

Did you know that plankton are the most abundant organisms on Earth? These tiny creatures come in all sorts of shapes and sizes but are often too small to see without the help of a microscope. To learn more about plankton, visit <http://askabiologist.asu.edu/explore/invisible-watery-world>.

# Plankton Key

1. *Daphnia*
2. *Strobilidium* ciliate
3. *Clione limacina* pteropod
4. *Alexandrium* dinoflagellate
5. *Actinomma* radiolarian
6. *Chaetognatha* arrow worm
7. Copepod
8. Pennate diatoms
9. *Hedbergella* foraminiferan
10. *Platynereis* polychaete worm
11. *Dinophysis* dinoflagellate
12. *Campylodiscus* diatom
13. *Ceratium* dinoflagellate
14. *Epiplocytilis undella* tintinnid ciliate
15. *Euchlanis* rotifer
16. *Cyclotella* centric diatom
17. *Emiliana huxleyi* coccolithophorid
18. Foraminiferan
19. *Chaetoceros* diatom chain
20. *Gambierdiscus australes* dinoflagellate

- Phytoplankton
- Zooplankton
- Symbiotic\*

Plankton are not to scale.

\*These zooplankton can have phytoplankton living inside their bodies.
