

Children and COVID-19: State Data Report

A joint report from the American Academy of Pediatrics and the Children's Hospital Association
Summary of publicly reported data from 49 states, NYC, DC, PR, and GU

Version: 5/4/2023

Note: Data Limitations. The numbers in this report represent cumulative counts since states began reporting. The data are based on how public agencies collect, categorize and post information. All data reported by state/local health departments are preliminary and subject to change and reporting may change over time. Notably, in the summer of 2021 and winter of 2022, some states revised cases counts previously reported, begun reporting less frequently, or dropped metrics previously reported. For example, due to several changes on their dashboards and the data currently available, AL, DC, HI, IA, KY, MN, MS, NE, SC, TX, VA, & WI data in this report are not current. Readers should consider these factors. States may have additional information on their web sites.

Changes in testing, changes in how states report, periods when school is not in session, and holiday weeks affect week to week comparisons and might cause irregularities in reporting and trends. Shortages of COVID-19 tests during surges and COVID-19 home tests likely affect the undercounting of COVID-19 cases.

As of 6/16/22, due to only a portion of states reporting hospitalizations and deaths, we no longer providing updates on cumulative hospitalizations and mortality data. The CDC now provides information that includes all of the US: For information regarding US child hospitalizations from the CDC, visit <https://covid.cdc.gov/covid-data-tracker/#new-hospital-admissions>. For information pertaining to US child mortality from the CDC, visit <https://covid.cdc.gov/covid-data-tracker/#demographics>.

As of 3/2/23, the COVID-19 Report was simplified and charts were modified for better readability.

COVID-19: Available Data for Children

- State-level reports are the best publicly available data on COVID-19 cases in children
- Starting in June 2021, some states reported less frequently and dropped metrics previously reported as overall cases decreased
- This report summarizes what was available on 5/4/23
- **49 states, NYC, DC, Puerto Rico and Guam** provided age distributions of reported COVID-19 cases

Fig 1A: States Reporting Age Distribution of COVID-19 Cases as of 5/4/23

Reporting age distribution of COVID-19 cases:

- Yes: Reported age distribution of cases
- TX: Reported age distribution for only 2% of cases; Cases through 8/26/21
- NY: Only NYC reported age distribution of cases
- MA: Only reported age distribution of cases added in past 2 weeks
- AL: Cases through 7/29/21 HI: Cases through 1/13/22 WI: Cases through 4/20/23
- DC: Cases through 3/3/22 MS: Cases through 3/10/22
- SC: Cases through 4/28/22 NE: Cases through 5/12/22
- MN: Cases through 6/30/22 VA: Cases through 2/2/23
- KY: Cases through 3/2/23 IA: Cases through 3/30/23

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU
 Analysis by American Academy of Pediatrics and Children's Hospital Association
 All data reported by state/local health departments are preliminary and subject to change

Children and COVID-19: Data Limitations

General Limitations

- Format, content, and metrics of reported COVID-19 data differed substantially by state
- Definition of “child”: Age ranges reported for children varied by state (0-14, 0-17, 0-18, 0-19, and 0-20 years; see Fig 1B)
- Unknown: Number of children infected but not tested and confirmed

Fig 1B: Child Age Ranges of COVID-19 Cases Reported by States as of 5/4/23

State-Level Changes

- TX: Age distribution reported for only 2% of confirmed cases (99,989/6,670,771) resulting in an undercount of child cases; TX cumulative cases through 8/26/21. As of 4/15/23, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in [Appendix 3B](#)
- NY: Did not provide age distribution for state-wide cases (NYC only)
- AL: As of 8/13/20, changed definition of child case from 0-24 to 0-17 years; as of 9/17/20, provided age distribution for confirmed cases only; as of 8/5/21, due to change in data available, AL cumulative cases 7/29/21
- HI: As of 8/27/20, changed definition of child case from 0-19 to 0-17 years; As of 1/20/22, due to change in available data, HI cumulative cases through 1/13/22
- MA: As of 9/3/20, revised definition of probable case, leading to a reduction in total case count, and changed reporting from total child cases to cases added in last two weeks
- RI: As of 9/10/20, changed definition of child case from 0-19 to 0-18 years
- MO: As of 10/1/20, changed definition of child cases from 0-19 to 0-17 years
- PR: As of 3/11/21, due to a change in data available, a calculation was required to obtain confirmed and probable child case totals, leading to a reduction in total child case count
- FL: As of 6/24/21, due to change in data available, calculation required to obtain child cases for 0-14 years; As of 6/9/22, due to available data for FL (case data updated every other week), child and total cases averaged across 2-week period
- LA: As of 8/5/21, changed reporting total cases from confirmed to confirmed and probable (combined)
- WV: As of 8/12/21, WV changed definition of child case from 0-19 to 0-20 years
- WA: As of 3/10/22, changed definition of child case from 0-19 to 0-17
- DC: As of 3/10/22, due to change in available data, DC cumulative cases through 3/3/22
- MS: As of 3/17/22, due to change in available data, MS cumulative cases through 3/10/22
- SC: As of 5/5/22, due to change in available data, SC cumulative cases through 4/28/22
- NE: As of 5/19/22, due to change in available data, NE cumulative cases through 5/12/22
- MN: As of 7/7/22, due to change in available data, MN cumulative cases through 6/30/22
- OR: As of 1/26/23, due to available data (child case data updated quarterly) & as of 10/6/22, (child case data updated monthly), calculations required for child cases and weekly estimates fluctuate
- VA: As of 3/9/23, due to change in available data, VA cumulative cases though 2/2/23
- KY: As of 3/16/23, due to change in available data, KY cumulative cases through 3/2/23
- IA: As of 4/6/23, due to change in available data, IA cumulative cases through 3/30/23
- WI: As of 5/4/23, due to change in available data, WI cumulative cases through 4/20/23

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU; Analysis by American Academy of Pediatrics and Children’s Hospital Association; All data reported by state/local health departments are preliminary and subject to change

Children and COVID-19: 5/4/23

Summary of State-Level Data Provided in this Report*

Detail and links to state/local data sources provided in Appendix

Cumulative Number of Child COVID-19 Cases*

- 15,587,232 total child COVID-19 cases reported, and children represented 17.9% (15,587,232/86,839,098) of all cases
- Overall rate: 20,709 cases per 100,000 children in the population

Change in Child COVID-19 Cases*

- 8,247 child COVID-19 cases were reported the past week from 4/27/23-5/4/23 (15,578,985 to 15,587,232) and children represented 15.8% (8,247/52,277) of the weekly reported cases
- Over two weeks, 4/20/23-5/4/23, there was a <1% increase in the cumulated number of child COVID-19 cases since the beginning of the pandemic (18,669 cases added (15,568,562 to 15,587,232))

See detail in [Appendix](#): Data from 49 states, NYC, DC, PR, and GU; Analysis by American Academy of Pediatrics and Children's Hospital Association

* Note: Data Limitations. The numbers in this report represent cumulative counts since states began reporting. The data are based on how public agencies collect, categorize and post information. All data reported by state/local health departments are preliminary and subject to change and reporting may change over time.

See detail in [State-Level Changes](#): For several states (AL, DC, HI, IA, KY, MN, MS, NE, SC, TX, VA, & WI), due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current. Readers should consider these factors. States may have additional information on their web sites.

Changes in testing, changes in how states report, periods when school is not in session and holiday weeks affect week to week comparisons and might cause irregularities in reporting and trends. Shortages of COVID-19 tests during surges and COVID-19 home tests likely affect the undercounting of COVID-19 cases.

As of 6/16/22, due to only a portion of states reporting hospitalizations and deaths, we no longer providing updates on cumulative hospitalizations and mortality data. The CDC now provides information that includes all of the US: For information regarding US child hospitalizations from the CDC, visit <https://covid.cdc.gov/covid-data-tracker/#new-hospital-admissions>. For information pertaining to US child mortality from the CDC, visit <https://covid.cdc.gov/covid-data-tracker/#demographics>.

As of 3/2/23, the COVID-19 Report was simplified and charts were modified for better readability.

Fig 2. Cumulative Number of Child COVID-19 Cases: 5/4/23

- 15,587,232 total child COVID-19 cases (cumulative)
- Among states reporting:
 - Eight states reported 500,000+ child cases
 - Two states reported fewer than 50,000 child cases

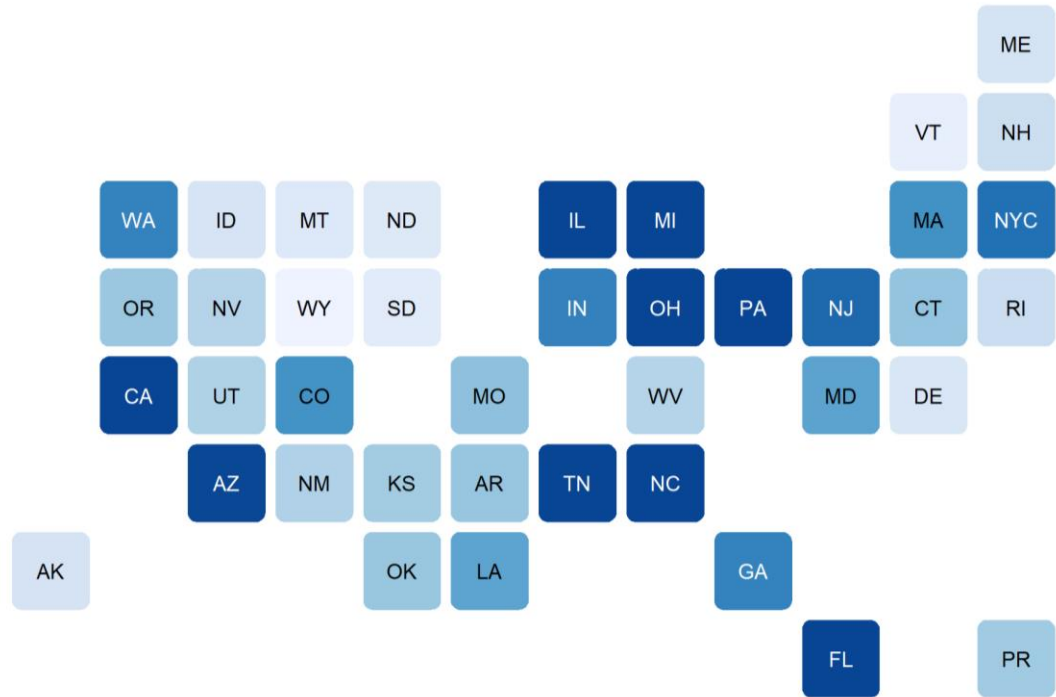

See detail in [Appendix 3A & 3B](#): Data from 42 states, NYC, & PR (See note below on states not included in figure)
 All data reported by state/local health departments are preliminary and subject to change
 Analysis by American Academy of Pediatrics and Children’s Hospital Association
 See detail in [State-Level Changes](#): For several states (AL, DC, HI, IA, KY, MN, MS, NE, SC, TX, VA, & WI), cumulative child cases and total cases for all ages are not current. These 9 states, TX, and GU are not included in the figure
 As of 4/6/23, due to data revisions and available data, DE reported large increase in cumulative child cases (n=6,645). These are being added into this report over next several weeks (250 child cases added on 5/4/23); On 5/4/23, due to available data and data revisions, NC reported a large increase in cumulative child cases and total cases; OH cumulative child cases and total cases through 3/30/23; MA cumulative child cases and total cases through 4/20/23; As of 5/4/23, due to change in available data, WI cumulative child cases and total cases through 4/20/23; UT cumulative child cases and total cases through 4/27/23

Fig 3. Cumulative Child COVID-19 Cases and Percent Increase in Child Cases

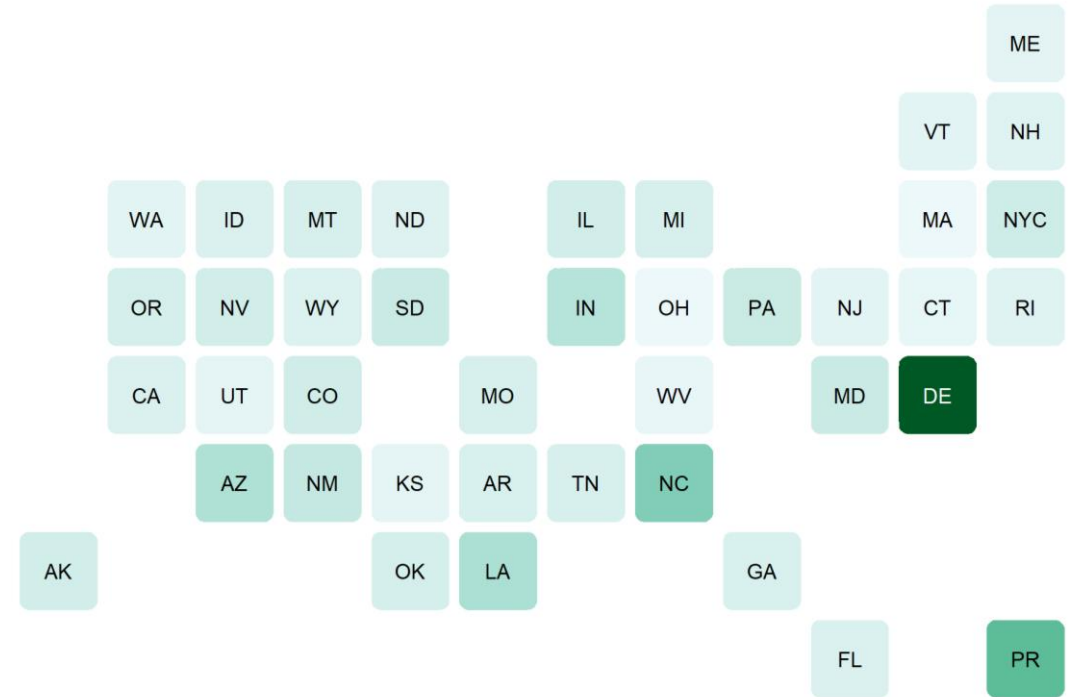

A. Cumulative Child COVID-19 Cases, 5/4/23

8 states with 500,000+ cumulative child cases

B. Percent Increase in Child Cases, 4/20/23-5/4/23

From 4/20-5/4, there were 18,669 child cases added (15,568,562 to 15,587,232; <1% increase)

Cumulative child COVID-19 cases (thousands) 100 200 300 400 500+

Percent increase 0.00 0.25 0.50 0.75 1.00+

± As of 1/26/23, due to available data for OR (child case data updated quarterly), and as of 10/6/22, due to available data for OR (child case data updated quarterly)

« As of 5/5/22, due to available data, SC cumulative child cases and total cases through 4/28/22

^ Texas previously reported age for only 2% of total confirmed cases and these cumulative cases through 8/26/21 are included (7,754); Cases per 100,000 children omitted for Texas; Data for Texas in this report is limited to the case count for which age is provided through 8/26/21;

As of 1/14/22, TX released new data that is NOT included in cumulative case counts or figures but reported above in parentheses (eg, 1,411,529 cumulative child cases as of 4/15/23)

≠ On 5/4/23, due to available data, UT cumulative child cases and total cases through 4/27/23

> As of 2/23/23, due to change in available data, VA cumulative child cases and total cases through 2/2/23

♦ As of 5/4/23, due to available data, WI cumulative child cases and total cases through 4/20/23

± As of 1/26/23, due to available data for OR (child case data updated quarterly), and as of 10/6/22, due to available data for OR (child case data updated quarterly)

Frequently Asked Questions

Q: *Why are the AAP and CHA collecting this data?*

A: Our goal is to provide a weekly snapshot of how COVID-19 is affecting children in the United States. CDC provides a national number of cases by age on its [COVID-19 data tracker](#), but there are no geographic indicators provided and the age data are not released on a regular schedule. Our data collection method allows for tracking the number of child cases weekly, as well as providing publicly reported case numbers for children at the state level.

Q: *The age ranges for children in the report are broad – why were these age ranges chosen and are data available for more specific age ranges of children?*

A: Each state makes different decisions about how to report the age distribution of COVID-19 cases, and as a result the age range for reported cases varies by state. For the purposes of this report it is not possible to standardize more detailed age ranges for children based on what is publicly available from the states at this time. Please refer to specific state health department websites of interest to see if the state provides more granular detail of cases by age (see report Appendix for links to all state data sources).

Q: *What is the definition of a COVID-19 case?*

A: COVID-19 cases are defined as persons who have been identified as a confirmed (via a diagnostic molecular test) or probable (via a clinical diagnosis) case. COVID-19 cases are reported by the states, [following reporting standards established by the CDC](#). For more information on the definitions of confirmed and probable cases, see the following resources: [COVID Tracking Project: Definitions](#); [CDC, COVID-19 Data and Surveillance](#).

Q: *Why are only a small portion (<5%) of child COVID-19 cases included for Texas?*

A: Texas Department of State Health Services reports overall confirmed cases but only a small fraction are included in the age distribution. As of 1/14/22 (last updated 4/15/23), TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report. Other sources for child COVID-19 cases can be found here: [Texas Public Schools COVID-19 Data](#)

Q: *Why does the report not provide the percent of child cases that were symptomatic vs. asymptomatic or that had underlying conditions?*

A: For the report, we are limited to the data that states are making publicly available. At this time, states are not providing data related to symptoms or underlying conditions and age. CDC provides some information on COVID-19 hospitalizations by age on the [CDC COVID-NET dashboard](#).

Q: *For the child population for each state, does that match the listed age range for the state's child COVID-19 data?*

A: Yes, the report uses child population numbers that match on directly with the listed age range for children provided by each state. State population numbers were obtained from the [US Census Bureau](#).

Q: *The report provides “cumulative totals” for cases in available states. Are those the total numbers since the states began reporting, or since the AAP and CHA started collecting this data?*

A: All “cumulative total” data represent cumulative counts since states began reporting COVID-19 data.

Q: *Why were hospitalization and mortality data removed from this report?*

A: As of 6/16/22, only a portion of states were continuing to report cumulative hospitalization and mortality data. The CDC now provides information that includes all of the US: For information regarding US child hospitalizations, visit <https://covid.cdc.gov/covid-data-tracker/#new-hospital-admissions>. For information pertaining to US child mortality, visit <https://covid.cdc.gov/covid-data-tracker/#demographics>.

Q: *How can I learn more about COVID-19 cases in my state?*

A: Links to all state data sources are provided in the Appendix.

Q: *Are these data final?*

A: No. All data reported by state/local health departments included in this report are preliminary and subject to change and revision as health departments gather more information.

Q: *Is this the most recent report available? When will a new report be released?*

A: The most recent version of the report is available for [download on the AAP website](#). New reports are made available on a weekly basis at aap.org/CovidStateData.

Additional Resources

- For more information about COVID-19 data in your area, we encourage you to reach out to your state and local health department officials
- Visit the [AAP Critical Updates](#) site for daily updates, resources, and guidance on COVID-19 and pediatrics
- For COVID-19 articles for parents in English and Spanish, visit [HealthyChildren.org](#), the parenting website of the AAP
