Text Generation

Hutter dataset is often referred as a benchmark for character-level language modeling (Sutskever et al., 2011; Graves, 2013). In this supplementary material, we provide some samples generated by the gated-feedback RNN with LSTM units which was trained on Hutter dataset. We sampled once from the model (except the last sample) after providing a seed sequence extracted from the test set which was not used for training the model. We use bold-faced font whenever the following (generated) characters are considered highly relevant to the context of earlier seed text. We use red color to distinguish the seed text snippet from the generated one.

Sample #1

England, Italy, France, Germany and **others**.

==Euroscepticism in the United Kingdom==
