indicates that the goal is achieved at any focus value at or below the high value. Similarly, if the high value is missing, it indicates that the goal is achieved at any focus value at or above the low value.

_detailString (optional)
Element

detailBoolean (optional)
Boolean The target value of the focus to be achieved to signify the fulfillment of the goal, e.g. 150 pounds, 7.0%. Either the high or low or both values of the range can be specified. When a low value is missing, it indicates that the goal is achieved at any focus value at or below the high value. Similarly, if the high value is missing, it indicates that the goal is achieved at any focus value at or above the low value.

_detailBoolean (optional)
Element

detailInteger (optional)
BigDecimal The target value of the focus to be achieved to signify the fulfillment of the goal, e.g. 150 pounds, 7.0%. Either the high or low or both values of the range can be specified. When a low value is missing, it indicates that the goal is achieved at any focus value at or below the high value. Similarly, if the high value is missing, it indicates that the goal is achieved at any focus value at or above the low value.

_detailInteger (optional)
Element

detailRatio (optional)
Ratio

dueDate (optional)
String Indicates either the date or the duration after start by which the goal should be met.

_dueDate (optional)
Element

dueDuration (optional)
Duration

GraphDefinition -

A formal computable definition of a graph of resources - that is, a coherent set of resources that form a graph by following references. The Graph Definition resource defines a set and makes rules about the set.

resourceType
oas_any_type_not_mapped This is a GraphDefinition resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)

String String of characters used to identify a name or a resource

_url (optional)
Element
version (optional)
String A sequence of Unicode characters

_version (optional)
Element
name (optional)
String A sequence of Unicode characters

_name (optional)
Element

status (optional)
String The status of this graph definition. Enables tracking the life-cycle of the content.
Enum:
  draft
  active
  retired
  unknown

_status (optional)
Element
experimental (optional)
Boolean Value of "true" or "false"

_experimental (optional)
Element
date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters
_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.
description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine
_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate graph definition instances.
jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the graph definition is intended to be used.
purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

start (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_start (optional)
Element
profile (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

link (optional)
array[GraphDefinition_Link] Links this graph makes rules about.

GraphDefinition_Compartment -   Up

A formal computable definition of a graph of resources - that is, a coherent set of resources that form a graph by following references. The Graph Definition resource defines a set and makes rules about the set.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

use (optional)
String Defines how the compartment rule is used - whether it it is used to test whether resources are subject to the rule, or whether it is a rule that must be followed.
    Enum:
        condition
        requirement
_use (optional)
Element

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element
rule (optional)
String identical | matching | different | no-rule | custom.
    Enum:
        identical
        matching
        different
        custom

_rule (optional)
Element

expression (optional)
String A sequence of Unicode characters

_expression (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

GraphDefinition_Link -

A formal computable definition of a graph of resources - that is, a coherent set of resources that form a graph by following references. The Graph Definition resource defines a set and makes rules about the set.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

path (optional)
String A sequence of Unicode characters

_path (optional)
Element

sliceName (optional)
String A sequence of Unicode characters
_sliceName (optional)
Element

min (optional)
BigDecimal A whole number
_min (optional)
Element

max (optional)
String A sequence of Unicode characters

_max (optional)
Element
description (optional)
String A sequence of Unicode characters

_description (optional)
Element
target (optional)
array[GraphDefinition_Target] Potential target for the link.

GraphDefinition_Target -

A formal computable definition of a graph of resources - that is, a coherent set of resources that form a graph by following references. The Graph Definition resource defines a set and makes rules about the set.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_type (optional)
Element

params (optional)
String A sequence of Unicode characters

_params (optional)
Element

profile (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

compartment (optional)
array[GraphDefinition_Compartment] Compartment Consistency Rules.

link (optional)
array[GraphDefinition_Link] Additional links from target resource.

Group -   **Up**

Represents a defined collection of entities that may be discussed or acted upon collectively but which are not expected to act collectively, and are not formally or legally recognized; i.e. a collection of entities that isn't an Organization.

resourceType
oas_any_type_not_mapped This is a Group resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] A unique business identifier for this group.

active (optional)
Boolean Value of "true" or "false"

_active (optional)
Element

type (optional)
String Identifies the broad classification of the kind of resources the group includes.
>   **Enum:**
>
>   *person*
>   *animal*
>   *practitioner*
>   *device*
>   *medication*
>   *substance*

_type (optional)
Element

actual (optional)
Boolean Value of "true" or "false"

_actual (optional)
Element

code (optional)
CodeableConcept

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

quantity (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)

_quantity (optional)
Element

managingEntity (optional)
Reference

characteristic (optional)
array[Group_Characteristic] Identifies traits whose presence r absence is shared by members of the group.
member (optional)
array[Group_Member] Identifies the resource instances that are members of the group.

Group_Characteristic - **Up**

Represents a defined collection of entities that may be discussed or acted upon collectively but which are not expected to act collectively, and are not formally or legally recognized; i.e. a collection of entities that isn't an Organization.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code
CodeableConcept
valueCodeableConcept (optional)
CodeableConcept

valueBoolean (optional)
Boolean The value of the trait that holds (or does not hold - see 'exclude') for members of the group.

_valueBoolean (optional)
Element

valueQuantity (optional)
Quantity

valueRange (optional)
Range
valueReference (optional)
Reference

exclude (optional)
Boolean Value of "true" or "false"

_exclude (optional)
Element

period (optional)
Period

Group_Member - **Up**

Represents a defined collection of entities that may be discussed or acted upon collectively but which are not expected to act collectively, and are not formally or legally recognized; i.e. a collection of entities that isn't an Organization.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

entity
Reference
period (optional)
Period

inactive (optional)
Boolean Value of "true" or "false"
_inactive (optional)
Element

GuidanceResponse -   Up

A guidance response is the formal response to a guidance request, including any output parameters returned by the evaluation, as well as the description of any proposed actions to be taken.

resourceType
oas_any_type_not_mapped This is a GuidanceResponse resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta
implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

requestIdentifier (optional)
Identifier
identifier (optional)
array[Identifier] Allows a service to provide unique, business identifiers for the response.

moduleUri (optional)
String An identifier, CodeableConcept or canonical reference to the guidance that was requested.

_moduleUri (optional)
Element

moduleCanonical (optional)
String An identifier, CodeableConcept or canonical reference to the guidance that was requested.

_moduleCanonical (optional)
Element
moduleCodeableConcept (optional)
CodeableConcept

status (optional)
String The status of the response. If the evaluation is completed successfully, the status will indicate success. However, in order to complete the evaluation, the engine may require more information. In this case, the status will be data-required, and the response will contain a description of the additional required information. If the evaluation completed successfully, but the engine determines that a potentially more accurate response could be provided if more data was available, the status will be data-requested, and the response will contain a description of the additional requested information.

> **Enum:**
> *success*
> *data-requested*
> *data-required*
> *in-progress*
> *failure*
> *entered-in-error*

_status (optional)
Element

subject (optional)
Reference
encounter (optional)
Reference

occurrenceDateTime (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.
_occurrenceDateTime (optional)
Element

performer (optional)
Reference

reasonCode (optional)
array[CodeableConcept] Describes the reason for the guidance response in coded or textual form.

reasonReference (optional)
array[Reference] Indicates the reason the request was initiated. This is typically provided as a parameter to the evaluation and echoed by the service, although for some use cases, such as subscription- or event-based scenarios, it may provide an indication of the cause for the response.

note (optional)
array[Annotation] Provides a mechanism to communicate additional information about the response.

evaluationMessage (optional)
array[Reference] Messages resulting from the evaluation of the artifact or artifacts. As part of evaluating the request, the engine may produce informational or warning messages. These messages will be provided by this element.

outputParameters (optional)
Reference

result (optional)
Reference

dataRequirement (optional)
array[DataRequirement] If the evaluation could not be completed due to lack of information, or additional information would potentially result in a more accurate response, this element will a description of the data required in order to proceed with the evaluation. A subsequent request to the service should include this data.

HealthcareService -   Up

The details of a healthcare service available at a location.

resourceType
oas_any_type_not_mapped This is a HealthcareService resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element
text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] External identifiers for this item.

active (optional)
Boolean Value of "true" or "false"

_active (optional)
Element

providedBy (optional)
Reference

category (optional)
array[CodeableConcept] Identifies the broad category of service being performed or delivered.

type (optional)
array[CodeableConcept] The specific type of service that may be delivered or performed.

specialty (optional)
array[CodeableConcept] Collection of specialties handled by the service site. This is more of a medical term.

location (optional)
array[Reference] The location(s) where this healthcare service may be provided.

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

comment (optional)
String A sequence of Unicode characters
_comment (optional)
Element

extraDetails (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_extraDetails (optional)
Element

photo (optional)
Attachment

telecom (optional)
array[ContactPoint] List of contacts related to this specific healthcare service.

coverageArea (optional)
array[Reference] The location(s) that this service is available to (not where the service is provided).
serviceProvisionCode (optional)
array[CodeableConcept] The code(s) that detail the conditions under which the healthcare service is available/offered.
eligibility (optional)
array[HealthcareService_Eligibility] Does this service have specific eligibility requirements that need to be met in order to use the service?

program (optional)
array[CodeableConcept] Programs that this service is applicable to.

characteristic (optional)
array[CodeableConcept] Collection of characteristics (attributes).

communication (optional)
array[CodeableConcept] Some services are specifically made available in multiple languages, this property permits a directory to declare the languages this is offered in. Typically this is only provided where a service operates in communities with mixed languages used.

referralMethod (optional)
array[CodeableConcept] Ways that the service accepts referrals, if this is not provided then it is implied that no referral is required.

appointmentRequired (optional)
Boolean Value of "true" or "false"

_appointmentRequired (optional)
Element

availableTime (optional)
array[HealthcareService_AvailableTime] A collection of times that the Service Site is available.

notAvailable (optional)
array[HealthcareService_NotAvailable] The HealthcareService is not available during this period of time due to the provided reason.

availabilityExceptions (optional)
String A sequence of Unicode characters

_availabilityExceptions (optional)
Element

endpoint (optional)
array[Reference] Technical endpoints providing access to services operated for the specific healthcare services defined at this resource.

HealthcareService_AvailableTime -

The details of a healthcare service available at a location.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

daysOfWeek (optional)
array[String] Indicates which days of the week are available between the start and end Times.
Enum:

_daysOfWeek (optional)
array[Element] Extensions for daysOfWeek

allDay (optional)
Boolean Value of "true" or "false"

_allDay (optional)
Element

availableStartTime (optional)

String A time during the day, with no date specified

_availableStartTime (optional)
Element
availableEndTime (optional)
String A time during the day, with no date specified

_availableEndTime (optional)
Element

HealthcareService_Eligibility -

The details of a healthcare service available at a location.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
CodeableConcept

comment (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_comment (optional)
Element

HealthcareService_NotAvailable -

The details of a healthcare service available at a location.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

during (optional)
Period

HumanName -

A human's name with the ability to identify parts and usage.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

use (optional)
String Identifies the purpose for this name.

> **Enum:**
>> *usual*
>> *official*
>> *temp*
>> *nickname*
>> *anonymous*
>> *old*
>> *maiden*

_use (optional)
Element

text (optional)
String A sequence of Unicode characters

_text (optional)
Element

family (optional)
String A sequence of Unicode characters

_family (optional)
Element

given (optional)
array[String] Given name.

_given (optional)
array[Element] Extensions for given

prefix (optional)
array[String] Part of the name that is acquired as a title due to academic, legal, employment or nobility status, etc. and that appears at the start of the name.

_prefix (optional)
array[Element] Extensions for prefix

suffix (optional)
array[String] Part of the name that is acquired as a title due to academic, legal, employment or nobility status, etc. and that appears at the end of the name.

_suffix (optional)
array[Element] Extensions for suffix

period (optional)
Period

Identifier -

An identifier - identifies some entity uniquely and unambiguously. Typically this is used for business identifiers.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

use (optional)
String The purpose of this identifier.
> **Enum:**
>> *usual*
>> *official*
>> *temp*
>> *secondary*
>> *old*

_use (optional)

type (optional)
CodeableConcept

system (optional)
String String of characters used to identify a name or a resource

_system (optional)
Element

value (optional)
String A sequence of Unicode characters

_value (optional)
Element

period (optional)
Period

assigner (optional)
Reference

ImagingStudy -   Up

Representation of the content produced in a DICOM imaging study. A study comprises a set of series, each of which includes a set of Service-Object Pair Instances (SOP Instances - images or other data) acquired or produced in a common context. A series is of only one modality (e.g. X-ray, CT, MR, ultrasound), but a study may have multiple series of different modalities.

resourceType
oas_any_type_not_mapped This is a ImagingStudy resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifiers for the ImagingStudy such as DICOM Study Instance UID, and Accession Number.

status (optional)
String The current state of the ImagingStudy.

> **Enum:**
> *registered*
> *available*
> *cancelled*
> *entered-in-error*
> *unknown*

_status (optional)
Element

modality (optional)
array[Coding] A list of all the series.modality values that are actual acquisition modalities, i.e. those in the DICOM Context Group 29 (value set OID 1.2.840.10008.6.1.19).

subject
Reference

encounter (optional)
Reference

started (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_started (optional)
Element

basedOn (optional)
array[Reference] A list of the diagnostic requests that resulted in this imaging study being performed.

referrer (optional)
Reference

interpreter (optional)
array[Reference] Who read the study and interpreted the images or other content.

endpoint (optional)

array[Reference] The network service providing access (e.g., query, view, or retrieval) for the study. See implementation notes for information about using DICOM endpoints. A study-level endpoint applies to each series in the study, unless overridden by a series-level endpoint with the same Endpoint.connectionType.

numberOfSeries (optional)

BigDecimal An integer with a value that is not negative (e.g. >= 0)

_numberOfSeries (optional)

Element

numberOfInstances (optional)

BigDecimal An integer with a value that is not negative (e.g. >= 0)

_numberOfInstances (optional)

Element

procedureReference (optional)

Reference

procedureCode (optional)

array[CodeableConcept] The code for the performed procedure type.

location (optional)

Reference

reasonCode (optional)

array[CodeableConcept] Description of clinical condition indicating why the ImagingStudy was requested.

reasonReference (optional)

array[Reference] Indicates another resource whose existence justifies this Study.

note (optional)

array[Annotation] Per the recommended DICOM mapping, this element is derived from the Study Description attribute (0008,1030). Observations or findings about the imaging study should be recorded in another resource, e.g. Observation, and not in this element.

description (optional)

String A sequence of Unicode characters

_description (optional)

Element

series (optional)

array[ImagingStudy_Series] Each study has one or more series of images or other content.

ImagingStudy_Instance -   **Up**

Representation of the content produced in a DICOM imaging study. A study comprises a set of series, each of which includes a set of Service-Object Pair Instances (SOP Instances - images or other data) acquired or produced in a common context. A series is of only one modality (e.g. X-ray, CT, MR, ultrasound), but a study may have multiple series of different modalities.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

uid (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_uid (optional)
Element

sopClass
Coding
number (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)

_number (optional)
Element

title (optional)
String A sequence of Unicode characters

_title (optional)
Element

`ImagingStudy_Performer -`   **Up**

Representation of the content produced in a DICOM imaging study. A study comprises a set of series, each of which includes a set of Service-Object Pair Instances (SOP Instances - images or other data) acquired or produced in a common context. A series is of only one modality (e.g. X-ray, CT, MR, ultrasound), but a study may have multiple series of different modalities.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

function (optional)
CodeableConcept

actor
Reference

`ImagingStudy_Series -`   **Up**

Representation of the content produced in a DICOM imaging study. A study comprises a set of series, each of which includes a set of Service-Object Pair Instances (SOP Instances - images or other data) acquired or produced in a common context. A series is of only one modality (e.g. X-ray, CT, MR, ultrasound), but a study may have multiple series of different modalities.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.
To make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer can define an extension, there is a set of
requirements that SHALL be met as part of the definition of the extension. Applications processing a
resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

uid (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This
might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these
constraints.) Ids are case-insensitive.

_uid (optional)
Element

_numberOfInstances (optional)
Element

endpoint (optional)
array[Reference] The network service providing access (e.g., query, view, or retrieval) for this series.
See implementation notes for information about using DICOM endpoints. A series-level endpoint, if
present, has precedence over a study-level endpoint with the same Endpoint.connectionType.

bodySite (optional)
Coding

laterality (optional)
Coding

specimen (optional)
array[Reference] The specimen imaged, e.g., for whole slide imaging of a biopsy.

started (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are
specified, a time zone SHALL be populated. The format is a union of the schema types gYear,
gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be
zero-filled and may be ignored. Dates SHALL be valid dates.

_started (optional)
Element

performer (optional)

array[ImagingStudy_Performer] indicates who or what performed the series and how they were involved.

instance (optional)
array[ImagingStudy_Instance] A single SOP instance within the series, e.g. an image, or presentation state.

Immunization -   **Up**

Describes the event of a patient being administered a vaccine or a record of an immunization as reported by a patient, a clinician or another party.

resourceType
oas_any_type_not_mapped This is a Immunization resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)

array[Immunization_Performer] Indicates who performed the immunization event.
note (optional)
array[Annotation] Extra information about the immunization that is not conveyed by the other attributes.
reasonCode (optional)

array[CodeableConcept] Reasons why the vaccine was administered.

reasonReference (optional)

array[Reference] Condition, Observation or DiagnosticReport that supports why the immunization was administered.

isSubpotent (optional)

Boolean Value of "true" or "false"

_isSubpotent (optional)

Element

subpotentReason (optional)

array[CodeableConcept] Reason why a dose is considered to be subpotent.

education (optional)

array[Immunization_Education] Educational material presented to the patient (or guardian) at the time of vaccine administration.

programEligibility (optional)

array[CodeableConcept] Indicates a patient's eligibility for a funding program.

fundingSource (optional)

CodeableConcept

reaction (optional)

array[Immunization_Reaction] Categorical data indicating that an adverse event is associated in time to an immunization.

protocolApplied (optional)

array[Immunization_ProtocolApplied] The protocol (set of recommendations) being followed by the provider who administered the dose.

ImmunizationEvaluation -   **Up**

Describes a comparison of an immunization event against published recommendations to determine if the administration is "valid" in relation to those recommendations.

resourceType

oas_any_type_not_mapped This is a ImmunizationEvaluation resource

id (optional)

seriesDosesString (optional)
String The recommended number of doses to achieve immunity.

_seriesDosesString (optional)
Element

supportingImmunization (optional)
array[Reference] Immunization event history and/or evaluation that supports the status and recommendation.

supportingPatientInformation (optional)
array[Reference] Patient Information that supports the status and recommendation. This includes patient observations, adverse reactions and allergy/intolerance information.

Immunization_Education -   **Up**

Describes the event of a patient being administered a vaccine or a record of an immunization as reported by a patient, a clinician or another party.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

documentType (optional)
String A sequence of Unicode characters

_documentType (optional)
Element

reference (optional)
String String of characters used to identify a name or a resource

_reference (optional)
Element

publicationDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_publicationDate (optional)
Element

presentationDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_presentationDate (optional)
Element

Immunization_Performer -   **Up**

Describes the event of a patient being administered a vaccine or a record of an immunization as reported by a patient, a clinician or another party.

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

function (optional)
CodeableConcept

actor
Reference

Immunization_ProtocolApplied -   Up

Describes the event of a patient being administered a vaccine or a record of an immunization as reported by a patient, a clinician or another party.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

series (optional)
String A sequence of Unicode characters

_series (optional)
Element

authority (optional)
Reference

targetDisease (optional)
array[CodeableConcept] The vaccine preventable disease the dose is being administered against.

doseNumberPositiveInt (optional)
BigDecimal Nominal position in a series.

_doseNumberPositiveInt (optional)
Element

doseNumberString (optional)

String Nominal position in a series.

_doseNumberString (optional)
Element
seriesDosesPositiveInt (optional)
BigDecimal The recommended number of doses to achieve immunity.

_seriesDosesPositiveInt (optional)
Element
seriesDosesString (optional)
String The recommended number of doses to achieve immunity.

_seriesDosesString (optional)
Element

Immunization_Reaction -   Up

Describes the event of a patient being administered a vaccine or a record of an immunization as reported by a patient, a clinician or another party.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

detail (optional)
Reference
reported (optional)
Boolean Value of "true" or "false"

_reported (optional)
Element

ImplementationGuide -   Up

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

resourceType
oas_any_type_not_mapped This is a ImplementationGuide resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

version (optional)
String A sequence of Unicode characters

_version (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

title (optional)
String A sequence of Unicode characters

_title (optional)
Element

status (optional)
String The status of this implementation guide. Enables tracking the life-cycle of the content.

Enum:

draft

active
retired

unknown

_status (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"

_experimental (optional)
Element

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate implementation guide instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the implementation guide is intended to be used.

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

packageId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_packageId (optional)
Element

license (optional)
String The license that applies to this Implementation Guide, using an SPDX license code, or 'not-open-source'.

Enum:

not-open-source
0BSD

AAL

Element

fhirVersion (optional)
array[String] The version(s) of the FHIR specification that this ImplementationGuide targets - e.g. describes how to use. The value of this element is the formal version of the specification, without the revision number, e.g. [publication].[major].[minor], which is 4.0.1. for this version.

   Enum:

_fhirVersion (optional)
array[Element] Extensions for fhirVersion

dependsOn (optional)
array[ImplementationGuide_DependsOn] Another implementation guide that this implementation depends on. Typically, an implementation guide uses value sets, profiles etc.defined in other implementation guides.

global (optional)
array[ImplementationGuide_Global] A set of profiles that all resources covered by this implementation guide must conform to.

definition (optional)
ImplementationGuide_Definition

manifest (optional)
ImplementationGuide_Manifest

`ImplementationGuide_Definition -`   **Up**

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

grouping (optional)
array[ImplementationGuide_Grouping] A logical group of resources. Logical groups can be used when building pages.

resource
array[ImplementationGuide_Resource] A resource that is part of the implementation guide. Conformance resources (value set, structure definition, capability statements etc.) are obvious candidates for inclusion, but any kind of resource can be included as an example resource.

page (optional)
ImplementationGuide_Page

parameter (optional)
array[ImplementationGuide_Parameter] Defines how IG is built by tools.

template (optional)

array[ImplementationGuide_Template] A template for building resources.

ImplementationGuide_DependsOn -

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

uri
String A URI that is a reference to a canonical URL on a FHIR resource
packageId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_packageId (optional)
Element
version (optional)
String A sequence of Unicode characters

_version (optional)
Element

ImplementationGuide_Global -

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of

requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

type (optional)
Element

profile
String A URI that is a reference to a canonical URL on a FHIR resource

ImplementationGuide_Grouping -

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters

name (optional)
Element

description (optional)
String A sequence of Unicode characters

description (optional)
Element

ImplementationGuide_Manifest -

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

rendering (optional)
String A URI that is a literal reference

_rendering (optional)
Element

resource
array[ImplementationGuide_Resource1] A resource that is part of the implementation guide. Conformance resources (value set, structure definition, capability statements etc.) are obvious candidates for inclusion, but any kind of resource can be included as an example resource.

page (optional)
array[ImplementationGuide_Page1] Information about a page within the IG.

image (optional)
array[String] Indicates a relative path to an image that exists within the IG.

_image (optional)
array[Element] Extensions for image

other (optional)
array[String] Indicates the relative path of an additional non-page, non-image file that is part of the IG - e.g. zip, jar and similar files that could be the target of a hyperlink in a derived IG.

_other (optional)
array[Element] Extensions for other

ImplementationGuide_Page -

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

nameUrl (optional)

String The source address for the page.

_nameUrl (optional)
Element

nameReference (optional)
Reference

title (optional)
String A sequence of Unicode characters

_title (optional)
Element

generation (optional)
String A code that indicates how the page is generated.

      Enum:

          html
          markdown

          xml

          generated

_generation (optional)
Element

page (optional)
array[ImplementationGuide_Page] Nested Pages/Sections under this page.

ImplementationGuide_Page1 -   **Up**

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

title (optional)
String A sequence of Unicode characters

_title (optional)
Element

anchor (optional)
array[String] The name of an anchor available on the page.

_anchor (optional)

array[Element] Extensions for anchor

ImplementationGuide_Parameter -

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String apply | path-resource | path-pages | path-tx-cache | expansion-parameter | rule-broken-links | generate-xml | generate-json | generate-turtle | html-template.

> **Enum:**
>> *apply*
>> *path-resource*
>> *path-pages*
>> *path-tx-cache*
>> *expansion-parameter*
>> *rule-broken-links*
>> *generate-xml*
>> *generate-json*
>> *generate-turtle*
>> *html-template*

_code (optional)
Element

value (optional)
String A sequence of Unicode characters

_value (optional)
Element

ImplementationGuide_Resource -

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

reference
Reference

fhirVersion (optional)
array[String] Indicates the FHIR Version(s) this artifact is intended to apply to. If no versions are specified, the resource is assumed to apply to all the versions stated in ImplementationGuide.fhirVersion.
        Enum:
_fhirVersion (optional)
array[Element] Extensions for fhirVersion

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element
exampleBoolean (optional)
Boolean If true or a reference, indicates the resource is an example instance. If a reference is present, indicates that the example is an example of the specified profile.

_exampleBoolean (optional)
Element

exampleCanonical (optional)
String If true or a reference, indicates the resource is an example instance. If a reference is present, indicates that the example is an example of the specified profile.

_exampleCanonical (optional)
Element
groupingId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.
_groupingId (optional)
Element

ImplementationGuide_Resource1 -   **Up**

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

reference
Reference
exampleBoolean (optional)
Boolean If true or a reference, indicates the resource is an example instance. If a reference is present, indicates that the example is an example of the specified profile.
_exampleBoolean (optional)
Element

exampleCanonical (optional)
String If true or a reference, indicates the resource is an example instance. If a reference is present, indicates that the example is an example of the specified profile.

_exampleCanonical (optional)
Element
relativePath (optional)
String A URI that is a literal reference

_relativePath (optional)
Element

`ImplementationGuide_Template -`

A set of rules of how a particular interoperability or standards problem is solved - typically through the use of FHIR resources. This resource is used to gather all the parts of an implementation guide into a logical whole and to publish a computable definition of all the parts.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

source (optional)
String A sequence of Unicode characters

_source (optional)
Element

scope (optional)
String A sequence of Unicode characters

_scope (optional)
Element

InsurancePlan -

Details of a Health Insurance product/plan provided by an organization.

resourceType
oas_any_type_not_mapped This is a InsurancePlan resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifiers assigned to this health insurance product which remain constant as the resource is updated and propagates from server to server.

status (optional)
String The current state of the health insurance product.

> **Enum:**
>> *draft*
>> *active*
>>
>> *retired*
>>
>> *unknown*

_status (optional)
Element

type (optional)
array[CodeableConcept] The kind of health insurance product.

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

alias (optional)
array[String] A list of alternate names that the product is known as, or was known as in the past.

_alias (optional)
array[Element] Extensions for alias

period (optional)
Period

ownedBy (optional)
Reference

administeredBy (optional)
Reference

coverageArea (optional)
array[Reference] The geographic region in which a health insurance product's benefits apply.

contact (optional)
array[InsurancePlan_Contact] The contact for the health insurance product for a certain purpose.

endpoint (optional)
array[Reference] The technical endpoints providing access to services operated for the health insurance product.

network (optional)
array[Reference] Reference to the network included in the health insurance product.

coverage (optional)
array[InsurancePlan_Coverage] Details about the coverage offered by the insurance product.

plan (optional)
array[InsurancePlan_Plan] Details about an insurance plan.

`InsurancePlan_Benefit -`   **Up**

Details of a Health Insurance product/plan provided by an organization.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type
CodeableConcept

requirement (optional)
String A sequence of Unicode characters

_requirement (optional)
Element
limit (optional)
array[InsurancePlan_Limit] The specific limits on the benefit.

InsurancePlan_Benefit1 -

Details of a Health Insurance product/plan provided by an organization.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type
CodeableConcept

cost (optional)
array[InsurancePlan_Cost] List of the costs associated with a specific benefit.

InsurancePlan_Contact -

Details of a Health Insurance product/plan provided by an organization.
id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

purpose (optional)
CodeableConcept

name (optional)
HumanName

telecom (optional)
array[ContactPoint] A contact detail (e.g. a telephone number or an email address) by which the party may be contacted.

address (optional)
Address

InsurancePlan_Cost -

Details of a Health Insurance product/plan provided by an organization.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type
CodeableConcept
applicability (optional)
CodeableConcept

qualifiers (optional)
array[CodeableConcept] Additional information about the cost, such as information about funding sources (e.g. HSA, HRA, FSA, RRA).

value (optional)
Quantity

InsurancePlan_Coverage -

Details of a Health Insurance product/plan provided by an organization.
id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type
CodeableConcept
network (optional)
array[Reference] Reference to the network that providing the type of coverage.

benefit
array[InsurancePlan_Benefit] Specific benefits under this type of coverage.

`InsurancePlan_GeneralCost -`   **Up**

Details of a Health Insurance product/plan provided by an organization.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

category
CodeableConcept

benefit (optional)
array[InsurancePlan_Benefit1] List of the specific benefits under this category of benefit.

`Invoice -`

Invoice containing collected ChargeItems from an Account with calculated individual and total price for Billing purpose.

resourceType
oas_any_type_not_mapped This is a Invoice resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifier of this Invoice, often used for reference in correspondence about this invoice or for tracking of payments.

status (optional)
String The current state of the Invoice.

> **Enum:**
> *draft*
> *issued*
> *balanced*
> *cancelled*
> *entered-in-error*

_status (optional)
Element

cancelledReason (optional)
String A sequence of Unicode characters

_cancelledReason (optional)
Element

type (optional)
CodeableConcept

subject (optional)
Reference

recipient (optional)
Reference

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

participant (optional)
array[Invoice_Participant] Indicates who or what performed or participated in the charged service.

issuer (optional)
Reference

account (optional)
Reference

lineItem (optional)
array[Invoice_LineItem] Each line item represents one charge for goods and services rendered. Details such as date, code and amount are found in the referenced ChargeItem resource.

totalPriceComponent (optional)
array[Invoice_PriceComponent] The total amount for the Invoice may be calculated as the sum of the line items with surcharges/deductions that apply in certain conditions. The priceComponent element can be used to offer transparency to the recipient of the Invoice of how the total price was calculated.

totalNet (optional)
Money

totalGross (optional)
Money

paymentTerms (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_paymentTerms (optional)
Element

note (optional)
array[Annotation] Comments made about the invoice by the issuer, subject, or other participants.

Invoice_LineItem -   **Up**

Invoice containing collected ChargeItems from an Account with calculated individual and total price for Billing purpose.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

sequence (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_sequence (optional)
Element

chargeItemReference (optional)
Reference

chargeItemCodeableConcept (optional)
CodeableConcept

priceComponent (optional)
array[Invoice_PriceComponent] The price for a ChargeItem may be calculated as a base price with surcharges/deductions that apply in certain conditions. A ChargeItemDefinition resource that defines the prices, factors and conditions that apply to a billing code is currently under development. The

priceComponent element can be used to offer transparency to the recipient of the invoice as to how
the prices have been calculated.

Invoice_Participant -

Invoice containing collected ChargeItems from an Account with calculated individual and total price for Billing purpose.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.
To make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer can define an extension, there is a set of
requirements that SHALL be met as part of the definition of the extension. Applications processing a
resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

Element

lastReviewDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.
_lastReviewDate (optional)
Element

effectivePeriod (optional)
Period

topic (optional)
array[CodeableConcept] Descriptive topics related to the content of the library. Topics provide a high-level categorization of the library that can be useful for filtering and searching.

author (optional)
array[ContactDetail] An individiual or organization primarily involved in the creation and maintenance of the content.
editor (optional)
array[ContactDetail] An individual or organization primarily responsible for internal coherence of the content.
reviewer (optional)
array[ContactDetail] An individual or organization primarily responsible for review of some aspect of the content.
endorser (optional)
array[ContactDetail] An individual or organization responsible for officially endorsing the content for use in some setting.

relatedArtifact (optional)

array[RelatedArtifact] Related artifacts such as additional documentation, justification, or bibliographic references.

parameter (optional)

array[ParameterDefinition] The parameter element defines parameters used by the library.

dataRequirement (optional)

array[DataRequirement] Describes a set of data that must be provided in order to be able to successfully perform the computations defined by the library.

content (optional)

array[Attachment] The content of the library as an Attachment. The content may be a reference to a url, or may be directly embedded as a base-64 string. Either way, the contentType of the attachment determines how to interpret the content.

Linkage -

Identifies two or more records (resource instances) that refer to the same real-world "occurrence".

resourceType

oas_any_type_not_mapped This is a Linkage resource

id (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate measure instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the measure is intended to be used.

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

usage (optional)
String A sequence of Unicode characters

_usage (optional)
Element

copyright (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)

Element

approvalDate (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_approvalDate (optional)

Element

lastReviewDate (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_lastReviewDate (optional)

Element

effectivePeriod (optional)

Period

topic (optional)

array[CodeableConcept] Descriptive topics related to the content of the measure. Topics provide a high-level categorization grouping types of measures that can be useful for filtering and searching.

author (optional)

array[ContactDetail] An individiual or organization primarily involved in the creation and maintenance of the content.

editor (optional)

array[ContactDetail] An individual or organization primarily responsible for internal coherence of the content.

reviewer (optional)

array[ContactDetail] An individual or organization primarily responsible for review of some aspect of the content.

endorser (optional)

array[ContactDetail] An individual or organization responsible for officially endorsing the content for use in some setting.

relatedArtifact (optional)

array[RelatedArtifact] Related artifacts such as additional documentation, justification, or bibliographic references.

library (optional)

array[String] A reference to a Library resource containing the formal logic used by the measure.

disclaimer (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_disclaimer (optional)

Element

scoring (optional)

CodeableConcept

compositeScoring (optional)

CodeableConcept

type (optional)

array[CodeableConcept] Indicates whether the measure is used to examine a process, an outcome over time, a patient-reported outcome, or a structure measure such as utilization.

riskAdjustment (optional)

String A sequence of Unicode characters

_riskAdjustment (optional)

Element

rateAggregation (optional)

String A sequence of Unicode characters

_rateAggregation (optional)
Element

rationale (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_rationale (optional)
Element

clinicalRecommendationStatement (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_clinicalRecommendationStatement (optional)
Element

improvementNotation (optional)
CodeableConcept

definition (optional)
array[String] Provides a description of an individual term used within the measure.

_definition (optional)
array[Element] Extensions for definition

guidance (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_guidance (optional)
Element

group (optional)
array[Measure_Group] A group of population criteria for the measure.

supplementalData (optional)
array[Measure_SupplementalData] The supplemental data criteria for the measure report, specified as either the name of a valid CQL expression within a referenced library, or a valid FHIR Resource Path.

MeasureReport -   Up

The MeasureReport resource contains the results of the calculation of a measure; and optionally a reference to the resources involved in that calculation.

resourceType
oas_any_type_not_mapped This is a MeasureReport resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own

independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] A formal identifier that is used to identify this MeasureReport when it is represented in other formats or referenced in a specification, model, design or an instance.

status (optional)
String The MeasureReport status. No data will be available until the MeasureReport status is complete.
Enum:
> *complete*
> *pending*
> *error*

_status (optional)
Element

type (optional)
String The type of measure report. This may be an individual report, which provides the score for the measure for an individual member of the population; a subject-listing, which returns the list of members that meet the various criteria in the measure; a summary report, which returns a population count for each of the criteria in the measure; or a data-collection, which enables the MeasureReport to be used to exchange the data-of-interest for a quality measure.
Enum:
> *individual*
> *subject-list*
> *summary*
> *data-collection*

_type (optional)
Element

measure
String A URI that is a reference to a canonical URL on a FHIR resource

subject (optional)
Reference
date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element
reporter (optional)
Reference

period
Period

improvementNotation (optional)

CodeableConcept

group (optional)
array[MeasureReport_Group] The results of the calculation, one for each population group in the measure.

evaluatedResource (optional)
array[Reference] A reference to a Bundle containing the Resources that were used in the calculation of this measure.

MeasureReport_Component -

The MeasureReport resource contains the results of the calculation of a measure; and optionally a reference to the resources involved in that calculation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code
CodeableConcept

value
CodeableConcept

MeasureReport_Group -

The MeasureReport resource contains the results of the calculation of a measure; and optionally a reference to the resources involved in that calculation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
CodeableConcept

population (optional)
array[MeasureReport_Population] The populations that make up the population group, one for each type of population appropriate for the measure.

measureScore (optional)
Quantity

stratifier (optional)
array[MeasureReport_Stratifier] When a measure includes multiple stratifiers, there will be a stratifier group for each stratifier defined by the measure.

MeasureReport_Population -

The MeasureReport resource contains the results of the calculation of a measure; and optionally a reference to the resources involved in that calculation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
CodeableConcept
count (optional)
BigDecimal A whole number

count (optional)
Element

subjectResults (optional)
Reference

MeasureReport_Population1 -

The MeasureReport resource contains the results of the calculation of a measure; and optionally a reference to the resources involved in that calculation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
CodeableConcept
count (optional)
BigDecimal A whole number

_count (optional)
Element

subjectResults (optional)
Reference

MeasureReport_Stratifier -

The MeasureReport resource contains the results of the calculation of a measure; and optionally a reference to the resources involved in that calculation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
array[CodeableConcept] The meaning of this stratifier, as defined in the measure definition.

stratum (optional)
array[MeasureReport_Stratum] This element contains the results for a single stratum within the stratifier. For example, when stratifying on administrative gender, there will be four strata, one for each possible gender value.

MeasureReport_Stratum -

The MeasureReport resource contains the results of the calculation of a measure; and optionally a reference to the resources involved in that calculation.

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

value (optional)
CodeableConcept

component (optional)
array[MeasureReport_Component] A stratifier component value.

population (optional)
array[MeasureReport_Population1] The populations that make up the stratum, one for each type of population appropriate to the measure.

measureScore (optional)
Quantity

Measure_Component -

The Measure resource provides the definition of a quality measure.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

array[Extension] May be used to represent additional information that is not part of the basic
definition of the resource. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource
and that modifies the understanding of the element that contains it and/or the understanding of the
containing element's descendants. Usually modifier elements provide negation or qualification. To
make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer is allowed to define an extension, there is a
set of requirements that SHALL be met as part of the definition of the extension. Applications
processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifiers associated with this Medication Administration that are defined by business
processes and/or used to refer to it when a direct URL reference to the resource itself is not
appropriate. They are business identifiers assigned to this resource by the performer or other systems
and remain constant as the resource is updated and propagates from server to server.

instantiates (optional)
array[String] A protocol, guideline, orderset, or other definition that was adhered to in whole or in
part by this event.

_instantiates (optional)
array[Element] Extensions for instantiates

partOf (optional)
array[Reference] A larger event of which this particular event is a component or step.

status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents

_status (optional)
Element

statusReason (optional)
array[CodeableConcept] A code indicating why the administration was not performed.

category (optional)
CodeableConcept

medicationCodeableConcept (optional)
CodeableConcept

medicationReference (optional)
Reference

subject
Reference

context (optional)
Reference

supportingInformation (optional)
array[Reference] Additional information (for example, patient height and weight) that supports the
administration of the medication.

effectiveDateTime (optional)
String A specific date/time or interval of time during which the administration took place (or did not
take place, when the 'notGiven' attribute is true). For many administrations, such as swallowing a
tablet the use of dateTime is more appropriate.

_effectiveDateTime (optional)
Element

effectivePeriod (optional)
Period

performer (optional)
array[MedicationAdministration_Performer] Indicates who or what performed the medication administration and how they were involved.

reasonCode (optional)
array[CodeableConcept] A code indicating why the medication was given.

reasonReference (optional)
array[Reference] Condition or observation that supports why the medication was administered.

request (optional)
Reference

device (optional)
array[Reference] The device used in administering the medication to the patient. For example, a particular infusion pump.

note (optional)
array[Annotation] Extra information about the medication administration that is not conveyed by the other attributes.

dosage (optional)
MedicationAdministration_Dosage

eventHistory (optional)
array[Reference] A summary of the events of interest that have occurred, such as when the administration was verified.

`MedicationAdministration_Dosage -`   **Up**

Describes the event of a patient consuming or otherwise being administered a medication. This may be as simple as swallowing a tablet or it may be a long running infusion. Related resources tie this event to the authorizing prescription, and the specific encounter between patient and health care practitioner.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

method (optional)

CodeableConcept

dose (optional)
Quantity
rateRatio (optional)
Ratio

rateQuantity (optional)
Quantity

MedicationAdministration_Performer -   **Up**

Describes the event of a patient consuming or otherwise being administered a medication. This may be as simple as swallowing a tablet or it may be a long running infusion. Related resources tie this event to the authorizing prescription, and the specific encounter between patient and health care practitioner.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

function (optional)
CodeableConcept
actor
Reference

MedicationDispense -   **Up**

Indicates that a medication product is to be or has been dispensed for a named person/patient. This includes a description of the medication product (supply) provided and the instructions for administering the medication. The medication dispense is the result of a pharmacy system responding to a medication order.

resourceType
oas_any_type_not_mapped This is a MedicationDispense resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifiers associated with this Medication Dispense that are defined by business processes and/or used to refer to it when a direct URL reference to the resource itself is not appropriate. They are business identifiers assigned to this resource by the performer or other systems and remain constant as the resource is updated and propagates from server to server.

partOf (optional)
array[Reference] The procedure that trigger the dispense.

status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

whenPrepared (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_whenPrepared (optional)
Element

whenHandedOver (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_whenHandedOver (optional)
Element
destination (optional)
Reference

receiver (optional)
array[Reference] Identifies the person who picked up the medication. This will usually be a patient or their caregiver, but some cases exist where it can be a healthcare professional.

note (optional)
array[Annotation] Extra information about the dispense that could not be conveyed in the other attributes.

dosageInstruction (optional)
array[Dosage] Indicates how the medication is to be used by the patient.
substitution (optional)
MedicationDispense_Substitution

detectedIssue (optional)
array[Reference] Indicates an actual or potential clinical issue with or between one or more active or proposed clinical actions for a patient; e.g. drug-drug interaction, duplicate therapy, dosage alert etc.

eventHistory (optional)
array[Reference] A summary of the events of interest that have occurred, such as when the dispense was verified.

`MedicationDispense_Performer -`   **Up**

Indicates that a medication product is to be or has been dispensed for a named person/patient. This includes a description of the medication product (supply) provided and the instructions for administering the medication. The medication dispense is the result of a pharmacy system responding to a medication order.

id (optional)

CodeableConcept
status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

manufacturer (optional)
Reference
doseForm (optional)
CodeableConcept

amount (optional)
Quantity

synonym (optional)
array[String] Additional names for a medication, for example, the name(s) given to a medication in different countries. For example, acetaminophen and paracetamol or salbutamol and albuterol.
_synonym (optional)
array[Element] Extensions for synonym

relatedMedicationKnowledge (optional)

array[MedicationKnowledge_RelatedMedicationKnowledge] Associated or related knowledge about a medication.

associatedMedication (optional)
array[Reference] Associated or related medications. For example, if the medication is a branded product (e.g. Crestor), this is the Therapeutic Moeity (e.g. Rosuvastatin) or if this is a generic medication (e.g. Rosuvastatin), this would link to a branded product (e.g. Crestor).

productType (optional)
array[CodeableConcept] Category of the medication or product (e.g. branded product, therapeutic moeity, generic product, innovator product, etc.).

monograph (optional)
array[MedicationKnowledge_Monograph] Associated documentation about the medication.

ingredient (optional)
array[MedicationKnowledge_Ingredient] Identifies a particular constituent of interest in the product.

preparationInstruction (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_preparationInstruction (optional)
Element

intendedRoute (optional)
array[CodeableConcept] The intended or approved route of administration.

cost (optional)
array[MedicationKnowledge_Cost] The price of the medication.

monitoringProgram (optional)
array[MedicationKnowledge_MonitoringProgram] The program under which the medication is reviewed.

administrationGuidelines (optional)
array[MedicationKnowledge_AdministrationGuidelines] Guidelines for the administration of the medication.

medicineClassification (optional)
array[MedicationKnowledge_MedicineClassification] Categorization of the medication within a formulary or classification system.

packaging (optional)
MedicationKnowledge_Packaging

drugCharacteristic (optional)
array[MedicationKnowledge_DrugCharacteristic] Specifies descriptive properties of the medicine, such as color, shape, imprints, etc.

contraindication (optional)
array[Reference] Potential clinical issue with or between medication(s) (for example, drug-drug interaction, drug-disease contraindication, drug-allergy interaction, etc.).

regulatory (optional)
array[MedicationKnowledge_Regulatory] Regulatory information about a medication.

kinetics (optional)
array[MedicationKnowledge_Kinetics] The time course of drug absorption, distribution, metabolism and excretion of a medication from the body.

MedicationKnowledge_AdministrationGuidelines -   **Up**

Information about a medication that is used to support knowledge.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

dosage (optional)
array[MedicationKnowledge_Dosage] Dosage for the medication for the specific guidelines.
indicationCodeableConcept (optional)
CodeableConcept

indicationReference (optional)
Reference

patientCharacteristics (optional)
array[MedicationKnowledge_PatientCharacteristics] Characteristics of the patient that are relevant to the administration guidelines (for example, height, weight, gender, etc.).

MedicationKnowledge_Cost -   **Up**

Information about a medication that is used to support knowledge.
id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. CodeableConcept

reason (optional)
CodeableConcept

MedicationStatement -

A record of a medication that is being consumed by a patient. A MedicationStatement may indicate that the patient may be taking the medication now or has taken the medication in the past or will be taking the medication in the future. The source of this information can be the patient, significant other (such as a family member or spouse), or a clinician. A common scenario where this information is captured is during the history taking process during a patient visit or stay. The medication information may come from sources such as the patient's memory, from a prescription bottle, or from a list of medications the patient, clinician or other party maintains.

The primary difference between a medication statement and a medication administration is that the medication administration has complete administration information and is based on actual administration information from the person who administered the medication. A medication statement is often, if not always, less specific. There is no required date/time when the medication was administered, in fact we only know that a source has reported the patient is taking this medication, where details such as time, quantity, or rate or even medication product may be incomplete or missing or less precise. As stated earlier, the medication statement information may come from the patient's memory, from a prescription bottle or from a list of medications the patient, clinician or other party maintains. Medication administration is more formal and is not missing detailed information.

resourceType
oas_any_type_not_mapped This is a MedicationStatement resource
id (optional)

String Any combination of letters, numerals, '-' and '.', with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource
and that modifies the understanding of the element that contains it and/or the understanding of the
containing element's descendants. Usually modifier elements provide negation or qualification. To
make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer is allowed to define an extension, there is a
set of requirements that SHALL be met as part of the definition of the extension. Applications
processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifier for the marketing authorization, as assigned by a regulator.
subject (optional)
Reference

country (optional)
array[CodeableConcept] The country in which the marketing authorization has been granted.

jurisdiction (optional)
array[CodeableConcept] Jurisdiction within a country.

status (optional)
CodeableConcept

statusDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are
specified, a time zone SHALL be populated. The format is a union of the schema types gYear,
gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be
zero-filled and may be ignored. Dates SHALL be valid dates.
_statusDate (optional)
Element

restoreDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are
specified, a time zone SHALL be populated. The format is a union of the schema types gYear,
gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be
zero-filled and may be ignored. Dates SHALL be valid dates.
_restoreDate (optional)

batchIdentifier (optional)
array[MedicinalProductPackaged_BatchIdentifier] Batch numbering.

packageItem
array[MedicinalProductPackaged_PackageItem] A packaging item, as a contained for medicine, possibly with other packaging items within.

`MedicinalProductPackaged_BatchIdentifier -`   **Up**

A medicinal product in a container or package.

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

outerPackaging
Identifier

immediatePackaging (optional)
Identifier

MedicinalProductPackaged_PackageItem -   **Up**

A medicinal product in a container or package.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Including possibly Data Carrier Identifier.

type
CodeableConcept

quantity
Quantity

material (optional)
array[CodeableConcept] Material type of the package item.

alternateMaterial (optional)
array[CodeableConcept] A possible alternate material for the packaging.

device (optional)
array[Reference] A device accompanying a medicinal product.

manufacturedItem (optional)
array[Reference] The manufactured item as contained in the packaged medicinal product.

packageItem (optional)
array[MedicinalProductPackaged_PackageItem] Allows containers within containers.

physicalCharacteristics (optional)
ProdCharacteristic

otherCharacteristics (optional)
array[CodeableConcept] Other codeable characteristics.

shelfLifeStorage (optional)
array[ProductShelfLife] Shelf Life and storage information.

manufacturer (optional)
array[Reference] Manufacturer of this Package Item.

MedicinalProductPharmaceutical -   **Up**

A pharmaceutical product described in terms of its composition and dose form.

resourceType
oas_any_type_not_mapped This is a MedicinalProductPharmaceutical resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] An identifier for the pharmaceutical medicinal product.

administrableDoseForm
CodeableConcept

unitOfPresentation (optional)
CodeableConcept
ingredient (optional)
array[Reference] Ingredient.

device (optional)
array[Reference] Accompanying device.

characteristics (optional)
array[MedicinalProductPharmaceutical_Characteristics] Characteristics e.g. a products onset of action.
routeOfAdministration
array[MedicinalProductPharmaceutical_RouteOfAdministration] The path by which the pharmaceutical product is taken into or makes contact with the body.

MedicinalProductPharmaceutical_Characteristics -   **Up**

A pharmaceutical product described in terms of its composition and dose form.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)

String A sequence of Unicode characters

_publisher (optional)

Element

contact (optional)

array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)

Element

useContext (optional)

array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate message definition instances.

jurisdiction (optional)

array[CodeableConcept] A legal or geographic region in which the message definition is intended to be used.

purpose (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)

Element

copyright (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)

Element

base (optional)

String A URI that is a reference to a canonical URL on a FHIR resource

parent (optional)

array[String] Identifies a protocol or workflow that this MessageDefinition represents a step in.

eventCoding (optional)

Coding

eventUri (optional)

String Event code or link to the EventDefinition.

_eventUri (optional)

Element

category (optional)

String The impact of the content of the message.

Enum:

> *consequence*
> *currency*
> *notification*

_category (optional)

Element

focus (optional)

array[MessageDefinition_Focus] Identifies the resource (or resources) that are being addressed by the event. For example, the Encounter for an admit message or two Account records for a merge.

responseRequired (optional)

String Declare at a message definition level whether a response is required or only upon error or success, or never.

Enum:

> *always*
> *on-error*
> *never*

on-success

_responseRequired (optional)
Element
allowedResponse (optional)
array[MessageDefinition_AllowedResponse] Indicates what types of messages may be sent as an application-level response to this message.

graph (optional)
array[String] Canonical reference to a GraphDefinition. If a URL is provided, it is the canonical reference to a [[[GraphDefinition]]] that it controls what resources are to be added to the bundle when building the document. The GraphDefinition can also specify profiles that apply to the various resources.

MessageDefinition_AllowedResponse -   Up

Defines the characteristics of a message that can be shared between systems, including the type of event that initiates the message, the content to be transmitted and what response(s), if any, are permitted.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

message
String A URI that is a reference to a canonical URL on a FHIR resource

situation (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_situation (optional)
Element

MessageDefinition_Focus -   Up

Defines the characteristics of a message that can be shared between systems, including the type of event that initiates the message, the content to be transmitted and what response(s), if any, are permitted.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_code (optional)
Element

profile (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

min (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)
_min (optional)
Element

max (optional)
String A sequence of Unicode characters
_max (optional)
Element

MessageHeader -   **Up**

The header for a message exchange that is either requesting or responding to an action. The reference(s) that are the subject of the action as well as other information related to the action are typically transmitted in a bundle in which the MessageHeader resource instance is the first resource in the bundle.

resourceType
oas_any_type_not_mapped This is a MessageHeader resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)

Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

eventCoding (optional)
Coding
eventUri (optional)
String Code that identifies the event this message represents and connects it with its definition. Events defined as part of the FHIR specification have the system value "http://terminology.hl7.org/CodeSystem/message-events". Alternatively uri to the EventDefinition.

_eventUri (optional)
Element

destination (optional)
array[MessageHeader_Destination] The destination application which the message is intended for.

sender (optional)
Reference
enterer (optional)
Reference

author (optional)
Reference

source
MessageHeader_Source

responsible (optional)
Reference

reason (optional)
CodeableConcept
response (optional)
MessageHeader_Response

focus (optional)
array[Reference] The actual data of the message - a reference to the root/focus class of the event.

definition (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

MessageHeader_Destination - **Up**

The header for a message exchange that is either requesting or responding to an action. The reference(s) that are the subject of the action as well as other information related to the action are typically transmitted in a bundle in which the MessageHeader resource instance is the first resource in the bundle.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

target (optional)
Reference

endpoint (optional)
String A URI that is a literal reference

_endpoint (optional)
Element

receiver (optional)
Reference

MessageHeader_Response -   **Up**

The header for a message exchange that is either requesting or responding to an action. The reference(s) that are the subject of the action as well as other information related to the action are typically transmitted in a bundle in which the MessageHeader resource instance is the first resource in the bundle.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.
_identifier (optional)
Element
code (optional)
String Code that identifies the type of response to the message - whether it was successful or not, and whether it should be resent or not.

Enum:
ok
transient-error
fatal-error

_code (optional)
Element

details (optional)
Reference

MessageHeader_Source -

The header for a message exchange that is either requesting or responding to an action. The reference(s) that are the subject of the action as well as other information related to the action are typically transmitted in a bundle in which the MessageHeader resource instance is the first resource in the bundle.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

software (optional)
String A sequence of Unicode characters

_software (optional)
Element
version (optional)
String A sequence of Unicode characters

_version (optional)
Element

contact (optional)
ContactPoint

endpoint (optional)
String A URI that is a literal reference

_endpoint (optional)
Element

Meta -

The metadata about a resource. This is content in the resource that is maintained by the infrastructure. Changes to the content might not always be associated with version changes to the resource.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

versionId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_versionId (optional)
Element

lastUpdated (optional)
String An instant in time - known at least to the second

_lastUpdated (optional)
Element

source (optional)
String String of characters used to identify a name or a resource

_source (optional)
Element

profile (optional)
array[String] A list of profiles (references to [[[StructureDefinition]]] resources) that this resource claims to conform to. The URL is a reference to [[[StructureDefinition.url]]].

security (optional)
array[Coding] Security labels applied to this resource. These tags connect specific resources to the overall security policy and infrastructure.

tag (optional)
array[Coding] Tags applied to this resource. Tags are intended to be used to identify and relate resources to process and workflow, and applications are not required to consider the tags when interpreting the meaning of a resource.

MolecularSequence -   [Up](#)

Raw data describing a biological sequence.

resourceType
oas_any_type_not_mapped This is a MolecularSequence resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] A unique identifier for this particular sequence instance. This is a FHIR-defined id.

type (optional)

String Amino Acid Sequence/ DNA Sequence / RNA Sequence.

> **Enum:**
>> *aa*
>> *dna*
>> *rna*

_type (optional)

Element

coordinateSystem (optional)

BigDecimal A whole number

_coordinateSystem (optional)

Element

patient (optional)

Reference

specimen (optional)

Reference

device (optional)

Reference

performer (optional)

Reference

quantity (optional)

Quantity

referenceSeq (optional)

MolecularSequence_ReferenceSeq

variant (optional)

array[MolecularSequence_Variant] The definition of variant here originates from Sequence ontology (**variant_of**). This element can represent amino acid or nucleic sequence change(including insertion,deletion,SNP,etc.) It can represent some complex mutation or segment variation with the assist of CIGAR string.

observedSeq (optional)

String A sequence of Unicode characters

_observedSeq (optional)

Element

quality (optional)

array[MolecularSequence_Quality] An experimental feature attribute that defines the quality of the feature in a quantitative way, such as a phred quality score (SO:0001686).

readCoverage (optional)
BigDecimal A whole number
_readCoverage (optional)
Element

repository (optional)
array[MolecularSequence_Repository] Configurations of the external repository. The repository shall store target's observedSeq or records related with target's observedSeq.

pointer (optional)
array[Reference] Pointer to next atomic sequence which at most contains one variant.

structureVariant (optional)
array[MolecularSequence_StructureVariant] Information about chromosome structure variation.

MolecularSequence_Inner -   Up

Raw data describing a biological sequence.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

start (optional)
BigDecimal A whole number
_start (optional)
Element

end (optional)
BigDecimal A whole number

_end (optional)
Element

MolecularSequence_Outer -   Up

Raw data describing a biological sequence.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

start (optional)
BigDecimal A whole number
_start (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

score (optional)

array[BigDecimal] Invidual data point representing the GQ (genotype quality) score threshold.

_score (optional)

array[Element] Extensions for score

numTP (optional)

array[BigDecimal] The number of true positives if the GQ score threshold was set to "score" field value.

_numTP (optional)

array[Element] Extensions for numTP

numFP (optional)

array[BigDecimal] The number of false positives if the GQ score threshold was set to "score" field value.

_numFP (optional)

array[Element] Extensions for numFP

numFN (optional)

array[BigDecimal] The number of false negatives if the GQ score threshold was set to "score" field value.

_numFN (optional)

array[Element] Extensions for numFN

precision (optional)

array[BigDecimal] Calculated precision if the GQ score threshold was set to "score" field value.

_precision (optional)

array[Element] Extensions for precision

sensitivity (optional)

array[BigDecimal] Calculated sensitivity if the GQ score threshold was set to "score" field value.

_sensitivity (optional)

array[Element] Extensions for sensitivity

fMeasure (optional)

array[BigDecimal] Calculated fScore if the GQ score threshold was set to "score" field value.

_fMeasure (optional)

array[Element] Extensions for fMeasure

`MolecularSequence_StructureVariant -`   **Up**

Raw data describing a biological sequence.

id (optional)

Reference

Money -

An amount of economic utility in some recognized currency.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

value (optional)
BigDecimal A rational number with implicit precision
_value (optional)
Element

currency (optional)
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents

_currency (optional)
Element

NamingSystem -

A curated namespace that issues unique symbols within that namespace for the identification of concepts, people,
devices, etc. Represents a "System" used within the Identifier and Coding data types.
resourceType
oas_any_type_not_mapped This is a NamingSystem resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This
might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these
constraints.) Ids are case-insensitive.
meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)

String A sequence of Unicode characters

_name (optional)

Element

status (optional)

String The status of this naming system. Enables tracking the life-cycle of the content.

> **Enum:**
> *draft*
> *active*
> *retired*
> *unknown*

_status (optional)

Element

kind (optional)

String Indicates the purpose for the naming system - what kinds of things does it make unique?

> **Enum:**
> *codesystem*
> *identifier*
> *root*

_kind (optional)

Element

date (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)

Element

publisher (optional)

String A sequence of Unicode characters

_publisher (optional)

Element

contact (optional)

array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

responsible (optional)

String A sequence of Unicode characters

_responsible (optional)
Element

type (optional)
CodeableConcept

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate naming system instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the naming system is intended to be used.

usage (optional)
String A sequence of Unicode characters

_usage (optional)
Element

uniqueId
array[NamingSystem_UniqueId] Indicates how the system may be identified when referenced in electronic exchange.

`NamingSystem_UniqueId -`   Up

A curated namespace that issues unique symbols within that namespace for the identification of concepts, people, devices, etc. Represents a "System" used within the Identifier and Coding data types.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
String Identifies the unique identifier scheme used for this particular identifier.
> **Enum:**
> *oid*
> *uuid*
> *uri*
> *other*

_type (optional)
Element

value (optional)
String A sequence of Unicode characters

_value (optional)
Element

preferred (optional)
Boolean Value of "true" or "false"

_preferred (optional)
Element

comment (optional)
String A sequence of Unicode characters
_comment (optional)
Element

period (optional)
Period

Narrative -

A human-readable summary of the resource conveying the essential clinical and business information for the resource.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

status (optional)
String The status of the narrative - whether it's entirely generated (from just the defined data or the extensions too), or whether a human authored it and it may contain additional data.
Enum:
> *generated*
> *extensions*
> *additional*
> *empty*

_status (optional)
Element
div
oas_any_type_not_mapped xhtml - escaped html (see specfication)

NutritionOrder -

A request to supply a diet, formula feeding (enteral) or oral nutritional supplement to a patient/resident.

resourceType
oas_any_type_not_mapped This is a NutritionOrder resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element
language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifiers assigned to this order by the order sender or by the order receiver.

instantiatesCanonical (optional)
array[String] The URL pointing to a FHIR-defined protocol, guideline, orderset or other definition that is adhered to in whole or in part by this NutritionOrder.

instantiatesUri (optional)
array[String] The URL pointing to an externally maintained protocol, guideline, orderset or other definition that is adhered to in whole or in part by this NutritionOrder.

_instantiatesUri (optional)
array[Element] Extensions for instantiatesUri

instantiates (optional)
array[String] The URL pointing to a protocol, guideline, orderset or other definition that is adhered to in whole or in part by this NutritionOrder.

_instantiates (optional)
array[Element] Extensions for instantiates

status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

intent (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_intent (optional)
Element

patient
Reference

encounter (optional)
Reference

dateTime (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_dateTime (optional)
Element

orderer (optional)
Reference

allergyIntolerance (optional)
array[Reference] A link to a record of allergies or intolerances which should be included in the nutrition order.

foodPreferenceModifier (optional)
array[CodeableConcept] This modifier is used to convey order-specific modifiers about the type of food that should be given. These can be derived from patient allergies, intolerances, or preferences such as Halal, Vegan or Kosher. This modifier applies to the entire nutrition order inclusive of the oral diet, nutritional supplements and enteral formula feedings.

excludeFoodModifier (optional)
array[CodeableConcept] This modifier is used to convey Order-specific modifier about the type of oral food or oral fluids that should not be given. These can be derived from patient allergies, intolerances, or preferences such as No Red Meat, No Soy or No Wheat or Gluten-Free. While it should not be necessary to repeat allergy or intolerance information captured in the referenced AllergyIntolerance resource in the excludeFoodModifier, this element may be used to convey additional specificity related to foods that should be eliminated from the patient's diet for any reason. This modifier applies to the entire nutrition order inclusive of the oral diet, nutritional supplements and enteral formula feedings.

oralDiet (optional)
NutritionOrder_OralDiet

supplement (optional)
array[NutritionOrder_Supplement] Oral nutritional products given in order to add further nutritional value to the patient's diet.

enteralFormula (optional)
NutritionOrder_EnteralFormula

note (optional)
array[Annotation] Comments made about the {{title}} by the requester, performer, subject or other participants.

NutritionOrder_Administration -   **Up**

A request to supply a diet, formula feeding (enteral) or oral nutritional supplement to a patient/resident.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

schedule (optional)
Timing

quantity (optional)
Quantity

rateQuantity (optional)
Quantity

rateRatio (optional)
Ratio

NutritionOrder_EnteralFormula -   **Up**

A request to supply a diet, formula feeding (enteral) or oral nutritional supplement to a patient/resident.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

baseFormulaType (optional)
CodeableConcept

baseFormulaProductName (optional)
String A sequence of Unicode characters
_baseFormulaProductName (optional)
Element

additiveType (optional)
CodeableConcept

additiveProductName (optional)
String A sequence of Unicode characters
_additiveProductName (optional)
Element

caloricDensity (optional)
Quantity

routeofAdministration (optional)
CodeableConcept

administration (optional)
array[NutritionOrder_Administration] Formula administration instructions as structured data. This repeating structure allows for changing the administration rate or volume over time for both bolus and continuous feeding. An example of this would be an instruction to increase the rate of continuous feeding every 2 hours.

maxVolumeToDeliver (optional)
Quantity
administrationInstruction (optional)

String A sequence of Unicode characters

_administrationInstruction (optional)
Element

NutritionOrder_Nutrient -

A request to supply a diet, formula feeding (enteral) or oral nutritional supplement to a patient/resident.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

modifier (optional)
CodeableConcept
amount (optional)
Quantity

NutritionOrder_OralDiet -

A request to supply a diet, formula feeding (enteral) or oral nutritional supplement to a patient/resident.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
array[CodeableConcept] The kind of diet or dietary restriction such as fiber restricted diet or diabetic diet.

schedule (optional)

array[Timing] The time period and frequency at which the diet should be given. The diet should be given for the combination of all schedules if more than one schedule is present.

nutrient (optional)
array[NutritionOrder_Nutrient] Class that defines the quantity and type of nutrient modifications (for example carbohydrate, fiber or sodium) required for the oral diet.

texture (optional)
array[NutritionOrder_Texture] Class that describes any texture modifications required for the patient to safely consume various types of solid foods.

fluidConsistencyType (optional)
array[CodeableConcept] The required consistency (e.g. honey-thick, nectar-thick, thin, thickened.) of liquids or fluids served to the patient.

instruction (optional)
String A sequence of Unicode characters

_instruction (optional)
Element

NutritionOrder_Supplement -

A request to supply a diet, formula feeding (enteral) or oral nutritional supplement to a patient/resident.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
CodeableConcept

productName (optional)
String A sequence of Unicode characters

_productName (optional)
Element

schedule (optional)
array[Timing] The time period and frequency at which the supplement(s) should be given. The supplement should be given for the combination of all schedules if more than one schedule is present.

quantity (optional)
Quantity

instruction (optional)
String A sequence of Unicode characters

_instruction (optional)
Element

NutritionOrder_Texture -

A request to supply a diet, formula feeding (enteral) or oral nutritional supplement to a patient/resident.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

modifier (optional)
CodeableConcept

foodType (optional)
CodeableConcept

Observation -

Measurements and simple assertions made about a patient, device or other subject.

resourceType
oas_any_type_not_mapped This is a Observation resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] A unique identifier assigned to this observation.

basedOn (optional)

array[Reference] A plan, proposal or order that is fulfilled in whole or in part by this event. For example, a MedicationRequest may require a patient to have laboratory test performed before it is dispensed.

partOf (optional)

array[Reference] A larger event of which this particular Observation is a component or step. For example, an observation as part of a procedure.

status (optional)

String The status of the result value.
Enum:

> *registered*
>
> *preliminary*
> *final*
>
> *amended*
>
> *corrected*
>
> *cancelled*
> *entered-in-error*
>
> *unknown*

status (optional)

Element

category (optional)

array[CodeableConcept] A code that classifies the general type of observation being made.

code

CodeableConcept

subject (optional)

Reference

focus (optional)

array[Reference] The actual focus of an observation when it is not the patient of record representing something or someone associated with the patient such as a spouse, parent, fetus, or donor. For example, fetus observations in a mother's record. The focus of an observation could also be an existing condition, an intervention, the subject's diet, another observation of the subject, or a body structure such as tumor or implanted device. An example use case would be using the Observation resource to capture whether the mother is trained to change her child's tracheostomy tube. In this example, the child is the patient of record and the mother is the focus.

encounter (optional)

Reference

effectiveDateTime (optional)

String The time or time-period the observed value is asserted as being true. For biological subjects - e.g. human patients - this is usually called the "physiologically relevant time". This is usually either the time of the procedure or of specimen collection, but very often the source of the date/time is not known, only the date/time itself.

effectiveDateTime (optional)

Element

effectivePeriod (optional)

Period

effectiveTiming (optional)

Timing

effectiveInstant (optional)

String The time or time-period the observed value is asserted as being true. For biological subjects - e.g. human patients - this is usually called the "physiologically relevant time". This is usually either the time of the procedure or of specimen collection, but very often the source of the date/time is not known, only the date/time itself.

_effectiveInstant (optional)

Element

issued (optional)

String An instant in time - known at least to the second

_issued (optional)

Element

performer (optional)

array[Reference] Who was responsible for asserting the observed value as "true".

valueQuantity (optional)

Quantity

valueCodeableConcept (optional)

CodeableConcept

valueString (optional)

String The information determined as a result of making the observation, if the information has a simple value.

_valueString (optional)

Element

valueBoolean (optional)

Boolean The information determined as a result of making the observation, if the information has a simple value.

_valueBoolean (optional)

Element

valueInteger (optional)

BigDecimal The information determined as a result of making the observation, if the information has a simple value.

_valueInteger (optional)

Element

valueRange (optional)

Range

valueRatio (optional)

Ratio

valueSampledData (optional)

SampledData

valueTime (optional)

String The information determined as a result of making the observation, if the information has a simple value.

_valueTime (optional)

Element

valueDateTime (optional)

String The information determined as a result of making the observation, if the information has a simple value.

_valueDateTime (optional)

Element

valuePeriod (optional)

Period

dataAbsentReason (optional)

CodeableConcept

interpretation (optional)
array[CodeableConcept] A categorical assessment of an observation value. For example, high, low, normal.
note (optional)
array[Annotation] Comments about the observation or the results.

bodySite (optional)
CodeableConcept
method (optional)
CodeableConcept

specimen (optional)
Reference

device (optional)
Reference
referenceRange (optional)
array[Observation_ReferenceRange] Guidance on how to interpret the value by comparison to a normal or recommended range. Multiple reference ranges are interpreted as an "OR". In other words, to represent two distinct target populations, two referenceRange elements would be used.
hasMember (optional)
array[Reference] This observation is a group observation (e.g. a battery, a panel of tests, a set of vital sign measurements) that includes the target as a member of the group.
derivedFrom (optional)
array[Reference] The target resource that represents a measurement from which this observation value is derived. For example, a calculated anion gap or a fetal measurement based on an ultrasound image.
component (optional)
array[Observation_Component] Some observations have multiple component observations. These component observations are expressed as separate code value pairs that share the same attributes. Examples include systolic and diastolic component observations for blood pressure measurement and multiple component observations for genetics observations.

ObservationDefinition -

Set of definitional characteristics for a kind of observation or measurement produced or consumed by an orderable health care service.

resourceType
oas_any_type_not_mapped This is a ObservationDefinition resource
id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta
implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the resource. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource
and that modifies the understanding of the element that contains it and/or the understanding of the
containing element's descendants. Usually modifier elements provide negation or qualification. To
make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer is allowed to define an extension, there is a
set of requirements that SHALL be met as part of the definition of the extension. Applications
processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

category (optional)
array[CodeableConcept] A code that classifies the general type of observation.

code
CodeableConcept

identifier (optional)
array[Identifier] A unique identifier assigned to this ObservationDefinition artifact.

permittedDataType (optional)
array[String] The data types allowed for the value element of the instance observations conforming to
this ObservationDefinition.
    Enum:

permittedDataType (optional)
array[Element] Extensions for permittedDataType

multipleResultsAllowed (optional)
Boolean Value of "true" or "false"

_multipleResultsAllowed (optional)
Element

method (optional)
CodeableConcept

preferredReportName (optional)
String A sequence of Unicode characters

_preferredReportName (optional)
Element

quantitativeDetails (optional)
ObservationDefinition_QuantitativeDetails

qualifiedInterval (optional)
array[ObservationDefinition_QualifiedInterval] Multiple ranges of results qualified by different
contexts for ordinal or continuous observations conforming to this ObservationDefinition.

validCodedValueSet (optional)
Reference

normalCodedValueSet (optional)
Reference

abnormalCodedValueSet (optional)
Reference

criticalCodedValueSet (optional)
Reference

`ObservationDefinition_QualifiedInterval -`   **Up**

Set of definitional characteristics for a kind of observation or measurement produced or consumed by an orderable health care service.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

category (optional)
String The category of interval of values for continuous or ordinal observations conforming to this ObservationDefinition.
  Enum:
    reference
    critical
    absolute

_category (optional)
Element

range (optional)
Range

context (optional)
CodeableConcept

appliesTo (optional)
array[CodeableConcept] Codes to indicate the target population this reference range applies to.

gender (optional)
String Sex of the population the range applies to.
  Enum:
    male
    female
    other
    unknown

_gender (optional)
Element

age (optional)
Range

gestationalAge (optional)
Range

condition (optional)
String A sequence of Unicode characters

_condition (optional)
Element

`ObservationDefinition_QuantitativeDetails -`   **Up**

Set of definitional characteristics for a kind of observation or measurement produced or consumed by an orderable health care service.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

customaryUnit (optional)
CodeableConcept

unit (optional)
CodeableConcept

conversionFactor (optional)
BigDecimal A rational number with implicit precision

_conversionFactor (optional)
Element

decimalPrecision (optional)
BigDecimal A whole number

_decimalPrecision (optional)
Element

`Observation_Component -`

Measurements and simple assertions made about a patient, device or other subject.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code
CodeableConcept

valueQuantity (optional)
Quantity

valueCodeableConcept (optional)
CodeableConcept

valueString (optional)
String The information determined as a result of making the observation, if the information has a simple value.

_valueString (optional)
Element

valueBoolean (optional)
Boolean The information determined as a result of making the observation, if the information has a simple value.

_valueBoolean (optional)
Element

valueInteger (optional)
BigDecimal The information determined as a result of making the observation, if the information has a simple value.

_valueInteger (optional)
Element

valueRange (optional)
Range

valueRatio (optional)
Ratio

valueSampledData (optional)
SampledData

valueTime (optional)
String The information determined as a result of making the observation, if the information has a simple value.

_valueTime (optional)
Element

valueDateTime (optional)
String The information determined as a result of making the observation, if the information has a simple value.

_valueDateTime (optional)
Element

valuePeriod (optional)
Period

dataAbsentReason (optional)
CodeableConcept

interpretation (optional)
array[CodeableConcept] A categorical assessment of an observation value. For example, high, low, normal.

referenceRange (optional)
array[Observation_ReferenceRange] Guidance on how to interpret the value by comparison to a normal or recommended range.

Observation_ReferenceRange -   **Up**

Measurements and simple assertions made about a patient, device or other subject.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

low (optional)
Quantity
high (optional)
Quantity

type (optional)
CodeableConcept

appliesTo (optional)
array[CodeableConcept] Codes to indicate the target population this reference range applies to. For example, a reference range may be based on the normal population or a particular sex or race. Multiple appliesTo are interpreted as an "AND" of the target populations. For example, to represent a target population of African American females, both a code of female and a code for African American would be used.

age (optional)
Range

text (optional)
String A sequence of Unicode characters
_text (optional)
Element

OperationDefinition -

A formal computable definition of an operation (on the RESTful interface) or a named query (using the search interaction).

resourceType
oas_any_type_not_mapped This is a OperationDefinition resource
id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element
language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative
contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

version (optional)
String A sequence of Unicode characters

_version (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

title (optional)
String A sequence of Unicode characters

_title (optional)
Element

status (optional)
String The status of this operation definition. Enables tracking the life-cycle of the content.

> **Enum:**
> *draft*
> *active*
> *retired*
> *unknown*

_status (optional)
Element

kind (optional)
String Whether this is an operation or a named query.

> **Enum:**
> *operation*
> *query*

_kind (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"

_experimental (optional)
Element

date (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate operation definition instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the operation definition is intended to be used.

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

affectsState (optional)
Boolean Value of "true" or "false"

_affectsState (optional)
Element

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

comment (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_comment (optional)
Element

base (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

resource (optional)
array[String] The types on which this operation can be executed.

_resource (optional)
array[Element] Extensions for resource

system (optional)
Boolean Value of "true" or "false"

_system (optional)
Element

type (optional)

Boolean value of "true" or "false"

_type (optional)
Element
instance (optional)
Boolean Value of "true" or "false"

_instance (optional)
Element
inputProfile (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

outputProfile (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

parameter (optional)
array[OperationDefinition_Parameter] The parameters for the operation/query.
overload (optional)
array[OperationDefinition_Overload] Defines an appropriate combination of parameters to use when invoking this operation, to help code generators when generating overloaded parameter sets for this operation.

OperationDefinition_Binding -

A formal computable definition of an operation (on the RESTful interface) or a named query (using the search interaction).

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

strength (optional)
String Indicates the degree of conformance expectations associated with this binding - that is, the degree to which the provided value set must be adhered to in the instances.
> **Enum:**
> *required*
> *extensible*
> *preferred*
> *example*

_strength (optional)
Element

valueSet
String A URI that is a reference to a canonical URL on a FHIR resource

OperationDefinition_Overload -

A formal computable definition of an operation (on the RESTful interface) or a named query (using the search interaction).
id (optional)

String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

parameterName (optional)
array[String] Name of parameter to include in overload.
_parameterName (optional)
array[Element] Extensions for parameterName

comment (optional)
String A sequence of Unicode characters

_comment (optional)
Element

OperationDefinition_Parameter -   [Up](#)

A formal computable definition of an operation (on the RESTful interface) or a named query (using the search interaction).

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_name (optional)
Element
use (optional)
String Whether this is an input or an output parameter.
        Enum:

in
out

_use (optional)
Element

min (optional)
BigDecimal A whole number

_min (optional)
Element

max (optional)
String A sequence of Unicode characters
_max (optional)
Element

documentation (optional)
String A sequence of Unicode characters

_documentation (optional)
Element

type (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_type (optional)
Element

targetProfile (optional)
array[String] Used when the type is "Reference" or "canonical", and identifies a profile structure or implementation Guide that applies to the target of the reference this parameter refers to. If any profiles are specified, then the content must conform to at least one of them. The URL can be a local reference - to a contained StructureDefinition, or a reference to another StructureDefinition or Implementation Guide by a canonical URL. When an implementation guide is specified, the target resource SHALL conform to at least one profile defined in the implementation guide.

searchType (optional)
String How the parameter is understood as a search parameter. This is only used if the parameter type is string.
    Enum:
      number
      date
      string
      token
      reference
      composite
      quantity
      uri
      special

_searchType (optional)
Element
binding (optional)
OperationDefinition_Binding

referencedFrom (optional)
array[OperationDefinition_ReferencedFrom] Identifies other resource parameters within the operation invocation that are expected to resolve to this resource.

part (optional)
array[OperationDefinition_Parameter] The parts of a nested Parameter.

OperationDefinition_ReferencedFrom -   **Up**

A formal computable definition of an operation (on the RESTful interface) or a named query (using the search interaction).

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

source (optional)
String A sequence of Unicode characters

_source (optional)
Element

sourceId (optional)
String A sequence of Unicode characters

_sourceId (optional)
Element

OperationOutcome -   **[Up](#)**

A collection of error, warning, or information messages that result from a system action.

resourceType
oas_any_type_not_mapped This is a OperationOutcome resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

issue
array[OperationOutcome_Issue] An error, warning, or information message that results from a system action.

OperationOutcome_Issue -   **Up**

A collection of error, warning, or information messages that result from a system action.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

severity (optional)
String Indicates whether the issue indicates a variation from successful processing.
Enum:
> *fatal*
> *error*
> *warning*
> *information*

_severity (optional)
Element
code (optional)
String Describes the type of the issue. The system that creates an OperationOutcome SHALL choose the most applicable code from the IssueType value set, and may additional provide its own code for the error in the details element.
Enum:
> *invalid*
> *structure*
> *required*
> *value*
> *invariant*
> *security*
> *login*

diagnostics (optional)
String A sequence of Unicode characters

_diagnostics (optional)
Element

location (optional)
array[String]

This element is deprecated because it is XML specific. It is replaced by issue.expression, which is format independent, and simpler to parse.

For resource issues, this will be a simple XPath limited to element names, repetition indicators and the default child accessor that identifies one of the elements in the resource that caused this issue to be raised. For HTTP errors, will be "http." + the parameter name.

_location (optional)
array[Element] Extensions for location

expression (optional)
array[String] A simple subset of FHIRPath limited to element names, repetition indicators and the default child accessor that identifies one of the elements in the resource that caused this issue to be raised.

_expression (optional)
array[Element] Extensions for expression

```
Organization -                                                          Up
```

A formally or informally recognized grouping of people or organizations formed for the purpose of achieving some form of collective action. Includes companies, institutions, corporations, departments, community groups, healthcare practice groups, payer/insurer, etc.

resourceType
oas_any_type_not_mapped This is a Organization resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifier for the organization that is used to identify the organization across multiple disparate systems.

active (optional)
Boolean Value of "true" or "false"
_active (optional)
Element

type (optional)
array[CodeableConcept] The kind(s) of organization that this is.
name (optional)
String A sequence of Unicode characters

_name (optional)
Element

alias (optional)
array[String] A list of alternate names that the organization is known as, or was known as in the past.
_alias (optional)
array[Element] Extensions for alias

telecom (optional)
array[ContactPoint] A contact detail for the organization.
address (optional)
array[Address] An address for the organization.

partOf (optional)
Reference

contact (optional)
array[Organization_Contact] Contact for the organization for a certain purpose.
endpoint (optional)
array[Reference] Technical endpoints providing access to services operated for the organization.

OrganizationAffiliation -   **Up**

Defines an affiliation/assotiation/relationship between 2 distinct oganizations, that is not a part-of relationship/sub-division relationship.

resourceType
oas_any_type_not_mapped This is a OrganizationAffiliation resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element
text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifiers that are specific to this role.

active (optional)
Boolean Value of "true" or "false"

_active (optional)

Element

period (optional)
Period
organization (optional)
Reference

participatingOrganization (optional)
Reference
network (optional)
array[Reference] Health insurance provider network in which the participatingOrganization provides the role's services (if defined) at the indicated locations (if defined).
code (optional)
array[CodeableConcept] Definition of the role the participatingOrganization plays in the association.

specialty (optional)
array[CodeableConcept] Specific specialty of the participatingOrganization in the context of the role.

location (optional)
array[Reference] The location(s) at which the role occurs.

healthcareService (optional)
array[Reference] Healthcare services provided through the role.

telecom (optional)
array[ContactPoint] Contact details at the participatingOrganization relevant to this Affiliation.
endpoint (optional)
array[Reference] Technical endpoints providing access to services operated for this role.

Organization_Contact -   **Up**

A formally or informally recognized grouping of people or organizations formed for the purpose of achieving some form of collective action. Includes companies, institutions, corporations, departments, community groups, healthcare practice groups, payer/insurer, etc.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

purpose (optional)
CodeableConcept

name (optional)
HumanName
telecom (optional)
array[ContactPoint] A contact detail (e.g. a telephone number or an email address) by which the party may be contacted.
address (optional)

Address

ParameterDefinition -   **Up**

The parameters to the module. This collection specifies both the input and output parameters. Input parameters are provided by the caller as part of the $evaluate operation. Output parameters are included in the GuidanceResponse.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

name (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_name (optional)
Element
use (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_use (optional)
Element

min (optional)
BigDecimal A whole number
_min (optional)
Element

max (optional)
String A sequence of Unicode characters

_max (optional)
Element

documentation (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_type (optional)
Element

profile (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

Parameters -   **Up**

This resource is a non-persisted resource used to pass information into and back from an [operation](). It has no other use, and there is no RESTful endpoint associated with it.
resourceType
oas_any_type_not_mapped This is a Parameters resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.
meta (optional)
Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

parameter (optional)
array[Parameters_Parameter] A parameter passed to or received from the operation.

Parameters_Parameter -

This resource is a non-persisted resource used to pass information into and back from an operation. It has no other use, and there is no RESTful endpoint associated with it.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

valueBase64Binary (optional)
String If the parameter is a data type.

_valueBase64Binary (optional)
Element

valueBoolean (optional)
Boolean If the parameter is a data type.

_valueBoolean (optional)
Element

valueCanonical (optional)
String If the parameter is a data type.

_valueCanonical (optional)
Element

valueCode (optional)
String If the parameter is a data type.

_valueCode (optional)
Element

valueDate (optional)

String If the parameter is a data type.

_valueDate (optional)

Element

valueDateTime (optional)

String If the parameter is a data type.

_valueDateTime (optional)

Element

valueDecimal (optional)

BigDecimal If the parameter is a data type.

_valueDecimal (optional)

Element

valueId (optional)

String If the parameter is a data type.

_valueId (optional)

Element

valueInstant (optional)

String If the parameter is a data type.

_valueInstant (optional)

Element

valueInteger (optional)

BigDecimal If the parameter is a data type.

_valueInteger (optional)

Element

valueMarkdown (optional)

String If the parameter is a data type.

_valueMarkdown (optional)

Element

valueOid (optional)

String If the parameter is a data type.

_valueOid (optional)

Element

valuePositiveInt (optional)

BigDecimal If the parameter is a data type.

_valuePositiveInt (optional)

Element

valueString (optional)

String If the parameter is a data type.

_valueString (optional)

Element

valueTime (optional)

String If the parameter is a data type.

_valueTime (optional)

Element

valueUnsignedInt (optional)

BigDecimal If the parameter is a data type.

_valueUnsignedInt (optional)

Element

valueUri (optional)

String If the parameter is a data type.

_valueUri (optional)

Element

valueUrl (optional)

String If the parameter is a data type.

valueUrl (optional)

Element

valueUuid (optional)

String If the parameter is a data type.

valueUuid (optional)

Element

valueAddress (optional)

Address

valueAge (optional)

Age

valueAnnotation (optional)

Annotation

valueAttachment (optional)

Attachment

valueCodeableConcept (optional)

CodeableConcept

valueCoding (optional)

Coding

valueContactPoint (optional)

ContactPoint

valueCount (optional)

Count

valueDistance (optional)

Distance

valueDuration (optional)

Duration

valueHumanName (optional)

HumanName

valueIdentifier (optional)

Identifier

valueMoney (optional)

Money

valuePeriod (optional)

Period

valueQuantity (optional)

Quantity

valueRange (optional)

Range

valueRatio (optional)

Ratio

valueReference (optional)

Reference

valueSampledData (optional)

SampledData

valueSignature (optional)

Signature

valueTiming (optional)

Timing

valueContactDetail (optional)

ContactDetail

valueContributor (optional)
Contributor

valueDataRequirement (optional)
DataRequirement

valueExpression (optional)
Expression

valueParameterDefinition (optional)
ParameterDefinition

valueRelatedArtifact (optional)
RelatedArtifact

valueTriggerDefinition (optional)
TriggerDefinition

valueUsageContext (optional)
UsageContext

valueDosage (optional)
Dosage

valueMeta (optional)
Meta

resource (optional)
ResourceList

part (optional)
array[Parameters_Parameter] A named part of a multi-part parameter.

Patient -   **Up**

Demographics and other administrative information about an individual or animal receiving care or other health-related
services.

resourceType
oas_any_type_not_mapped This is a Patient resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This
might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these
constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource
that contains them - they cannot be identified independently, and nor can they have their own
independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the resource. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] An identifier for this patient.

active (optional)
Boolean Value of "true" or "false"
_active (optional)
Element

name (optional)
array[HumanName] A name associated with the individual.

telecom (optional)
array[ContactPoint] A contact detail (e.g. a telephone number or an email address) by which the individual may be contacted.
gender (optional)
String Administrative Gender - the gender that the patient is considered to have for administration and record keeping purposes.
> **Enum:**
> *male*
> *female*
> *other*
> *unknown*

_gender (optional)
Element
birthDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.
_birthDate (optional)
Element

deceasedBoolean (optional)
Boolean Indicates if the individual is deceased or not.

_deceasedBoolean (optional)
Element

deceasedDateTime (optional)
String Indicates if the individual is deceased or not.

_deceasedDateTime (optional)
Element
address (optional)
array[Address] An address for the individual.

maritalStatus (optional)
CodeableConcept

multipleBirthBoolean (optional)
Boolean Indicates whether the patient is part of a multiple (boolean) or indicates the actual birth order (integer).
_multipleBirthBoolean (optional)
Element

multipleBirthInteger (optional)

BigDecimal Indicates whether the patient is part of a multiple (boolean) or indicates the actual birth order (integer).

_multipleBirthInteger (optional)
Element

photo (optional)
array[Attachment] Image of the patient.

contact (optional)
array[Patient_Contact] A contact party (e.g. guardian, partner, friend) for the patient.

communication (optional)
array[Patient_Communication] A language which may be used to communicate with the patient about his or her health.

generalPractitioner (optional)
array[Reference] Patient's nominated care provider.

managingOrganization (optional)
Reference

link (optional)
array[Patient_Link] Link to another patient resource that concerns the same actual patient.

Patient_Communication -

Demographics and other administrative information about an individual or animal receiving care or other health-related services.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

language
CodeableConcept

preferred (optional)
Boolean Value of "true" or "false"

_preferred (optional)
Element

Patient_Contact -

Demographics and other administrative information about an individual or animal receiving care or other health-related services.

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

relationship (optional)
array[CodeableConcept] The nature of the relationship between the patient and the contact person.

name (optional)
HumanName

telecom (optional)
array[ContactPoint] A contact detail for the person, e.g. a telephone number or an email address.

address (optional)
Address

gender (optional)
String Administrative Gender - the gender that the contact person is considered to have for administration and record keeping purposes.

   Enum:
      male
      female
      other
      unknown

_gender (optional)
Element

organization (optional)
Reference
period (optional)
Period

Patient_Link -

Demographics and other administrative information about an individual or animal receiving care or other health-related services.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of

requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

other
Reference

type (optional)
String The type of link between this patient resource and another patient resource.
Enum:

   replaced-by

   replaces

   refer
   seealso

_type (optional)
Element

PaymentNotice -

This resource provides the status of the payment for goods and services rendered, and the request and response resource references.

resourceType
oas_any_type_not_mapped This is a PaymentNotice resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

identifier (optional)
array[Identifier] A formal identifier that is used to identify this plan definition when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)
String A sequence of Unicode characters

_version (optional)
Element
name (optional)
String A sequence of Unicode characters

_name (optional)
Element
title (optional)
String A sequence of Unicode characters

_title (optional)
Element

subtitle (optional)
String A sequence of Unicode characters

_subtitle (optional)
Element

type (optional)
CodeableConcept
status (optional)
String The status of this plan definition. Enables tracking the life-cycle of the content.
  Enum:
    draft
    active
    retired
    unknown

_status (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"

_experimental (optional)
Element
subjectCodeableConcept (optional)
CodeableConcept

subjectReference (optional)
Reference

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters
_publisher (optional)
Element

contact (optional)

array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)

Element

useContext (optional)

array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate plan definition instances.

jurisdiction (optional)

array[CodeableConcept] A legal or geographic region in which the plan definition is intended to be used.

purpose (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)

Element

usage (optional)

String A sequence of Unicode characters

_usage (optional)

Element

copyright (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)

Element

approvalDate (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_approvalDate (optional)

Element

lastReviewDate (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_lastReviewDate (optional)

Element

effectivePeriod (optional)

Period

topic (optional)

array[CodeableConcept] Descriptive topics related to the content of the plan definition. Topics provide a high-level categorization of the definition that can be useful for filtering and searching.

author (optional)

array[ContactDetail] An individiual or organization primarily involved in the creation and maintenance of the content.

editor (optional)

array[ContactDetail] An individual or organization primarily responsible for internal coherence of the content.

reviewer (optional)

array[ContactDetail] An individual or organization primarily responsible for review of some aspect of the content.

endorser (optional)

array[ContactDetail] An individual or organization responsible for officially endorsing the content for use in some setting.

relatedArtifact (optional)
array[RelatedArtifact] Related artifacts such as additional documentation, justification, or bibliographic references.
library (optional)
array[String] A reference to a Library resource containing any formal logic used by the plan definition.

goal (optional)
array[PlanDefinition_Goal] Goals that describe what the activities within the plan are intended to achieve. For example, weight loss, restoring an activity of daily living, obtaining herd immunity via immunization, meeting a process improvement objective, etc.

action (optional)
array[PlanDefinition_Action] An action or group of actions to be taken as part of the plan.

PlanDefinition_Action -   **Up**

This resource allows for the definition of various types of plans as a sharable, consumable, and executable artifact. The resource is general enough to support the description of a broad range of clinical artifacts such as clinical decision support rules, order sets and protocols.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

prefix (optional)
String A sequence of Unicode characters
_prefix (optional)
Element

title (optional)
String A sequence of Unicode characters

_title (optional)
Element
description (optional)
String A sequence of Unicode characters

_description (optional)
Element
textEquivalent (optional)
String A sequence of Unicode characters

_textEquivalent (optional)
Element

priority (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_priority (optional)

Element

code (optional)

array[CodeableConcept] A code that provides meaning for the action or action group. For example, a section may have a LOINC code for the section of a documentation template.

reason (optional)

array[CodeableConcept] A description of why this action is necessary or appropriate.

documentation (optional)

array[RelatedArtifact] Didactic or other informational resources associated with the action that can be provided to the CDS recipient. Information resources can include inline text commentary and links to web resources.

goalId (optional)

array[String] Identifies goals that this action supports. The reference must be to a goal element defined within this plan definition.

_goalId (optional)

array[Element] Extensions for goalId

subjectCodeableConcept (optional)

CodeableConcept

subjectReference (optional)

Reference

trigger (optional)

array[TriggerDefinition] A description of when the action should be triggered.

condition (optional)

array[PlanDefinition_Condition] An expression that describes applicability criteria or start/stop conditions for the action.

input (optional)

array[DataRequirement] Defines input data requirements for the action.

output (optional)

array[DataRequirement] Defines the outputs of the action, if any.

relatedAction (optional)

array[PlanDefinition_RelatedAction] A relationship to another action such as "before" or "30-60 minutes after start of".

timingDateTime (optional)

String An optional value describing when the action should be performed.

_timingDateTime (optional)

Element

timingAge (optional)

Age

timingPeriod (optional)

Period

timingDuration (optional)

Duration

timingRange (optional)

Range

timingTiming (optional)

Timing

participant (optional)

array[PlanDefinition_Participant] Indicates who should participate in performing the action described.

type (optional)

CodeableConcept

groupingBehavior (optional)

String Defines the grouping behavior for the action and its children.

    Enum:

        visual-group
        logical-group
        sentence-group

_groupingBehavior (optional)
Element

selectionBehavior (optional)
String Defines the selection behavior for the action and its children.
    Enum:
        any
        all
        all-or-none
        exactly-one
        at-most-one
        one-or-more

_selectionBehavior (optional)
Element

requiredBehavior (optional)
String Defines the required behavior for the action.
    Enum:
        must
        could
        must-unless-documented

_requiredBehavior (optional)
Element

precheckBehavior (optional)
String Defines whether the action should usually be preselected.
    Enum:
        yes
        no

_precheckBehavior (optional)
Element

cardinalityBehavior (optional)
String Defines whether the action can be selected multiple times.
    Enum:
        single
        multiple

_cardinalityBehavior (optional)
Element

definitionCanonical (optional)
String A reference to an ActivityDefinition that describes the action to be taken in detail, or a PlanDefinition that describes a series of actions to be taken.

_definitionCanonical (optional)
Element

definitionUri (optional)
String A reference to an ActivityDefinition that describes the action to be taken in detail, or a PlanDefinition that describes a series of actions to be taken.

_definitionUri (optional)
Element

transform (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

dynamicValue (optional)
array[PlanDefinition_DynamicValue] Customizations that should be applied to the statically defined resource. For example, if the dosage of a medication must be computed based on the patient's weight, a customization would be used to specify an expression that calculated the weight, and the path on the resource that would contain the result.

action (optional)
array[PlanDefinition_Action] Sub actions that are contained within the action. The behavior of this action determines the functionality of the sub-actions. For example, a selection behavior of at-most-one indicates that of the sub-actions, at most one may be chosen as part of realizing the action definition.

PlanDefinition_Condition -

This resource allows for the definition of various types of plans as a sharable, consumable, and executable artifact. The resource is general enough to support the description of a broad range of clinical artifacts such as clinical decision support rules, order sets and protocols.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

kind (optional)
String The kind of condition.
Enum:
   applicability
   start
   stop

_kind (optional)
Element

expression (optional)
Expression

PlanDefinition_DynamicValue -   **Up**

This resource allows for the definition of various types of plans as a sharable, consumable, and executable artifact. The resource is general enough to support the description of a broad range of clinical artifacts such as clinical decision support rules, order sets and protocols.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

path (optional)
String A sequence of Unicode characters

path (optional)
Element

expression (optional)
Expression

PlanDefinition_Goal -

This resource allows for the definition of various types of plans as a sharable, consumable, and executable artifact. The resource is general enough to support the description of a broad range of clinical artifacts such as clinical decision support rules, order sets and protocols.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

category (optional)
CodeableConcept

description
CodeableConcept

priority (optional)
CodeableConcept

start (optional)
CodeableConcept

addresses (optional)
array[CodeableConcept] Identifies problems, conditions, issues, or concerns the goal is intended to address.

documentation (optional)
array[RelatedArtifact] Didactic or other informational resources associated with the goal that provide further supporting information about the goal. Information resources can include inline text commentary and links to web resources.

target (optional)
array[PlanDefinition_Target] Indicates what should be done and within what timeframe.

PlanDefinition_Participant -

This resource allows for the definition of various types of plans as a sharable, consumable, and executable artifact. The resource is general enough to support the description of a broad range of clinical artifacts such as clinical decision support rules, order sets and protocols.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
String The type of participant in the action.
Enum:
    patient
    practitioner
    related-person
    device

_type (optional)
Element
role (optional)
CodeableConcept

PlanDefinition_RelatedAction -   **Up**

This resource allows for the definition of various types of plans as a sharable, consumable, and executable artifact. The resource is general enough to support the description of a broad range of clinical artifacts such as clinical decision support rules, order sets and protocols.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

actionId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.
_actionId (optional)

Element

relationship (optional)

String The relationship of this action to the related action.
      Enum:

        before-start

        before

        before-end
        concurrent-with-start

        concurrent

        concurrent-with-end
        after-start

        after

        after-end

_relationship (optional)

Element

offsetDuration (optional)

Duration

offsetRange (optional)

Range

PlanDefinition_Target -

This resource allows for the definition of various types of plans as a sharable, consumable, and executable artifact. The resource is general enough to support the description of a broad range of clinical artifacts such as clinical decision support rules, order sets and protocols.

id (optional)

String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

measure (optional)

CodeableConcept

detailQuantity (optional)

Quantity

detailRange (optional)

Range

detailCodeableConcept (optional)
CodeableConcept

due (optional)

Duration

Population -

A populatioof people with some set of grouping criteria.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

ageRange (optional)
Range

ageCodeableConcept (optional)
CodeableConcept

gender (optional)
CodeableConcept

race (optional)
CodeableConcept

physiologicalCondition (optional)
CodeableConcept

`Practitioner -`

A person who is directly or indirectly involved in the provisioning of healthcare.

resourceType
oas_any_type_not_mapped This is a Practitioner resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] An identifier that applies to this person in this role.

active (optional)

Boolean Value of "true" or "false"

_active (optional)

Element

name (optional)

array[HumanName] The name(s) associated with the practitioner.

telecom (optional)

array[ContactPoint] A contact detail for the practitioner, e.g. a telephone number or an email address.

address (optional)

array[Address] Address(es) of the practitioner that are not role specific (typically home address). Work addresses are not typically entered in this property as they are usually role dependent.

gender (optional)

String Administrative Gender - the gender that the person is considered to have for administration and record keeping purposes.

Enum:

> *male*
> *female*
> *other*
> *unknown*

_gender (optional)

Element

birthDate (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_birthDate (optional)

Element

photo (optional)

array[Attachment] Image of the person.

qualification (optional)

array[Practitioner_Qualification] The official certifications, training, and licenses that authorize or otherwise pertain to the provision of care by the practitioner. For example, a medical license issued by a medical board authorizing the practitioner to practice medicine within a certian locality.

communication (optional)

array[CodeableConcept] A language the practitioner can use in patient communication.

PractitionerRole -   **Up**

A specific set of Roles/Locations/Specialties/Services that a practitioner may perform at an organization for a period of time.

resourceType
oas_any_type_not_mapped This is a PractitionerRole resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business Identifiers that are specific to a role/location.

active (optional)
Boolean Value of "true" or "false"

_active (optional)
Element

period (optional)
Period

practitioner (optional)
Reference

organization (optional)
Reference

code (optional)
array[CodeableConcept] Roles which this practitioner is authorized to perform for the organization.

specialty (optional)
array[CodeableConcept] Specific specialty of the practitioner.

location (optional)
array[Reference] The location(s) at which this practitioner provides care.

healthcareService (optional)
array[Reference] The list of healthcare services that this worker provides for this role's Organization/Location(s).

telecom (optional)
array[ContactPoint] Contact details that are specific to the role/location/service.

availableTime (optional)
array[PractitionerRole_AvailableTime] A collection of times the practitioner is available or performing this role at the location and/or healthcareservice.

notAvailable (optional)
array[PractitionerRole_NotAvailable] The practitioner is not available or performing this role during this period of time due to the provided reason.

availabilityExceptions (optional)
String A sequence of Unicode characters
_availabilityExceptions (optional)
Element

endpoint (optional)
array[Reference] Technical endpoints providing access to services operated for the practitioner with this role.

PractitionerRole_AvailableTime -

A specific set of Roles/Locations/specialties/services that a practitioner may perform at an organization for a period of time.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

daysOfWeek (optional)
array[String] Indicates which days of the week are available between the start and end Times.
_daysOfWeek (optional)
array[Element] Extensions for daysOfWeek

allDay (optional)
Boolean Value of "true" or "false"

_allDay (optional)
Element
availableStartTime (optional)
String A time during the day, with no date specified

_availableStartTime (optional)
Element

availableEndTime (optional)
String A time during the day, with no date specified

_availableEndTime (optional)
Element

PractitionerRole_NotAvailable -   **Up**

A specific set of Roles/Locations/specialties/services that a practitioner may perform at an organization for a period of time.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters

_description (optional)
Element
during (optional)
Period

Practitioner_Qualification -   **Up**

A person who is directly or indirectly involved in the provisioning of healthcare.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] An identifier that applies to this person's qualification in this role.

code
CodeableConcept

period (optional)
Period

issuer (optional)
Reference

Procedure -

An action that is or was performed on or for a patient. This can be a physical intervention like an operation, or less invasive like long term services, counseling, or hypnotherapy.

resourceType
oas_any_type_not_mapped This is a Procedure resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element
text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[identifier] Business identifiers assigned to this procedure by the performer or other systems which remain constant as the resource is updated and is propagated from server to server.

instantiatesCanonical (optional)
array[String] The URL pointing to a FHIR-defined protocol, guideline, order set or other definition that is adhered to in whole or in part by this Procedure.

instantiatesUri (optional)
array[String] The URL pointing to an externally maintained protocol, guideline, order set or other definition that is adhered to in whole or in part by this Procedure.

_instantiatesUri (optional)
array[Element] Extensions for instantiatesUri

basedOn (optional)
array[Reference] A reference to a resource that contains details of the request for this procedure.

partOf (optional)
array[Reference] A larger event of which this particular procedure is a component or step.

status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

statusReason (optional)
CodeableConcept

category (optional)
CodeableConcept

code (optional)
CodeableConcept

subject
Reference

encounter (optional)
Reference

performedDateTime (optional)
String Estimated or actual date, date-time, period, or age when the procedure was performed. Allows a period to support complex procedures that span more than one date, and also allows for the length of the procedure to be captured.

_performedDateTime (optional)
Element

performedPeriod (optional)
Period

performedString (optional)
String Estimated or actual date, date-time, period, or age when the procedure was performed. Allows a period to support complex procedures that span more than one date, and also allows for the length of the procedure to be captured.

_performedString (optional)
Element

performedAge (optional)
Age

performedRange (optional)
Range

recorder (optional)
Reference

asserter (optional)
Reference

performer (optional)
array[Procedure_Performer] Limited to "real" people rather than equipment.

location (optional)
Reference

reasonCode (optional)
array[CodeableConcept] The coded reason why the procedure was performed. This may be a coded entity of some type, or may simply be present as text.

reasonReference (optional)
array[Reference] The justification of why the procedure was performed.

bodySite (optional)
array[CodeableConcept] Detailed and structured anatomical location information. Multiple locations are allowed - e.g. multiple punch biopsies of a lesion.

outcome (optional)
CodeableConcept

report (optional)
array[Reference] This could be a histology result, pathology report, surgical report, etc.

complication (optional)
array[CodeableConcept] Any complications that occurred during the procedure, or in the immediate post-performance period. These are generally tracked separately from the notes, which will typically describe the procedure itself rather than any 'post procedure' issues.

complicationDetail (optional)
array[Reference] Any complications that occurred during the procedure, or in the immediate post-performance period.

followUp (optional)
array[CodeableConcept] If the procedure required specific follow up - e.g. removal of sutures. The follow up may be represented as a simple note or could potentially be more complex, in which case the CarePlan resource can be used.

note (optional)
array[Annotation] Any other notes and comments about the procedure.

focalDevice (optional)
array[Procedure_FocalDevice] A device that is implanted, removed or otherwise manipulated (calibration, battery replacement, fitting a prosthesis, attaching a wound-vac, etc.) as a focal portion of the Procedure.

usedReference (optional)
array[Reference] Identifies medications, devices and any other substance used as part of the procedure.

usedCode (optional)
array[CodeableConcept] Identifies coded items that were used as part of the procedure.

Procedure_FocalDevice -   **Up**

An action that is or was performed on or for a patient. This can be a physical intervention like an operation, or less invasive like long term services, counseling, or hypnotherapy.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

action (optional)
CodeableConcept

manipulated
Reference

Procedure_Performer -

An action that is or was performed on or for a patient. This can be a physical intervention like an operation, or less invasive like long term services, counseling, or hypnotherapy.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

Identifier

type
CodeableConcept

period
Quantity

specialPrecautionsForStorage (optional)
array[CodeableConcept] Special precautions for storage, if any, can be specified using an appropriate controlled vocabulary The controlled term and the controlled term identifier shall be specified.

Provenance -

Provenance of a resource is a record that describes entities and processes involved in producing and delivering or otherwise influencing that resource. Provenance provides a critical foundation for assessing authenticity, enabling trust, and allowing reproducibility. Provenance assertions are a form of contextual metadata and can themselves become important records with their own provenance. Provenance statement indicates clinical significance in terms of confidence in authenticity, reliability, and trustworthiness, integrity, and stage in lifecycle (e.g. Document Completion - has the artifact been legally authenticated), all of which may impact security, privacy, and trust policies.

resourceType
oas_any_type_not_mapped This is a Provenance resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

target

array[Reference] The Reference(s) that were generated or updated by the activity described in this resource. A provenance can point to more than one target if multiple resources were created/updated by the same activity.

occurredPeriod (optional)

Period

occurredDateTime (optional)

String The period during which the activity occurred.

_occurredDateTime (optional)

Element

recorded (optional)

String An instant in time - known at least to the second

_recorded (optional)

Element

policy (optional)

array[String] Policy or plan the activity was defined by. Typically, a single activity may have multiple applicable policy documents, such as patient consent, guarantor funding, etc.

_policy (optional)

array[Element] Extensions for policy

location (optional)

Reference

reason (optional)

array[CodeableConcept] The reason that the activity was taking place.

activity (optional)

CodeableConcept

agent

array[Provenance_Agent] An actor taking a role in an activity for which it can be assigned some degree of responsibility for the activity taking place.

entity (optional)

array[Provenance_Entity] An entity used in this activity.

signature (optional)

array[Signature] A digital signature on the target Reference(s). The signer should match a Provenance.agent. The purpose of the signature is indicated.

Provenance_Agent -   **Up**

Provenance of a resource is a record that describes entities and processes involved in producing and delivering or otherwise influencing that resource. Provenance provides a critical foundation for assessing authenticity, enabling trust, and allowing reproducibility. Provenance assertions are a form of contextual metadata and can themselves become important records with their own provenance. Provenance statement indicates clinical significance in terms of confidence in authenticity, reliability, and trustworthiness, integrity, and stage in lifecycle (e.g. Document Completion - has the artifact been legally authenticated), all of which may impact security, privacy, and trust policies.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
CodeableConcept
role (optional)
array[CodeableConcept] The function of the agent with respect to the activity. The security role enabling the agent with respect to the activity.
who
Reference

onBehalfOf (optional)
Reference

Provenance_Entity -   **Up**

Provenance of a resource is a record that describes entities and processes involved in producing and delivering or otherwise influencing that resource. Provenance provides a critical foundation for assessing authenticity, enabling trust, and allowing reproducibility. Provenance assertions are a form of contextual metadata and can themselves become important records with their own provenance. Provenance statement indicates clinical significance in terms of confidence in authenticity, reliability, and trustworthiness, integrity, and stage in lifecycle (e.g. Document Completion - has the artifact been legally authenticated), all of which may impact security, privacy, and trust policies.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

role (optional)
String How the entity was used during the activity.
    Enum:
        derivation
        revision
        quotation
        source
        removal

_role (optional)
Element

what
Reference
agent (optional)
array[Provenance_Agent] The entity is attributed to an agent to express the agent's responsibility for that entity, possibly along with other agents. This description can be understood as shorthand for saying that the agent was responsible for the activity which generated the entity.

Quantity -   **Up**

A measured amount (or an amount that can potentially be measured). Note that measured amounts include amounts that are not precisely quantified, including amounts involving arbitrary units and floating currencies.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

value (optional)
BigDecimal A rational number with implicit precision

_value (optional)
Element

comparator (optional)
String How the value should be understood and represented - whether the actual value is greater or less than the stated value due to measurement issues; e.g. if the comparator is "<" , then the real value is < stated value.
Enum:

> <
>
> <=
> >=
>
> >

_comparator (optional)
Element

unit (optional)
String A sequence of Unicode characters

_unit (optional)
Element

system (optional)
String String of characters used to identify a name or a resource

_system (optional)
Element

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

Questionnaire -

A structured set of questions intended to guide the collection of answers from end-users. Questionnaires provide detailed control over order, presentation, phraseology and grouping to allow coherent, consistent data collection.

resourceType
oas_any_type_not_mapped This is a Questionnaire resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

identifier (optional)
array[Identifier] A formal identifier that is used to identify this questionnaire when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)
String A sequence of Unicode characters

_version (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

title (optional)
String A sequence of Unicode characters

_title (optional)
Element

derivedFrom (optional)
array[String] The URL of a Questionnaire that this Questionnaire is based on.

status (optional)
String The status of this questionnaire. Enables tracking the life-cycle of the content.

> Enum:
> *draft*
> *active*
> *retired*
> *unknown*

_status (optional)
Element

experimental (optional)

Boolean value of "true" or "false"

_experimental (optional)
Element
subjectType (optional)
array[String] The types of subjects that can be the subject of responses created for the questionnaire.

_subjectType (optional)
array[Element] Extensions for subjectType
date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.
description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine
_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate questionnaire instances.
jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the questionnaire is intended to be used.

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element
copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine
_copyright (optional)
Element

approvalDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_approvalDate (optional)
Element
lastReviewDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.
_lastReviewDate (optional)
Element

effectivePeriod (optional)
Period

code (optional)

array[Coding] An identifier for this question or group of questions in a particular terminology such as LOINC.

item (optional)
array[Questionnaire_Item] A particular question, question grouping or display text that is part of the questionnaire.

QuestionnaireResponse -

A structured set of questions and their answers. The questions are ordered and grouped into coherent subsets, corresponding to the structure of the grouping of the questionnaire being responded to.

resourceType
oas_any_type_not_mapped This is a QuestionnaireResponse resource
id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta
implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element
language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
Identifier

basedOn (optional)
array[Reference] The order, proposal or plan that is fulfilled in whole or in part by this QuestionnaireResponse. For example, a ServiceRequest seeking an intake assessment or a decision support recommendation to assess for post-partum depression.

partOf (optional)

array[Reference] A procedure or observation that this questionnaire was performed as part of the execution of. For example, the surgery a checklist was executed as part of.

questionnaire (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

status (optional)
String The position of the questionnaire response within its overall lifecycle.

Enum:
in-progress
completed
amended
entered-in-error
stopped

_status (optional)
Element

subject (optional)
Reference

encounter (optional)
Reference

authored (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_authored (optional)
Element

author (optional)
Reference

source (optional)
Reference

item (optional)
array[QuestionnaireResponse_Item] A group or question item from the original questionnaire for which answers are provided.

`QuestionnaireResponse_Answer -`

A structured set of questions and their answers. The questions are ordered and grouped into coherent subsets, corresponding to the structure of the grouping of the questionnaire being responded to.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

valueBoolean (optional)
Boolean The answer (or one of the answers) provided by the respondent to the question.

_valueBoolean (optional)

Element

valueDecimal (optional)

BigDecimal The answer (or one of the answers) provided by the respondent to the question.

_valueDecimal (optional)

Element

valueInteger (optional)

BigDecimal The answer (or one of the answers) provided by the respondent to the question.

_valueInteger (optional)

Element

valueDate (optional)

String The answer (or one of the answers) provided by the respondent to the question.

_valueDate (optional)

Element

valueDateTime (optional)

String The answer (or one of the answers) provided by the respondent to the question.

_valueDateTime (optional)

Element

valueTime (optional)

String The answer (or one of the answers) provided by the respondent to the question.

_valueTime (optional)

Element

valueString (optional)

String The answer (or one of the answers) provided by the respondent to the question.

_valueString (optional)

Element

valueUri (optional)

String The answer (or one of the answers) provided by the respondent to the question.

_valueUri (optional)

Element

valueAttachment (optional)

Attachment

valueCoding (optional)

Coding

valueQuantity (optional)

Quantity

valueReference (optional)

Reference

item (optional)

array[QuestionnaireResponse_Item] Nested groups and/or questions found within this particular answer.

QuestionnaireResponse_Item -   **Up**

A structured set of questions and their answers. The questions are ordered and grouped into coherent subsets, corresponding to the structure of the grouping of the questionnaire being responded to.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

linkId (optional)
String A sequence of Unicode characters
_linkId (optional)
Element

definition (optional)
String String of characters used to identify a name or a resource

_definition (optional)
Element
text (optional)
String A sequence of Unicode characters

_text (optional)
Element
answer (optional)
array[QuestionnaireResponse_Answer] The respondent's answer(s) to the question.

item (optional)
array[QuestionnaireResponse_Item] Questions or sub-groups nested beneath a question or group.

```
Questionnaire_AnswerOption -                                          Up
```

A structured set of questions intended to guide the collection of answers from end-users. Questionnaires provide detailed control over order, presentation, phraseology and grouping to allow coherent, consistent data collection.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

valueInteger (optional)
BigDecimal A potential answer that's allowed as the answer to this question.

_valueInteger (optional)
Element

valueDate (optional)

String A potential answer that's allowed as the answer to this question.

_valueDate (optional)
Element
valueTime (optional)
String A potential answer that's allowed as the answer to this question.

_valueTime (optional)
Element
valueString (optional)
String A potential answer that's allowed as the answer to this question.

_valueString (optional)
Element

valueCoding (optional)
Coding
valueReference (optional)
Reference

initialSelected (optional)
Boolean Value of "true" or "false"
_initialSelected (optional)
Element

Questionnaire_EnableWhen -   Up

A structured set of questions intended to guide the collection of answers from end-users. Questionnaires provide detailed control over order, presentation, phraseology and grouping to allow coherent, consistent data collection.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

question (optional)
String A sequence of Unicode characters

_question (optional)
Element

operator (optional)
String Specifies the criteria by which the question is enabled.
    Enum:
       exists
       =
       !=
       >
       <
       >=
       <=

_operator (optional)
Element

answerBoolean (optional)
Boolean A value that the referenced question is tested using the specified operator in order for the item to be enabled.

_answerBoolean (optional)
Element

answerDecimal (optional)
BigDecimal A value that the referenced question is tested using the specified operator in order for the item to be enabled.

_answerDecimal (optional)
Element

answerInteger (optional)
BigDecimal A value that the referenced question is tested using the specified operator in order for the item to be enabled.

_answerInteger (optional)
Element

answerDate (optional)
String A value that the referenced question is tested using the specified operator in order for the item to be enabled.

_answerDate (optional)
Element

answerDateTime (optional)
String A value that the referenced question is tested using the specified operator in order for the item to be enabled.

_answerDateTime (optional)
Element

answerTime (optional)
String A value that the referenced question is tested using the specified operator in order for the item to be enabled.

_answerTime (optional)
Element

answerString (optional)
String A value that the referenced question is tested using the specified operator in order for the item to be enabled.

_answerString (optional)
Element

answerCoding (optional)
Coding

answerQuantity (optional)
Quantity

answerReference (optional)
Reference

Questionnaire_Initial -

A structured set of questions intended to guide the collection of answers from end-users. Questionnaires provide detailed control over order, presentation, phraseology and grouping to allow coherent, consistent data collection.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

valueBoolean (optional)
Boolean The actual value to for an initial answer.

_valueBoolean (optional)
Element

valueDecimal (optional)
BigDecimal The actual value to for an initial answer.

_valueDecimal (optional)
Element

valueInteger (optional)
BigDecimal The actual value to for an initial answer.

_valueInteger (optional)
Element

valueDate (optional)
String The actual value to for an initial answer.

_valueDate (optional)
Element

valueDateTime (optional)
String The actual value to for an initial answer.

_valueDateTime (optional)
Element

valueTime (optional)
String The actual value to for an initial answer.

_valueTime (optional)
Element

valueString (optional)
String The actual value to for an initial answer.

_valueString (optional)
Element

valueUri (optional)
String The actual value to for an initial answer.

_valueUri (optional)
Element

valueAttachment (optional)
Attachment

valueCoding (optional)
Coding

valueQuantity (optional)
Quantity

valueReference (optional)
Reference

Questionnaire_Item -

A structured set of questions intended to guide the collection of answers from end-users. Questionnaires provide detailed control over order, presentation, phraseology and grouping to allow coherent, consistent data collection.

id (optional)

String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

linkId (optional)
String A sequence of Unicode characters

_linkId (optional)
Element

definition (optional)
String String of characters used to identify a name or a resource

_definition (optional)
Element

code (optional)
array[Coding] A terminology code that corresponds to this group or question (e.g. a code from LOINC, which defines many questions and answers).

prefix (optional)
String A sequence of Unicode characters
_prefix (optional)
Element

text (optional)
String A sequence of Unicode characters
_text (optional)
Element

type (optional)
String The type of questionnaire item this is - whether text for display, a grouping of other items or a particular type of data to be captured (string, integer, coded choice, etc.).

    Enum:
      group
      display
      boolean
      decimal
      integer
      date
      dateTime
      time
      string
      text
      url
      choice
      open-choice

> *attachment*
> *reference*
> *quantity*

_type (optional)
Element

enableWhen (optional)
array[Questionnaire_EnableWhen] A constraint indicating that this item should only be enabled (displayed/allow answers to be captured) when the specified condition is true.

enableBehavior (optional)
String Controls how multiple enableWhen values are interpreted - whether all or any must be true.
Enum:
> *all*
> *any*

_enableBehavior (optional)
Element

required (optional)
Boolean Value of "true" or "false"

_required (optional)
Element

repeats (optional)
Boolean Value of "true" or "false"

_repeats (optional)
Element

readOnly (optional)
Boolean Value of "true" or "false"

_readOnly (optional)
Element

maxLength (optional)
BigDecimal A whole number

_maxLength (optional)
Element

answerValueSet (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

answerOption (optional)
array[Questionnaire_AnswerOption] One of the permitted answers for a "choice" or "open-choice" question.

initial (optional)
array[Questionnaire_Initial] One or more values that should be pre-populated in the answer when initially rendering the questionnaire for user input.

item (optional)
array[Questionnaire_Item] Text, questions and other groups to be nested beneath a question or group.

Range -   **Up**

A set of ordered Quantities defined by a low and high limit.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

low (optional)
Quantity

high (optional)

Quantity

Ratio -

A relationship of two Quantity values - expressed as a numerator and a denominator.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

numerator (optional)
Quantity

denominator (optional)
Quantity

Reference -

A reference from one resource to another.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

reference (optional)
String A sequence of Unicode characters

_reference (optional)
Element

type (optional)
String String of characters used to identify a name or a resource

_type (optional)
Element

identifier (optional)
Identifier

display (optional)
String A sequence of Unicode characters

_display (optional)
Element

RelatedArtifact -

Related artifacts such as additional documentation, justification, or bibliographic references.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

type (optional)
String The type of relationship to the related artifact.

Enum:
documentation

justification
citation
predecessor
successor
derived-from
depends-on
composed-of

_type (optional)
Element

label (optional)
String A sequence of Unicode characters

_label (optional)
Element

display (optional)
String A sequence of Unicode characters

_display (optional)
Element

citation (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_citation (optional)
Element

url (optional)
String A URI that is a literal reference

_url (optional)
Element

document (optional)
Attachment

resource (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

RelatedPerson -

Information about a person that is involved in the care for a patient, but who is not the target of healthcare, nor has a formal responsibility in the care process.

resourceType
oas_any_type_not_mapped This is a RelatedPerson resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] Identifier for a person within a particular scope.

active (optional)

Boolean Value of "true" or "false"

_active (optional)

Element

patient

Reference

relationship (optional)

array[CodeableConcept] The nature of the relationship between a patient and the related person.

name (optional)

array[HumanName] A name associated with the person.

telecom (optional)

array[ContactPoint] A contact detail for the person, e.g. a telephone number or an email address.

gender (optional)

String Administrative Gender - the gender that the person is considered to have for administration and record keeping purposes.

    Enum:

        male
        female

        other

        unknown

_gender (optional)

Element

birthDate (optional)

String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_birthDate (optional)

Element

address (optional)

array[Address] Address where the related person can be contacted or visited.

photo (optional)

array[Attachment] Image of the person.

period (optional)

Period

communication (optional)

array[RelatedPerson_Communication] A language which may be used to communicate with about the patient's health.

RelatedPerson_Communication -

Information about a person that is involved in the care for a patient, but who is not the target of healthcare, nor has a formal responsibility in the care process.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

language
CodeableConcept
preferred (optional)
Boolean Value of "true" or "false"

_preferred (optional)
Element

RequestGroup -

A group of related requests that can be used to capture intended activities that have inter-dependencies such as "give this medication after that one".

resourceType
oas_any_type_not_mapped This is a RequestGroup resource
id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.
meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element
language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] Allows a service to provide a unique, business identifier for the request.

instantiatesCanonical (optional)

array[String] A canonical URL referencing a FHIR-defined protocol, guideline, orderset or other definition that is adhered to in whole or in part by this request.

_instantiatesCanonical (optional)

array[Element] Extensions for instantiatesCanonical

instantiatesUri (optional)

array[String] A URL referencing an externally defined protocol, guideline, orderset or other definition that is adhered to in whole or in part by this request.

_instantiatesUri (optional)

array[Element] Extensions for instantiatesUri

basedOn (optional)

array[Reference] A plan, proposal or order that is fulfilled in whole or in part by this request.

replaces (optional)

array[Reference] Completed or terminated request(s) whose function is taken by this new request.

groupIdentifier (optional)

Identifier

status (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)

Element

intent (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_intent (optional)

Element

priority (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_priority (optional)

Element

code (optional)

CodeableConcept

subject (optional)
Reference

encounter (optional)
Reference

authoredOn (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_authoredOn (optional)
Element

author (optional)
Reference

reasonCode (optional)
array[CodeableConcept] Describes the reason for the request group in coded or textual form.

reasonReference (optional)
array[Reference] Indicates another resource whose existence justifies this request group.

note (optional)
array[Annotation] Provides a mechanism to communicate additional information about the response.

action (optional)
array[RequestGroup_Action] The actions, if any, produced by the evaluation of the artifact.

RequestGroup_Action -   **Up**

A group of related requests that can be used to capture intended activities that have inter-dependencies such as "give this medication after that one".

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

prefix (optional)
String A sequence of Unicode characters

_prefix (optional)
Element

title (optional)
String A sequence of Unicode characters

_title (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

textEquivalent (optional)
String A sequence of Unicode characters

_textEquivalent (optional)
Element

priority (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_priority (optional)
Element

code (optional)
array[CodeableConcept] A code that provides meaning for the action or action group. For example, a section may have a LOINC code for a section of a documentation template.

documentation (optional)
array[RelatedArtifact] Didactic or other informational resources associated with the action that can be provided to the CDS recipient. Information resources can include inline text commentary and links to web resources.

condition (optional)
array[RequestGroup_Condition] An expression that describes applicability criteria, or start/stop conditions for the action.

relatedAction (optional)
array[RequestGroup_RelatedAction] A relationship to another action such as "before" or "30-60 minutes after start of".

timingDateTime (optional)
String An optional value describing when the action should be performed.

_timingDateTime (optional)
Element

timingAge (optional)
Age

timingPeriod (optional)
Period

timingDuration (optional)
Duration

timingRange (optional)
Range

timingTiming (optional)
Timing

participant (optional)
array[Reference] The participant that should perform or be responsible for this action.

type (optional)
CodeableConcept

groupingBehavior (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_groupingBehavior (optional)
Element

selectionBehavior (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_selectionBehavior (optional)
Element

requiredBehavior (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_requiredBehavior (optional)
Element

precheckBehavior (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_precheckBehavior (optional)
Element

cardinalityBehavior (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_cardinalityBehavior (optional)
Element

resource (optional)
Reference

action (optional)
array[RequestGroup_Action] Sub actions.

RequestGroup_Condition -

A group of related requests that can be used to capture intended activities that have inter-dependencies such as "give this medication after that one".

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

kind (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_kind (optional)
Element

expression (optional)
Expression

RequestGroup_RelatedAction -

A group of related requests that can be used to capture intended activities that have inter-dependencies such as "give this medication after that one".

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

actionId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.
_actionId (optional)
Element

relationship (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_relationship (optional)
Element

offsetDuration (optional)
Duration
offsetRange (optional)
Range

ResearchDefinition -   **Up**

The ResearchDefinition resource describes the conditional state (population and any exposures being compared within the population) and outcome (if specified) that the knowledge (evidence, assertion, recommendation) is about.

resourceType
oas_any_type_not_mapped This is a ResearchDefinition resource
id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta
implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element
language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_language (optional)
Element

text (optional)
Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

identifier (optional)
array[Identifier] A formal identifier that is used to identify this research definition when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)
String A sequence of Unicode characters
_version (optional)
Element

name (optional)
String A sequence of Unicode characters

ResourceList -                                                                    Up
```

resourceType
oas_any_type_not_mapped This is a VisionPrescription resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] A unique identifier assigned to this vision prescription.
status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

type
CodeableConcept
name
String A sequence of Unicode characters

_name (optional)
Element

subject
Reference

servicePeriod (optional)
Period

coverage (optional)
array[InsurancePlan_Coverage] Details about the coverage offered by the insurance product.
owner (optional)
Reference

description
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element
guarantor (optional)
array[Account_Guarantor] The parties responsible for balancing the account if other payment options fall short.
partOf (optional)
array[Reference] Task that this particular task is part of.

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

version (optional)
String A sequence of Unicode characters

_version (optional)

Element

title (optional)
String A sequence of Unicode characters
_title (optional)
Element

subtitle (optional)
String A sequence of Unicode characters
_subtitle (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"

_experimental (optional)
Element
subjectCodeableConcept (optional)
CodeableConcept

subjectReference (optional)
Reference
date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.
useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate value set instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the value set is intended to be used.
purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine
_purpose (optional)
Element

usage (optional)
String A sequence of Unicode characters

_usage (optional)
Element

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

approvalDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.
_approvalDate (optional)

Element

lastReviewDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a
union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_lastReviewDate (optional)
Element

effectivePeriod (optional)
Period

topic (optional)
array[CodeableConcept] Descriptive topics related to the content of the RiskEvidenceSynthesis. Topics
provide a high-level categorization grouping types of EffectEvidenceSynthesiss that can be useful for
filtering and searching.

author
array[ContactDetail] An individiual or organization primarily involved in the creation and maintenance
of the content.

editor (optional)
array[ContactDetail] An individual or organization primarily responsible for internal coherence of the
content.

reviewer (optional)
array[ContactDetail] An individual or organization primarily responsible for review of some aspect of
the content.

endorser (optional)
array[ContactDetail] An individual or organization responsible for officially endorsing the content for
use in some setting.

relatedArtifact (optional)
array[RelatedArtifact] Related artifacts such as additional documentation, justification, or
bibliographic references.

library (optional)
array[String] A reference to a Library resource containing the formal logic used by the
ResearchElementDefinition.

kind (optional)
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents

_kind (optional)
Element

profile (optional)
array[Reference] Reference to the profile to be used for validation.

code
CodeableConcept

intent (optional)
String Indicates the "level" of actionability associated with the Task, i.e. i+R[9]Cs this a proposed task,
a planned task, an actionable task, etc.

>   **Enum:**
>   *unknown*
>   *proposal*
>   *plan*
>   *order*
>   *original-order*
>   *reflex-order*
>   *filler-order*
>   *instance-order*
>   *option*

_intent (optional)
Element

priority
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents

_priority (optional)

Element

doNotPerform (optional)
Boolean Value of "true" or "false"

_doNotPerform (optional)
Element

timingTiming (optional)
Timing
timingDateTime (optional)
String How often the device was used.

_timingDateTime (optional)
Element

timingAge (optional)
Age
timingPeriod (optional)
Period

timingRange (optional)
Range
timingDuration (optional)
Duration

location (optional)
Reference

participant
array[TestReport_Participant] A participant in the test execution, either the execution engine, a client, or a server.

productReference (optional)
Reference

productCodeableConcept (optional)
CodeableConcept

quantity
Quantity
dosage (optional)
array[Dosage] Indicates how the medication is/was or should be taken by the patient.

bodySite (optional)
array[CodeableConcept] Anatomic location where the procedure should be performed. This is the target site.

specimenRequirement (optional)
array[Reference] Defines specimen requirements for the action to be performed, such as required specimens for a lab test.

observationRequirement (optional)
array[Reference] Defines observation requirements for the action to be performed, such as body weight or surface area.

observationResultRequirement (optional)
array[Reference] Defines the observations that are expected to be produced by the action.
transform (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

dynamicValue (optional)
array[ActivityDefinition_DynamicValue] Dynamic values that will be evaluated to produce values for elements of the resulting resource. For example, if the dosage of a medication must be computed based on the patient's weight, a dynamic value would be used to specify an expression that calculated the weight, and the path on the request resource that would contain the result.
actuality (optional)
String Whether the event actually happened, or just had the potential to. Note that this is independent of whether anyone was affected or harmed or how severely.
Enum:
    actual

potential

_actuality (optional)
Element
category
CodeableConcept

event (optional)
array[Composition_Event] The clinical service, such as a colonoscopy or an appendectomy, being documented.

encounter (optional)
Reference
detected (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_detected (optional)
Element
recordedDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_recordedDate (optional)
Element
resultingCondition (optional)
array[Reference] Includes information about the reaction that occurred as a result of exposure to a substance (for example, a drug or a chemical).

seriousness (optional)
CodeableConcept

severity (optional)
String Indicates the degree of importance associated with the identified issue based on the potential impact on the patient.

  Enum:
  high
  moderate
  low

outcome
Reference

recorder (optional)
Reference
contributor (optional)
array[Reference] Identifies the individual(s) or organization who provided the contents of the care plan.

suspectEntity (optional)
array[AdverseEvent_SuspectEntity] Describes the entity that is suspected to have caused the adverse event.

subjectMedicalHistory (optional)
array[Reference] AdverseEvent.subjectMedicalHistory.

referenceDocument (optional)
array[Reference] AdverseEvent.referenceDocument.

study
Reference

clinicalStatus (optional)
CodeableConcept

verificationStatus (optional)
CodeableConcept

_type (optional)

Element

_category (optional)

Element

criticality (optional)

String Estimate of the potential clinical harm, or seriousness, of the reaction to the identified substance.

Enum:

> *low*
>
> *high*
> *unable-to-assess*

_criticality (optional)

Element

patient

Reference

onsetDateTime (optional)

String Estimated or actual date or date-time the condition began, in the opinion of the clinician.

_onsetDateTime (optional)

Element

onsetAge (optional)

Age

onsetPeriod (optional)

Period

onsetRange (optional)

Range

onsetString (optional)

String Estimated or actual date or date-time the condition began, in the opinion of the clinician.

_onsetString (optional)

Element

asserter (optional)

Reference

lastOccurrence (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_lastOccurrence (optional)

Element

note (optional)

array[Annotation] Free-text information captured about the task as it progresses.

reaction (optional)

array[Immunization_Reaction] Categorical data indicating that an adverse event is associated in time to an immunization.

cancelationReason (optional)

CodeableConcept

serviceCategory (optional)

array[CodeableConcept] A broad categorization of the service that is to be performed during this appointment.

serviceType (optional)

array[CodeableConcept] The type of appointments that can be booked into this slot (ideally this would be an identifiable service - which is at a location, rather than the location itself). If provided then this overrides the value provided on the availability resource.

specialty (optional)

array[CodeableConcept] The specialty of a practitioner that would be required to perform the service requested in this appointment.

appointmentType (optional)
CodeableConcept

reasonCode (optional)
CodeableConcept

reasonReference (optional)
Reference

supportingInformation (optional)
array[Reference] Include additional information (for example, patient height and weight) that supports the ordering of the medication.

start (optional)
String An instant in time - known at least to the second

_start (optional)
Element

end (optional)
String An instant in time - known at least to the second

_end (optional)
Element

minutesDuration (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_minutesDuration (optional)
Element

slot (optional)
array[Reference] The slots from the participants' schedules that will be filled by the appointment.

created (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_created (optional)
Element

comment (optional)
String A sequence of Unicode characters

_comment (optional)
Element

patientInstruction (optional)
String A sequence of Unicode characters

_patientInstruction (optional)
Element

basedOn (optional)
array[Reference] BasedOn refers to a higher-level authorization that triggered the creation of the task. It references a "request" resource such as a ServiceRequest, MedicationRequest, ServiceRequest, CarePlan, etc. which is distinct from the "request" resource the task is seeking to fulfill. This latter resource is referenced by FocusOn. For example, based on a ServiceRequest (= BasedOn), a task is created to fulfill a procedureRequest (= FocusOn) to collect a specimen from a patient.

requestedPeriod (optional)
array[Period]

A set of date ranges (potentially including times) that the appointment is preferred to be scheduled within.

The duration (usually in minutes) could also be provided to indicate the length of the appointment to fill and populate the start/end times for the actual allocated time. However, in other situations the duration may be calculated by the scheduling system.

appointment
array[Reference] The appointment that scheduled this encounter.

participantType (optional)
array[CodeableConcept] Role of participant in the appointment.

actor
array[Reference] Slots that reference this schedule resource provide the availability details to these referenced resource(s).

participantStatus (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_participantStatus (optional)
Element

subtype (optional)
array[Coding] Identifier for the category of event.

action (optional)
array[RequestGroup_Action] The actions, if any, produced by the evaluation of the artifact.

_action (optional)
Element

period
Period

recorded (optional)
String An instant in time - known at least to the second

_recorded (optional)
Element

_outcome (optional)
Element

outcomeDesc (optional)
String A sequence of Unicode characters

_outcomeDesc (optional)
Element

purposeOfEvent (optional)
array[CodeableConcept] The purposeOfUse (reason) that was used during the event being recorded.

agent
array[Provenance_Agent] An actor taking a role in an activity for which it can be assigned some degree of responsibility for the activity taking place.

source
array[Reference] Supporting literature.

entity (optional)
array[Provenance_Entity] An entity used in this activity.

contentType (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_contentType (optional)
Element

securityContext (optional)
Reference

data (optional)
String A stream of bytes

_data (optional)
Element

productCategory (optional)
String Broad category of this product.
Enum:
> *organ*
> *tissue*
> *fluid*
> *cells*

biologicalAgent

_productCategory (optional)
Element
productCode (optional)
CodeableConcept

request
array[Reference] Details concerning a service request that required a specimen to be collected.
_quantity (optional)
Element

parent (optional)
array[Reference] Reference to the parent (source) specimen which is used when the specimen was either derived from or a component of another specimen.

collection (optional)
array[CodeableConcept] The action to be performed for collecting the specimen.

processing (optional)
array[Specimen_Processing] Details concerning processing and processing steps for the specimen.

manipulation (optional)
BiologicallyDerivedProduct_Manipulation

storage (optional)
array[BiologicallyDerivedProduct_Storage] Product storage.
active (optional)
Boolean Value of "true" or "false"

_active (optional)
Element

morphology (optional)
CodeableConcept

locationQualifier (optional)
array[CodeableConcept] Qualifier to refine the anatomical location. These include qualifiers for laterality, relative location, directionality, number, and plane.

image (optional)
array[Attachment] Image or images used to identify a location.

timestamp (optional)
String An instant in time - known at least to the second
_timestamp (optional)
Element

total (optional)
array[ExplanationOfBenefit_Total] Categorized monetary totals for the adjudication.
_total (optional)
Element

link (optional)
array[Person_Link] Link to a resource that concerns the same actual person.

entry (optional)
array[List_Entry] Entries in this list.
signature (optional)
array[Signature] A digital signature on the target Reference(s). The signer should match a Provenance.agent. The purpose of the signature is indicated.

instantiates (optional)
array[String] The URL pointing to a protocol, guideline, orderset or other definition that is adhered to in whole or in part by this NutritionOrder.

imports (optional)
array[String] Reference to a canonical URL of another CapabilityStatement that this software adds to. The capability statement automatically includes everything in the other statement, and it is not duplicated, though the server may repeat the same resources, interactions and operations to add additional details to them.

software (optional)
TerminologyCapabilities_Software

implementation (optional)
TerminologyCapabilities_Implementation

fhirVersion (optional)
String The version of the FHIR specification on which this StructureDefinition is based - this is the formal version of the specification, without the revision number, e.g. [publication].[major].[minor], which is 4.0.1. for this version.

    Enum:

       0.01
       0.05
       0.06
       0.11
       0.0.80
       0.0.81
       0.0.82
       0.4.0
       0.5.0
       1.0.0
       1.0.1
       1.0.2
       1.1.0
       1.4.0
       1.6.0
       1.8.0
       3.0.0
       3.0.1
       3.3.0
       3.5.0
       4.0.0
       4.0.1

_fhirVersion (optional)
Element

format (optional)
array[String] A list of the formats supported by this implementation using their content types.

_format (optional)
array[Element] Extensions for format

patchFormat (optional)
array[String] A list of the patch formats supported by this implementation using their content types.

_patchFormat (optional)
array[Element] Extensions for patchFormat

implementationGuide (optional)
array[String] A list of implementation guides that the server does (or should) support in their entirety.

rest (optional)
array[CapabilityStatement_Rest] A definition of the restful capabilities of the solution, if any.

messaging (optional)
array[CapabilityStatement_Messaging] A description of the messaging capabilities of the solution.

document (optional)
array[CapabilityStatement_Document] A document definition.

instantiatesCanonical (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

instantiatesUri (optional)
String String of characters used to identify a name or a resource

_instantiatesUri (optional)
Element

replaces (optional)
array[Reference] The request takes the place of the referenced completed or terminated request(s).

careTeam (optional)

array[ExplanationOfBenefit_CareTeam] The members of the team who provided the products and services.

addresses (optional)
array[Reference] The identified conditions and other health record elements that are intended to be addressed by the goal.

supportingInfo (optional)
array[Reference] Additional clinical information about the patient or specimen that may influence the services or their interpretations. This information includes diagnosis, clinical findings and other observations. In laboratory ordering these are typically referred to as "ask at order entry questions (AOEs)". This includes observations explicitly requested by the producer (filler) to provide context or supporting information needed to complete the order. For example, reporting the amount of inspired oxygen for blood gas measurements.

goal (optional)
array[PlanDefinition_Goal] Goals that describe what the activities within the plan are intended to achieve. For example, weight loss, restoring an activity of daily living, obtaining herd immunity via immunization, meeting a process improvement objective, etc.

activity (optional)
CodeableConcept

managingOrganization (optional)
Reference
telecom (optional)
array[ContactPoint] A contact detail for the person, e.g. a telephone number or an email address.

orderable (optional)
Boolean Value of "true" or "false"

_orderable (optional)
Element

referencedItem
Reference

additionalIdentifier (optional)
array[Identifier] Used in supporting related concepts, e.g. NDC to RxNorm.
classification (optional)
array[SubstanceReferenceInformation_Classification] Todo.

validityPeriod (optional)
Period

validTo (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_validTo (optional)
Element

lastUpdated (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_lastUpdated (optional)
Element

additionalCharacteristic (optional)
array[CodeableConcept] Used for examplefor Out of Formulary, or any specifics.
additionalClassification (optional)
array[CodeableConcept] User for example for ATC classification, or.

relatedEntry (optional)
array[CatalogEntry_RelatedEntry] Used for example, to point to a substance, or to a device used to administer a medication.

definitionUri (optional)

array[String] References the (external) source of pricing information, rules of application for the code this ChargeItem uses.

_definitionUri (optional)
array[Element] Extensions for definitionUri

definitionCanonical (optional)
array[String] References the source of pricing information, rules of application for the code this ChargeItem uses.

context (optional)
array[StructureDefinition_Context] Identifies the types of resource or data type elements to which the extension can be applied.

occurrenceDateTime (optional)
String When the request should be fulfilled.

_occurrenceDateTime (optional)
Element

occurrencePeriod (optional)
Period

occurrenceTiming (optional)
Timing

performer (optional)
array[Reference] The desired performer for doing the requested service. For example, the surgeon, dermatopathologist, endoscopist, etc.

performingOrganization (optional)
Reference

requestingOrganization (optional)
Reference

costCenter (optional)
Reference

bodysite (optional)
array[CodeableConcept] The anatomical location where the related service has been applied.

factorOverride (optional)
BigDecimal A rational number with implicit precision

_factorOverride (optional)
Element

priceOverride (optional)
Money

overrideReason (optional)
String A sequence of Unicode characters

_overrideReason (optional)
Element

enterer (optional)
Reference

enteredDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_enteredDate (optional)
Element

reason (optional)
String A sequence of Unicode characters

service (optional)
array[Reference] Indicated the rendered service that caused this charge.

account (optional)
Reference

derivedFromUri (optional)
array[String] The URL pointing to an externally-defined charge item definition that is adhered to in whole or in part by this definition.
_derivedFromUri (optional)
array[Element] Extensions for derivedFromUri

instance (optional)
array[Substance_Instance] Substance may be used to describe a kind of substance, or a specific package/container of the substance: an instance.

applicability (optional)
array[ChargeItemDefinition_Applicability] Expressions that describe applicability criteria for the billing code.

propertyGroup (optional)
array[ChargeItemDefinition_PropertyGroup] Group of properties which are applicable under the same conditions. If no applicability rules are established for the group, then all properties always apply.

subType (optional)
CodeableConcept

use (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_use (optional)
Element

billablePeriod (optional)
Period
insurer
Reference

provider
Reference
fundsReserve (optional)
CodeableConcept

related (optional)
array[ExplanationOfBenefit_Related] Other claims which are related to this claim such as prior submissions or claims for related services or for the same event.

prescription (optional)
Reference

originalPrescription (optional)
Reference

payee (optional)
Reference

referral (optional)
Reference
facility (optional)
Reference

diagnosis (optional)
array[ExplanationOfBenefit_Diagnosis] Information about diagnoses relevant to the claim items.

procedure (optional)
MedicinalProductAuthorization_Procedure

insurance
array[Reference] Insurance plans, coverage extensions, pre-authorizations and/or pre-determinations that may be relevant to the Task.

accident (optional)
ExplanationOfBenefit_Accident

item
array[QuestionnaireResponse_Item] A group or question item from the original questionnaire for which answers are provided.

requestor (optional)

Reference

disposition (optional)
String A sequence of Unicode characters

_disposition (optional)
Element

preAuthRef (optional)
array[String] Reference from the Insurer which is used in later communications which refers to this adjudication.

_preAuthRef (optional)
array[Element] Extensions for preAuthRef

preAuthPeriod (optional)
Period
payeeType (optional)
CodeableConcept

addItem (optional)
array[ExplanationOfBenefit_AddItem] The first-tier service adjudications for payor added product or service lines.

adjudication (optional)
array[ExplanationOfBenefit_Adjudication] The adjudication results which are presented at the header level rather than at the line-item or add-item levels.

payment
Reference
formCode (optional)
CodeableConcept

form (optional)
CodeableConcept
processNote (optional)
array[PaymentReconciliation_ProcessNote] A note that describes or explains the processing in a human readable form.
communicationRequest (optional)
array[Reference] Request for additional supporting or authorizing information.

error (optional)
String A sequence of Unicode characters

statusReason (optional)
CodeableConcept

effectiveDateTime (optional)
String The time or time-period the observed value is asserted as being true. For biological subjects - e.g. human patients - this is usually called the "physiologically relevant time". This is usually either the time of the procedure or of specimen collection, but very often the source of the date/time is not known, only the date/time itself.

_effectiveDateTime (optional)
Element
assessor (optional)
Reference

previous (optional)
Reference
problem (optional)
array[Reference] A list of the relevant problems/conditions for a patient.

investigation (optional)
array[ClinicalImpression_Investigation] One or more sets of investigations (signs, symptoms, etc.). The actual grouping of investigations varies greatly depending on the type and context of the assessment. These investigations may include data generated during the assessment process, or data previously generated and recorded that is pertinent to the outcomes.

protocol (optional)

array[Reference] The set of steps expected to be performed as part of the execution of the study.

_protocol (optional)
array[Element] Extensions for protocol
summary (optional)
String A sequence of Unicode characters

_summary (optional)
Element
finding (optional)
array[ClinicalImpression_Finding] Specific findings or diagnoses that were considered likely or relevant to ongoing treatment.
prognosisCodeableConcept (optional)
array[CodeableConcept] Estimate of likely outcome.

prognosisReference (optional)
array[Reference] RiskAssessment expressing likely outcome.
caseSensitive (optional)
Boolean Value of "true" or "false"

_caseSensitive (optional)
Element

valueSet (optional)
String A URI that is a reference to a canonical URL on a FHIR resource
hierarchyMeaning (optional)
String The meaning of the hierarchy of concepts as represented in this resource.
> **Enum:**
>> *grouped-by*
>> *is-a*
>> *part-of*
>> *classified-with*

_hierarchyMeaning (optional)
Element

compositional (optional)
Boolean Value of "true" or "false"

_compositional (optional)
Element
versionNeeded (optional)
Boolean Value of "true" or "false"

_versionNeeded (optional)
Element
content
Attachment

_content (optional)
Element

supplements (optional)
String A URI that is a reference to a canonical URL on a FHIR resource
count (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)

_count (optional)
Element
filter (optional)
array[CodeSystem_Filter] A filter that can be used in a value set compose statement when selecting concepts using a filter.
property (optional)
array[SubstanceSpecification_Property] General specifications for this substance, including how it is related to other substances.
concept (optional)

array[CodeSystem_Concept] Concepts that are in the code system. The concept definitions are inherently hierarchical, but the definitions must be consulted to determine what the meanings of the hierarchical relationships are.

inResponseTo (optional)
array[Reference] Prior communication that this communication is in response to.

medium (optional)
array[CodeableConcept] A channel that was used for this communication (e.g. email, fax).

about (optional)
array[Reference] Other resources that pertain to this communication request and to which this communication request should be associated.

sent (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_sent (optional)
Element

received (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_received (optional)
Element

recipient
Reference

sender (optional)
Reference

payload (optional)
array[CommunicationRequest_Payload] Text, attachment(s), or resource(s) to be communicated to the recipient.

groupIdentifier (optional)
Identifier

authoredOn (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_authoredOn (optional)
Element

requester (optional)
Reference

_code (optional)
Element

search (optional)
Boolean Value of "true" or "false"

_search (optional)
Element

resource (optional)
array[String] The types on which this operation can be executed.

confidentiality (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_confidentiality (optional)
Element

attester (optional)

array[Composition_Attester] A participant who has attested to the accuracy of the composition/document.

custodian (optional)
Reference

relatesTo (optional)
array[DocumentReference_RelatesTo] Relationships that this document has with other document references that already exist.

section (optional)
array[Composition_Section] The root of the sections that make up the composition.

sourceUri (optional)
String Identifier for the source value set that contains the concepts that are being mapped and provides context for the mappings.

_sourceUri (optional)
Element

sourceCanonical (optional)
String Identifier for the source value set that contains the concepts that are being mapped and provides context for the mappings.

_sourceCanonical (optional)
Element

targetUri (optional)
String The target value set provides context for the mappings. Note that the mapping is made between concepts, not between value sets, but the value set provides important context about how the concept mapping choices are made.

_targetUri (optional)
Element

targetCanonical (optional)
String The target value set provides context for the mappings. Note that the mapping is made between concepts, not between value sets, but the value set provides important context about how the concept mapping choices are made.

_targetCanonical (optional)
Element

group
array[StructureMap_Group] Organizes the mapping into manageable chunks for human review/ease of maintenance.

abatementDateTime (optional)
String The date or estimated date that the condition resolved or went into remission. This is called "abatement" because of the many overloaded connotations associated with "remission" or "resolution" - Conditions are never really resolved, but they can abate.

_abatementDateTime (optional)
Element

abatementAge (optional)
Age

abatementPeriod (optional)
Period

abatementRange (optional)
Range

abatementString (optional)
String The date or estimated date that the condition resolved or went into remission. This is called "abatement" because of the many overloaded connotations associated with "remission" or "resolution" - Conditions are never really resolved, but they can abate.

_abatementString (optional)
Element

stage (optional)
array[Condition_Stage] Clinical stage or grade of a condition. May include formal severity assessments.

evidence (optional)

array[DetectedIssue_Evidence] supporting evidence or manifestations that provide the basis for identifying the detected issue such as a GuidanceResponse or MeasureReport.

scope
CodeableConcept

dateTime (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_dateTime (optional)
Element

organization (optional)
Reference
sourceAttachment (optional)
Attachment

sourceReference (optional)
Reference
policy (optional)
array[String] Policy or plan the activity was defined by. Typically, a single activity may have multiple applicable policy documents, such as patient consent, guarantor funding, etc.
policyRule (optional)
CodeableConcept

verification (optional)
array[Consent_Verification] Whether a treatment instruction (e.g. artificial respiration yes or no) was verified with the patient, his/her family or another authorized person.

provision (optional)
Consent_Provision
legalState (optional)
CodeableConcept

contentDerivative (optional)
CodeableConcept

issued (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_issued (optional)
Element

applies (optional)
Period
expirationType (optional)
CodeableConcept

authority (optional)
Reference

domain (optional)
CodeableConcept

site (optional)
array[Reference] A facility in which study activities are conducted.

alias (optional)
array[String] A list of alternate names that the organization is known as, or was known as in the past.
_alias (optional)
array[Element] Extensions for alias

topicCodeableConcept (optional)
CodeableConcept

topicReference (optional)

Reference

contentDefinition (optional)
Contract_ContentDefinition

term (optional)
array[Contract_Term] One or more Contract Provisions, which may be related and conveyed as a group, and may contain nested groups.

relevantHistory (optional)
array[Reference] Links to Provenance records for past versions of this Task that identify key state transitions or updates that are likely to be relevant to a user looking at the current version of the task.

signer (optional)
array[Contract_Signer] Parties with legal standing in the Contract, including the principal parties, the grantor(s) and grantee(s), which are any person or organization bound by the contract, and any ancillary parties, which facilitate the execution of the contract such as a notary or witness.

friendly (optional)
array[Contract_Friendly] The "patient friendly language" versionof the Contract in whole or in parts. "Patient friendly language" means the representation of the Contract and Contract Provisions in a manner that is readily accessible and understandable by a layperson in accordance with best practices for communication styles that ensure that those agreeing to or signing the Contract understand the roles, actions, obligations, responsibilities, and implication of the agreement.

legal (optional)
array[Contract_Legal] List of Legal expressions or representations of this Contract.

rule (optional)
array[Contract_Rule] List of Computable Policy Rule Language Representations of this Contract.

legallyBindingAttachment (optional)
Attachment

legallyBindingReference (optional)
Reference

policyHolder (optional)
Reference

subscriber (optional)
Reference

subscriberId (optional)
String A sequence of Unicode characters

_subscriberId (optional)
Element

beneficiary
Reference

dependent (optional)
String A sequence of Unicode characters

_dependent (optional)
Element

relationship
array[SubstanceSpecification_Relationship] A link between this substance and another, with details of the relationship.

payor
array[Reference] The program or plan underwriter or payor including both insurance and non-insurance agreements, such as patient-pay agreements.

class
CodeableConcept

order (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_order (optional)
Element

network (optional)

array[Reference] health insurance provider network in which the participatingOrganization provides the role's services (if defined) at the indicated locations (if defined).

_network (optional)
Element
costToBeneficiary (optional)
array[Coverage_CostToBeneficiary] A suite of codes indicating the cost category and associated amount which have been detailed in the policy and may have been included on the health card.
subrogation (optional)
Boolean Value of "true" or "false"

_subrogation (optional)
Element

contract (optional)
array[Reference] The policy(s) which constitute this insurance coverage.
servicedDate (optional)
String The date or dates when the enclosed suite of services were performed or completed.

_servicedDate (optional)
Element
servicedPeriod (optional)
Period

_severity (optional)
Element

identifiedDateTime (optional)
String The date or period when the detected issue was initially identified.
_identifiedDateTime (optional)
Element

identifiedPeriod (optional)
Period
implicated (optional)
array[Reference] Indicates the resource representing the current activity or proposed activity that is potentially problematic.
detail (optional)
array[PaymentReconciliation_Detail] Distribution of the payment amount for a previously acknowledged payable.
_detail (optional)
Element

reference (optional)
String String of characters used to identify a name or a resource
_reference (optional)
Element

mitigation (optional)
String A sequence of Unicode characters

definition (optional)
String A URI that is a reference to a canonical URL on a FHIR resource
udiCarrier (optional)
array[Device_UdiCarrier] Unique device identifier (UDI) assigned to device label or package. Note that the Device may include multiple udiCarriers as it either may include just the udiCarrier for the jurisdiction it is sold, or for multiple jurisdictions it could have been sold.
distinctIdentifier (optional)
String A sequence of Unicode characters

_distinctIdentifier (optional)
Element

manufacturer (optional)
array[Reference] Manufacturer of this Package Item.
_manufacturer (optional)

Element

manufactureDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_manufactureDate (optional)
Element

expirationDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_expirationDate (optional)
Element
lotNumber (optional)
String A sequence of Unicode characters

_lotNumber (optional)
Element
serialNumber (optional)
String A sequence of Unicode characters

_serialNumber (optional)
Element

deviceName (optional)
String A sequence of Unicode characters
modelNumber (optional)
String A sequence of Unicode characters

_modelNumber (optional)
Element
partNumber (optional)
String A sequence of Unicode characters

_partNumber (optional)
Element

specialization (optional)
array[DeviceDefinition_Specialization] The capabilities supported on a device, the standards to which the device conforms for a particular purpose, and used for the communication.

safety (optional)
array[CodeableConcept] Safety characteristics of the device.

udiDeviceIdentifier (optional)
array[DeviceDefinition_UdiDeviceIdentifier] Unique device identifier (UDI) assigned to device label or package. Note that the Device may include multiple udiCarriers as it either may include just the udiCarrier for the jurisdiction it is sold, or for multiple jurisdictions it could have been sold.
manufacturerString (optional)
String A name of the manufacturer.

_manufacturerString (optional)
Element

manufacturerReference (optional)
Reference

shelfLifeStorage (optional)
array[ProductShelfLife] Shelf Life and storage information.

physicalCharacteristics (optional)
ProdCharacteristic
languageCode (optional)
array[CodeableConcept] Language code for the human-readable text strings produced by the device (all supported).
capability (optional)
array[DeviceDefinition_Capability] Device capabilities.

onlineInformation (optional)

String String of characters used to identify a name or a resource

_onlineInformation (optional)

Element

parentDevice (optional)

Reference

material (optional)

array[DeviceDefinition_Material] A substance used to create the material(s) of which the device is made.

unit (optional)

CodeableConcept

operationalStatus (optional)

Coding

_operationalStatus (optional)

Element

color (optional)

String Describes the color representation for the metric. This is often used to aid clinicians to track and identify parameter types by color. In practice, consider a Patient Monitor that has ECG/HR and Pleth for example; the parameters are displayed in different characteristic colors, such as HR-blue, BP-green, and PR and SpO2- magenta.

Enum:

  black

  red
  green

  yellow

  blue

  magenta
  cyan

  white

_color (optional)

Element

measurementPeriod (optional)

Timing

calibration (optional)

array[DeviceMetric_Calibration] Describes the calibrations that have been performed or that are required to be performed.

priorRequest (optional)

array[Reference] The request takes the place of the referenced completed or terminated request(s).

codeReference (optional)

Reference

codeCodeableConcept (optional)

CodeableConcept

parameter (optional)

array[SupplyRequest_Parameter] Specific parameters for the ordered item. For example, the size of the indicated item.

performerType (optional)

array[CodeableConcept] The kind of participant that should perform the task.

derivedFrom (optional)

String A URI that is a reference to a canonical URL on a FHIR resource

recordedOn (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_recordedOn (optional)

Element

device

Reference

resultsInterpreter (optional)
array[Reference] The practitioner or organization that is responsible for the report's conclusions and interpretations.

specimen (optional)
array[Reference] One or more specimens that the laboratory procedure will use.

result (optional)
String The overall result from the execution of the TestScript.

> **Enum:**
> > *pass*
> > *fail*
> > *pending*

imagingStudy (optional)
array[Reference] One or more links to full details of any imaging performed during the diagnostic investigation. Typically, this is imaging performed by DICOM enabled modalities, but this is not required. A fully enabled PACS viewer can use this information to provide views of the source images.

media (optional)
array[DiagnosticReport_Media] A list of key images associated with this report. The images are generally created during the diagnostic process, and may be directly of the patient, or of treated specimens (i.e. slides of interest).

conclusion (optional)
String A sequence of Unicode characters

_conclusion (optional)
Element

conclusionCode (optional)
array[CodeableConcept] One or more codes that represent the summary conclusion (interpretation/impression) of the diagnostic report.

presentedForm (optional)
array[Attachment] Rich text representation of the entire result as issued by the diagnostic service. Multiple formats are allowed but they SHALL be semantically equivalent.

masterIdentifier (optional)
Identifier

_source (optional)
Element

docStatus (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_docStatus (optional)
Element

authenticator (optional)
Reference

securityLabel (optional)
array[CodeableConcept] A set of Security-Tag codes specifying the level of privacy/security of the Document. Note that DocumentReference.meta.security contains the security labels of the "reference" to the document, while DocumentReference.securityLabel contains a snapshot of the security labels on the document the reference refers to.

synthesisType (optional)
CodeableConcept

studyType (optional)
CodeableConcept

population
Reference

exposure
Reference

exposureAlternative
Reference

sampleSize (optional)
RiskEvidenceSynthesis_SampleSize

resultsByExposure (optional)
array[EffectEvidenceSynthesis_ResultsByExposure] A description of the results for each exposure considered in the effect estimate.

effectEstimate (optional)
array[EffectEvidenceSynthesis_EffectEstimate] The estimated effect of the exposure variant.

certainty (optional)
array[RiskEvidenceSynthesis_Certainty] A description of the certainty of the risk estimate.

statusHistory (optional)
array[EpisodeOfCare_StatusHistory] The history of statuses that the EpisodeOfCare has been through (without requiring processing the history of the resource).

classHistory (optional)
array[Encounter_ClassHistory] The class history permits the tracking of the encounters transitions without needing to go through the resource history. This would be used for a case where an admission starts of as an emergency encounter, then transitions into an inpatient scenario. Doing this and not restarting a new encounter ensures that any lab/diagnostic results can more easily follow the patient and not require re-processing and not get lost or cancelled during a kind of discharge from emergency to inpatient.

episodeOfCare (optional)
array[Reference] Where a specific encounter should be classified as a part of a specific episode(s) of care this field should be used. This association can facilitate grouping of related encounters together for a specific purpose, such as government reporting, issue tracking, association via a common problem. The association is recorded on the encounter as these are typically created after the episode of care and grouped on entry rather than editing the episode of care to append another encounter to it (the episode of care could span years).

length (optional)
Duration

hospitalization (optional)
Encounter_Hospitalization

serviceProvider (optional)
Reference

connectionType
Coding

payloadType
array[CodeableConcept] The payload type describes the acceptable content that can be communicated on the endpoint.

payloadMimeType (optional)
array[String] The mime type to send the payload in - e.g. application/fhir+xml, application/fhir+json. If the mime type is not specified, then the sender could send any content (including no content depending on the connectionType).

_payloadMimeType (optional)
array[Element] Extensions for payloadMimeType

address (optional)
array[Address] Address where the related person can be contacted or visited.

_address (optional)
Element

header (optional)
array[String] Additional headers / information to send as part of the notification.

_header (optional)
array[Element] Extensions for header

candidate (optional)
Reference

requestProvider (optional)
Reference

referralRequest (optional)

array[Reference] Referral Request(s) that are fulfilled by this EpisodeOfCare, incoming referrals.

careManager (optional)
Reference
team (optional)
array[Reference] The list of practitioners that may be facilitating this episode of care for specific purposes.

trigger
array[TriggerDefinition] The trigger element defines when the event occurs. If more than one trigger condition is specified, the event fires whenever any one of the trigger conditions is met.

shortTitle (optional)
String A sequence of Unicode characters

_shortTitle (optional)
Element
exposureBackground
Reference

exposureVariant (optional)
array[Reference] A reference to a EvidenceVariable resource that defines the exposure for the research.

characteristic
array[ResearchElementDefinition_Characteristic] A characteristic that defines the members of the research element. Multiple characteristics are applied with "and" semantics.

process (optional)
array[ExampleScenario_Process] Each major process - a group of operations.
workflow (optional)
array[String] Another nested workflow.

fundsReserveRequested (optional)
CodeableConcept
claim (optional)
Reference

claimResponse (optional)
Reference

preAuthRefPeriod (optional)
array[Period] The timeframe during which the supplied preauthorization reference may be quoted on claims to obtain the adjudication as provided.

precedence (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_precedence (optional)
Element

benefitPeriod (optional)
Period
benefitBalance (optional)
array[ExplanationOfBenefit_BenefitBalance] Balance by Benefit Category.

dataAbsentReason (optional)
CodeableConcept
sex (optional)
CodeableConcept

bornPeriod (optional)
Period

bornDate (optional)
String The actual or approximate date of birth of the relative.
_bornDate (optional)
Element

bornString (optional)
String The actual or approximate date of birth of the relative.

_bornString (optional)

Element

ageAge (optional)

Age

ageRange (optional)

Range

ageString (optional)

String The age of the relative at the time the family member history is recorded.

_ageString (optional)

Element

estimatedAge (optional)

Boolean Value of "true" or "false"

_estimatedAge (optional)

Element

deceasedBoolean (optional)

Boolean Indicates if the individual is deceased or not.

_deceasedBoolean (optional)

Element

deceasedAge (optional)

Age

deceasedRange (optional)

Range

deceasedDate (optional)

String Deceased flag or the actual or approximate age of the relative at the time of death for the family member history record.

_deceasedDate (optional)

Element

deceasedString (optional)

String Deceased flag or the actual or approximate age of the relative at the time of death for the family member history record.

_deceasedString (optional)

Element

condition (optional)

array[CodeableConcept] A mode or state of being that describes the nature of the specimen.

lifecycleStatus (optional)

String The state of the goal throughout its lifecycle.

> **Enum:**
> *proposed*
> *planned*
> *accepted*
> *active*
> *on-hold*
> *completed*
> *cancelled*
> *entered-in-error*
> *rejected*

_lifecycleStatus (optional)

Element

achievementStatus (optional)

CodeableConcept

startDate (optional)

String The date or event after which the goal should begin being pursued.

_startDate (optional)

Element

startCodeableConcept (optional)

CodeableConcept

target
array[Reference] A resource that was validated.

statusDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_statusDate (optional)
Element
_statusReason (optional)
Element

expressedBy (optional)
Reference

outcomeCode (optional)
array[CodeableConcept] Identifies the change (or lack of change) at the point when the status of the goal is assessed.
outcomeReference (optional)
array[Reference] Details of what's changed (or not changed).

actual (optional)
Boolean Value of "true" or "false"

_actual (optional)
Element
managingEntity (optional)
Reference

member (optional)
array[Group_Member] Identifies the resource instances that are members of the group.
requestIdentifier (optional)
Identifier

moduleUri (optional)
String An identifier, CodeableConcept or canonical reference to the guidance that was requested.

_moduleUri (optional)
Element
moduleCanonical (optional)
String An identifier, CodeableConcept or canonical reference to the guidance that was requested.

_moduleCanonical (optional)
Element
moduleCodeableConcept (optional)
CodeableConcept

evaluationMessage (optional)
array[Reference] Messages resulting from the evaluation of the artifact or artifacts. As part of evaluating the request, the engine may produce informational or warning messages. These messages will be provided by this element.
outputParameters (optional)
Reference

dataRequirement (optional)
array[DataRequirement] Describes a set of data that must be provided in order to be able to successfully perform the computations defined by the library.

providedBy (optional)
Reference
extraDetails (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine
_extraDetails (optional)
Element

photo (optional)
array[Attachment] Image of the person.

coverageArea (optional)
array[Reference] The geographic region in which a health insurance product's benefits apply.

serviceProvisionCode (optional)
array[CodeableConcept] The code(s) that detail the conditions under which the healthcare service is available/offered.

eligibility (optional)
array[HealthcareService_Eligibility] Does this service have specific eligibility requirements that need to be met in order to use the service?

program (optional)
array[CodeableConcept] Programs that this service is applicable to.

communication (optional)
array[RelatedPerson_Communication] A language which may be used to communicate with about the patient's health.

referralMethod (optional)
array[CodeableConcept] Ways that the service accepts referrals, if this is not provided then it is implied that no referral is required.

appointmentRequired (optional)
Boolean Value of "true" or "false"

_appointmentRequired (optional)
Element

availableTime (optional)
array[PractitionerRole_AvailableTime] A collection of times the practitioner is available or performing this role at the location and/or healthcareservice.

notAvailable (optional)
array[PractitionerRole_NotAvailable] The practitioner is not available or performing this role during this period of time due to the provided reason.

availabilityExceptions (optional)
String A sequence of Unicode characters

_availabilityExceptions (optional)
Element

endpoint (optional)
array[Reference] Technical endpoints providing access to services operated for the practitioner with this role.

modality (optional)
CodeableConcept

started (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_started (optional)
Element

referrer (optional)
Reference

interpreter (optional)
array[Reference] Who read the study and interpreted the images or other content.

numberOfSeries (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)

_numberOfSeries (optional)
Element

numberOfInstances (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)

_numberOfInstances (optional)

Element

procedureReference (optional)
Reference
procedureCode (optional)
array[CodeableConcept] The code for the performed procedure type.

series (optional)
String A sequence of Unicode characters
vaccineCode
CodeableConcept

occurrenceString (optional)
String Date vaccine administered or was to be administered.

_occurrenceString (optional)
Element
primarySource (optional)
array[VerificationResult_PrimarySource] Information about the primary source(s) involved in validation.

_primarySource (optional)
Element

reportOrigin (optional)
CodeableConcept
route (optional)
CodeableConcept

doseQuantity (optional)
Quantity

isSubpotent (optional)
Boolean Value of "true" or "false"

_isSubpotent (optional)
Element

subpotentReason (optional)
array[CodeableConcept] Reason why a dose is considered to be subpotent.
education (optional)
array[Immunization_Education] Educational material presented to the patient (or guardian) at the time of vaccine administration.
programEligibility (optional)
array[CodeableConcept] Indicates a patient's eligibility for a funding program.

fundingSource (optional)
CodeableConcept
protocolApplied (optional)
array[Immunization_ProtocolApplied] The protocol (set of recommendations) being followed by the provider who administered the dose.
targetDisease
CodeableConcept

immunizationEvent
Reference

doseStatus
CodeableConcept

doseStatusReason (optional)
array[CodeableConcept] Provides an explanation as to why the vaccine administration event is valid or not relative to the published recommendations.

_series (optional)
Element

doseNumberPositiveInt (optional)
BigDecimal Nominal position in a series.
_doseNumberPositiveInt (optional)

Element

doseNumberString (optional)
String Nominal position in a series.
_doseNumberString (optional)
Element

seriesDosesPositiveInt (optional)
BigDecimal The recommended number of doses to achieve immunity.
_seriesDosesPositiveInt (optional)
Element

seriesDosesString (optional)
String The recommended number of doses to achieve immunity.

_seriesDosesString (optional)
Element

recommendation
array[ImmunizationRecommendation_Recommendation] Vaccine administration recommendations.

packageId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_packageId (optional)
Element

license (optional)
String The license that applies to this Implementation Guide, using an SPDX license code, or 'not-open-source'.
Enum:
not-open-source

[Element](#)

dependsOn (optional)
[array[ImplementationGuide_DependsOn]](#) Another implementation guide that this implementation depends on. Typically, an implementation guide uses value sets, profiles etc.defined in other implementation guides.

global (optional)
[array[ImplementationGuide_Global]](#) A set of profiles that all resources covered by this implementation guide must conform to.

manifest (optional)
[ImplementationGuide_Manifest](#)

ownedBy (optional)
[Reference](#)

administeredBy (optional)
[Reference](#)

plan (optional)
[array[InsurancePlan_Plan]](#) Details about an insurance plan.

cancelledReason (optional)
[String](#) A sequence of Unicode characters

_cancelledReason (optional)
[Element](#)

issuer (optional)
[Reference](#)

lineItem (optional)

array[Invoice_LineItem] Each line item represents one charge for goods and services rendered. Details such as date, code and amount are found in the referenced ChargeItem resource.

totalPriceComponent (optional)
array[Invoice_PriceComponent] The total amount for the Invoice may be calculated as the sum of the line items with surcharges/deductions that apply in certain conditions. The priceComponent element can be used to offer transparency to the recipient of the Invoice of how the total price was calculated.

totalNet (optional)
Money

totalGross (optional)
Money

paymentTerms (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_paymentTerms (optional)
Element

mode (optional)
String Indicates whether a resource instance represents a specific location or a class of locations.
Enum:
    instance
    kind

_mode (optional)
Element

orderedBy (optional)
CodeableConcept

emptyReason (optional)
CodeableConcept

physicalType (optional)
CodeableConcept

position (optional)
Location_Position

hoursOfOperation (optional)
array[Location_HoursOfOperation] What days/times during a week is this location usually open.

disclaimer (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_disclaimer (optional)
Element

scoring (optional)
CodeableConcept

compositeScoring (optional)
CodeableConcept

riskAdjustment (optional)
String A sequence of Unicode characters

_riskAdjustment (optional)
Element

rateAggregation (optional)
String A sequence of Unicode characters

_rateAggregation (optional)
Element

rationale (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_rationale (optional)
Element

clinicalRecommendationStatement (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_clinicalRecommendationStatement (optional)
Element

improvementNotation (optional)
CodeableConcept

_definition (optional)
array[Element] Extensions for definition

guidance (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_guidance (optional)
Element

supplementalData (optional)
array[Measure_SupplementalData] The supplemental data criteria for the measure report, specified as either the name of a valid CQL expression within a referenced library, or a valid FHIR Resource Path.

measure
String A URI that is a reference to a canonical URL on a FHIR resource

reporter (optional)
Reference

evaluatedResource (optional)
array[Reference] A reference to a Bundle containing the Resources that were used in the calculation of this measure.

view (optional)
CodeableConcept

createdDateTime (optional)
String The date and time(s) at which the media was collected.

_createdDateTime (optional)
Element

createdPeriod (optional)
Period

operator (optional)
Reference

_deviceName (optional)
Element

height (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_height (optional)
Element

width (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_width (optional)
Element

frames (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_frames (optional)
Element

duration (optional)
Quantity

_duration (optional)
Element

amount
Money

ingredient (optional)

array[Substance_Ingredient] A substance can be composed of other substances.

batch (optional)
Medication_Batch
_instantiates (optional)
array[Element] Extensions for instantiates

medicationCodeableConcept (optional)
CodeableConcept
medicationReference (optional)
Reference

eventHistory (optional)
array[Reference] Links to Provenance records for past versions of this resource or fulfilling request or event resources that identify key state transitions or updates that are likely to be relevant to a user looking at the current version of the resource.
statusReasonCodeableConcept (optional)
CodeableConcept

statusReasonReference (optional)
Reference
authorizingPrescription (optional)
array[Reference] Indicates the medication order that is being dispensed against.

daysSupply (optional)
Quantity

whenPrepared (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_whenPrepared (optional)
Element

whenHandedOver (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_whenHandedOver (optional)
Element

destination (optional)
array[TestScript_Destination] An abstract server used in operations within this test script in the destination element.

receiver (optional)
array[Reference] Identifies the person who picked up the Supply.
dosageInstruction (optional)
array[Dosage] Indicates how the medication is to be used by the patient.

substitution (optional)
MedicationRequest_Substitution

detectedIssue (optional)
array[Reference] Indicates an actual or potential clinical issue with or between one or more active or proposed clinical actions for a patient; e.g. Drug-drug interaction, duplicate therapy, dosage alert etc.
doseForm (optional)
CodeableConcept

synonym (optional)
array[String] Additional names for a medication, for example, the name(s) given to a medication in different countries. For example, acetaminophen and paracetamol or salbutamol and albuterol.

_synonym (optional)
array[Element] Extensions for synonym

relatedMedicationKnowledge (optional)

array[MedicationKnowledge_RelatedMedicationKnowledge] Associated or related knowledge about a medication.

associatedMedication (optional)

array[Reference] Associated or related medications. For example, if the medication is a branded product (e.g. Crestor), this is the Therapeutic Moeity (e.g. Rosuvastatin) or if this is a generic medication (e.g. Rosuvastatin), this would link to a branded product (e.g. Crestor).

productType (optional)

array[CodeableConcept] Category of the medication or product (e.g. branded product, therapeutic moeity, generic product, innovator product, etc.).

monograph (optional)

array[MedicationKnowledge_Monograph] Associated documentation about the medication.

preparationInstruction (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_preparationInstruction (optional)

Element

intendedRoute (optional)

array[CodeableConcept] The intended or approved route of administration.

cost (optional)

array[MedicationKnowledge_Cost] The price of the medication.

monitoringProgram (optional)

array[MedicationKnowledge_MonitoringProgram] The program under which the medication is reviewed.

administrationGuidelines (optional)

array[MedicationKnowledge_AdministrationGuidelines] Guidelines for the administration of the medication.

medicineClassification (optional)

array[MedicationKnowledge_MedicineClassification] Categorization of the medication within a formulary or classification system.

packaging (optional)

MedicationKnowledge_Packaging

drugCharacteristic (optional)

array[MedicationKnowledge_DrugCharacteristic] Specifies descriptive properties of the medicine, such as color, shape, imprints, etc.

contraindication (optional)

array[Reference] Potential clinical issue with or between medication(s) (for example, drug-drug interaction, drug-disease contraindication, drug-allergy interaction, etc.).

regulatory (optional)

array[MedicationKnowledge_Regulatory] Regulatory information about a medication.

kinetics (optional)

array[MedicationKnowledge_Kinetics] The time course of drug absorption, distribution, metabolism and excretion of a medication from the body.

reportedBoolean (optional)

Boolean Indicates if this record was captured as a secondary 'reported' record rather than as an original primary source-of-truth record. It may also indicate the source of the report.

_reportedBoolean (optional)

Element

reportedReference (optional)

Reference

_instantiatesCanonical (optional)

array[Element] Extensions for instantiatesCanonical

courseOfTherapyType (optional)

CodeableConcept

dispenseRequest (optional)

MedicationRequest_DispenseRequest

priorPrescription (optional)

Reference

dateAsserted (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_dateAsserted (optional)

Element

informationSource (optional)

Reference

combinedPharmaceuticalDoseForm (optional)

CodeableConcept

legalStatusOfSupply (optional)

CodeableConcept

additionalMonitoringIndicator (optional)

CodeableConcept

specialMeasures (optional)

array[String] Whether the Medicinal Product is subject to special measures for regulatory reasons.

_specialMeasures (optional)

array[Element] Extensions for specialMeasures

paediatricUseIndicator (optional)

CodeableConcept

productClassification (optional)

array[CodeableConcept] Allows the product to be classified by various systems.

marketingStatus (optional)

array[MarketingStatus] Marketing information.

pharmaceuticalProduct (optional)

array[Reference] Pharmaceutical aspects of product.

packagedMedicinalProduct (optional)

array[Reference] Package representation for the product.

attachedDocument (optional)

array[Reference] Supporting documentation, typically for regulatory submission.

masterFile (optional)

array[Reference] A master file for to the medicinal product (e.g. Pharmacovigilance System Master File).

clinicalTrial (optional)

array[Reference] Clinical trials or studies that this product is involved in.

crossReference (optional)

array[Identifier] Reference to another product, e.g. for linking authorised to investigational product.

manufacturingBusinessOperation (optional)

array[MedicinalProduct_ManufacturingBusinessOperation] An operation applied to the product, for manufacturing or adminsitrative purpose.

specialDesignation (optional)

array[MedicinalProduct_SpecialDesignation] Indicates if the medicinal product has an orphan designation for the treatment of a rare disease.

country (optional)

array[CodeableConcept] The country in which the marketing authorization has been granted.

restoreDate (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_restoreDate (optional)

Element

dataExclusivityPeriod (optional)
Period

dateOfFirstAuthorization (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_dateOfFirstAuthorization (optional)
Element

internationalBirthDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_internationalBirthDate (optional)
Element

legalBasis (optional)
CodeableConcept

jurisdictionalAuthorization (optional)
array[MedicinalProductAuthorization_JurisdictionalAuthorization] Authorization in areas within a country.

holder (optional)
Reference

regulator (optional)
Reference

disease (optional)
CodeableConcept

diseaseStatus (optional)
CodeableConcept

comorbidity (optional)
array[CodeableConcept] Comorbidity (concurrent condition) or co-infection as part of the indication.

therapeuticIndication (optional)
array[Reference] Information about the use of the medicinal product in relation to other therapies as part of the indication.

otherTherapy (optional)
array[MedicinalProductIndication_OtherTherapy] Information about the use of the medicinal product in relation to other therapies described as part of the indication.

diseaseSymptomProcedure (optional)
CodeableConcept

intendedEffect (optional)
CodeableConcept

undesirableEffect (optional)
array[Reference] Describe the undesirable effects of the medicinal product.

role
CodeableConcept

allergenicIndicator (optional)
Boolean Value of "true" or "false"

_allergenicIndicator (optional)
Element

specifiedSubstance (optional)
array[MedicinalProductIngredient_SpecifiedSubstance] A specified substance that comprises this ingredient.

substance (optional)
MedicinalProductIngredient_Substance

interactant (optional)

array[MedicinalProductInteraction_Interactant] The specific medication, food or laboratory test that
interacts.

effect (optional)
CodeableConcept

incidence (optional)
CodeableConcept

management (optional)
CodeableConcept

manufacturedDoseForm
CodeableConcept

unitOfPresentation (optional)
CodeableConcept

otherCharacteristics (optional)
array[CodeableConcept] Other codeable characteristics.

marketingAuthorization (optional)
Reference

batchIdentifier (optional)
array[MedicinalProductPackaged_BatchIdentifier] Batch numbering.

packageItem
array[MedicinalProductPackaged_PackageItem] A packaging item, as a contained for medicine, possibly
with other packaging items within.

administrableDoseForm
CodeableConcept

characteristics (optional)
array[MedicinalProductPharmaceutical_Characteristics] Characteristics e.g. a products onset of action.

routeOfAdministration
array[MedicinalProductPharmaceutical_RouteOfAdministration] The path by which the pharmaceutical
product is taken into or makes contact with the body.

symptomConditionEffect (optional)
CodeableConcept

frequencyOfOccurrence (optional)
CodeableConcept

base (optional)
array[String] The base resource type(s) that this search parameter can be used against.

eventCoding (optional)
Coding

eventUri (optional)
String Code that identifies the event this message represents and connects it with its definition. Events
defined as part of the FHIR specification have the system value
"http://terminology.hl7.org/CodeSystem/message-events". Alternatively uri to the EventDefinition.

_eventUri (optional)
Element

focus (optional)
Reference

responseRequired (optional)
String Declare at a message definition level whether a response is required or only upon error or
success, or never.

> **Enum:**
> *always*
> *on-error*
> *never*
> *on-success*

_responseRequired (optional)
Element

allowedResponse (optional)

array[MessageDefinition_AllowedResponse] indicates what types of messages may be sent as an application-level response to this message.

graph (optional)
array[String] Canonical reference to a GraphDefinition. If a URL is provided, it is the canonical reference to a [[[GraphDefinition]]] that it controls what resources are to be added to the bundle when building the document. The GraphDefinition can also specify profiles that apply to the various resources.

responsible (optional)
String A sequence of Unicode characters

response (optional)
Reference

coordinateSystem (optional)
BigDecimal A whole number
_coordinateSystem (optional)
Element

referenceSeq (optional)
MolecularSequence_ReferenceSeq
variant (optional)
array[MolecularSequence_Variant] The definition of variant here originates from Sequence ontology (**variant_of**). This element can represent amino acid or nucleic sequence change(including insertion,deletion,SNP,etc.) It can represent some complex mutation or segment variation with the assist of CIGAR string.

observedSeq (optional)
String A sequence of Unicode characters

_observedSeq (optional)
Element

quality (optional)
array[MolecularSequence_Quality] An experimental feature attribute that defines the quality of the feature in a quantitative way, such as a phred quality score (**SO:0001686**).

readCoverage (optional)
BigDecimal A whole number

_readCoverage (optional)
Element
repository (optional)
array[MolecularSequence_Repository] Configurations of the external repository. The repository shall store target's observedSeq or records related with target's observedSeq.

pointer (optional)
array[Reference] Pointer to next atomic sequence which at most contains one variant.

structureVariant (optional)
array[MolecularSequence_StructureVariant] Information about chromosome structure variation.
_responsible (optional)
Element

uniqueId
array[NamingSystem_UniqueId] Indicates how the system may be identified when referenced in electronic exchange.

orderer (optional)
Reference
allergyIntolerance (optional)
array[Reference] A link to a record of allergies or intolerances which should be included in the nutrition order.
foodPreferenceModifier (optional)
array[CodeableConcept] This modifier is used to convey order-specific modifiers about the type of food that should be given. These can be derived from patient allergies, intolerances, or preferences such as Halal, Vegan or Kosher. This modifier applies to the entire nutrition order inclusive of the oral diet, nutritional supplements and enteral formula feedings.

excludeFoodModifier (optional)

array[CodeableConcept] This modifier is used to convey Order-specific modifier about the type of oral food or oral fluids that should not be given. These can be derived from patient allergies, intolerances, or preferences such as No Red Meat, No Soy or No Wheat or Gluten-Free. While it should not be necessary to repeat allergy or intolerance information captured in the referenced AllergyIntolerance resource in the excludeFoodModifier, this element may be used to convey additional specificity related to foods that should be eliminated from the patientâ€™s diet for any reason. This modifier applies to the entire nutrition order inclusive of the oral diet, nutritional supplements and enteral formula feedings.

oralDiet (optional)
NutritionOrder_OralDiet
supplement (optional)
array[NutritionOrder_Supplement] Oral nutritional products given in order to add further nutritional value to the patient's diet.
enteralFormula (optional)
NutritionOrder_EnteralFormula

effectiveTiming (optional)
Timing
effectiveInstant (optional)
String The time or time-period the observed value is asserted as being true. For biological subjects - e.g. human patients - this is usually called the "physiologically relevant time". This is usually either the time of the procedure or of specimen collection, but very often the source of the date/time is not known, only the date/time itself.

_effectiveInstant (optional)
Element
valueQuantity (optional)
Quantity

valueCodeableConcept (optional)
CodeableConcept

valueString (optional)
String The information determined as a result of making the observation, if the information has a simple value.

_valueString (optional)
Element
valueBoolean (optional)
Boolean The information determined as a result of making the observation, if the information has a simple value.

_valueBoolean (optional)
Element

valueInteger (optional)
BigDecimal The information determined as a result of making the observation, if the information has a simple value.

_valueInteger (optional)
Element
valueRange (optional)
Range

valueRatio (optional)
Ratio
valueSampledData (optional)
SampledData

valueTime (optional)
String The information determined as a result of making the observation, if the information has a simple value.

_valueTime (optional)
Element

valueDateTime (optional)
String The information determined as a result of making the observation, if the information has a simple value.

_valueDateTime (optional)
Element

valuePeriod (optional)
Period

interpretation (optional)
array[CodeableConcept] A categorical assessment of an observation value. For example, high, low, normal.

method (optional)
CodeableConcept

referenceRange (optional)
array[Observation_ReferenceRange] Guidance on how to interpret the value by comparison to a normal or recommended range. Multiple reference ranges are interpreted as an "OR". In other words, to represent two distinct target populations, two referenceRange elements would be used.

hasMember (optional)
array[Reference] This observation is a group observation (e.g. a battery, a panel of tests, a set of vital sign measurements) that includes the target as a member of the group.

component (optional)
array[SearchParameter_Component] Used to define the parts of a composite search parameter.

permittedDataType (optional)
array[String] The data types allowed for the value element of the instance observations conforming to this ObservationDefinition.

     Enum:

_permittedDataType (optional)
array[Element] Extensions for permittedDataType

multipleResultsAllowed (optional)
Boolean Value of "true" or "false"

_multipleResultsAllowed (optional)
Element

preferredReportName (optional)
String A sequence of Unicode characters

_preferredReportName (optional)
Element

quantitativeDetails (optional)
ObservationDefinition_QuantitativeDetails

qualifiedInterval (optional)
array[ObservationDefinition_QualifiedInterval] Multiple ranges of results qualified by different contexts for ordinal or continuous observations conforming to this ObservationDefinition.

validCodedValueSet (optional)
Reference

normalCodedValueSet (optional)
Reference

abnormalCodedValueSet (optional)
Reference

criticalCodedValueSet (optional)
Reference

affectsState (optional)
Boolean Value of "true" or "false"

_affectsState (optional)
Element

_resource (optional)
array[Element] Extensions for resource

system (optional)
Boolean Value of "true" or "false"

_system (optional)

Element

_instance (optional)
Element
inputProfile (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

outputProfile (optional)
String A URI that is a reference to a canonical URL on a FHIR resource
overload (optional)
array[OperationDefinition_Overload] Defines an appropriate combination of parameters to use when invoking this operation, to help code generators when generating overloaded parameter sets for this operation.

issue
array[OperationOutcome_Issue] An error, warning, or information message that results from a system action.

participatingOrganization (optional)
Reference

healthcareService (optional)
array[Reference] The list of healthcare services that this worker provides for this role's Organization/Location(s).

gender (optional)
String Administrative Gender - the gender that the person is considered to have for administration and record keeping purposes.
>   **Enum:**
>   *male*
>   *female*
>   *other*
>   *unknown*

_gender (optional)
Element

birthDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_birthDate (optional)
Element

deceasedDateTime (optional)
String Indicates if the individual is deceased or not.

_deceasedDateTime (optional)
Element

maritalStatus (optional)
CodeableConcept
multipleBirthBoolean (optional)
Boolean Indicates whether the patient is part of a multiple (boolean) or indicates the actual birth order (integer).

_multipleBirthBoolean (optional)
Element

multipleBirthInteger (optional)
BigDecimal Indicates whether the patient is part of a multiple (boolean) or indicates the actual birth order (integer).

_multipleBirthInteger (optional)
Element
generalPractitioner (optional)
array[Reference] Patient's nominated care provider.

paymentDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_paymentDate (optional)

Element

paymentStatus (optional)
CodeableConcept
paymentIssuer (optional)
Reference

paymentAmount
Money
paymentIdentifier (optional)
Identifier

qualification (optional)
array[Practitioner_Qualification] The official certifications, training, and licenses that authorize or otherwise pertain to the provision of care by the practitioner. For example, a medical license issued by a medical board authorizing the practitioner to practice medicine within a certian locality.
practitioner (optional)
Reference

performedDateTime (optional)
String Estimated or actual date, date-time, period, or age when the procedure was performed. Allows a period to support complex procedures that span more than one date, and also allows for the length of the procedure to be captured.

_performedDateTime (optional)
Element

performedPeriod (optional)
Period
performedString (optional)
String Estimated or actual date, date-time, period, or age when the procedure was performed. Allows a period to support complex procedures that span more than one date, and also allows for the length of the procedure to be captured.
_performedString (optional)
Element

performedAge (optional)
Age

performedRange (optional)
Range
report (optional)
array[Reference] This could be a histology result, pathology report, surgical report, etc.

complication (optional)
array[CodeableConcept] Any complications that occurred during the procedure, or in the immediate post-performance period. These are generally tracked separately from the notes, which will typically describe the procedure itself rather than any 'post procedure' issues.

complicationDetail (optional)
array[Reference] Any complications that occurred during the procedure, or in the immediate post-performance period.

followUp (optional)
array[CodeableConcept] If the procedure required specific follow up - e.g. removal of sutures. The follow up may be represented as a simple note or could potentially be more complex, in which case the CarePlan resource can be used.

focalDevice (optional)
array[Procedure_FocalDevice] A device that is implanted, removed or otherwise manipulated (calibration, battery replacement, fitting a prosthesis, attaching a wound-vac, etc.) as a focal portion of the Procedure.
usedReference (optional)
array[Reference] Identifies medications, devices and any other substance used as part of the procedure.
usedCode (optional)
array[CodeableConcept] Identifies coded items that were used as part of the procedure.

occurredPeriod (optional)

Period

occurredDateTime (optional)
String The period during which the activity occurred.
_occurredDateTime (optional)
Element

_policy (optional)
array[Element] Extensions for policy
subjectType (optional)
array[String] The types of subjects that can be the subject of responses created for the questionnaire.

_subjectType (optional)
array[Element] Extensions for subjectType

questionnaire (optional)
String A URI that is a reference to a canonical URL on a FHIR resource
authored (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_authored (optional)
Element
variableType (optional)
String The type of the outcome (e.g. Dichotomous, Continuous, or Descriptive).
> **Enum:**
> *dichotomous*
> *continuous*
> *descriptive*

_variableType (optional)
Element

primaryPurposeType (optional)
CodeableConcept
phase (optional)
CodeableConcept

keyword (optional)
array[Coding] A set of key words or terms from external terminologies that may be used to assist with indexing and searching of templates nby describing the use of this structure definition, or the content it describes.

enrollment (optional)
array[Reference] Reference to a Group that defines the criteria for and quantity of subjects participating in the study. E.g. " 200 female Europeans between the ages of 20 and 45 with early onset diabetes".
sponsor (optional)
Reference

principalInvestigator (optional)
Reference

reasonStopped (optional)
CodeableConcept

arm (optional)
array[ResearchStudy_Arm] Describes an expected sequence of events for one of the participants of a study. E.g. Exposure to drug A, wash-out, exposure to drug B, wash-out, follow-up.

objective (optional)
array[ResearchStudy_Objective] A goal that the study is aiming to achieve in terms of a scientific question to be answered by the analysis of data collected during the study.

individual
Reference

assignedArm (optional)
String A sequence of Unicode characters

_assignedArm (optional)
Element

actualArm (optional)
String A sequence of Unicode characters

_actualArm (optional)
Element

consent (optional)
Reference

basis (optional)
array[Reference] Indicates the source data considered as part of the assessment (for example, FamilyHistory, Observations, Procedures, Conditions, etc.).

prediction (optional)
array[RiskAssessment_Prediction] Describes the expected outcome for the subject.

_mitigation (optional)
Element

riskEstimate (optional)
RiskEvidenceSynthesis_RiskEstimate

planningHorizon (optional)
Period

_base (optional)
array[Element] Extensions for base

expression (optional)
String A sequence of Unicode characters

_expression (optional)
Element

xpath (optional)
String A sequence of Unicode characters

_xpath (optional)
Element

xpathUsage (optional)
String How the search parameter relates to the set of elements returned by evaluating the xpath query.

> **Enum:**
> *normal*
> *phonetic*
> *nearby*
> *distance*
> *other*

_xpathUsage (optional)
Element

_target (optional)
array[Element] Extensions for target

multipleOr (optional)
Boolean Value of "true" or "false"

_multipleOr (optional)
Element

multipleAnd (optional)
Boolean Value of "true" or "false"

_multipleAnd (optional)
Element

comparator (optional)
array[String] Comparators supported for the search parameter.

> **Enum:**

_comparator (optional)
array[Element] Extensions for comparator

modifier (optional)

array[String] A modifier supported for the search parameter.

    Enum:

_modifier (optional)

array[Element] Extensions for modifier

chain (optional)

array[String] Contains the names of any search parameters which may be chained to the containing search parameter. Chained parameters may be added to search parameters of type reference and specify that resources will only be returned if they contain a reference to a resource which matches the chained parameter value. Values for this field should be drawn from SearchParameter.code for a parameter on the target resource type.

_chain (optional)

array[Element] Extensions for chain

requisition (optional)

Identifier

orderDetail (optional)

array[CodeableConcept] Additional details and instructions about the how the services are to be delivered. For example, and order for a urinary catheter may have an order detail for an external or indwelling catheter, or an order for a bandage may require additional instructions specifying how the bandage should be applied.

quantityQuantity (optional)

Quantity

quantityRatio (optional)

Ratio

quantityRange (optional)

Range

asNeededBoolean (optional)

Boolean If a CodeableConcept is present, it indicates the pre-condition for performing the service. For example "pain", "on flare-up", etc.

_asNeededBoolean (optional)

Element

asNeededCodeableConcept (optional)

CodeableConcept

locationCode (optional)

array[CodeableConcept] The preferred location(s) where the procedure should actually happen in coded or free text form. E.g. at home or nursing day care center.

locationReference (optional)

array[Reference] A reference to the the preferred location(s) where the procedure should actually happen. E.g. at home or nursing day care center.

schedule

Reference

overbooked (optional)

Boolean Value of "true" or "false"

_overbooked (optional)

Element

accessionIdentifier (optional)

Identifier

receivedTime (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_receivedTime (optional)

Element

container (optional)

array[Specimen_Container] The container holding the specimen. The recursive nature of containers, i.e. blood in tube in tray in rack is not addressed here.

typeCollected (optional)
CodeableConcept

patientPreparation (optional)
array[CodeableConcept] Preparation of the patient for specimen collection.

timeAspect (optional)
String A sequence of Unicode characters

_timeAspect (optional)
Element

typeTested (optional)
array[SpecimenDefinition_TypeTested] Specimen conditioned in a container as expected by the testing laboratory.

mapping (optional)
array[StructureDefinition_Mapping] An external specification that the content is mapped to.

abstract (optional)
Boolean Value of "true" or "false"

_abstract (optional)
Element

contextInvariant (optional)
array[String] A set of rules as FHIRPath Invariants about when the extension can be used (e.g. co-occurrence variants for the extension). All the rules must be true.

_contextInvariant (optional)
array[Element] Extensions for contextInvariant

baseDefinition (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

derivation (optional)
String How the type relates to the baseDefinition.
> **Enum:**
>> *specialization*
>> *constraint*

_derivation (optional)
Element

snapshot (optional)
StructureDefinition_Snapshot

differential (optional)
StructureDefinition_Differential

structure (optional)
SubstanceSpecification_Structure

import (optional)
array[String] Other maps used by this map (canonical URLs).

_reason (optional)
Element

criteria (optional)
String A sequence of Unicode characters

_criteria (optional)
Element

_error (optional)
Element

channel
Subscription_Channel

sequenceType (optional)
CodeableConcept

numberOfSubunits (optional)

BigDecimal A whole number

_numberOfSubunits (optional)
Element
areaOfHybridisation (optional)
String A sequence of Unicode characters

_areaOfHybridisation (optional)
Element
oligoNucleotideType (optional)
CodeableConcept

subunit (optional)
array[SubstanceProtein_Subunit] This subclause refers to the description of each subunit constituting the SubstanceProtein. A subunit is a linear sequence of amino acids linked through peptide bonds. The Subunit information shall be provided when the finished SubstanceProtein is a complex of multiple sequences; subunits are not used to delineate domains within a single sequence. Subunits are listed in order of decreasing length; sequences of the same length will be ordered by decreasing molecular weight; subunits that have identical sequences will be repeated multiple times.

geometry (optional)
CodeableConcept

copolymerConnectivity (optional)
array[CodeableConcept] Todo.
modification (optional)
array[String] Todo.

_modification (optional)
array[Element] Extensions for modification

monomerSet (optional)
array[SubstancePolymer_MonomerSet] Todo.

repeat (optional)
array[SubstancePolymer_Repeat] Todo.

disulfideLinkage (optional)
array[String] The disulphide bond between two cysteine residues either on the same subunit or on two different subunits shall be described. The position of the disulfide bonds in the SubstanceProtein shall be listed in increasing order of subunit number and position within subunit followed by the abbreviation of the amino acids involved. The disulfide linkage positions shall actually contain the amino acid Cysteine at the respective positions.

_disulfideLinkage (optional)
array[Element] Extensions for disulfideLinkage

gene (optional)
array[SubstanceReferenceInformation_Gene] Todo.

geneElement (optional)
array[SubstanceReferenceInformation_GeneElement] Todo.
sourceMaterialClass (optional)
CodeableConcept

sourceMaterialType (optional)
CodeableConcept

sourceMaterialState (optional)
CodeableConcept

organismId (optional)
Identifier

organismName (optional)
String A sequence of Unicode characters
_organismName (optional)
Element

parentSubstanceId (optional)
array[Identifier] The parent of the herbal drug Ginkgo biloba, Leaf is the substance ID of the substance (fresh) of Ginkgo biloba L. or Ginkgo biloba L. (Whole plant).

parentSubstanceName (optional)

array[String] The parent substance of the Herbal Drug, or Herbal preparation.

parentSubstanceName (optional)

array[Element] Extensions for parentSubstanceName

countryOfOrigin (optional)

array[CodeableConcept] The country where the plant material is harvested or the countries where the plasma is sourced from as laid down in accordance with the Plasma Master File. For â€œPlasma-derived substancesâ€ the attribute country of origin provides information about the countries used for the manufacturing of the Cryopoor plama or Crioprecipitate.

geographicalLocation (optional)

array[String] The place/region where the plant is harvested or the places/regions where the animal source material has its habitat.

geographicalLocation (optional)

array[Element] Extensions for geographicalLocation

developmentStage (optional)

CodeableConcept

fractionDescription (optional)

array[SubstanceSourceMaterial_FractionDescription] Many complex materials are fractions of parts of plants, animals, or minerals. Fraction elements are often necessary to define both Substances and Specified Group 1 Substances. For substances derived from Plants, fraction information will be captured at the Substance information level (. Oils, Juices and Exudates). Additional information for Extracts, such as extraction solvent composition, will be captured at the Specified Substance Group 1 information level. For plasma-derived products fraction information will be captured at the Substance and the Specified Substance Group 1 levels.

organism (optional)

SubstanceSourceMaterial_Organism

partDescription (optional)

array[SubstanceSourceMaterial_PartDescription] To do.

moiety (optional)

array[SubstanceSpecification_Moiety] Moiety, for structural modifications.

referenceInformation (optional)

Reference

molecularWeight (optional)

array[SubstanceSpecification_MolecularWeight] The molecular weight or weight range (for proteins, polymers or nucleic acids).

nucleicAcid (optional)

Reference

polymer (optional)

Reference

protein (optional)

Reference

sourceMaterial (optional)

Reference

suppliedItem (optional)

SupplyDelivery_SuppliedItem

supplier (optional)

array[Reference] Who is intended to fulfill the request.

itemCodeableConcept (optional)

CodeableConcept

itemReference (optional)

Reference

deliverFrom (optional)

Reference

deliverTo (optional)

Reference

businessStatus (optional)
CodeableConcept

for (optional)
Reference
executionPeriod (optional)
Period

lastModified (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_lastModified (optional)
Element
restriction (optional)
Task_Restriction

input (optional)
array[Task_Input] Additional information that may be needed in the execution of the task.
output (optional)
array[Task_Output] Outputs produced by the Task.

lockedDate (optional)
Boolean Value of "true" or "false"

_lockedDate (optional)
Element
codeSystem (optional)
array[TerminologyCapabilities_CodeSystem] Identifies a code system that is supported by the server. If there is a no code system URL, then this declares the general assumptions a client can make about support for any CodeSystem resource.
expansion (optional)
ValueSet_Expansion

codeSearch (optional)
String The degree to which the server supports the code search parameter on ValueSet, if it is supported.
> **Enum:**
> *explicit*
> *all*

_codeSearch (optional)
Element
validateCode (optional)
TerminologyCapabilities_ValidateCode

translation (optional)
TerminologyCapabilities_Translation

closure (optional)
TerminologyCapabilities_Closure
testScript
Reference

_result (optional)
Element
score (optional)
BigDecimal A rational number with implicit precision

_score (optional)
Element

tester (optional)
String A sequence of Unicode characters
_tester (optional)
Element

setup (optional)
TestScript_Setup

test (optional)
array[TestScript_Test] A test in this script.

teardown (optional)
TestScript_Teardown

origin (optional)
array[TestScript_Origin] An abstract server used in operations within this test script in the origin element.

metadata (optional)
TestScript_Metadata

fixture (optional)
array[TestScript_Fixture] Fixture in the test script - by reference (uri). All fixtures are required for the test script to execute.

variable (optional)
array[TestScript_Variable] Variable is set based either on element value in response body or on header field value in the response headers.

immutable (optional)
Boolean Value of "true" or "false"

_immutable (optional)
Element

compose (optional)
ValueSet_Compose

targetLocation (optional)
array[String] The fhirpath location(s) within the resource that was validated.

_targetLocation (optional)
array[Element] Extensions for targetLocation

need (optional)
CodeableConcept

validationType (optional)
CodeableConcept

validationProcess (optional)
array[CodeableConcept] The primary process by which the target is validated (edit check; value set; primary source; multiple sources; standalone; in context).

frequency (optional)
Timing

lastPerformed (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_lastPerformed (optional)
Element

nextScheduled (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_nextScheduled (optional)
Element

failureAction (optional)
CodeableConcept

attestation (optional)
VerificationResult_Attestation

validator (optional)
array[VerificationResult_Validator] Information about the entity validating information.

dateWritten (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_dateWritten (optional)

Element

prescriber

Reference

lensSpecification

array[VisionPrescription_LensSpecification] Contain the details of the individual lens specifications and serves as the authorization for the fullfillment by certified professionals.

RiskAssessment -   Up

An assessment of the likely outcome(s) for a patient or other subject as well as the likelihood of each outcome.

resourceType

oas_any_type_not_mapped This is a RiskAssessment resource

id (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)

Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)

Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Business identifier assigned to the risk assessment.

basedOn (optional)
Reference

parent (optional)
Reference

status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

method (optional)
CodeableConcept

code (optional)
CodeableConcept

subject
Reference
encounter (optional)
Reference

occurrenceDateTime (optional)
String The date (and possibly time) the risk assessment was performed.

_occurrenceDateTime (optional)
Element
occurrencePeriod (optional)
Period

condition (optional)
Reference
performer (optional)
Reference

reasonCode (optional)
array[CodeableConcept] The reason the risk assessment was performed.

reasonReference (optional)
array[Reference] Resources supporting the reason the risk assessment was performed.
basis (optional)
array[Reference] Indicates the source data considered as part of the assessment (for example, FamilyHistory, Observations, Procedures, Conditions, etc.).

prediction (optional)
array[RiskAssessment_Prediction] Describes the expected outcome for the subject.

mitigation (optional)
String A sequence of Unicode characters
_mitigation (optional)
Element

note (optional)
array[Annotation] Additional comments about the risk assessment.

RiskAssessment_Prediction -   **Up**

An assessment of the likely outcome(s) for a patient or other subject as well as the likelihood of each outcome.
id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

outcome (optional)
CodeableConcept
probabilityDecimal (optional)
BigDecimal Indicates how likely the outcome is (in the specified timeframe).

_probabilityDecimal (optional)
Element

probabilityRange (optional)
Range

qualitativeRisk (optional)
CodeableConcept

relativeRisk (optional)
BigDecimal A rational number with implicit precision
_relativeRisk (optional)

rationale (optional)
String A sequence of Unicode characters

_rationale (optional)
Element

```
RiskEvidenceSynthesis -                                                           Up
```

The RiskEvidenceSynthesis resource describes the likelihood of an outcome in a population plus exposure state where the risk estimate is derived from a combination of research studies.

resourceType
oas_any_type_not_mapped This is a RiskEvidenceSynthesis resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

identifier (optional)
array[Identifier] A formal identifier that is used to identify this risk evidence synthesis when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)
String A sequence of Unicode characters
_version (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

title (optional)
String A sequence of Unicode characters

_title (optional)
Element
status (optional)
String The status of this risk evidence synthesis. Enables tracking the life-cycle of the content.
    Enum:
       draft
       active
       retired
       unknown
_status (optional)
Element

date (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

note (optional)
array[Annotation] A human-readable string to clarify or explain concepts about the resource.

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate risk evidence synthesis instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the risk evidence synthesis is intended to be used.

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

approvalDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_approvalDate (optional)
Element

lastReviewDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_lastReviewDate (optional)
Element

effectivePeriod (optional)
Period

topic (optional)
array[CodeableConcept] Descriptive topics related to the content of the RiskEvidenceSynthesis. Topics provide a high-level categorization grouping types of EffectEvidenceSynthesiss that can be useful for filtering and searching.

author (optional)
array[ContactDetail] An individiual or organization primarily involved in the creation and maintenance of the content.

editor (optional)
array[ContactDetail] An individual or organization primarily responsible for internal coherence of the content.

reviewer (optional)
array[ContactDetail] An individual or organization primarily responsible for review of some aspect of the content.

endorser (optional)
array[ContactDetail] An individual or organization responsible for officially endorsing the content for use in some setting.

relatedArtifact (optional)
array[RelatedArtifact] Related artifacts such as additional documentation, justification, or bibliographic references.

synthesisType (optional)
CodeableConcept

studyType (optional)
CodeableConcept

population
Reference

exposure (optional)
Reference

outcome
Reference

sampleSize (optional)
RiskEvidenceSynthesis_SampleSize

riskEstimate (optional)
RiskEvidenceSynthesis_RiskEstimate

certainty (optional)
array[RiskEvidenceSynthesis_Certainty] A description of the certainty of the risk estimate.

RiskEvidenceSynthesis_Certainty -   **Up**

The RiskEvidenceSynthesis resource describes the likelihood of an outcome in a population plus exposure state where the risk estimate is derived from a combination of research studies.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

rating (optional)
array[CodeableConcept] A rating of the certainty of the effect estimate.

note (optional)
array[Annotation] A human-readable string to clarify or explain concepts about the resource.

certaintySubcomponent (optional)
array[RiskEvidenceSynthesis_CertaintySubcomponent] A description of a component of the overall certainty.

RiskEvidenceSynthesis_CertaintySubcomponent -   **Up**

The RiskEvidenceSynthesis resource describes the likelihood of an outcome in a population plus exposure state where the risk estimate is derived from a combination of research studies.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
CodeableConcept
rating (optional)
array[CodeableConcept] A rating of a subcomponent of rating certainty.

note (optional)
array[Annotation] A human-readable string to clarify or explain concepts about the resource.

RiskEvidenceSynthesis_PrecisionEstimate -   Up

The RiskEvidenceSynthesis resource describes the likelihood of an outcome in a population plus exposure state where the risk estimate is derived from a combination of research studies.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
CodeableConcept

level (optional)
BigDecimal A rational number with implicit precision

_level (optional)
Element

from (optional)
BigDecimal A rational number with implicit precision

_from (optional)
Element

to (optional)
BigDecimal A rational number with implicit precision

_to (optional)
Element

`RiskEvidenceSynthesis_RiskEstimate -`

The RiskEvidenceSynthesis resource describes the likelihood of an outcome in a population plus exposure state where the risk estimate is derived from a combination of research studies.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters
_description (optional)
Element

type (optional)
CodeableConcept
value (optional)
BigDecimal A rational number with implicit precision

_value (optional)
Element

unitOfMeasure (optional)
CodeableConcept

denominatorCount (optional)
BigDecimal A whole number

_denominatorCount (optional)
Element
numeratorCount (optional)
BigDecimal A whole number

_numeratorCount (optional)
Element

precisionEstimate (optional)

array[RiskEvidenceSynthesis_PrecisionEstimate] A description of the precision of the estimate for the effect.

RiskEvidenceSynthesis_SampleSize -

The RiskEvidenceSynthesis resource describes the likelihood of an outcome in a population plus exposure state where the risk estimate is derived from a combination of research studies.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters
_description (optional)
Element

numberOfStudies (optional)
BigDecimal A whole number

_numberOfStudies (optional)
Element
numberOfParticipants (optional)
BigDecimal A whole number

_numberOfParticipants (optional)
Element

SampledData -

A series of measurements taken by a device, with upper and lower limits. There may be more than one dimension in the data.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

origin
Quantity

period (optional)
BigDecimal A rational number with implicit precision

_period (optional)
Element

factor (optional)
BigDecimal A rational number with implicit precision

_factor (optional)
Element

lowerLimit (optional)
BigDecimal A rational number with implicit precision

_lowerLimit (optional)
Element

upperLimit (optional)
BigDecimal A rational number with implicit precision

_upperLimit (optional)
Element

dimensions (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_dimensions (optional)
Element

data (optional)
String A sequence of Unicode characters

_data (optional)
Element

Schedule -   **Up**

A container for slots of time that may be available for booking appointments.

resourceType
oas_any_type_not_mapped This is a Schedule resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] External Ids for this item.

active (optional)
Boolean Value of "true" or "false"

_active (optional)
Element

serviceCategory (optional)
array[CodeableConcept] A broad categorization of the service that is to be performed during this appointment.

serviceType (optional)
array[CodeableConcept] The specific service that is to be performed during this appointment.

specialty (optional)
array[CodeableConcept] The specialty of a practitioner that would be required to perform the service requested in this appointment.

actor
array[Reference] Slots that reference this schedule resource provide the availability details to these referenced resource(s).

planningHorizon (optional)
Period

comment (optional)
String A sequence of Unicode characters

_comment (optional)
Element

`SearchParameter -`   **Up**

A search parameter that defines a named search item that can be used to search/filter on a resource.

resourceType
oas_any_type_not_mapped This is a SearchParameter resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource
_url (optional)
Element

version (optional)
String A sequence of Unicode characters

_version (optional)
Element
name (optional)
String A sequence of Unicode characters

_name (optional)
Element
derivedFrom (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

status (optional)
String The status of this search parameter. Enables tracking the life-cycle of the content.
   Enum:
      draft
      active
      retired
      unknown

_status (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"
_experimental (optional)
Element

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.
_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate search parameter instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the search parameter is intended to be used.

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_code (optional)
Element

base (optional)
array[String] The base resource type(s) that this search parameter can be used against.

_base (optional)
array[Element] Extensions for base

type (optional)
String The type of value that a search parameter may contain, and how the content is interpreted.
Enum:

> *number*
> *date*
> *string*
> *token*
> *reference*
> *composite*
> *quantity*
> *uri*
> *special*

_type (optional)
Element

expression (optional)
String A sequence of Unicode characters

_expression (optional)
Element

xpath (optional)
String A sequence of Unicode characters

_xpath (optional)
Element

xpathUsage (optional)
String How the search parameter relates to the set of elements returned by evaluating the xpath query.
Enum:

normal
phonetic
nearby
distance
other

_xpathUsage (optional)
Element
target (optional)
array[String] Types of resource (if a resource is referenced).

_target (optional)
array[Element] Extensions for target

multipleOr (optional)
Boolean Value of "true" or "false"
_multipleOr (optional)
Element

multipleAnd (optional)
Boolean Value of "true" or "false"
_multipleAnd (optional)
Element

comparator (optional)
array[String] Comparators supported for the search parameter.
        Enum:

_comparator (optional)
array[Element] Extensions for comparator

modifier (optional)
array[String] A modifier supported for the search parameter.
        Enum:
_modifier (optional)
array[Element] Extensions for modifier

chain (optional)
array[String] Contains the names of any search parameters which may be chained to the containing search parameter. Chained parameters may be added to search parameters of type reference and specify that resources will only be returned if they contain a reference to a resource which matches the chained parameter value. Values for this field should be drawn from SearchParameter.code for a parameter on the target resource type.

_chain (optional)
array[Element] Extensions for chain
component (optional)
array[SearchParameter_Component] Used to define the parts of a composite search parameter.

SearchParameter_Component -   **Up**

A search parameter that defines a named search item that can be used to search/filter on a resource.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of

requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

definition
String A URI that is a reference to a canonical URL on a FHIR resource

expression (optional)
String A sequence of Unicode characters
_expression (optional)
Element

ServiceRequest -   Up

A record of a request for service such as diagnostic investigations, treatments, or operations to be performed.

resourceType
oas_any_type_not_mapped This is a ServiceRequest resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] Identifiers assigned to this order instance by the orderer and/or the receiver and/or order fulfiller.

instantiatesCanonical (optional)
array[String] The URL pointing to a FHIR-defined protocol, guideline, orderset or other definition that is adhered to in whole or in part by this ServiceRequest.

instantiatesUri (optional)
array[String] The URL pointing to an externally maintained protocol, guideline, orderset or other definition that is adhered to in whole or in part by this ServiceRequest.

_instantiatesUri (optional)
array[Element] Extensions for instantiatesUri

basedOn (optional)
array[Reference] Plan/proposal/order fulfilled by this request.

replaces (optional)
array[Reference] The request takes the place of the referenced completed or terminated request(s).

requisition (optional)
Identifier

status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

intent (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_intent (optional)
Element

category (optional)
array[CodeableConcept] A code that classifies the service for searching, sorting and display purposes (e.g. "Surgical Procedure").

priority (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_priority (optional)
Element

doNotPerform (optional)
Boolean Value of "true" or "false"

_doNotPerform (optional)
Element

code (optional)
CodeableConcept

orderDetail (optional)
array[CodeableConcept] Additional details and instructions about the how the services are to be delivered. For example, and order for a urinary catheter may have an order detail for an external or indwelling catheter, or an order for a bandage may require additional instructions specifying how the bandage should be applied.

quantityQuantity (optional)
Quantity

quantityRatio (optional)
Ratio

quantityRange (optional)
Range

subject
Reference

encounter (optional)
Reference

occurrenceDateTime (optional)

String The date/time at which the requested service should occur.

_occurrenceDateTime (optional)

Element

occurrencePeriod (optional)

Period

occurrenceTiming (optional)

Timing

asNeededBoolean (optional)

Boolean If a CodeableConcept is present, it indicates the pre-condition for performing the service. For example "pain", "on flare-up", etc.

_asNeededBoolean (optional)

Element

asNeededCodeableConcept (optional)

CodeableConcept

authoredOn (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_authoredOn (optional)

Element

requester (optional)

Reference

performerType (optional)

CodeableConcept

performer (optional)

array[Reference] The desired performer for doing the requested service. For example, the surgeon, dermatopathologist, endoscopist, etc.

locationCode (optional)

array[CodeableConcept] The preferred location(s) where the procedure should actually happen in coded or free text form. E.g. at home or nursing day care center.

locationReference (optional)

array[Reference] A reference to the the preferred location(s) where the procedure should actually happen. E.g. at home or nursing day care center.

reasonCode (optional)

array[CodeableConcept] An explanation or justification for why this service is being requested in coded or textual form. This is often for billing purposes. May relate to the resources referred to in `supportingInfo`.

reasonReference (optional)

array[Reference] Indicates another resource that provides a justification for why this service is being requested. May relate to the resources referred to in `supportingInfo`.

insurance (optional)

array[Reference] Insurance plans, coverage extensions, pre-authorizations and/or pre-determinations that may be needed for delivering the requested service.

supportingInfo (optional)

array[Reference] Additional clinical information about the patient or specimen that may influence the services or their interpretations. This information includes diagnosis, clinical findings and other observations. In laboratory ordering these are typically referred to as "ask at order entry questions (AOEs)". This includes observations explicitly requested by the producer (filler) to provide context or supporting information needed to complete the order. For example, reporting the amount of inspired oxygen for blood gas measurements.

specimen (optional)

array[Reference] One or more specimens that the laboratory procedure will use.

bodySite (optional)

array[CodeableConcept] Anatomic location where the procedure should be performed. This is the target site.

note (optional)
array[Annotation] Any other notes and comments made about the service request. For example, internal billing notes.

patientInstruction (optional)
String A sequence of Unicode characters
_patientInstruction (optional)
Element

relevantHistory (optional)
array[Reference] Key events in the history of the request.

Signature -   **Up**

A signature along with supporting context. The signature may be a digital signature that is cryptographic in nature, or some other signature acceptable to the domain. This other signature may be as simple as a graphical image representing a hand-written signature, or a signature ceremony Different signature approaches have different utilities.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

type
array[Coding] An indication of the reason that the entity signed this document. This may be explicitly included as part of the signature information and can be used when determining accountability for various actions concerning the document.

when (optional)
String An instant in time - known at least to the second

_when (optional)
Element

who
Reference

onBehalfOf (optional)
Reference

targetFormat (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_targetFormat (optional)
Element

sigFormat (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_sigFormat (optional)
Element

data (optional)
String A stream of bytes
_data (optional)
Element

Slot -   **Up**

A slot of time on a schedule that may be available for booking appointments.

resourceType
oas_any_type_not_mapped This is a Slot resource

id (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)

Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)

Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] External Ids for this item.

serviceCategory (optional)

array[CodeableConcept] A broad categorization of the service that is to be performed during this appointment.

serviceType (optional)

array[CodeableConcept] The type of appointments that can be booked into this slot (ideally this would be an identifiable service - which is at a location, rather than the location itself). If provided then this overrides the value provided on the availability resource.

specialty (optional)

array[CodeableConcept] The specialty of a practitioner that would be required to perform the service requested in this appointment.

appointmentType (optional)

CodeableConcept

schedule

Reference

status (optional)

String busy | free | busy-unavailable | busy-tentative | entered-in-error.
Enum:

busy
free
busy-unavailable
busy-tentative
entered-in-error

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Id for specimen.
accessionIdentifier (optional)
Identifier

status (optional)
String The availability of the specimen.
    Enum:
        available
        unavailable
        unsatisfactory
        entered-in-error

_status (optional)
Element

type (optional)
CodeableConcept
subject (optional)
Reference

receivedTime (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.
_receivedTime (optional)
Element

parent (optional)
array[Reference] Reference to the parent (source) specimen which is used when the specimen was either derived from or a component of another specimen.

request (optional)
array[Reference] Details concerning a service request that required a specimen to be collected.

collection (optional)
Specimen_Collection

processing (optional)
array[Specimen_Processing] Details concerning processing and processing steps for the specimen.

container (optional)
array[Specimen_Container] The container holding the specimen. The recursive nature of containers; i.e. blood in tube in tray in rack is not addressed here.

condition (optional)
array[CodeableConcept] A mode or state of being that describes the nature of the specimen.
note (optional)
array[Annotation] To communicate any details or issues about the specimen or during the specimen collection. (for example: broken vial, sent with patient, frozen).

`SpecimenDefinition -`   **Up**

A kind of specimen with associated set of requirements.

resourceType

oas_any_type_not_mapped This is a SpecimenDefinition resource

id (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)

Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)

Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

Identifier

typeCollected (optional)

CodeableConcept

patientPreparation (optional)

array[CodeableConcept] Preparation of the patient for specimen collection.

timeAspect (optional)

String A sequence of Unicode characters

_timeAspect (optional)

Element

collection (optional)

array[CodeableConcept] The action to be performed for collecting the specimen.

typeTested (optional)

array[SpecimenDefinition_TypeTested] Specimen conditioned in a container as expected by the testing laboratory.

SpecimenDefinition_Additive -

A kind of specimen with associated set of requirements.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

additiveCodeableConcept (optional)
CodeableConcept

additiveReference (optional)
Reference

SpecimenDefinition_Container -   Up

A kind of specimen with associated set of requirements.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

material (optional)
CodeableConcept
type (optional)
CodeableConcept

cap (optional)
CodeableConcept

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

capacity (optional)
Quantity

minimumVolumeQuantity (optional)
Quantity

minimumVolumeString (optional)
String The minimum volume to be conditioned in the container.

_minimumVolumeString (optional)
Element

additive (optional)
array[SpecimenDefinition_Additive] Substance introduced in the kind of container to preserve, maintain or enhance the specimen. Examples: Formalin, Citrate, EDTA.

preparation (optional)
String A sequence of Unicode characters

_preparation (optional)
Element

SpecimenDefinition_Handling - **Up**

A kind of specimen with associated set of requirements.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

temperatureQualifier (optional)
CodeableConcept

temperatureRange (optional)
Range

maxDuration (optional)
Duration

instruction (optional)
String A sequence of Unicode characters

_instruction (optional)
Element

SpecimenDefinition_TypeTested - **Up**

A kind of specimen with associated set of requirements.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

isDerived (optional)

Boolean Value of "true" or "false"

_isDerived (optional)

Element

type (optional)

CodeableConcept

preference (optional)

String The preference for this type of conditioned specimen.
Enum:

> *preferred*
> *alternate*

_preference (optional)

Element

container (optional)

SpecimenDefinition_Container

requirement (optional)

String A sequence of Unicode characters

_requirement (optional)

Element

retentionTime (optional)

Duration

rejectionCriterion (optional)

array[CodeableConcept] Criterion for rejection of the specimen in its container by the laboratory.

handling (optional)

array[SpecimenDefinition_Handling] Set of instructions for preservation/transport of the specimen at a defined temperature interval, prior the testing process.

`Specimen_Collection -`

A sample to be used for analysis.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

collector (optional)
Reference
collectedDateTime (optional)
String. Time when specimen was collected from subject - the physiologically relevant time.

collectedDateTime (optional)
Element

collectedPeriod (optional)
Period
duration (optional)
Duration

quantity (optional)
Quantity
method (optional)
CodeableConcept

bodySite (optional)
CodeableConcept

fastingStatusCodeableConcept (optional)
CodeableConcept
fastingStatusDuration (optional)
Duration

`Specimen_Container -`

A sample to be used for analysis.

id (optional)
String. A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[identifier] Id for container. There may be multiple; a manufacturer's bar code, lab assigned identifier, etc. The container ID may differ from the specimen id in some circumstances.

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

type (optional)
CodeableConcept

capacity (optional)
Quantity
specimenQuantity (optional)
Quantity

additiveCodeableConcept (optional)
CodeableConcept

additiveReference (optional)
Reference

Specimen_Processing -

A sample to be used for analysis.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters
_description (optional)
Element

procedure (optional)
CodeableConcept

additive (optional)
array[Reference] Material used in the processing step.

timeDateTime (optional)
String A record of the time or period when the specimen processing occurred. For example the time of sample fixation or the period of time the sample was in formalin.

_timeDateTime (optional)
Element

timePeriod (optional)
Period

StructureDefinition -

A definition of a FHIR structure. This resource is used to describe the underlying resources, data types defined in FHIR, and also for describing extensions and constraints on resources and data types.

resourceType
oas_any_type_not_mapped This is a StructureDefinition resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource
_url (optional)
Element

identifier (optional)
array[Identifier] A formal identifier that is used to identify this structure definition when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)
String A sequence of Unicode characters
_version (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)

Element

title (optional)

String A sequence of Unicode characters

_title (optional)

Element

status (optional)

String The status of this structure definition. Enables tracking the life-cycle of the content.

> **Enum:**
>
>> *draft*
>> *active*
>>
>> *retired*
>>
>> *unknown*

_status (optional)

Element

experimental (optional)

Boolean Value of "true" or "false"

_experimental (optional)

Element

date (optional)

String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)

Element

publisher (optional)

String A sequence of Unicode characters

_publisher (optional)

Element

contact (optional)

array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)

Element

useContext (optional)

array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate structure definition instances.

jurisdiction (optional)

array[CodeableConcept] A legal or geographic region in which the structure definition is intended to be used.

purpose (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)

Element

copyright (optional)

String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)

Element

keyword (optional)

array[Coding] A set of key words or terms from external terminologies that may be used to assist with indexing and searching of templates nby describing the use of this structure definition, or the content it describes.

fhirVersion (optional)

String The version of the FHIR specification on which this StructureDefinition is based - this is the formal version of the specification, without the revision number, e.g. [publication].[major].[minor], which is 4.0.1. for this version.

Enum:
    0.01
    0.05
    0.06
    0.11
    0.0.80
    0.0.81
    0.0.82
    0.4.0
    0.5.0
    1.0.0
    1.0.1
    1.0.2
    1.1.0
    1.4.0
    1.6.0
    1.8.0
    3.0.0
    3.0.1
    3.3.0
    3.5.0
    4.0.0
    4.0.1

_fhirVersion (optional)

Element

mapping (optional)
array[StructureDefinition_Mapping] An external specification that the content is mapped to.

kind (optional)

String Defines the kind of structure that this definition is describing.

Enum:
    primitive-type
    complex-type
    resource
    logical

_kind (optional)

Element

abstract (optional)

Boolean Value of "true" or "false"

_abstract (optional)

Element

context (optional)

array[StructureDefinition_Context] Identifies the types of resource or data type elements to which the extension can be applied.

contextInvariant (optional)

array[String] A set of rules as FHIRPath Invariants about when the extension can be used (e.g. co-occurrence variants for the extension). All the rules must be true.

_contextInvariant (optional)

array[Element] Extensions for contextInvariant

type (optional)

String String of characters used to identify a name or a resource

_type (optional)

Element

baseDefinition (optional)

String A URI that is a reference to a canonical URL on a FHIR resource

derivation (optional)

String How the type relates to the baseDefinition.

> **Enum:**
> *specialization*
>
> *constraint*

_derivation (optional)

Element

snapshot (optional)

StructureDefinition_Snapshot

differential (optional)

StructureDefinition_Differential

StructureDefinition_Context -   **Up**

A definition of a FHIR structure. This resource is used to describe the underlying resources, data types defined in FHIR, and also for describing extensions and constraints on resources and data types.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)

String Defines how to interpret the expression that defines what the context of the extension is.

> **Enum:**
> *fhirpath*
>
> *element*
>
> *extension*

_type (optional)

Element

expression (optional)

String A sequence of Unicode characters

_expression (optional)

Element

StructureDefinition_Differential -   **Up**

A definition of a FHIR structure. This resource is used to describe the underlying resources, data types defined in FHIR, and also for describing extensions and constraints on resources and data types.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

element
array[ElementDefinition] Captures constraints on each element within the resource.

StructureDefinition_Mapping -

A definition of a FHIR structure. This resource is used to describe the underlying resources, data types defined in FHIR, and also for describing extensions and constraints on resources and data types.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identity (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_identity (optional)
Element

uri (optional)
String String of characters used to identify a name or a resource

_uri (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

comment (optional)
String A sequence of Unicode characters

_comment (optional)

Element

StructureDefinition_Snapshot -

A definition of a FHIR structure. This resource is used to describe the underlying resources, data types defined in FHIR, and also for describing extensions and constraints on resources and data types.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

element
array[ElementDefinition] Captures constraints on each element within the resource.

StructureMap -

A Map of relationships between 2 structures that can be used to transform data.

resourceType
oas_any_type_not_mapped This is a StructureMap resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource
_url (optional)
Element

identifier (optional)
array[Identifier] A formal identifier that is used to identify this structure map when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)
String A sequence of Unicode characters
_version (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element
title (optional)
String A sequence of Unicode characters

_title (optional)
Element
status (optional)
String The status of this structure map. Enables tracking the life-cycle of the content.

> **Enum:**
> *draft*
> *active*
> *retired*
> *unknown*

_status (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"

_experimental (optional)
Element
date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element
publisher (optional)
String A sequence of Unicode characters

_publisher (optional)

Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.
description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate structure map instances.
jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the structure map is intended to be used.

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

structure (optional)
array[StructureMap_Structure] A structure definition used by this map. The structure definition may describe instances that are converted, or the instances that are produced.

import (optional)
array[String] Other maps used by this map (canonical URLs).

group
array[StructureMap_Group] Organizes the mapping into manageable chunks for human review/ease of maintenance.

StructureMap_Dependent -

A Map of relationships between 2 structures that can be used to transform data.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_name (optional)

Element

variable (optional)

array[String] Variable to pass to the rule or group.

_variable (optional)

array[Element] Extensions for variable

StructureMap_Group -

A Map of relationships between 2 structures that can be used to transform data.

id (optional)

String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_name (optional)

Element

extends (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_extends (optional)

Element

typeMode (optional)

String If this is the default rule set to apply for the source type or this combination of types.

> **Enum:**
>> *none*
>>
>> *types*
>>
>> *type-and-types*

_typeMode (optional)

Element

documentation (optional)

String A sequence of Unicode characters

_documentation (optional)

Element

input
array[StructureMap_Input] A name assigned to an instance of data. The instance must be provided when the mapping is invoked.
rule
array[StructureMap_Rule] Transform Rule from source to target.

StructureMap_Input -

A Map of relationships between 2 structures that can be used to transform data.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_name (optional)
Element
type (optional)
String A sequence of Unicode characters

_type (optional)
Element
mode (optional)
String Mode for this instance of data.
> **Enum:**
> *source*
> *target*

_mode (optional)
Element

documentation (optional)
String A sequence of Unicode characters

_documentation (optional)
Element

StructureMap_Parameter -

A Map of relationships between 2 structures that can be used to transform data.
id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

valueId (optional)
String Parameter value - variable or literal.

_valueId (optional)
Element

valueString (optional)
String Parameter value - variable or literal.

_valueString (optional)
Element

valueBoolean (optional)
Boolean Parameter value - variable or literal.
_valueBoolean (optional)
Element

valueInteger (optional)
BigDecimal Parameter value - variable or literal.

_valueInteger (optional)
Element

valueDecimal (optional)
BigDecimal Parameter value - variable or literal.

_valueDecimal (optional)
Element

StructureMap_Rule -   **Up**

A Map of relationships between 2 structures that can be used to transform data.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_name (optional)
Element

source
array[StructureMap_Source] Source inputs to the mapping.

target (optional)
array[StructureMap_Target] Content to create because of this mapping rule.

rule (optional)
array[StructureMap_Rule] Rules contained in this rule.

dependent (optional)
array[StructureMap_Dependent] Which other rules to apply in the context of this rule.

documentation (optional)
String A sequence of Unicode characters

_documentation (optional)
Element

StructureMap_Source -

A Map of relationships between 2 structures that can be used to transform data.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

context (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_context (optional)
Element

min (optional)
BigDecimal A whole number

_min (optional)
Element

max (optional)
String A sequence of Unicode characters

_max (optional)

Element

type (optional)
String A sequence of Unicode characters
_type (optional)
Element

defaultValueBase64Binary (optional)
String A value to use if there is no existing value in the source object.
_defaultValueBase64Binary (optional)
Element

defaultValueBoolean (optional)
Boolean A value to use if there is no existing value in the source object.

_defaultValueBoolean (optional)
Element
defaultValueCanonical (optional)
String A value to use if there is no existing value in the source object.

_defaultValueCanonical (optional)
Element
defaultValueCode (optional)
String A value to use if there is no existing value in the source object.

_defaultValueCode (optional)
Element

defaultValueDate (optional)
String A value to use if there is no existing value in the source object.
_defaultValueDate (optional)
Element

defaultValueDateTime (optional)
String A value to use if there is no existing value in the source object.
_defaultValueDateTime (optional)
Element

defaultValueDecimal (optional)
BigDecimal A value to use if there is no existing value in the source object.

_defaultValueDecimal (optional)
Element
defaultValueId (optional)
String A value to use if there is no existing value in the source object.

_defaultValueId (optional)
Element
defaultValueInstant (optional)
String A value to use if there is no existing value in the source object.

_defaultValueInstant (optional)
Element

defaultValueInteger (optional)
BigDecimal A value to use if there is no existing value in the source object.
_defaultValueInteger (optional)
Element

defaultValueMarkdown (optional)
String A value to use if there is no existing value in the source object.
_defaultValueMarkdown (optional)
Element

defaultValueOid (optional)
String A value to use if there is no existing value in the source object.

_defaultValueOid (optional)
Element

defaultValuePositiveInt (optional)
BigDecimal A value to use if there is no existing value in the source object.

_defaultValuePositiveInt (optional)
Element

defaultValueString (optional)
String A value to use if there is no existing value in the source object.

_defaultValueString (optional)
Element

defaultValueTime (optional)
String A value to use if there is no existing value in the source object.
_defaultValueTime (optional)
Element

defaultValueUnsignedInt (optional)
BigDecimal A value to use if there is no existing value in the source object.

_defaultValueUnsignedInt (optional)
Element

defaultValueUri (optional)
String A value to use if there is no existing value in the source object.

_defaultValueUri (optional)
Element

defaultValueUrl (optional)
String A value to use if there is no existing value in the source object.

_defaultValueUrl (optional)
Element

defaultValueUuid (optional)
String A value to use if there is no existing value in the source object.

_defaultValueUuid (optional)
Element

defaultValueAddress (optional)
Address
defaultValueAge (optional)
Age

defaultValueAnnotation (optional)
Annotation

defaultValueAttachment (optional)
Attachment

defaultValueCodeableConcept (optional)
CodeableConcept

defaultValueCoding (optional)
Coding
defaultValueContactPoint (optional)
ContactPoint

defaultValueCount (optional)
Count

defaultValueDistance (optional)
Distance

defaultValueDuration (optional)
Duration

Contributor

defaultValueDataRequirement (optional)
DataRequirement

defaultValueExpression (optional)
Expression

defaultValueParameterDefinition (optional)
ParameterDefinition

defaultValueRelatedArtifact (optional)
RelatedArtifact

defaultValueTriggerDefinition (optional)
TriggerDefinition

defaultValueUsageContext (optional)
UsageContext

defaultValueDosage (optional)
Dosage

defaultValueMeta (optional)
Meta

element (optional)
String A sequence of Unicode characters
_element (optional)
Element

listMode (optional)
String How to handle the list mode for this element.
    Enum:
        first
        not_first
        last
        not_last
        only_one
_listMode (optional)
Element

variable (optional)

String Any combination of letters, numerals, `-` and `.`, with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_variable (optional)
Element

condition (optional)
String A sequence of Unicode characters
_condition (optional)
Element

check (optional)
String A sequence of Unicode characters

_check (optional)
Element
logMessage (optional)
String A sequence of Unicode characters

_logMessage (optional)
Element

StructureMap_Structure -

A Map of relationships between 2 structures that can be used to transform data.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url
String A URI that is a reference to a canonical URL on a FHIR resource

mode (optional)
String How the referenced structure is used in this mapping.
Enum:
        source
        queried
        target
        produced

_mode (optional)
Element
alias (optional)
String A sequence of Unicode characters

_alias (optional)
Element

documentation (optional)

String A sequence of Unicode characters

_documentation (optional)
Element

StructureMap_Target -

A Map of relationships between 2 structures that can be used to transform data.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

context (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_context (optional)
Element

contextType (optional)
String How to interpret the context.
Enum:
  type
  variable

_contextType (optional)
Element

element (optional)
String A sequence of Unicode characters

_element (optional)
Element

variable (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_variable (optional)
Element

listMode (optional)
array[String] If field is a list, how to manage the list.
Enum:

_listMode (optional)
array[Element] Extensions for listMode

listRuleId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these

constraints.) Ids are case-insensitive.

_listRuleId (optional)
Element
transform (optional)
String How the data is copied / created.

     Enum:

        create
        copy

        truncate

        escape
        cast

        append

        translate
        reference

        dateOp

        uuid

        pointer
        evaluate

        cc

        c
        qty

        id

        cp

_transform (optional)
Element

parameter (optional)
array[StructureMap_Parameter] Parameters to the transform.

Subscription -   **Up**

The subscription resource is used to define a push-based subscription from a server to another system. Once a subscription is registered with the server, the server checks every resource that is created or updated, and if the resource matches the given criteria, it sends a message on the defined "channel" so that another system can take an appropriate action.

resourceType
oas_any_type_not_mapped This is a Subscription resource
id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element
language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_language (optional)
Element

text (optional)
Narrative
contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

status (optional)
String The status of the subscription, which marks the server state for managing the subscription.
Enum:

requested

active
error

off

_status (optional)
Element

contact (optional)
array[ContactPoint] Contact details for a human to contact about the subscription. The primary use of this for system administrator troubleshooting.

end (optional)
String An instant in time - known at least to the second

_end (optional)
Element

reason (optional)
String A sequence of Unicode characters

_reason (optional)
Element

criteria (optional)
String A sequence of Unicode characters

_criteria (optional)
Element

error (optional)
String A sequence of Unicode characters

_error (optional)
Element

channel
Subscription_Channel

Subscription_Channel -

The subscription resource is used to define a push-based subscription from a server to another system. Once a subscription is registered with the server, the server checks every resource that is created or updated, and if the resource matches the given criteria, it sends a message on the defined "channel" so that another system can take an appropriate action.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
String The type of channel to send notifications on.

> **Enum:**
> > *rest-hook*
> > *websocket*
> > *email*
> > *sms*
> > *message*

_type (optional)
Element

endpoint (optional)
String A URI that is a literal reference

_endpoint (optional)
Element

payload (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_payload (optional)
Element

header (optional)
array[String] Additional headers / information to send as part of the notification.

_header (optional)
array[Element] Extensions for header

Substance -   [Up](#)

A homogeneous material with a definite composition.

resourceType
oas_any_type_not_mapped This is a Substance resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Unique identifier for the substance.

status (optional)
String A code to indicate if the substance is actively used.
  Enum:
    active
    inactive
    entered-in-error

_status (optional)
Element

category (optional)
array[CodeableConcept] A code that classifies the general type of substance. This is used for searching, sorting and display purposes.

code
CodeableConcept

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

instance (optional)
array[Substance_Instance] Substance may be used to describe a kind of substance, or a specific package/container of the substance: an instance.

ingredient (optional)
array[Substance_Ingredient] A substance can be composed of other substances.

SubstanceAmount -   **Up**

Chemical substances are a single substance type whose primary defining element is the molecular structure. Chemical substances shall be defined on the basis of their complete covalent molecular structure; the presence of a salt (counter-ion) and/or solvates (water, alcohols) is also captured. Purity, grade, physical form or particle size are not taken into account in the definition of a chemical substance or in the assignment of a Substance ID.

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

amountQuantity (optional)
Quantity

amountRange (optional)
Range

amountString (optional)
String Used to capture quantitative values for a variety of elements. If only limits are given, the arithmetic mean would be the average. If only a single definite value for a given element is given, it would be captured in this field.

_amountString (optional)
Element

amountType (optional)
CodeableConcept

amountText (optional)
String A sequence of Unicode characters

_amountText (optional)
Element

referenceRange (optional)
SubstanceAmount_ReferenceRange

SubstanceAmount_ReferenceRange -   **Up**

Chemical substances are a single substance type whose primary defining element is the molecular structure. Chemical substances shall be defined on the basis of their complete covalent molecular structure; the presence of a salt (counter-ion) and/or solvates (water, alcohols) is also captured. Purity, grade, physical form or particle size are not taken into account in the definition of a chemical substance or in the assignment of a Substance ID.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

lowLimit (optional)
Quantity

highLimit (optional)
Quantity

SubstanceNucleicAcid -   **Up**

Nucleic acids are defined by three distinct elements: the base, sugar and linkage. Individual substance/moiety IDs will be created for each of these elements. The nucleotide sequence will be always entered in the 5â€™-3â€™ direction.

resourceType
oas_any_type_not_mapped This is a SubstanceNucleicAcid resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

`SubstanceSourceMaterial -`   Up

Source material shall capture information on the taxonomic and anatomical origins as well as the fraction of a material that can result in or can be modified to form a substance. This set of data elements shall be used to define polymer substances isolated from biological matrices. Taxonomic and anatomical origins shall be described using a controlled vocabulary as required. This information is captured for naturally derived polymers (. starch) and structurally diverse substances. For Organisms belonging to the Kingdom Plantae the Substance level defines the fresh material of a single species or infraspecies, the Herbal Drug and the Herbal preparation. For Herbal preparations, the fraction information will be captured at the Substance information level and additional information for herbal extracts will be captured at the Specified Substance Group 1 information level. See for further explanation the Substance Class: Structurally Diverse and the herbal annex.

resourceType
oas_any_type_not_mapped This is a SubstanceSourceMaterial resource

id (optional)

Element

SubstanceSpecification_Property -   **Up**

The detailed description of a substance, typically at a level beyond what is used for prescribing.

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

category (optional)
CodeableConcept

amountQuantity (optional)
Quantity

amountString (optional)
String Quantitative value for this property.

amountString (optional)
Element

SubstanceSpecification_Relationship -   **Up**

The detailed description of a substance, typically at a level beyond what is used for prescribing.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

CodeableConcept

isDefining (optional)
Boolean Value of "true" or "false"

_isDefining (optional)
Element
amountQuantity (optional)
Quantity

amountRange (optional)
Range

amountRatio (optional)
Ratio

amountString (optional)
String A numeric factor for the relationship, for instance to express that the salt of a substance has some percentage of the active substance in relation to some other.

_amountString (optional)
Element

amountRatioLowLimit (optional)
Ratio
amountType (optional)
CodeableConcept

source (optional)
array[Reference] Supporting literature.

`SubstanceSpecification_Representation -`

The detailed description of a substance, typically at a level beyond what is used for prescribing.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

CodeableConcept

molecularFormula (optional)
String A sequence of Unicode characters

_molecularFormula (optional)
Element
molecularFormulaByMoiety (optional)
String A sequence of Unicode characters

_molecularFormulaByMoiety (optional)
Element
isotope (optional)
array[SubstanceSpecification_Isotope] Applicable for single substances that contain a radionuclide or a non-natural isotopic ratio.
molecularWeight (optional)
SubstanceSpecification_MolecularWeight

source (optional)
array[Reference] Supporting literature.
representation (optional)
array[SubstanceSpecification_Representation] Molecular structural representation.

Substance_Ingredient -

A homogeneous material with a definite composition.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

quantity (optional)
Ratio
substanceCodeableConcept (optional)
CodeableConcept

substanceReference (optional)
Reference

Substance_Instance -

A homogeneous material with a definite composition.
id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
Identifier

expiry (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.
_expiry (optional)
Element

quantity (optional)
Quantity

SupplyDelivery -

Record of delivery of what is supplied.

resourceType
oas_any_type_not_mapped This is a SupplyDelivery resource
id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.
meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element
language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative
contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] Identifier for the supply delivery event that is used to identify it across multiple disparate systems.

basedOn (optional)
array[Reference] A plan, proposal or order that is fulfilled in whole or in part by this event.
partOf (optional)
array[Reference] A larger event of which this particular event is a component or step.

status (optional)
String A code specifying the state of the dispense event.
⎯⎯ **Enum:**
     in-progress
     completed
     abandoned
     entered-in-error

_status (optional)
Element

patient (optional)
Reference

type (optional)
CodeableConcept

suppliedItem (optional)
SupplyDelivery_SuppliedItem

occurrenceDateTime (optional)
String The date or time(s) the activity occurred.

_occurrenceDateTime (optional)
Element

occurrencePeriod (optional)
Period

occurrenceTiming (optional)
Timing

supplier (optional)
Reference

destination (optional)
Reference

receiver (optional)
array[Reference] Identifies the person who picked up the Supply.

SupplyDelivery_SuppliedItem -   **Up**

Record of delivery of what is supplied.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

quantity (optional)
Quantity

itemCodeableConcept (optional)
CodeableConcept

itemReference (optional)
Reference

SupplyRequest -   **Up**

A record of a request for a medication, substance or device used in the healthcare setting.

resourceType
oas_any_type_not_mapped This is a SupplyRequest resource

id (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)

Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)

Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)

array[Identifier] Business identifiers assigned to this SupplyRequest by the author and/or other systems. These identifiers remain constant as the resource is updated and propagates from server to server.

status (optional)

String Status of the supply request.

    Enum:

        draft
        active

        suspended

        cancelled
        completed

        entered-in-error

        unknown

_status (optional)

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To

make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
array[Identifier] The business identifier for this task.
instantiatesCanonical (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

instantiatesUri (optional)
String String of characters used to identify a name or a resource
_instantiatesUri (optional)
Element

basedOn (optional)
array[Reference] BasedOn refers to a higher-level authorization that triggered the creation of the task. It references a "request" resource such as a ServiceRequest, MedicationRequest, ServiceRequest, CarePlan, etc. which is distinct from the "request" resource the task is seeking to fulfill. This latter resource is referenced by FocusOn. For example, based on a ServiceRequest (= BasedOn), a task is created to fulfill a procedureRequest (= FocusOn) to collect a specimen from a patient.

groupIdentifier (optional)
Identifier
partOf (optional)
array[Reference] Task that this particular task is part of.

status (optional)
String The current status of the task.
    Enum:
        draft
        requested
        received
        accepted
        rejected
        ready
        cancelled
        in-progress
        on-hold
        failed
        completed
        entered-in-error
_status (optional)
Element

statusReason (optional)
CodeableConcept

businessStatus (optional)
CodeableConcept
intent (optional)
String Indicates the "level" of actionability associated with the Task, i.e. i+R[9]Cs this a proposed task, a planned task, an actionable task, etc.
    Enum:
        unknown
        proposal
        plan
        order
        original-order
        reflex-order
        filler-order
        instance-order
        option
_intent (optional)
Element

priority (optional)

valueBoolean (optional)
Boolean The value of the Output parameter as a basic type.

_valueBoolean (optional)
Element

valueCanonical (optional)
String The value of the Output parameter as a basic type.

_valueCanonical (optional)
Element

valueCode (optional)
String The value of the Output parameter as a basic type.

_valueCode (optional)
Element

valueDate (optional)
String The value of the Output parameter as a basic type.

_valueDate (optional)
Element

valueDateTime (optional)
String The value of the Output parameter as a basic type.

_valueDateTime (optional)

Element

valueDecimal (optional)

BigDecimal The value of the Output parameter as a basic type.

_valueDecimal (optional)

Element

valueId (optional)

String The value of the Output parameter as a basic type.

_valueId (optional)

Element

valueInstant (optional)

String The value of the Output parameter as a basic type.

_valueInstant (optional)

Element

valueInteger (optional)

BigDecimal The value of the Output parameter as a basic type.

_valueInteger (optional)

Element

valueMarkdown (optional)

String The value of the Output parameter as a basic type.

_valueMarkdown (optional)

Element

valueOid (optional)

String The value of the Output parameter as a basic type.

_valueOid (optional)

Element

valuePositiveInt (optional)

BigDecimal The value of the Output parameter as a basic type.

_valuePositiveInt (optional)

Element

valueString (optional)

String The value of the Output parameter as a basic type.

_valueString (optional)

Element

valueTime (optional)

String The value of the Output parameter as a basic type.

_valueTime (optional)

Element

valueUnsignedInt (optional)

BigDecimal The value of the Output parameter as a basic type.

_valueUnsignedInt (optional)

Element

valueUri (optional)

String The value of the Output parameter as a basic type.

_valueUri (optional)

Element

valueUrl (optional)

String The value of the Output parameter as a basic type.

_valueUrl (optional)

Element

valueUuid (optional)

String The value of the Output parameter as a basic type.

_valueUuid (optional)
Element

Meta

`Task_Restriction -`

A task to be performed.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

repetitions (optional)
BigDecimal An integer with a value that is positive (e.g. >0)
repetitions (optional)
Element

period (optional)
Period
recipient (optional)
array[Reference] For requests that are targeted to more than on potential recipient/target, for whom is fulfillment sought?

`TerminologyCapabilities -`

A TerminologyCapabilities resource documents a set of capabilities (behaviors) of a FHIR Terminology Server that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

resourceType
oas_any_type_not_mapped This is a TerminologyCapabilities resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)

Meta

implicitRules (optional)

String String of characters used to identify a name or a resource

_implicitRules (optional)

Element

language (optional)

String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)

Element

text (optional)

Narrative

contained (optional)

array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)

String String of characters used to identify a name or a resource

_url (optional)

Element

version (optional)

String A sequence of Unicode characters

_version (optional)

Element

name (optional)

String A sequence of Unicode characters

_name (optional)

Element

title (optional)

String A sequence of Unicode characters

_title (optional)

Element

status (optional)

String The status of this terminology capabilities. Enables tracking the life-cycle of the content.

> **Enum:**
> *draft*
> *active*
> *retired*
> *unknown*

_status (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"

_experimental (optional)
Element

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate terminology capabilities instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the terminology capabilities is intended to be used.

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

kind (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_kind (optional)
Element

software (optional)
TerminologyCapabilities_Software

implementation (optional)
TerminologyCapabilities_Implementation

lockedDate (optional)
Boolean Value of "true" or "false"

_lockedDate (optional)
Element

codeSystem (optional)
array[TerminologyCapabilities_CodeSystem] Identifies a code system that is supported by the server. If there is a no code system URL, then this declares the general assumptions a client can make about support for any CodeSystem resource.

expansion (optional)
TerminologyCapabilities_Expansion

codeSearch (optional)
String The degree to which the server supports the code search parameter on ValueSet, if it is supported.

> **Enum:**
> *explicit*
> *all*

_codeSearch (optional)
Element

validateCode (optional)
TerminologyCapabilities_ValidateCode

translation (optional)
TerminologyCapabilities_Translation

closure (optional)
TerminologyCapabilities_Closure

TerminologyCapabilities_Closure -   **Up**

A TerminologyCapabilities resource documents a set of capabilities (behaviors) of a FHIR Terminology Server that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

translation (optional)
Boolean Value of "true" or "false"

_translation (optional)
Element

TerminologyCapabilities_CodeSystem -   **Up**

A TerminologyCapabilities resource documents a set of capabilities (behaviors) of a FHIR Terminology Server that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

uri (optional)
String A URI that is a reference to a canonical URL on a FHIR resource

version (optional)
array[TerminologyCapabilities_Version] For the code system, a list of versions that are supported by the server.

subsumption (optional)
Boolean Value of "true" or "false"
_subsumption (optional)
Element

TerminologyCapabilities_Expansion -

A TerminologyCapabilities resource documents a set of capabilities (behaviors) of a FHIR Terminology Server that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

hierarchical (optional)
Boolean Value of "true" or "false"

_hierarchical (optional)
Element

paging (optional)
Boolean Value of "true" or "false"

_paging (optional)
Element

incomplete (optional)
Boolean Value of "true" or "false"

_incomplete (optional)
Element

parameter (optional)
array[TerminologyCapabilities_Parameter] Supported expansion parameter.

textFilter (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_textFilter (optional)
Element

TerminologyCapabilities_Filter -   **Up**

A TerminologyCapabilities resource documents a set of capabilities (behaviors) of a FHIR Terminology Server that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_code (optional)
Element

op (optional)
array[String] Operations supported for the property.

_op (optional)
array[Element] Extensions for op

TerminologyCapabilities_Implementation -   **Up**

A TerminologyCapabilities resource documents a set of capabilities (behaviors) of a FHIR Terminology Server that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

url (optional)
String A URI that is a literal reference

_url (optional)
Element

TerminologyCapabilities_Parameter -   Up

A TerminologyCapabilities resource documents a set of capabilities (behaviors) of a FHIR Terminology Server that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_name (optional)
Element

documentation (optional)
String A sequence of Unicode characters

_documentation (optional)
Element

TerminologyCapabilities_Software -   Up

A TerminologyCapabilities resource documents a set of capabilities (behaviors) of a FHIR Terminology Server that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

version (optional)
String A sequence of Unicode characters

_version (optional)
Element

TerminologyCapabilities_Translation -   **Up**

A TerminologyCapabilities resource documents a set of capabilities (behaviors) of a FHIR Terminology Server that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

needsMap (optional)
Boolean Value of "true" or "false"

_needsMap (optional)

Element

TerminologyCapabilities_ValidateCode -

A TerminologyCapabilities resource documents a set of capabilities (behaviors) of a FHIR Terminology Server that may be used as a statement of actual server functionality or a statement of required or desired server implementation.

Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To

make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
Identifier
name (optional)
String A sequence of Unicode characters

_name (optional)
Element
status (optional)
String The current state of this test report.

> **Enum:**
> *completed*
> *in-progress*
> *waiting*
> *stopped*
> *entered-in-error*

_status (optional)
Element
testScript
Reference

result (optional)
String The overall result from the execution of the TestScript.

> **Enum:**
> *pass*
> *fail*
> *pending*

_result (optional)
Element
score (optional)
BigDecimal A rational number with implicit precision

_score (optional)
Element

tester (optional)
String A sequence of Unicode characters
_tester (optional)
Element

issued (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.
_issued (optional)
Element

participant (optional)
array[TestReport_Participant] A participant in the test execution, either the execution engine, a client, or a server.

setup (optional)
TestReport_Setup
test (optional)
array[TestReport_Test] A test executed from the test script.

teardown (optional)
TestReport_Teardown

TestReport_Action -

A summary of information based on the results of executing a TestScript.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

operation (optional)
TestReport_Operation

assert (optional)
TestReport_Assert

TestReport_Action1 -

A summary of information based on the results of executing a TestScript.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

operation (optional)
TestReport_Operation
assert (optional)
TestReport_Assert

TestReport_Action2 -

A summary of information based on the results of executing a TestScript.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

operation
TestReport_Operation

TestReport_Assert -

A summary of information based on the results of executing a TestScript.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

result (optional)
String The result of this assertion.
Enum:
pass
skip
fail
warning
error

_result (optional)
Element
message (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine
_message (optional)

Element

detail (optional)
String A sequence of Unicode characters
_detail (optional)
Element

TestReport_Operation -

A summary of information based on the results of executing a TestScript.
id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of
governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.
To make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer can define an extension, there is a set of
requirements that SHALL be met as part of the definition of the extension. Applications processing a
resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

result (optional)
String The result of this operation.

> **Enum:**
> *pass*
> *skip*
> *fail*
> *warning*
> *error*

_result (optional)
Element
message (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark
down presentation engine
_message (optional)
Element

detail (optional)
String String of characters used to identify a name or a resource

_detail (optional)
Element

TestReport_Participant -

A summary of information based on the results of executing a TestScript.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic
definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
String The type of participant.
Enum:
> *test-engine*
> *client*
> *server*

_type (optional)
Element

uri (optional)
String String of characters used to identify a name or a resource

_uri (optional)
Element
display (optional)
String A sequence of Unicode characters

_display (optional)
Element

TestReport_Setup -   Up

A summary of information based on the results of executing a TestScript.
id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

action
array[TestReport_Action] Action would contain either an operation or an assertion.

TestReport_Teardown -   Up

A summary of information based on the results of executing a TestScript.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

action
array[TestReport_Action2] The teardown action will only contain an operation.

TestReport_Test -

A summary of information based on the results of executing a TestScript.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

action
array[TestReport_Action1] Action would contain either an operation or an assertion.

TestScript -

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

resourceType
oas_any_type_not_mapped This is a TestScript resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource
_url (optional)
Element

identifier (optional)
Identifier
version (optional)
String A sequence of Unicode characters

_version (optional)
Element

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

title (optional)
String A sequence of Unicode characters

_title (optional)
Element

status (optional)
String The status of this test script. Enables tracking the life-cycle of the content.

    Enum:

       draft
       active

       retired

       unknown

_status (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"

_experimental (optional)
Element

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate test script instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the test script is intended to be used.

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

origin (optional)

array[TestScript_Origin] An abstract server used in operations within this test script in the origin element.

destination (optional)
array[TestScript_Destination] An abstract server used in operations within this test script in the destination element.

metadata (optional)
TestScript_Metadata
fixture (optional)
array[TestScript_Fixture] Fixture in the test script - by reference (uri). All fixtures are required for the test script to execute.
profile (optional)
array[Reference] Reference to the profile to be used for validation.

variable (optional)
array[TestScript_Variable] Variable is set based either on element value in response body or on header field value in the response headers.

setup (optional)
TestScript_Setup
test (optional)
array[TestScript_Test] A test in this script.

teardown (optional)
TestScript_Teardown

TestScript_Action -

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

operation (optional)
TestScript_Operation

assert (optional)
TestScript_Assert

TestScript_Action1 -

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

operation (optional)
TestScript_Operation
assert (optional)
TestScript_Assert

TestScript_Action2 -

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

operation
TestScript_Operation

TestScript_Assert -

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.
id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an
extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element
and that modifies the understanding of the element in which it is contained and/or the understanding
of the containing element's descendants. Usually modifier elements provide negation or qualification.
To make the use of extensions safe and manageable, there is a strict set of governance applied to the
definition and use of extensions. Though any implementer can define an extension, there is a set of
requirements that SHALL be met as part of the definition of the extension. Applications processing a
resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource
(including cannot change the meaning of modifierExtension itself).

label (optional)
String A sequence of Unicode characters
_label (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

direction (optional)
String The direction to use for the assertion.
    Enum:
       response
       request

_direction (optional)
Element
compareToSourceId (optional)
String A sequence of Unicode characters

_compareToSourceId (optional)
Element
compareToSourceExpression (optional)
String A sequence of Unicode characters

_compareToSourceExpression (optional)
Element

compareToSourcePath (optional)
String A sequence of Unicode characters
_compareToSourcePath (optional)
Element

contentType (optional)
String A string which has at least one character and no leading or trailing whitespace and where there
is no whitespace other than single spaces in the contents

_contentType (optional)
Element
expression (optional)
String A sequence of Unicode characters

_expression (optional)
Element

headerField (optional)
String A sequence of Unicode characters

_headerField (optional)
Element

minimumId (optional)

String A sequence of Unicode characters

_minimumId (optional)
Element
navigationLinks (optional)
Boolean Value of "true" or "false"

_navigationLinks (optional)
Element
operator (optional)
String The operator type defines the conditional behavior of the assert. If not defined, the default is equals.
    Enum:
        equals
        notEquals
        in
        notIn
        greaterThan
        lessThan
        empty
        notEmpty
        contains
        notContains
        eval

_operator (optional)
Element

path (optional)
String A sequence of Unicode characters

_path (optional)
Element

requestMethod (optional)
String The request method or HTTP operation code to compare against that used by the client system under test.
    Enum:
        delete
        get
        options
        patch
        post
        put
        head

_requestMethod (optional)
Element

requestURL (optional)
String A sequence of Unicode characters

_requestURL (optional)
Element

resource (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_resource (optional)
Element
response (optional)
String okay | created | noContent | notModified | bad | forbidden | notFound | methodNotAllowed | conflict | gone | preconditionFailed | unprocessable.
    Enum:
        okay
        created
        noContent
        notModified
        bad
        forbidden

notFound
methodNotAllowed
conflict
gone
preconditionFailed
unprocessable

_response (optional)
Element

responseCode (optional)
String A sequence of Unicode characters

_responseCode (optional)
Element

sourceId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_sourceId (optional)
Element

validateProfileId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_validateProfileId (optional)
Element

value (optional)
String A sequence of Unicode characters

_value (optional)
Element

warningOnly (optional)
Boolean Value of "true" or "false"

_warningOnly (optional)
Element

TestScript_Capability -   Up

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

required (optional)

Boolean value of "true" or "false"

_required (optional)
Element
validated (optional)
Boolean Value of "true" or "false"

_validated (optional)
Element
description (optional)
String A sequence of Unicode characters

_description (optional)
Element

origin (optional)
array[BigDecimal] Which origin server these requirements apply to.
_origin (optional)
array[Element] Extensions for origin

destination (optional)
BigDecimal A whole number
_destination (optional)
Element

link (optional)
array[String] Links to the FHIR specification that describes this interaction and the resources involved in more detail.

_link (optional)
array[Element] Extensions for link

capabilities
String A URI that is a reference to a canonical URL on a FHIR resource

TestScript_Destination -

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

index (optional)
BigDecimal A whole number

_index (optional)
Element
profile

Coding

TestScript_Fixture -   **Up**

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

autocreate (optional)
Boolean Value of "true" or "false"

_autocreate (optional)
Element

autodelete (optional)
Boolean Value of "true" or "false"

_autodelete (optional)
Element

resource (optional)
Reference

TestScript_Link -   **Up**

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

TestScript_Metadata -

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

link (optional)
array[TestScript_Link] A link to the FHIR specification that this test is covering.

capability
array[TestScript_Capability] Capabilities that must exist and are assumed to function correctly on the FHIR server being tested.

TestScript_Operation -

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the

definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

type (optional)
Coding

resource (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_resource (optional)
Element

label (optional)
String A sequence of Unicode characters

_label (optional)
Element

description (optional)
String A sequence of Unicode characters

_description (optional)
Element

accept (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_accept (optional)
Element

contentType (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_contentType (optional)
Element

destination (optional)
BigDecimal A whole number

_destination (optional)
Element

encodeRequestUrl (optional)
Boolean Value of "true" or "false"

_encodeRequestUrl (optional)
Element

method (optional)
String The HTTP method the test engine MUST use for this operation regardless of any other operation details.

    Enum:
       delete
       get
       options
       patch
       post
       put
       head

_method (optional)
Element

origin (optional)
BigDecimal A whole number

_origin (optional)
Element

params (optional)

String A sequence of Unicode characters

_params (optional)
Element

requestHeader (optional)
_array[TestScript_RequestHeader]_ Header elements would be used to set HTTP headers.

requestId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_requestId (optional)
Element

responseId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_responseId (optional)
Element

sourceId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_sourceId (optional)
Element

targetId (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_targetId (optional)
Element

url (optional)
String A sequence of Unicode characters

_url (optional)
Element

`TestScript_Origin -`

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

index (optional)
BigDecimal A whole number

_index (optional)
Element

profile
Coding

`TestScript_RequestHeader -`

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

field (optional)
String A sequence of Unicode characters

_field (optional)
Element

value (optional)
String A sequence of Unicode characters

_value (optional)
Element

`TestScript_Setup -`

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the

definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

action
array[TestScript_Action] Action would contain either an operation or an assertion.

TestScript_Teardown -   **Up**

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

action
array[TestScript_Action2] The teardown action will only contain an operation.

TestScript_Test -   **Up**

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters

_name (optional)
Element
description (optional)
String A sequence of Unicode characters

_description (optional)
Element

action
array[TestScript_Action1] Action would contain either an operation or an assertion.

TestScript_Variable -   **Up**

A structured set of tests against a FHIR server or client implementation to determine compliance against the FHIR specification.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters

_name (optional)
Element
defaultValue (optional)
String A sequence of Unicode characters

_defaultValue (optional)
Element

description (optional)
String A sequence of Unicode characters
_description (optional)
Element

_expression (optional)
Element

headerField (optional)
String A sequence of Unicode characters

_headerField (optional)
Element
hint (optional)

String A sequence of Unicode characters

_hint (optional)
Element
path (optional)
String A sequence of Unicode characters

_path (optional)
Element
sourceId (optional)

String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

_sourceId (optional)
Element

Timing -   **Up**

Specifies an event that may occur multiple times. Timing schedules are used to record when things are planned, expected or requested to occur. The most common usage is in dosage instructions for medications. They are also used when planning care of various kinds, and may be used for reporting the schedule to which past regular activities were carried out.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

event (optional)
array[String] Identifies specific times when the event occurs.

_event (optional)
array[Element] Extensions for event

repeat (optional)
Timing_Repeat
code (optional)
CodeableConcept

Timing_Repeat -   **Up**

Specifies an event that may occur multiple times. Timing schedules are used to record when things are planned, expected or requested to occur. The most common usage is in dosage instructions for medications. They are also used when planning care of various kinds, and may be used for reporting the schedule to which past regular activities were carried out.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of

governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

boundsDuration (optional)
Duration
boundsRange (optional)
Range

boundsPeriod (optional)
Period

count (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_count (optional)
Element

countMax (optional)
BigDecimal An integer with a value that is positive (e.g. >0)
_countMax (optional)
Element

duration (optional)
BigDecimal A rational number with implicit precision

_duration (optional)
Element

durationMax (optional)
BigDecimal A rational number with implicit precision

_durationMax (optional)
Element
durationUnit (optional)
String The units of time for the duration, in UCUM units.
>   **Enum:**
>   *s*
>   *min*
>   *h*
>   *d*
>   *wk*
>   *mo*
>   *a*
_durationUnit (optional)
Element

frequency (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_frequency (optional)
Element

frequencyMax (optional)
BigDecimal An integer with a value that is positive (e.g. >0)

_frequencyMax (optional)
Element

period (optional)
BigDecimal A rational number with implicit precision

_period (optional)
Element

periodMax (optional)
BigDecimal A rational number with implicit precision

_periodMax (optional)
Element

periodUnit (optional)
String The units of time for the period in UCUM units.
    Enum:

        s
        min
        h
        d
        wk
        mo
        a

_periodUnit (optional)
Element

dayOfWeek (optional)
array[String] If one or more days of week is provided, then the action happens only on the specified day(s).

_dayOfWeek (optional)
array[Element] Extensions for dayOfWeek

timeOfDay (optional)
array[String] Specified time of day for action to take place.

_timeOfDay (optional)
array[Element] Extensions for timeOfDay

when (optional)
array[String] An approximate time period during the day, potentially linked to an event of daily living that indicates when the action should occur.
    Enum:

_when (optional)
array[Element] Extensions for when

offset (optional)
BigDecimal An integer with a value that is not negative (e.g. >= 0)

_offset (optional)
Element

TriggerDefinition -   [Up](Up)

A description of a triggering event. Triggering events can be named events, data events, or periodic, as determined by the type element.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

type (optional)
String The type of triggering event.
    Enum:

        named-event
        periodic
        data-changed

data-added
data-modified
data-removed
data-accessed
data-access-ended

_type (optional)
Element
name (optional)
String A sequence of Unicode characters

_name (optional)
Element

timingTiming (optional)
Timing
timingReference (optional)
Reference

timingDate (optional)
String The timing of the event (if this is a periodic trigger).
_timingDate (optional)
Element

timingDateTime (optional)
String The timing of the event (if this is a periodic trigger).

_timingDateTime (optional)
Element
data (optional)
array[DataRequirement] The triggering data of the event (if this is a data trigger). If more than one data is requirement is specified, then all the data requirements must be true.

condition (optional)
Expression

UsageContext -   Up

Specifies clinical/business/etc. metadata that can be used to retrieve, index and/or categorize an artifact. This metadata can either be specific to the applicable population (e.g., age category, DRG) or the specific context of care (e.g., venue, care setting, provider of care).

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

code
Coding

valueCodeableConcept (optional)
CodeableConcept
valueQuantity (optional)
Quantity

valueRange (optional)
Range

valueReference (optional)
Reference

ValueSet -   Up

A ValueSet resource instance specifies a set of codes drawn from one or more code systems, intended for use in a particular context. Value sets link between [[[CodeSystem]]] definitions and their use in coded elements.

resourceType
oas_any_type_not_mapped This is a ValueSet resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource
_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element
text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

url (optional)
String String of characters used to identify a name or a resource

_url (optional)
Element

identifier (optional)
array[Identifier] A formal identifier that is used to identify this value set when it is represented in other formats, or referenced in a specification, model, design or an instance.

version (optional)
String A sequence of Unicode characters
_version (optional)
Element

name (optional)
String A sequence of Unicode characters
_name (optional)
Element

title (optional)

String A sequence of Unicode characters

_title (optional)
Element

status (optional)
String The status of this value set. Enables tracking the life-cycle of the content. The status of the value set applies to the value set definition (ValueSet.compose) and the associated ValueSet metadata. Expansions do not have a state.

> **Enum:**
> *draft*
> *active*
> *retired*
> *unknown*

_status (optional)
Element

experimental (optional)
Boolean Value of "true" or "false"

_experimental (optional)
Element

date (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_date (optional)
Element

publisher (optional)
String A sequence of Unicode characters

_publisher (optional)
Element

contact (optional)
array[ContactDetail] Contact details to assist a user in finding and communicating with the publisher.

description (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_description (optional)
Element

useContext (optional)
array[UsageContext] The content was developed with a focus and intent of supporting the contexts that are listed. These contexts may be general categories (gender, age, ...) or may be references to specific programs (insurance plans, studies, ...) and may be used to assist with indexing and searching for appropriate value set instances.

jurisdiction (optional)
array[CodeableConcept] A legal or geographic region in which the value set is intended to be used.

immutable (optional)
Boolean Value of "true" or "false"

_immutable (optional)
Element

purpose (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_purpose (optional)
Element

copyright (optional)
String A string that may contain Github Flavored Markdown syntax for optional processing by a mark down presentation engine

_copyright (optional)
Element

compose (optional)
ValueSet_Compose

expansion (optional)
ValueSet_Expansion

ValueSet_Compose -

A ValueSet resource instance specifies a set of codes drawn from one or more code systems, intended for use in a particular context. Value sets link between [[[CodeSystem]]] definitions and their use in coded elements.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

lockedDate (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.
_lockedDate (optional)
Element

inactive (optional)
Boolean Value of "true" or "false"

_inactive (optional)
Element

include
array[ValueSet_Include] Include one or more codes from a code system or other value set(s).

exclude (optional)
array[ValueSet_Include] Exclude one or more codes from the value set based on code system filters and/or other value sets.

ValueSet_Concept -

A ValueSet resource instance specifies a set of codes drawn from one or more code systems, intended for use in a particular context. Value sets link between [[[CodeSystem]]] definitions and their use in coded elements.

id (optional)
String A sequence of Unicode characters
extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_code (optional)
Element

display (optional)
String A sequence of Unicode characters

_display (optional)
Element
designation (optional)
array[ValueSet_Designation] Additional representations for this concept when used in this value set - other languages, aliases, specialized purposes, used for particular purposes, etc.

ValueSet_Contains -   **Up**

A ValueSet resource instance specifies a set of codes drawn from one or more code systems, intended for use in a particular context. Value sets link between [[[CodeSystem]]] definitions and their use in **coded elements**.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.
modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

system (optional)
String String of characters used to identify a name or a resource

_system (optional)
Element
abstract (optional)
Boolean Value of "true" or "false"

_abstract (optional)
Element
inactive (optional)
Boolean Value of "true" or "false"

_inactive (optional)
Element

version (optional)
String A sequence of Unicode characters

_version (optional)
Element

code (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_code (optional)
Element

display (optional)
String A sequence of Unicode characters

_display (optional)
Element
designation (optional)
array[ValueSet_Designation] Additional representations for this item - other languages, aliases, specialized purposes, used for particular purposes, etc. These are relevant when the conditions of the expansion do not fix to a single correct representation.
contains (optional)
array[ValueSet_Contains] Other codes and entries contained under this entry in the hierarchy.

ValueSet_Designation -   Up

A ValueSet resource instance specifies a set of codes drawn from one or more code systems, intended for use in a particular context. Value sets link between [[[CodeSystem]]] definitions and their use in coded elements.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element
use (optional)
Coding

value (optional)
String A sequence of Unicode characters

_value (optional)
Element

ValueSet_Expansion -

A ValueSet resource instance specifies a set of codes drawn from one or more code systems, intended for use in a particular context. Value sets link between [[[CodeSystem]]] definitions and their use in <u>coded elements</u>.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

identifier (optional)
String String of characters used to identify a name or a resource

_identifier (optional)
Element

timestamp (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_timestamp (optional)
Element

total (optional)
BigDecimal A whole number
_total (optional)
Element

offset (optional)
BigDecimal A whole number
_offset (optional)
Element

parameter (optional)
array[ValueSet_Parameter] A parameter that controlled the expansion process. These parameters may be used by users of expanded value sets to check whether the expansion is suitable for a particular purpose, or to pick the correct expansion.
contains (optional)
array[ValueSet_Contains] The codes that are contained in the value set expansion.

ValueSet_Filter -   **Up**

A ValueSet resource instance specifies a set of codes drawn from one or more code systems, intended for use in a particular context. Value sets link between [[[CodeSystem]]] definitions and their use in <u>coded elements</u>.

id (optional)
String A sequence of Unicode characters
extension (optional)

array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

property (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents
_property (optional)
Element

op (optional)
String The kind of operation to perform as a part of the filter criteria.
Enum:

> =
> is-a
> descendent-of
> is-not-a
> regex
> in
> not-in
> generalizes
> exists

_op (optional)
Element

value (optional)
String A sequence of Unicode characters

_value (optional)
Element

`ValueSet_Include -`   Up

A ValueSet resource instance specifies a set of codes drawn from one or more code systems, intended for use in a particular context. Value sets link between [[[CodeSystem]]] definitions and their use in coded elements.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of

requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

system (optional)
String String of characters used to identify a name or a resource

_system (optional)
Element
version (optional)
String A sequence of Unicode characters

_version (optional)
Element
concept (optional)
array[ValueSet_Concept] Specifies a concept to be included or excluded.

filter (optional)
array[ValueSet_Filter] Select concepts by specify a matching criterion based on the properties (including relationships) defined by the system, or on filters defined by the system. If multiple filters are specified, they SHALL all be true.

valueSet (optional)
array[String] Selects the concepts found in this value set (based on its value set definition). This is an absolute URI that is a reference to ValueSet.url. If multiple value sets are specified this includes the union of the contents of all of the referenced value sets.

ValueSet_Parameter -   **Up**

A ValueSet resource instance specifies a set of codes drawn from one or more code systems, intended for use in a particular context. Value sets link between [[[CodeSystem]]] definitions and their use in coded elements.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

name (optional)
String A sequence of Unicode characters

_name (optional)
Element

valueString (optional)
String The value of the parameter.

_valueString (optional)
Element

valueBoolean (optional)
Boolean The value of the parameter.

_valueBoolean (optional)
Element

valueInteger (optional)
BigDecimal The value of the parameter.

_valueInteger (optional)
Element

valueDecimal (optional)
BigDecimal The value of the parameter.

_valueDecimal (optional)
Element

valueUri (optional)
String The value of the parameter.

_valueUri (optional)
Element

valueCode (optional)
String The value of the parameter.

_valueCode (optional)
Element

valueDateTime (optional)
String The value of the parameter.

_valueDateTime (optional)
Element

`VerificationResult -`

Describes validation requirements, source(s), status and dates for one or more elements.

resourceType
oas_any_type_not_mapped This is a VerificationResult resource

id (optional)
String Any combination of letters, numerals, "-" and ".", with a length limit of 64 characters. (This might be an integer, an unprefixed OID, UUID or any other identifier pattern that meets these constraints.) Ids are case-insensitive.

meta (optional)
Meta

implicitRules (optional)
String String of characters used to identify a name or a resource

_implicitRules (optional)
Element

language (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_language (optional)
Element

text (optional)
Narrative

contained (optional)
array[ResourceList] These resources do not have an independent existence apart from the resource that contains them - they cannot be identified independently, and nor can they have their own independent transaction scope.

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the resource. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)

array[Extension]

May be used to represent additional information that is not part of the basic definition of the resource and that modifies the understanding of the element that contains it and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer is allowed to define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

target (optional)
array[Reference] A resource that was validated.
targetLocation (optional)
array[String] The fhirpath location(s) within the resource that was validated.

_targetLocation (optional)
array[Element] Extensions for targetLocation

need (optional)
CodeableConcept
status (optional)
String A string which has at least one character and no leading or trailing whitespace and where there is no whitespace other than single spaces in the contents

_status (optional)
Element

statusDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.
_statusDate (optional)
Element

validationType (optional)
CodeableConcept
validationProcess (optional)
array[CodeableConcept] The primary process by which the target is validated (edit check; value set; primary source; multiple sources; standalone; in context).
frequency (optional)
Timing

lastPerformed (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.
_lastPerformed (optional)
Element

nextScheduled (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_nextScheduled (optional)
Element

failureAction (optional)
CodeableConcept

primarySource (optional)
array[VerificationResult_PrimarySource] Information about the primary source(s) involved in validation.

attestation (optional)

VerificationResult_Attestation

validator (optional)
array[VerificationResult_Validator] Information about the entity validating information.

VerificationResult_Attestation -

Describes validation requirements, source(s), status and dates for one or more elements.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

onBehalfOf (optional)
Reference

communicationMethod (optional)
CodeableConcept

date (optional)
String A date or partial date (e.g. just year or year + month). There is no time zone. The format is a union of the schema types gYear, gYearMonth and date. Dates SHALL be valid dates.

_date (optional)
Element

sourceIdentityCertificate (optional)
String A sequence of Unicode characters

_sourceIdentityCertificate (optional)
Element
proxyIdentityCertificate (optional)
String A sequence of Unicode characters

_proxyIdentityCertificate (optional)
Element

proxySignature (optional)
Signature

sourceSignature (optional)
Signature

VerificationResult_PrimarySource -

Describes validation requirements, source(s), status and dates for one or more elements.
id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

who (optional)
Reference
type (optional)
array[CodeableConcept] Type of primary source (License Board; Primary Education; Continuing Education; Postal Service; Relationship owner; Registration Authority; legal source; issuing source; authoritative source).
communicationMethod (optional)
array[CodeableConcept] Method for communicating with the primary source (manual; API; Push).

validationStatus (optional)
CodeableConcept

validationDate (optional)
String A date, date-time or partial date (e.g. just year or year + month). If hours and minutes are specified, a time zone SHALL be populated. The format is a union of the schema types gYear, gYearMonth, date and dateTime. Seconds must be provided due to schema type constraints but may be zero-filled and may be ignored. Dates SHALL be valid dates.

_validationDate (optional)
Element

canPushUpdates (optional)
CodeableConcept
pushTypeAvailable (optional)
array[CodeableConcept] Type of alerts/updates the primary source can send (specific requested changes; any changes; as defined by source).

VerificationResult_Validator -

Describes validation requirements, source(s), status and dates for one or more elements.

id (optional)
String A sequence of Unicode characters

extension (optional)
array[Extension] May be used to represent additional information that is not part of the basic definition of the element. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of requirements that SHALL be met as part of the definition of the extension.

modifierExtension (optional)
array[Extension]

May be used to represent additional information that is not part of the basic definition of the element and that modifies the understanding of the element in which it is contained and/or the understanding of the containing element's descendants. Usually modifier elements provide negation or qualification. To make the use of extensions safe and manageable, there is a strict set of governance applied to the definition and use of extensions. Though any implementer can define an extension, there is a set of

requirements that SHALL be met as part of the definition of the extension. Applications processing a resource are required to check for modifier extensions.

Modifier extensions SHALL NOT change the meaning of any elements on Resource or DomainResource (including cannot change the meaning of modifierExtension itself).

1　Terms of Use

1.1　API Usage Terms & Conditions

By accessing or using our APIs, you are agreeing to the terms below. If there is a conflict between these terms and additional terms provided by us, the additional terms will control for that conflict. Collectively, we refer to the terms below, any additional terms, terms within the accompanying API documentation, and any applicable policies and guidelines as the "Terms." You agree to comply with the Terms and that the Terms control your relationship with us. So please read all the Terms carefully.

Under the Terms (please refer to 45 CFR § 170.404 overall with notes below referencing specific sections of the regulation) , **"CliniComp"** means CliniComp International, Inc., a Delaware corporation with its principal place of business at 9655 Towne Centre Drive, San Diego, California, U.S.A. We may refer to "CliniComp" as "we", "our", or "us" in the Terms. Except as exigent circumstances require, prior to making changes to our certified API technology or to the terms and conditions thereof, we will provide notice and a reasonable opportunity for API Information Sources and API Users to update their applications to preserve compatibility with our certified API technology and to comply with applicable terms and conditions (section (a) 4 (iii)).

1.2　Account and Registration

1.2.1　Accepting the Terms

You may not use the APIs and may not accept the Terms if (a) you are not of legal age to form a binding contract with CliniComp, or (b) you are a person barred from using or receiving the APIs under the applicable laws of the United States or other countries including the country in which you are resident or from which you use the APIs.

1.2.2　Registration

In order to access certain APIs you will be required to comply with the API Terms of Use (see Appendix) and provide certain information (such as identification or contact details) as part of the registration process for the APIs, or as part of your continued use of the APIs. The registration information given to CliniComp will remain up to date, and you agree to inform CliniComp promptly of any updates. Registration documentation will be used to verify the authenticity of API users (see (section (a) (2) (ii) (A) (5) and (b) (1)). In order to register, a letter needs to be sent to CliniComp addressed as follows:

> CliniComp, Intl
>
> Attention: Marketing Department
>
> 9655 Towne Centre Drive
>
> San Diego 92121

1.2.3 Fees

There are currently no fees associated with the use of our APIs. CliniComp reserves the right to implement permitted fees in the future, including costs associated with development, deployment, and upgrades; usage costs; and value add services (see (section (a) (2) (ii) (A)). Detailed records of these fees would be kept, including the methodologies for how to caculate the fees and specific costs to which such fees are attributed (see (section (a) (3) (i) (A) and (C)).

CliniComp reserves the right to charge permitted fees, if required, to be discussed on a case by case basis and in accordance with § 171.302.

CliniComp will not charge any fees prohibited by the Office of the National Coordinator for Health Information Technology (ONC), including:

- costs associated with intangible assets other than actual development or acquisition of such assets;

- opportunity costs unrelated to the access, exchange, or use of electronic health information; or

- costs that led to the creation of intellectual property if the actor charged a royalty for that intellectual property pursuant to § 171.303 and that royalty included the development costs for the creation of the intellectual property.

1.3   Using Our APIs

1.3.1   Your End-Users

You will require your end-users to comply with (and not knowingly enable them to violate) applicable law, regulation, and the Terms.

1.4   Compliance with Law, Third-Party Rights, and Other CliniComp Terms of Service

You will comply with all applicable law, regulations, and third-party rights (including without limitation laws regarding the import or export of data or software, privacy, and local laws). You will not use the APIs to encourage or promote illegal activity or violation of third-party rights. You will not violate any other terms of service with CliniComp (or its affiliates).

1.4.1   Permitted Access

Openness and pro-competitive conditions: Upon registering, CliniComp will grant an API Information Source the independent ability to permit an API User to interact with the certified API technology deployed by the API Information Source (see (section (a) (4)).

CliniCOmp will grant all rights that may be reasonably necessary to access and use our API technology in a production environment; develop products and services that are designed to interact with out API; and marker, offer, and distribute products and services associated with our API. We agree to provide all support and other services reasonably necessary to enable the effective

development and use of certified API technology by in production environments and to make reasonable efforts to maintain the compatibility of our cerified API technology to avoid disruption of its use in production environments (see (section (a) (4) (ii)).

CliniComp will provide their certified API technology to an API Information Source on terms that are no less favorable than what CliniComp provides itself and its own customers, suppliers, partners, and other persons with whom CliniComp has a business relationship. CliniCompwill not condition the receipt of the aforementioned rights on (see (section (a) (4) (ii) (B)):

- receiving a fee, including not limited to a license fee, royalty, or revenue-sharing arrangement;

- agreeing to not compete with the Certified API developer in any product, service, or market;

- agreeing to deal exclusively with the Certified API Developer in any product, service, or market;

- obtaining additional licenses, products, or services that are not related to or can be unbundled from our API;

- licensing, granting, assigning, or transferring any intellectual property to CliniComp;

- meeting any CliniComp-specific testing or certification requirements; or

- providing CliniComp or their APItechnology with recipriocal access to application data.

You will only access (or attempt to access) an API by the means described in the documentation of that API. If we assign you developer credentials (e.g., client IDs), you must use them with the applicable APIs. You will not misrepresent or mask either your identity or your API Client's identity when using the APIs or developer accounts.

We agree to provide access to our certified API technology in a non-disriminatory fashion, including (see (section (a) (4) (i)):

- providing the API technology on terms that are no less favorable than those provided to ourselves, our customers, suppliers, partners, and other persons with whom we have a business relationship;

- basing our API terms on objective and verifiable criteria that are uniformly applied to all substiantially similar or similarly situated classes of persons and requests; or

- not offering different terms or services based on whether a competitive relationship exists or would be created or on the revenue or other value that another party may receive from using the API technology.

1.4.2   API Limitations

CliniComp sets and enforces limits on your use of the APIs (e.g., limiting the number of API requests that you may make or the number of users you may serve), in our sole discretion. You agree to and will not attempt to circumvent such limitations documented with each API. If you would like to use any API beyond these limits, you must obtain CliniComp's express consent (and CliniComp may decline such request or condition acceptance on your agreement to additional terms and/or charges

for that use). To seek such approval, contact the relevant CliniComp API team for information (CliniComp Support at 800-350-8202. Contact CliniComp, Intl. by mail at 9655 Towne Centre Dr, San Diego, CA 92121.).

1.4.3 Feedback

If you provide feedback or suggestions about our APIs, then we (and those we allow) may use such information without obligation to you.

1.5 API Clients

1.5.1 API Clients and Monitoring

The APIs are designed to help you enhance CliniComp's client applications. YOU AGREE THAT CLINICOMP MAY MONITOR USE OF THE APIS TO ENSURE QUALITY, IMPROVE CLINICOMP PRODUCTS AND SERVICES, AND VERIFY YOUR COMPLIANCE WITH THE TERMS. This monitoring may include CliniComp accessing and using your API Client to identify security issues that could affect CliniComp or its users. You will not interfere with this monitoring. CliniComp may use any technical means to overcome such interference. CliniComp may suspend access to the APIs by you or your API Client without notice if we reasonably believe that you are in violation of the Terms.

1.5.2 Security

You will use commercially reasonable efforts to protect user information collected by your API Client, including personally identifiable information ("PII"), from unauthorized access or use and will promptly report to your users any unauthorized access or use of such information to the extent required by applicable law.

1.5.3 Ownership

CliniComp does not acquire ownership rights of API Clients information, and by using our APIs, you do not acquire ownership of any rights in our APIs or the content that is accessed through our APIs.

1.6 Prohibitions and Confidentiality

1.6.1 API Prohibitions

When using the APIs, you may not (or allow those acting on your behalf to):

1. Sublicense an API for use by a third party. Consequently, you will not create an API Client that functions substantially the same as the APIs and offer it for use by third parties.

2. Perform an action with the intent of introducing to CliniComp products and services any viruses, worms, defects, Trojan horses, malware, or any items of a destructive nature.

3. Defame, abuse, harass, stalk, or threaten others.

4. Interfere with, overburden, or disrupt the APIs or the servers or networks providing the APIs.

5. Promote or facilitate unlawful online gambling or disruptive commercial messages or advertisements.

6. Remove, obscure, or alter any CliniComp terms of service or any links to or notices of those terms.

Unless otherwise specified in writing by us, CliniComp does not intend use of the APIs to create obligations under the Health Insurance Portability and Accountability Act, as amended ("HIPAA"), and makes no representations that the APIs satisfy HIPAA requirements. If you are (or become) a "covered entity" or "business associate" as defined in HIPAA, you will not use the APIs for any purpose or in any manner involving transmitting protected health information to CliniComp unless you have received prior written consent to such use from us.

1.6.2   Confidential Matters

1. Developer credentials (such as passwords, keys, and client IDs) are intended to be used by you and identify your API Client. You will keep your credentials confidential and make reasonable efforts to prevent and discourage other API Clients from using your credentials. Developer credentials may not be embedded in open source projects.

2. Our communications to you and our APIs may contain CliniComp confidential information. CliniComp confidential information includes any materials, communications, and information that are marked confidential or that would normally be considered confidential under the circumstances. If you receive any such information, then you will not disclose it to any third party without our prior written consent. CliniComp confidential information does not include information that you independently developed, that was rightfully given to you by a third party without confidentiality obligation, or that becomes public through no fault of your own.

1.7   Content

1.7.1   Content Accessible Through Our APIs

Our APIs contain some third-party content (such as text, images, videos, audio, or software). This content is the sole responsibility of the person that makes it available. We may sometimes review content to determine whether it is illegal or violates our policies or the Terms, and we may remove or refuse to display content. Finally, content accessible through our APIs may be subject to intellectual property rights or additional licensing requirements, and, if so, you may not use it unless you are licensed to do so by the owner of that content or are otherwise permitted by law. Your access to the content provided by the API may be restricted, limited, or filtered in accordance with applicable law, regulation, and policy.

1.7.2   Prohibitions on Content

Unless expressly permitted by the content owner or by applicable law, you will not, and will not permit your end users or others acting on your behalf to, do the following with content returned from the APIs:

1. Scrape, build databases, or otherwise create permanent copies of such content, or keep cached copies longer than permitted by the cache header;

2. Copy, translate, modify, create a derivative work of, sell, lease, lend, convey, distribute, publicly display, or sublicense to any third party;

3. Misrepresent the source or ownership; or

4. Remove, obscure, or alter any copyright, trademark, or other proprietary rights notices; or falsify or delete any author attributions, legal notices, or other labels of the origin or source of material.

1.8 Brand Features; Attribution

1.8.1 Brand Features

"Brand Features" is defined as the trade names, trademarks, service marks, logos, domain names, and other distinctive brand features of each party. Except where expressly stated, the Terms do not grant either party any right, title, or interest in or to the other party's Brand Features. All use by you of CliniComp's Brand Features (including any goodwill associated therewith) will inure to the benefit of CliniComp.

1.8.2 Attribution

You agree to display any attribution(s) required by CliniComp as described in the documentation for the API. CliniComp hereby grants to you a nontransferable, nonsublicensable, nonexclusive license while the Terms are in effect to display our Brand Features for the purpose of promoting or advertising that you use the APIs. You must only use our Brand Features in accordance with the Terms and for the purpose of fulfilling your obligations under this Section. You understand and agree that we have the sole discretion to determine whether your attribution(s) and use of our Brand Features are in accordance with the above requirements and guidelines.

1.8.3 Publicity

You will not make any statement regarding your use of an API which suggests partnership with, sponsorship by, or endorsement by CliniComp without our prior written approval.

1.9 Termination

1.9.1 Termination

You may stop using our APIs at any time with prior notice as described in your user agreement with CliniComp|EHR. Further, upon termination, cease your use of the applicable APIs. CliniComp reserves the right to amend the Terms upon notice to you and to terminate the Terms with you or discontinue the APIs or any portion or feature or your access thereto for any reason and at any time without liability or other obligation to you.

1.9.2 Your Obligations Post-Termination

Upon any termination of the Terms or discontinuation of your access to an API, you will immediately stop using the API, cease all use of the CliniComp Brand Features, and delete any cached or stored content that was permitted by the cache header under the section 6.7 on Content. CliniComp may

independently communicate with any account owner whose account(s) are associated with your API Client and developer credentials to provide notice of the termination of your right to use an API. In addition, the obligations of Confidentiality contained in section 6.6 and Indemnification contained in section 6.10.2, as well as the Limitation of Liability contained in section 6.10.1, will survive the termination of the Terms.

1.10 Liability & Indemnification

1.10.1 Limitation of Liability

When permitted by law, CliniComp, and CliniComp's suppliers and distributors, will not be responsible for loss of profits, revenues, or data, financial losses, or indirect, special, consequential, exemplary, or punitive damages.

To the extent permitted by law, the total liability of CliniComp, and its suppliers and distributors, for any claim under the terms, including for any implies warranties, is limited to the amount you paid us to use the applicable API's (Or, if we choose, to supplying you the API's again) during the 6 months prior to the event giving rise to the liability.

In all cases, CliniComp, and its suppliers and distributors, will not be liable for any expense, loss, or damage that is not reasonably foreseeable.

1.10.2 Indemnification

Unless prohibited by applicable law, if you are a business, you will defend, indemnify, and hold harmless CliniComp, and its affiliates, directors, officers, employees, and users, against all liabilities, damages, losses, costs, fees (including legal fees), and expenses relating to any allegation or third-party legal proceeding to the extent arising from:

- your misuse or your end user's misuse of the APIs;

- your violation or your end user's violation of the Terms; or

- any content or data routed into or used with the APIs by you, those acting on your behalf, or your end- users.
