Facts about Vintage Ironworks Custom Iron Entry Units

- **Certified by NAMI and Impact Approved by the Florida Building Commission, #11212.1, #11212.2 Miami-Dade NOA approval # 08-0807.22, #08-0807.21 for Impact and HVHZ applications**
- **Each entry unit comes with a Transferable Limited Lifetime Warranty.**
- Our door units are hand-forged and custom made, manufactured with 14-gauge iron.
- The door frame and the door panels are insulated.
- Door thickness: 1 ½”.
- Door frames are 1 ½” wide x 6” deep. The frames can be made to other specifications.
- Wrought iron of 5/8” is used in the scroll design. Depending on intricacy of the design, other thickness’ can be used.
- Tempered glass is used on **all** door units for safety measures (at least 3/8” thick), and is included in the price. Other glass options are available to meet customer’s needs, including impact applications.
- Standard hardware specification is: 2 1/8" boring, 2 3/8" backset, 5 ½" center to center.
- We are a Baldwin and Emtek hardware dealer and can assist you in your options. Hardware of your choice must be known, so we can bore the correct holes. Templates need to be provided if specifications are different than the standard. Custom Iron Pulls are also available.
- The door units are made as a pre-hung unit with a custom made iron frame. It supports the weight of the doors and allows for ease of installation.
- Extension flush bolts are used on double door units. The flush bolt is the mechanism that locks the passive door of a double door unit. One flush bolt locks into the top of the doorframe and the bottom flush bolt locks into the threshold/floor.
- Pemko weather stripping are used around the door frame and the glass frame (if door has operable glass panels) making the door weather tight.
- There are two options on the swing of the doors: in-swing or out-swing. Both configurations have product certification.
- Weight will vary depending on measurements and design. A 3' wide by 8' tall door weighs approximately 220 lbs.
- Various paint colors and finishes are available. Because the doors are hand painted, slight variations in the colors may occur.
- Pricing is determined by size of unit and type of design selected.
- Production times vary and will be provided by your dealer upon placing the order.

Features and Benefits of Vintage Ironworks

Custom Iron Entry Units

Miami- Dade Code Certified, Florida Building Code Certified

Vintage Ironworks door units, including the frames, side lights and transom units, have been engineered for strength, durability and your peace of mind. Our Florida Building Code certification for both positive and negative design pressures (+80 psf/-80 psf, equivalent to approx. 217+ mph wind load), water resistance as well as forced entry resistance meets and in some cases exceeds the Miami-Dade Code, Florida Building Code and International Building Code. [FL #4032, #11212.1, #11212.2. Miami/Dade NOA #08-0807.22, #08-0807.21.](#)

*Our certifications provide the peace of mind of an engineered product that meets and exceeds residential building code requirements, which is of great importance in the application and approval process of receiving a permit for new construction and remodeling.

Manufactured with Pride in the USA

Vintage Ironworks door units, including the frames, sidelights and transom units, are manufactured entirely in the United States of America. Our facility in Altamonte Springs, Florida utilizes both the methods of the skilled craftsmanship of the past as well as some of the most recent technological innovations in metal craft. We can produce your project with the highest level of skill and quality known to the industry.

*Our engineering, standard operating procedures and quality assurance standards insure that your project will be constructed exactly to your specifications and our strict demands. We pride ourselves in creating the best iron door products in the world and we're excited to prove it with each and every project.

Durability, Strength and a Lifetime Warranty

Vintage Ironworks door units, including the frames, sidelights and transom units, are constructed with a combination of 14 gauge galvanized iron and 5/8" solid iron scrollwork designs. These door systems are manufactured together and are delivered/installed as a pre-hung unit for consistency in tolerances from manufacturing to final application. We have engineered several features uncommon to the iron entry door manufacturing market including a double sealing astragal system and solid steel flush bolt locking mechanisms. Additionally, each ball bearing, stainless steel pin barrel hinge utilized is made of iron and welded into place for increased durability and strength.

*These units are certified for impact resistance, positive and negative design pressures (+80 psf/-80 psf, equivalent to approx. 217+ mph wind load), water resistance as well as forced entry resistance and provide the strength for your peace of mind. Under normal usage conditions these iron door systems will not warp, sag or deteriorate like wood units and with only minor maintenance should retain their beauty for a lifetime. Because we believe in our products and truly take great pride in our craftsmanship, we put the best warranty in the industry behind every product we manufacture. Your purchase with *Vintage Ironworks* comes with the only Transferable Limited Lifetime Warranty in the iron door industry.
