See the Benefits of Combining ZTS and EDR

The difference between what an attacker can do in 10 minutes vs. 40 minutes is dramatic. That's why it's critical to pair Endpoint Detection and Response (EDR) with Zero Trust Segmentation (ZTS) to stop the spread of breaches and ransomware.

Zero Trust Segmentation

+

Endpoint Detection and Response

## 4X faster than detection and response alone

**BISHOPFOX** Bishop Fox Ransomware Scenario Emulation 2022
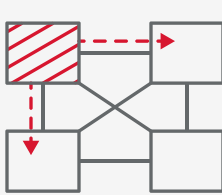

Stop endpoint-to-endpoint spread

Control administrative flows

Protect against zero-day attacks

Contain breaches as they happen

Control endpoint-to-server traffic

Protect agentless devices

The Power of the Illumio Zero Trust Segmentation Platform

❯ Learn how to protect devices and workloads with the first platform for breach containment: www.illumio.com/products

❯ Read the Bishop Fox report for more results from attack emulations measuring the effectiveness of Illumio ZTS against active ransomware threats.
