FINDING OF NO SIGNIFICANT IMPACT
and
RECORD OF DECISION

Revisions to Runway Safety Area and Runway Protection Zone Improvements
Baton Rouge Metropolitan Airport
Baton Rouge, Louisiana

February 23, 2023

I. INTRODUCTION

The purpose of this Finding of No Significant Impact and Record of Decision (FONSI/ROD) is twofold. First, it briefly presents the reasons why a set of revisions to the proposed project to make improvements to the Runway 13/31 Runway Safety Area (RSA) and Runway Protection Zone (RPZ) at Baton Rouge Metropolitan Airport (BTR), would have no significant impact on the quality of the human environment. Second, it documents the decision of the Federal Aviation Administration (FAA) to approve the Federal action requested by the airport sponsor, the Baton Rouge Airport Commission (BRAC), to support the revised proposed project. This FONSI/ROD includes necessary environmental findings and determinations.

Attached to this FONSI/ROD is the Supplemental Environmental Assessment (SEA) upon which these findings and determinations were made. This FONSI/ROD incorporates by reference the 2018 EA and FONSI addressing the original proposal to make improvements to the Runway 13/31 RSA and RPZ.

The BRAC has requested the following Federal action:

- Unconditional approval to revise the Airport Layout Plan to depict revisions to the Plank Road relocation component of the proposed Runway 13/31 RSA and RPZ improvements, as depicted in Exhibit 1.2 of the SEA.

The SEA was prepared pursuant to the provisions of the National Environmental Policy Act (NEPA) of 1969 and the Council on Environmental Quality (CEQ) regulations (40 C.F.R. Parts 1500-1508). Additionally, the SEA meets the guidelines identified in FAA Orders 1050.1F, *Environmental Impacts: Policies and Procedures* and 5050.4B, *NEPA Implementing Instructions for Airport Actions*.

After review of the SEA, correspondence received during the intergovernmental coordination process, and other supporting documentation, the FAA determined that a FONSI was appropriate for the Airport's proposed revisions to the Runway 13/31 RSA and RPZ improvements.

II. PURPOSE AND NEED

The purpose and need for the proposed Runway 13/31 RSA and RPZ improvements, as presented in the 2018 EA, has not changed. However, subsequent to issuance of the 2018 FONSI, the BRAC requested revisions to the Approved Action in response to concerns raised by the Louisiana Department of Transportation and Development (LADOTD) regarding surface traffic levels in the project vicinity. These revisions would affect only the Plank Road relocation component of the overall project. They involve grade separations designed to increase safety and eliminate the need for traffic signals in several locations. The proposed revisions are described in Chapter 2 of the SEA, with the specific components presented in Section 2.4.

III. ALTERNATIVES

Alternatives addressing LADOTD's concerns regarding the Plank Road relocation component were developed and screened as described in Sections 3.1 – 3.3 of the SEA, resulting in three final "build" alternatives, along with the requisite "no action" alternative. Alternative 3 (Plank Road Elevated at Hooper Road and Hooper Road elevated at New Plank) was selected as the Sponsor's Preferred Alternative, hereafter referred to in this finding as the Modified Action. It is depicted in Exhibit 3.3.

IV. STUDY AREA

Since the Modified Action would affect only the Plank Road relocation component of the 2018 Approved Action, the study area for the SEA was a subset of that utilized in the 2018 EA. It is depicted in Exhibit 4.1 of the SEA.

V. MODIFIED ACTION

As with the 2018 Approved Action, the Modified Action was evaluated based upon numerous factors, including environmental impacts, operational efficiency and cost considerations. The FAA has completed an independent evaluation of the SEA and finds that the 2018 Approved Action should be modified to encompass the revisions set forth herein as the Modified Action. The FAA has found that the Modified Action, among other factors, would best address the purpose and need and would best meet the FAA's statutory mission of promoting a safe and

efficient nationwide airport system.

In arriving at this decision, the FAA considered all pertinent factors, as well as the FAA statutory charter in the Federal Aviation Act of 1958, as amended, to promote, encourage and foster the development of civil aeronautics (49 U.S.C. § 40101).

Details of the Modified Action can be found in Section 2.4, 3.1, Exhibit 3.3 and Appendix F of the SEA.

VI. ENVIRONMENTAL CONSEQUENCES

The potential environmental impacts from the Modified Action, as compared with the 2018 Approved Action, were evaluated in the attached SEA for each of the environmental impact categories identified in FAA Orders 1050.1F and 5050.4B. Chapter 5 and Appendix F of the SEA provide detailed evaluations of the environmental consequences for each environmental impact category, which are summarized in Table 5.1.

As described in Chapter 5 of the SEA, the conclusions of no significant impacts presented in the 2018 EA and associated FONSI do not change with the Modified Action. The findings with respect to all impact categories and special purpose laws presented in the 2018 FONSI are incorporated by reference.

VII. PUBLIC INVOLVEMENT

Public comments on the Draft SEA were solicited as described in Section 6.1.3.1 of the Final SEA. There were two public comment periods, the second offered in response to FAA comments on the first Draft SEA clarifying that the 2018 EA and FONSI had addressed the relocation of some navigational aids. The only comments on the Draft SEA were made during the public hearing, and they were adequately addressed in Appendix H of the final SEA.

It must be noted that Sections 6.1.1., 6.1.2 and 6.1.3 contain errors. While they correctly describe the public outreach actions regarding the SEA, they do so in the future tense. However, these actions were indeed carried out.

VIII. CONDITIONS and MITIGATION

As prescribed by 40 CFR § 1505.3, the FAA shall take steps as appropriate to the action, through mechanisms such as enforcement of existing grant assurances, special conditions in future grant agreements, property conveyance deeds, releases, airport layout plan approvals, and/or required contract plans and specifications and shall monitor these as necessary to ensure that the airport sponsor fulfills representations made in Chapter 3 of the 2018 EA under the various impact categories and orders included in the 2018 FONSI with respect to mitigation of impacts.

The airport sponsor will coordinate mitigation plans with the appropriate jurisdictional agencies in conjunction with the FAA.

The conditions included in the 2018 FONSI are incorporated by reference and pertain in full to the Modified Action.

IX. DECISION CONSIDERATIONS AND ADDITIONAL FINDINGS

Throughout the development and review of the SEA, including the proposed improvements described in Part V above, the FAA has made every effort to adhere to the policies and purposes of NEPA, as stated in CEQ Regulations for Implementing NEPA, 40 CFR § 1500-1508. The FAA has concentrated on the truly significant issues related to the Modified Action. In its determination whether to prepare an EIS or issue a FONSI, the FAA weighed the following considerations:

After examination of the SEA, comments from Federal, state, and local agencies (no public comments were received), as well as all other evidence available to the FAA, the FAA has determined the available record demonstrated that no thresholds indicating the potential for significant impact were exceeded and that an EIS, therefore, is not required. In addition, the FAA determined that existing evidence available to the agency clearly points to the Modified Action as beneficial in fulfilling the FAA's statutory mission of promoting a safe and efficient nationwide airport system.

The SEA has adequately provided the agency with the information it needs: (a) to make an informed, objective decision on the environmental effects, as well as other effects, of the Modified Action; and (b) to take actions that protect, restore, and enhance the environment. The FAA weighed both the potential positive and negative consequences that the Modified Action may have on the quality of the human environment.

The determinations prescribed by the statutory provisions set forth in the Airport and Airway Improvement Act of 1982, as codified in 49 U.S.C. §§ 47106 and 47107, which are preconditions of FAA's approval of airport funding applications for AIP-eligible airport development, were presented in the 2018 FONSI and still pertain.

I have carefully and thoroughly considered the facts contained in the attached SEA. Based on that information, I find the proposed Federal action is consistent with existing national environmental policies and objectives of Section 101(a) of the National Environmental Policy Act of 1969 (NEPA) and other applicable environmental requirements. I also find the proposed Federal action with the required mitigation referenced above will not significantly affect the quality of the human environment or include any condition requiring any consultation pursuant to section 102(2)(C) of NEPA. As a result, FAA will not prepare an EIS for this action.

APPROVED:

DECISION AND ORDER

Revisions to Runway Safety Area and Runway Protection Zone Improvements
Baton Rouge Metropolitan Airport
Baton Rouge, Louisiana

February 23, 2023

The FAA recognizes its responsibilities under NEPA, CEQ regulations, and its own directives. Recognizing these responsibilities, the FAA has carefully considered the objectives of the proposed projects in relation to aeronautical and environmental factors at and around Baton Rouge Metropolitan Airport (BTR). Based upon the above analysis, the FAA has determined that the Modified Action meets the purpose and need of the proposed project and is consistent with FAA design standards.

Having carefully considered the aviation safety and operational objectives of the project, as well as being properly advised as to the anticipated environmental impacts of the proposal, under the authority delegated to me by the Administrator of the FAA, I find that the project is reasonably supported. I certify, as prescribed by 49 U.S.C. 44502, that the proposed project is reasonably necessary for use in air commerce.

The findings included in the 2018 FONSI are unchanged and still pertain to the Modified Action.

This decision does not constitute a commitment of funds under the Airport Improvement Program (AIP); however, it does fulfill the environmental prerequisites for the FAA to consider applications for AIP grants in connection with the proposed project in the future (49 U.S.C. 47101 et seq.).

Right of Appeal

This FONSI/ROD constitutes final order of the FAA Administrator and is subject to exclusive judicial review under 49 U.S.C. 46110 by the U.S. Circuit Court of Appeals for the District of Columbia or the U.S. Circuit Court of Appeals for the circuit in which the person contesting the decision resides or has its principal place of business. Any party having substantial interest in this order may apply for review of the decision by filing a petition for review in the appropriate United States Court of Appeals no later than 60 days after this order is issued in accordance with the provisions of 49 U.S.C. Section 46110. Any party seeking to stay implementation of the ROD must file an application with the FAA prior to seeking judicial relief as provided in Rule 18(a) of the Federal Rules of Appellate Procedure.

1. Introduction

1.1 Airport Overview

Baton Rouge Metropolitan Airport (BTR) is owned and operated by the City of Baton Rouge and Parish of East Baton Rouge. The Airport is located five miles north of Downtown Baton Rouge in the northwest portion of East Baton Rouge Parish (see Exhibit 1.1, Airport Vicinity Map). The Airport is easily accessed from Interstate 110 via Veterans Memorial Boulevard. The overall area of the Airport property is approximately 1,250 acres, which includes approximately 700 acres dedicated to aviation operations and uses, located on land owned by the Baton Rouge Metropolitan Airport, including some parcels with runway access. The Airport maintains three active runways, an extensive taxiway system with 14 taxiways, and an airfield system comprised of associated aprons, hold pads and electronic and visual navigational aids (see **Exhibit 1.1: Airport Location**).

1.2 Proposed Action

The Airport initiated a Master Plan Update in 2015, which was approved by the Metropolitan Council of the City of Baton Rouge and Parish of East Baton Rouge in December 2016. The primary objective of the Master Plan Update was to develop a general guide for the orderly, timely, and logical development of BTR so that it can continue to serve the aviation needs and support the economic development of the Baton Rouge region for the next 20 years.

An Environmental Assessment (EA) was initiated for the original project in 2017, and the Federal Aviation Administration (FAA) issued a Finding of No Significant Impact (FONSI) on June 13, 2018, which approved various safety and efficiency projects to provide a standard Runway Safety Area and Runway Protection Zone for Runway 31 at the Baton Rouge Metropolitan Airport (Airport). The FONSI followed the EA, which was completed in April of 2018, and the finding was published on June 13, 2018.

Following the issuance of the FONSI in 2018, the Louisiana Department of Transportation and Development (LADOTD) raised additional concerns related to traffic levels in the project area. LADOTD identified several refined alternatives which provide added traffic safety and a reduction of existing traffic impacts in the area. These alternatives include a series of grade separations which eliminate traffic lights in several locations.

After a comprehensive analysis of the approved action from the 2018 FONSI and the new refined alternatives from LADOTD, the preferred alternative is the relocation of Plank Road utilizing grade separations at Plank and Hooper Roads – east of the Airport. The Supplemental EA Preferred Alternative is the elevation of Plank Road at Hooper Road and elevation of Hooper Road at New Plank Road as depicted in **Exhibit 1.2: Preferred Alternative**.

In order to provide clarity on the full array of project components which were analyzed in this Supplemental Environmental Assessment (SEA) as well the original Environmental Assessment (EA) for the Runway 13/31 Runway Safety Area (RSA) and Runway Protection Zone (RPZ) Improvements, this section provides supplemental details related to the elements of the project and the analysis performed associated with those project elements.

The EA and the SEA analyzed the following project components:

Airfield Improvement Projects:

- Property Acquisition of approximately three (3) acres of land should be acquired for positive control of the land within the RPZ
- A standard 1,000-foot RSA will be graded per Federal Aviation Administration (FAA) Circular 150/5300-13
- Demolition of the existing Engineered Material Arresting System (EMAS)
- Construction of a 200 x 200-foot blast pad in place of existing EMAS
- With the relocation of Plank Road, the landing threshold can be shifted to the end of the pavement, thereby adding 315 feet of Landing Distance Available (LDA) to Runway 31 operations
- Grading, drainage, airfield electrical, and pavement markings to accommodate the landing threshold shift
- Modification of FAA Navigational Aids associated with the threshold shift including:
 - Relocation and replacement of the Runway 13 Localizer Antenna Array/Distance Measuring Equipment (DME) and equipment shelter
 - Replacement of the Runway 31 Visual Approach Slope Indicator (VASI) with a Precision Approach Path Indicators (PAPI)
 - Relocation/replacement of the Runway 31 Medium Intensity Approach Lighting System (MALS) and addition of an Equipment Shelter
- Amended arrival procedures associated with the landing threshold shift including:
 - The Precision Final Approach Fix (PFAF) on the Area Navigation (RNAV) [GPS] RWY 31 will move straight out the final approach (Southeast) 325.06 ft, keeping the altitude of 1700 ft Mean Sea Level (MSL) as the crossing altitude; angle of 3 degrees and Threshold Crossing Height (TCH) of 52 ft will not change
 - The DME Values on the Instrument Landing System (ILS) or Localizer (LOC) RWY 13 may change based upon the LOC Shelter and DME antenna moving approximately one tenth of a nautical mile. The fixes will not move, the

- course/ground tracks will not move, only the published DME values may require a new value to be published
- Circling area may be increased by 314 ft to the southeast of the current area, compensating for the threshold moving; preliminary evaluation revealed no increase in minima
 - Amended departure procedures associated with the landing threshold shift including:
 - Instrument Flight Rules (IFR) Departure procedure for Runway 13; will have fewer penetrations listed as “Low Close-in” penetrations eliminating the following:
 - Runway 13, pole 300' from the Departure End of Runway (DER), 549' left of centerline, 22' Above Ground Level (AGL)/91' MSL.
 - Vehicles on roadway 342' from DER, left and right of centerline, up to 15' AGL/84' MSL

Landside Development and Improvement Projects:

- Obstruction Removal
- Property Acquisition of 55 parcels impacted by the proposed Right of Way: two (2) parcels with single family residential homes and 53 commercial/industrial parcels.
- Realignment of perimeter road and fence
- Realignment of Plank Road including construction of approximately 0.65 miles of new roadway and requires changes to the right of way for approximately 2.5 miles of roadway
- Construction of related Plank Road tie-in with existing Hooper Road
- Introduction of two elevated bridge structures to better accommodate traffic movements

Coordination with resource agencies for Solicitation of Views (SOV) included the overall project area for any concerns related to the entirety of the project including the location of relocated Navigational Aids. A total of 77 SOV letters were sent regarding this project for BTR and depicted the overall project area. A summary of the concerns received were published in the EA and are also published in this SEA and no significant impacts or resources were identified associated with any of the project elements.

Aircraft Noise Modeling for this project included the implications of the threshold shift. This modeling included: the modification of FAA Navigational Aids associated with the threshold shift; amended arrival procedures associated with the landing threshold shift; and amended departure procedures associated with the landing threshold shift. This resulted in the model - aircraft being lower by 18 feet along the arrival path when compared to the no action condition. The noise associated with aircraft being 18 feet lower along the flight path was modeled and found to be negligible. Any other NAVAID change or flight procedure change that did not change the geometry (location) or altitude of the aircraft remained consistent in the model between the no action and the proposed action conditions. The Runway 13 departures were modeled for the proposed action to begin at the existing Runway 13 end of pavement and included the threshold shift at the 31 end of the runway. Again, noise modeling found the change to be negligible.

It was determined through the analysis of the EA and SEA that there were no significant impacts from the proposed project. This included the overall project area and all proposed elements, including navaid relocations and noise impacts included in the overall Runway 13/31 RSA and RPZ project.

1.3 Document Organization

This Supplemental Environmental Assessment (EA) is organized into the following chapters:

Chapter 1: Introduction – This chapter provides an overview of the Airport, describes the Proposed Action that is EA evaluates, and outlines the organization of the EA.

Chapter 2: Purpose and Need – This chapter identifies the problem being addressed (i.e., need) and describes what the Baton Rouge Metropolitan Airport is trying to achieve with the Proposed Action (i.e., purpose).

Chapter 3: Alternatives – This chapter provides a description of the No Action Alternative and identifies each of the alternatives that this EA considers or eliminates from detailed analysis.

Chapter 4: Affected Environment – This chapter provides an overview of the existing environmental conditions in the areas that the Proposed Action may affect. It also identifies past, present, and reasonably foreseeable future actions that may contribute to cumulative impacts when considered in combination with the Proposed Action.

Chapter 5: Environmental Consequences – This chapter describes the potential environmental effects that the Proposed Action and each reasonable alternative would have on the affected environment. Pursuant to regulations and the Council on Environmental Quality (CEQ) guidance documents, this chapter also discusses cumulative effects. That discussion focuses on the effects that the Proposed Action would have on environmental resources, in combination with the effects of those resources from past, present, and reasonably foreseeable future actions. Where appropriate, this EA contains figures and tables to clarify the analysis presented in this chapter.

Chapter 6: Agency Coordination and EA Distribution – This chapter describes the coordination process associated with the development of the EA.

Chapter 7: List of Preparers – This chapter identifies the individuals who prepared, contributed to, and reviewed this EA.

Chapter 8: References – This chapter lists the references used in the development of this EA.

Appendices – The appendices contain relevant material, analyses, or technical reports used in preparing this EA.

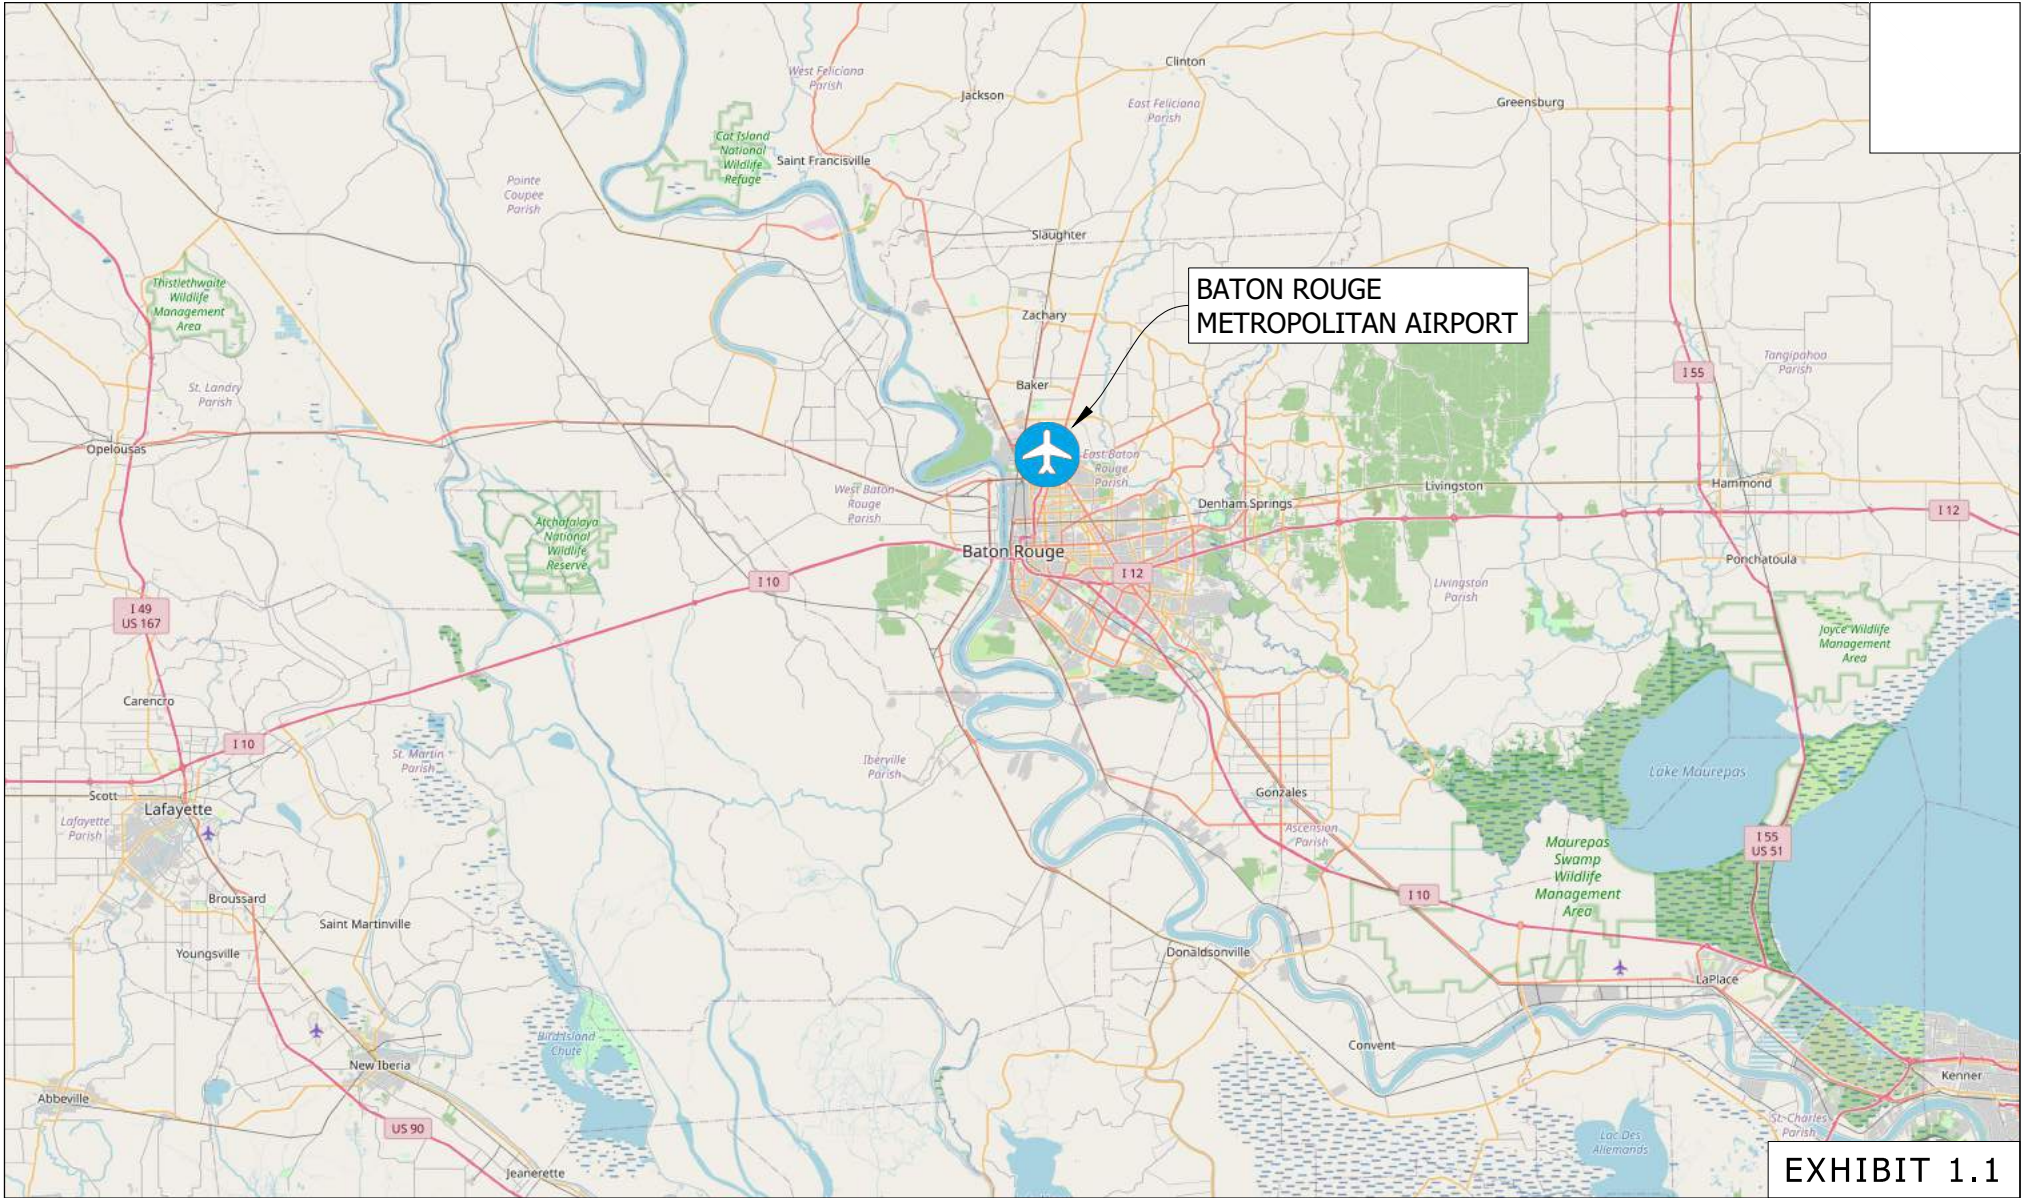

EXHIBIT 1.1

AIRPORT LOCATION

BATON ROUGE METROPOLITAN AIRPORT SUPPLEMENTAL ENVIRONMENTAL ASSESSMENT

EXHIBIT 1.2

PROPOSED ACTION

2. Purpose and Need

2.1 Introduction

The purpose of this Supplemental Environmental Assessment (EA) is to disclose the potentially significant environmental, economic and social impacts resulting from the implementation of the proposed Runway 13-31 Runway Safety Area (RSA) and Runway Protection Zone (RPZ) Improvements for Baton Rouge Metropolitan Airport (herein referred to as 'BTR' or 'Airport') by new alternatives which would also address roadway traffic flow and safety. The Purpose and Need of the proposed Runway 13-31 RSA and RPZ improvements remains the same as the 2018 EA analysis.

This Supplemental EA has been prepared in compliance with the National Environmental Policy Act (NEPA) of 1969, as amended, the U.S. Department of Transportation, Federal Aviation Administration (FAA) Airport Environmental Handbook Order 5050.4B, National Environmental Policy Act Implementing Instructions for Airport Actions, (April 28, 2006), FAA Environmental Impacts: Policies and Procedures Order 1050.1F (July 16, 2015) and FAA Airports 1050.1F Desk Reference (July 2015). The FAA serves as the lead federal agency for this NEPA evaluation.

The objectives of this section are to define the purpose and need of the proposed action, where 'need' is defined as the problem facing the Baton Rouge Metropolitan Airport and 'purpose' is defined as the solution to the problem. This section will also identify the federal actions required and outline the timeframe in which the proposed actions discussed in this Supplemental EA will take place. Concurrently, as a part of the NEPA process is being coordinated with the US Army Corps of Engineers, New Orleans District, for Section 404/Section 10 of the Clean Water Act consultation.

2.2 Purpose of the Proposed Improvements

The purpose of the proposed Runway 13-31 RSA and RPZ improvements is twofold. First, the project will increase compliance with FAA design standards. Second, the project will replace existing physical infrastructure at or near the end of its useful life. This project will improve airfield facilities and safety so that the Baton Rouge Metropolitan Airport may

continue to serve as a regionally competitive, origin-destination airport for passenger aircraft operations. The Purpose of the proposed Runway 13-31 RSA and RPZ improvements remains the same as the 2018 EA analysis, to increase compliance with FAA design standards and replace existing physical infrastructure at or near the end of its useful life.

2.3 Need for the Proposed Improvements

The proposed improvements at BTR are needed to provide additional capabilities to safely and efficiently accommodate projected future levels of activity. The Runway 13-31 RSA and RPZ improvements are needed to fully meet current FAA design standards, to provide the maximum reasonable margin of safety for the runway environment, and to preserve the Airport's eligibility to receive federal funding assistance by complying with FAA design standards and federal obligations. These obligations are described by the Federal Grant Assurances which require airport operators to maintain their facilities in a safe and efficient manner for public use. Since land was not available to improve the RSA to meet current FAA standards, an Engineered Materials Arresting System (EMAS) was constructed on Runway 13-31. The EMAS is a bed of engineered materials built at the end of the runway to reduce the risk of a runway excursion. If an aircraft overruns the runway, its tires will sink into the lightweight EMAS material, and the plane will decelerate as it moves through the material. Furthermore, the EMAS requires replacement approximately every ten to fifteen years thereafter in order to comply with FAA safety standards. The current Emergency Materials Arresting System (EMAS) is nearing the end of its useful life and will require a near term replacement should these improvements not be made. The Need of the proposed Runway 13-31 RSA and RPZ improvements remains the same as the 2018 EA analysis, to fully meet current FAA design standards, to provide the maximum reasonable margin of safety for the runway environment, and to preserve the Airport's eligibility to receive federal funding assistance by complying with FAA design standards and federal obligations.

2.4 Proposed Action

The purpose of the proposed Runway 13-31 RSA and RPZ improvements will increase compliance with FAA design standards and will replace existing physical infrastructure at or near the end of its useful life. The proposed Runway 13-31 RSA and RPZ improvements will allow the Airport to establish a full standard RSA and remove all roadways from the RPZ. This will require the relocation of Plank Road and will allow the elimination of the Engineered Materials Arresting System (EMAS). The additional alternatives to meet the purpose and need of the project and analyzed in this document also address roadway traffic and safety concerns. These alternatives include a series of grade separations which eliminate traffic lights in several locations.

This project will improve airfield facilities and safety so that the Baton Rouge Metropolitan Airport may continue to serve as a regionally competitive, origin-destination airport for passenger aircraft operations.

In order to provide clarity on the full array of project components which were analyzed in this SEA as well the original EA for the Runway 13/31 RSA and RPZ Improvements, this section provides supplemental details related to the elements of the project and the analysis performed associated with those project elements.

The EA and the SEA analyzed the following project components:

Airfield Improvement Projects:

- Property Acquisition of approximately three (3) acres of land should be acquired for positive control of the land within the RPZ
- A standard 1,000-foot RSA will be graded per Federal Aviation Administration (FAA) Circular 150/5300-13
- Demolition of the existing EMAS
- Construction of a 200 x 200-foot blast pad in place of existing EMAS
- With the relocation of Plank Road, the landing threshold can be shifted to the end of the pavement, thereby adding 315 feet of LDA to Runway 31 operations
- Grading, drainage, airfield electrical, and pavement markings to accommodate the landing threshold shift
- Modification of FAA Navigational Aids associated with the threshold shift including:
 - Relocation and replacement of the Runway 13 Localizer Antenna Array/Distance Measuring Equipment (DME) and equipment shelter
 - Replacement of the Runway 31 Visual Approach Slope Indicator (VASI) with a Precision Approach Path Indicators (PAPI)
 - Relocation/replacement of the Runway 31 Medium Intensity Approach Lighting System (MALS) and addition of an Equipment Shelter
- Amended arrival procedures associated with the landing threshold shift including:
 - PFAF on the RNAV (GPS) RWY 31 will move straight out the final approach (Southeast) 325.06 ft, keeping the altitude of 1700 ft MSL as the crossing altitude; angle of 3 degrees and TCH of 52 ft will not change
 - The DME Values on the ILS or LOC RWY 13 may change based upon the LOC Shelter and DME antenna moving approximately one tenth of a nautical mile. The fixes will not move, the course/ground tracks will not move, only the published DME values may require a new value to be published
 - Circling area may be increased by 314 ft to the southeast of the current area, compensating for the threshold moving; preliminary evaluation revealed no increase in minima
- Amended departure procedures associated with the landing threshold shift including:
 - Instrument Flight Rules (IFR) Departure procedure for Runway 13; will have fewer penetrations listed as “Low Close-in” penetrations eliminating the following:

- Runway 13, pole 300' from the DER, 549' left of centerline, 22' AGL/91' MSL.
- Vehicles on roadway 342' from DER, left and right of centerline, up to 15' AGL/84' MSL

Landside Development and Improvement Projects:

- Obstruction Removal
- Property Acquisition of 55 parcels impacted by the proposed Right of Way: two (2) parcels with single family residential homes and 53 commercial/industrial parcels.
- Realignment of perimeter road and fence
- Realignment of Plank Road including construction of approximately 0.65 miles of new roadway and requires changes to the right of way for approximately 2.5 miles of roadway
- Construction of related Plank Road tie-in with existing Hooper Road
- Introduction of two elevated bridge structures to better accommodate traffic movements

Coordination with resource agencies for SOV included the overall project area for any concerns related to the entirety of the project including the location of relocated Navigational Aids. A total of 77 SOV letters were sent regarding this project for BTR and depicted the overall project area. A summary of the concerns received were published in the EA and are also published in this SEA and no significant impacts or resources were identified associated with any of the project elements.

Aircraft Noise Modeling for this project included the implications of the threshold shift. This modeling included: the relocation of FAA Navigational Aids associated with the threshold shift; amended arrival procedures associated with the landing threshold shift; and amended departure procedures associated with the landing threshold shift. This resulted in the model - aircraft being lower by 18 feet along the arrival path when compared to the no action condition. The noise associated with aircraft being 18 feet lower along the flight path was modeled and found to be negligible. Any other NAVAID change or flight procedure change that did not change the geometry (location) or altitude of the aircraft remained consistent in the model between the no action and the proposed action conditions. The Runway 13 departures were modeled for the proposed action to begin at the existing Runway 13 end of pavement and included the threshold shift at the 31 end of the runway. Again, noise modeling found the change to be negligible.

It was determined through the analysis of the EA and SEA that there were no significant impacts from the proposed project. This included the overall project area and all proposed elements, including navaid relocations and noise impacts included in the overall Runway 13/31 RSA and RPZ project.

3. Alternatives

Section 1502.14 of the Executive Office of the President's Council on Environmental Quality (CEQ) regulations implementing the National Environmental Policy Act (NEPA) requires that the federal decision-maker perform the following tasks:

- Evaluate reasonable alternatives to the proposed action, and, for alternatives that the agency eliminated from detailed study, briefly discuss the reasons for their elimination;
- Discuss each alternative considered in detail, including the proposed action, so that reviewers may evaluate their comparative merits;
- Include the no action alternative;
- Include appropriate mitigation measures not already included in the proposed action or alternatives; and
- Limit their consideration to a reasonable number of alternatives.

Following the CEQ regulations, this chapter of the Supplemental EA summarizes the screening analysis conducted to identify a range of alternatives for this evaluation. The summary of the alternatives screening analysis presents the following:

- An overview of the structure of the alternatives screening analysis;
- A list of alternatives considered, including the Proposed Action, and the No Action Alternative;
- A concise explanation of why some of the initial alternatives considered have been eliminated from further analysis; and
- A list of laws, regulations, executive orders (EOs) and associated permits, licenses, and/or review applicable to the alternatives under the screening analysis.

As discussed in **Chapter 2, Purpose and Need**, the purpose for the proposed improvements at Baton Rouge Metropolitan Airport is twofold. First, the project will increase compliance with FAA design standards. Second, the project will replace existing physical infrastructure at or near the end of its useful life. This project will improve airfield facilities and safety so that the Baton Rouge Metropolitan Airport may continue to serve as a regionally competitive, origin-destination airport for passenger aircraft operations. Based on concerns raised by LADOTD related to roadway traffic and safety in the project area, three additional alternatives have been identified to address roadway traffic and safety concerns. These alternatives include a series of grade separations which eliminate traffic lights in several locations.

All alternatives analyzed for this project included navigational aid relocation as well as projects associated with correcting deficiencies in the Runway 13/31 RSA and RPZ and changes on the airfield. Each of the alternatives analyzed included the following project components:

Airfield Improvement Projects:

- Property Acquisition of approximately three (3) acres of land should be acquired for positive control of the land within the RPZ
- A standard 1,000-foot RSA will be graded per Federal Aviation Administration (FAA) Circular 150/5300-13
- Demolition of the existing EMAS
- Construction of a 200 x 200-foot blast pad in place of existing EMAS
- With the relocation of Plank Road, the landing threshold can be shifted to the end of the pavement, thereby adding 315 feet of LDA to Runway 31 operations
- Grading, drainage, airfield electrical, and pavement markings to accommodate the landing threshold shift
- Modification of FAA Navigational Aids associated with the threshold shift including:
 - Relocation and replacement of the Runway 13 Localizer Antenna Array/Distance Measuring Equipment (DME) and equipment shelter
 - Replacement of the Runway 31 Visual Approach Slope Indicator (VASI) with a Precision Approach Path Indicators (PAPI)
 - Relocation/replacement of the Runway 31 Medium Intensity Approach Lighting System (MALS) and addition of an Equipment Shelter
- Amended arrival procedures associated with the landing threshold shift including:
 - PFAF on the RNAV (GPS) RWY 31 will move straight out the final approach (Southeast) 325.06 ft, keeping the altitude of 1700 ft MSL as the crossing altitude; angle of 3 degrees and TCH of 52 ft will not change
 - The DME Values on the ILS or LOC RWY 13 may change based upon the LOC Shelter and DME antenna moving approximately one tenth of a nautical mile. The fixes will not move, the course/ground tracks will not move, only the published DME values may require a new value to be published
 - Circling area may be increased by 314 ft to the southeast of the current area, compensating for the threshold moving; preliminary evaluation revealed no increase in minima
- Amended departure procedures associated with the landing threshold shift including:
 - Instrument Flight Rules (IFR) Departure procedure for Runway 13; will have fewer penetrations listed as “Low Close-in” penetrations eliminating the following:
 - Runway 13, pole 300' from the DER, 549' left of centerline, 22' AGL/91' MSL.
 - Vehicles on roadway 342' from DER, left and right of centerline, up to 15' AGL/84' MSL

Landside Development and Improvement Projects:

- Obstruction Removal
- Property Acquisition of 55 parcels impacted by the proposed Right of Way: two (2) parcels with single family residential homes and 53 commercial/industrial parcels.
- Realignment of perimeter road and fence
- Realignment of Plank Road including construction of approximately 0.65 miles of new roadway and requires changes to the right of way for approximately 2.5 miles of roadway
- Construction of related Plank Road tie-in with existing Hooper Road
- Introduction of two elevated bridge structures to better accommodate traffic movements

Coordination with resource agencies for SOV included the overall project area for any concerns related to the entirety of the project including the location of relocated Navigational Aids. A total of 77 SOV letters were sent regarding this project for BTR and depicted the overall project area. A summary of the concerns received were published in the EA and are also published in this SEA and no significant impacts or resources were identified associated with any of the project elements.

Aircraft Noise Modeling for this project included the implications of the threshold shift. This modeling included: the modification of FAA Navigational Aids associated with the threshold shift; amended arrival procedures associated with the landing threshold shift; and amended departure procedures associated with the landing threshold shift. This resulted in the model - aircraft being lower by 18 feet along the arrival path when compared to the no action condition. The noise associated with aircraft being 18 feet lower along the flight path was modeled and found to be negligible. Any other NAVAID change or flight procedure change that did not change the geometry (location) or altitude of the aircraft remained consistent in the model between the no action and the proposed action conditions. The Runway 13 departures were modeled for the proposed action to begin at the existing Runway 13 end of pavement and included the threshold shift at the 31 end of the runway. Again, noise modeling found the change to be negligible.

It was determined through the analysis of the EA and SEA that there were no significant impacts from the proposed project. This included the overall project area and all proposed elements, including navaid relocations and noise impacts included in the overall Runway 13/31 RSA and RPZ project.

3.1 Alternatives Development

3.1.1 Alternatives for the Relocation of Plank Road

Alternatives included an alignment for Plank Road outside of the Runway Protection Zone and improvements to Hooper Road from the existing Plank Road/Hooper Road intersection to the new relocated Plank Road/Hooper Road intersection. Alignment studies for Plank Road resulted in a selected alignment that minimized the length of relocation and right of way

impacts within the constraints of the required geometric design criteria. The proposed alignment of Plank Road is common to all of the build alternatives. It is proposed as a 4-lane divided roadway located outside of the RPZ and just east of the East Baton Rouge Parish Sanitary Sewer Storage Facility. The alignment proceeds in a northwest direction passing behind the Saintsville Church of God in Christ and then tying into existing Plank Road adjacent to the All Star North Chevrolet Dealership driveway. All alternatives are consistent with the 2018 EA for realignment of Plank Road outside the RSA and RPZ. The new alternatives contemplate grade separation rather than conventional at-grade intersections which were approved in the 2018 FONSI.

A summary of the alternatives for Plank Road relocation is presented in the following pages. These alternatives are shown as Figures 3.1 through 3.3.

Alternative 1 (Plank Road Elevated at Hooper Road and New Plank Intersections)

Alternative 1 maintains the alignment of Plank Road outside of the RSA and RPZ but replaces two conventional at-grade intersections with grade separations which provide added safety and reduce traffic impacts in the project area. Alternative 1 elevates Plank Road at both the Hooper Road and New Plank intersections. A traffic analysis was performed for existing intersections in the study area for the existing condition. This analysis showed that the signalized intersections of Plank Road at Harding Blvd./Hooper Rd. and Hooper Rd. at Mickens Rd. both have multiple failing movements on multiple approaches in the PM peak hour due to capacity constraints. This alternative would improve these failing traffic movements for the study area.

Alternative 2 (Hooper Road Elevated at Plank & New Plank Intersections)

Alternative 2 maintains the alignment of Plank Road outside of the RSA and RPZ but replaces two traditional intersections with grade separations which provide added safety and reduce traffic impacts in the project area. Alternative 2 elevates Hooper Road at both the Plank Road and New Plank intersections. A traffic analysis was performed for existing intersections in the study area for the existing condition. This analysis showed that the signalized intersections of Plank Road at Harding Blvd./Hooper Rd. and Hooper Rd. at Mickens Rd. both have multiple failing movements on multiple approaches in the PM peak hour due to capacity constraints. This alternative would improve these failing traffic movements for the study area.

Alternative 3 (Hooper Road Elevated at New Plank Intersection and Plank Road Elevated at Hooper Road)

Alternative 3 (Hooper Road Elevated at New Plank and Plank Road Elevated at Hooper Road) maintains the alignment of Plank Road outside of the RSA and RPZ but replaces two traditional intersections with grade separations which provide added safety and reduce traffic impacts in the project area. Alternative 3 elevates Hooper Road at the New Plank

intersection, and Plank Road is elevated at Hooper Road. A traffic analysis was performed for existing intersections in the study area for the existing condition. This analysis showed that the signalized intersections of Plank Road at Harding Blvd./Hooper Rd. and Hooper Rd. at Mickens Rd. both have multiple failing movements on multiple approaches in the PM peak hour due to capacity constraints. This alternative would improve these failing traffic movements for the study area.

3.2 Alternatives Screening

A total of three alternatives for the relocation of Plank Road (LA 67) were identified. All the proposed alternatives satisfy the purpose and need of the project while also improving roadway traffic flow and safety in the project study area.

The screening analysis was designed to determine the alternatives that would be considered reasonable in terms of traffic operation and safety, traffic flow and accessibility, access to existing businesses, and additional impacts for each environmental category beyond the previously approved at grade signalized intersections which met the purpose and need of the project.

A summary of the results of the screening process is shown in **Table 3.1**.

Table 3.1: Level 2 Screening Results

	ALT 1	ALT 2	ALT 3
Access	Pass	Pass	Pass
Traffic Flow and Accessibility	Pass	Pass	Pass (provides greatest accessibility)
Air Quality	NA	NA	NA
Biological Resources	NA	NA	NA
Climate	NA	NA	NA

3.3 Alternatives Being Analyzed in this EA

3.3.1 No Action Alternative

As required by the National Environmental Policy Act (NEPA) a no-action alternative must be considered. This alternative would be to continue with the previously approved at grade signalized intersections for the relocation of Plank Road identified in the 2018 FONSI. The no-action alternative does not allow the airport to increase compliance with FAA design standards. A traffic analysis was performed for existing intersections in the study area for the existing condition. This analysis showed that the signalized intersections of Plank Road at Hooper Rd. and Hooper Rd. at Mickens Rd. both have multiple failing movements on multiple approaches in the PM peak hour due to capacity constraints. This alternative would not improve any of these failing traffic movements for the study area.

3.3.2 Sponsor's Preferred Alternative

Alternative 3 (Plank Road Elevated at Hooper Road and Hooper Road Elevated at New Plank) is the alternative that meets the screening criteria and provides improved traffic flow and safety at a greater level than the no-action alternative (previously approved at grade signalized intersections for the relocation of Plank Road) while also minimizing light impacts to residential units and providing for greatest access to existing businesses in the study area.

3.3.3 Alternatives Considered but Eliminated

As discussed above, three alternatives were considered for the relocation of Plank Road to meet the requirements for the Runway 13-31 RSA and RPZ improvements while also improving roadway traffic flow and safety in the project study area. All three build alternatives were carried forward for more detailed analysis. This section provides an overview of the selected alternatives.

Alternative 1 (Plank Road Elevated at Hooper Road and New Plank Intersections)

Alternative 1 meets the screening requirements, and provides improved operations and safety over the no-action. However, this alternative was found to have visual effect impacts (lighting impacts) for several residences in the area of New Plank Road. Therefore, it is not recommended as the preferred alternative.

Alternative 2 (Hooper Road Elevated at Plank & New Plank Intersections)

Alternative 2 meets the screening requirements and provides improved operations and safety over the no-action alternative. However, this alternative was found to have far greater access impacts to existing businesses in the Hooper Road intersection with the existing Plank Road. Therefore, it is not recommended as the preferred alternative.

4. Affected Environment

This chapter describes the existing environmental conditions that the Proposed Action may affect, as required by Federal Aviation Administration (FAA) Orders 1050.1F and 5050.4B. This information establishes a baseline for use in determining the potential effects of the Proposed Action and No Action Alternative.

For the Supplemental EA, this chapter focuses on the refined alternatives' study area existing conditions. **Exhibit 4.1** depicts the study area of the refined alternatives considered in this Supplemental EA and the 2018 EA study area. For efficiency purposes, resource category descriptions that remain the same as the 2018 EA are stated as such. This chapter describes the existing conditions for the following environmental resources:

- Air Quality (Section 4.1)
- Biological Resources (Section 4.2)
- Climate (Section 4.3)
- Coastal Resources (Section 4.4)
- Department of Transportation Act, Section 4(f) (Section 4.5)
- Farmlands (Section 4.6)
- Hazardous Materials, Solid Waste, and Pollution Prevention (Section 4.7)
- Historical, Architectural, Archeological and Cultural Resources (Section 4.8)
- Land Use (Section 4.9)
- Natural Resources and Energy Supply (Section 4.10)
- Noise and Compatible Land Use (Section 4.11)

- Socioeconomics, Environmental Justice, and Children’s Environmental Health and Safety Risks (Section 4.12)
- Visual Effects (Section 4.13)
- Water Resources (Section 4.14)
- Past, Present, and Reasonably Foreseeable Future Projects (Section 4.15)

4.1 Air Quality

This chapter discusses specific aspects of the environment in the vicinity of the proposed actions and how those aspects may be impacted by the build alternatives or by the no-action alternative. Please refer to Appendix A for further details regarding air quality.

On December 15, 2016, the U.S. Environmental Protection Agency re-designated the Greater Baton Rouge Nonattainment Area (BRNA) to attainment for the 2008 8-hour ozone standard. EPA approved the state’s 10-year plan for maintaining attainment of the 2008 8-hour ozone standard in the area and determined that the BRNA continues to attain the 2008 8-hour ozone National Ambient Air Quality Standard and has met the criteria for re-designation to attainment¹.

With this designation, federal activities proposed in East Baton Rouge Parish are generally considered not to be subject to the State’s general conformity regulations as promulgated under Louisiana Administrative Code² Determining Conformity of General Federal Actions to State or Federal Implementation Plans. However, in the past, the Louisiana Department of Environmental Quality (LDEQ) requested a general conformity applicability determination for the proposed improvements. Changes in air emissions at the airport could generally result from three sources: increased emissions from aircraft, emissions from vehicular traffic due to changes in the road configuration, and emissions from construction equipment during project construction. There are no air emissions changes due to the construction of any of the alternatives.

BATON ROUGE METROPOLITAN AIRPORT SUPPLEMENTAL ENVIRONMENTAL ASSESSMENT

EXHIBIT 4.1

STUDY AREA

4.1.1 Standards and Pollutants

Air emissions from vehicular traffic will not increase as a result of the proposed intersection improvement projects. Passenger vehicular traffic into and out of the airport is not forecast to increase. The improvements at the intersections will result in improved traffic flow.

Estimates were prepared for the total nitrogen oxides (NO_x), volatile organic carbon (VOC), and carbon monoxide (CO) emissions anticipated to be released into the atmosphere during construction of either of the elevated alternates.

This estimate is based on air emissions resulting from the operation of heavy equipment during construction activities. Preliminary construction planning estimates were utilized to estimate construction equipment usage. Emission factors for the diesel powered equipment were taken from EPA Report No. NR-009d, "Exhaust and Crankcase Emission Factors for Nonroad Engine Modeling- Compression-Ignition" and EPA Report "Exhaust and Crankcase Emission Factors for Nonroad Engine Modeling-Spark Ignition NR-010f," July 2010. To obtain conversion of calculated hydrocarbon emissions to Volatile Organic Compound (VOC) emissions the EPA report, "Conversion Factors for Hydrocarbon Emission Components, NR-0002d, July 2010" was used. Gasoline emission factors were contained in AP-42: Compilation of Air Pollutant Emission Factors, as described in **Appendix A: Air Emissions Assessment**. Previously, emissions resulting from the installation of hot mix asphalt were examined and found to be insignificant (<0.01 tons). Emissions from storage of diesel fuel and motor gasoline are insignificant.

4.1.2 Environmental Impacts

4.1.2.1 Direct Emissions: Construction of Either Elevated Alternate

Estimates were prepared of the total nitrogen oxides (NO_x), volatile organic carbon (VOC), and carbon monoxide (CO) emissions anticipated to be released to the atmosphere during construction of the subject project. It was estimated that approximately 10.52 tons of NO_x emissions, 0.63 tons of VOC emissions, and 0.38 tons of CO emissions will be released into the atmosphere during project construction (2019-2021). This equates to 5.26 tons per year (tpy) of NO_x emissions, 0.32 tpy of VOC emissions, and 0.19 tpy of CO emissions will be released into the atmosphere during project construction (2022-2024). The Baton Rouge area is currently in attainment for all air quality parameters, following over 20 years of non-attainment with the ozone standard. The level of significance in the project area for conformity determinations is 100 tons/year for each of the criteria pollutants except for VOCs, for which a level of 25 tons applies. All pollutants are significantly below these thresholds. The calculations are presented in **Appendix A: Air Emissions Assessment**.

4.1.2.2 Indirect Emissions

Indirect emissions are defined as those that occur as a result of moving equipment on the portion of the project area during construction. These are included in the above totals.

4.1.3 Summary of Findings

Direct and indirect emissions were calculated for activities conducted for all alternatives. Emissions were determined to be under the threshold of significance for the pollutants evaluated.

4.2 Biological Resources (including Fish, Wildlife, and Plants)

4.2.1 Biotic Communities

The long-term loss of wildlife habitat is addressed by the Fish and Wildlife Coordination Act (16 U.S.C. 661). Coordination with appropriate agencies is required if a proposed action has the potential to affect or eliminate potential wildlife habitat.

Previously Federal, State, and local agencies were contacted (see **Appendix C: Draft Biological Assessment**) to determine if biotic communities in the Airport environs would be adversely affected by the implementation of the proposed action. Correspondence was received from the United States Fish and Wildlife Service, the State of Louisiana Department of Wildlife and Fisheries, and the Louisiana Department of Agriculture and Forestry. All of these agencies indicated that the proposed action would not significantly impact important fish or wildlife habitats.

Because the proposed action is not expected to cause any adverse effects upon biotic communities, no mitigation measures would be required. Please refer to Appendix C for further details regarding biological resources.

4.2.2 Threatened and Endangered Species of Flora and Fauna

The term “endangered species” refers to any member of the animal kingdom (mammal, fish, or bird) or plant kingdom (seeds, roots, etc.) that is in danger of extinction throughout all or a portion of its range. The term “threatened species” refers to those members of the animal or plant kingdom that are likely to become endangered within the foreseeable future.

Endangered and threatened species are identified and protected by the Endangered Species Act of 1973, as amended in 78, 32, 88 and 2004. Section 7 of the Endangered Species Act requires that all Federal agencies consult with the U.S. Fish and Wildlife Service regarding any Federal action that may affect a federally listed species. This requirement applies to all Federal land management decisions and actions. Such consultations often require preparation of a biological evaluation or assessment by the Federal action agency (ESA, 1973).

The November 6, 2020, list of endangered, threatened and candidate species maintained by the Louisiana Wildlife and Fisheries agency was reviewed. No new species have been added since the previously completed EA and no additional natural habitats with important fish and wildlife resources are included in the preferred alternative; therefore, no impacts are anticipated.

The Biological Assessment is attached as **Appendix C: Draft Biological Assessment** which is from the 2018 EA and is still valid. The Biological Assessment determined there would be no impacts to Threatened or Endangered Species due to the originally proposed project. Even with the proposed changes to the roadway alignments, this determination remains valid.

4.3 Climate

The description of climate change and greenhouse gas emissions remains the same as the 2018 EA analysis. Currently, there are no air quality permit standards for the evaluation of greenhouse gas emissions (GHG) that are emitted from construction activities. For the no-action alternative, there will be no projected increase or decrease in greenhouse emissions, which are considered in metric tons equivalent of CO². There will be short term emissions associated with any of the build alternatives. The tons per year of CO² were calculated in the Air Quality Analysis and were determined to be 473 tons/year.

There are no significance thresholds for aviation GHG emissions, nor has the FAA identified specific factors to consider in making a significance determination for GHG emissions. There are currently no accepted methods of determining significance applicable to aviation projects given the small percentage of emissions they contribute. CEQ has noted that, “it is not currently useful for the NEPA analysis to attempt to link specific climatological changes, or the environmental impacts thereof, to the particular project or emissions, as such direct linkage is difficult to isolate and to understand.”³ Accordingly, it is not useful to attempt to determine the significance of such impacts.

Because there are currently no standards for determining levels of significance of these emissions, there is no anticipated significant impact to climate from the build alternatives.

³ CEQ (2010), Draft Guidance, *Consideration of the Effects of Climate Change and Greenhouse Gas Emissions*, 75 Federal Register 8046 (February 23, 2010). Available at: <http://www.whitehouse.gov/sites/default/files/microsites/ceq/20100218-nepa-consideration-effects-ghg-draft-guidance.pdf>

4.4 Coastal Resources

The description of coastal resources remains the same as the 2018 EA analysis. The location of the project is unchanged. The proposed project is not located in the Coastal Zone boundary and no features of the project are considered coastal barrier resources. Therefore, no impacts to the coastal zone or coastal barrier resources will occur.

4.5 Department of Transportation Act, Section 4(f)

The description of resources regarding Section 4(f) of the Department of Transportation Act remains the same as the 2018 EA analysis. According to correspondence received in the 2018 EA, there are no Section 4(f) properties impacted by the proposed project. Therefore, no significant impacts to Section 4(f) lands are expected with the proposed action and no mitigation measures would be required.

4.6 Farmlands

The United States Department of Agriculture defines 'prime farmland' as follows:

"Land that has the best combination of physical and chemical characteristics for producing food, feed, forage, fiber, and oilseed crops and is also available for these uses. It has the soil quality, growing season, and moisture supply needed to produce economically sustained high yields of crops when treated and managed according to acceptable farming methods, including water management. In general, prime farmlands have an adequate and dependable water supply from precipitation or irrigation, a favorable temperature and growing season, acceptable acidity or alkalinity, acceptable salt and sodium content, and few or no rocks. They are permeable to water and air. Prime farmlands are not excessively erodible or saturated with water for a long period of time, and they either do not flood frequently or are protected from flooding." (USDA Handbook No. 18, 1993).

A letter requesting the prime farmland was sent to USDA on May 15, 2017 and again on September 14, 2017. Additionally, the Natural Resources Conservation Service (NRCS) website was reviewed concerning the presence of prime farmlands. This has not changed from the 2018 EA. The amount of prime farmland indicated based on the preferred alternative is approximately 1 acre. It does not appear that the area designated as prime farmland has been used within the recent past for agricultural production because it remains heavily wooded. Additionally, it traverses an area that will likely be considered as jurisdictional wetlands.

BATON ROUGE METROPOLITAN AIRPORT SUPPLEMENTAL ENVIRONMENTAL ASSESSMENT

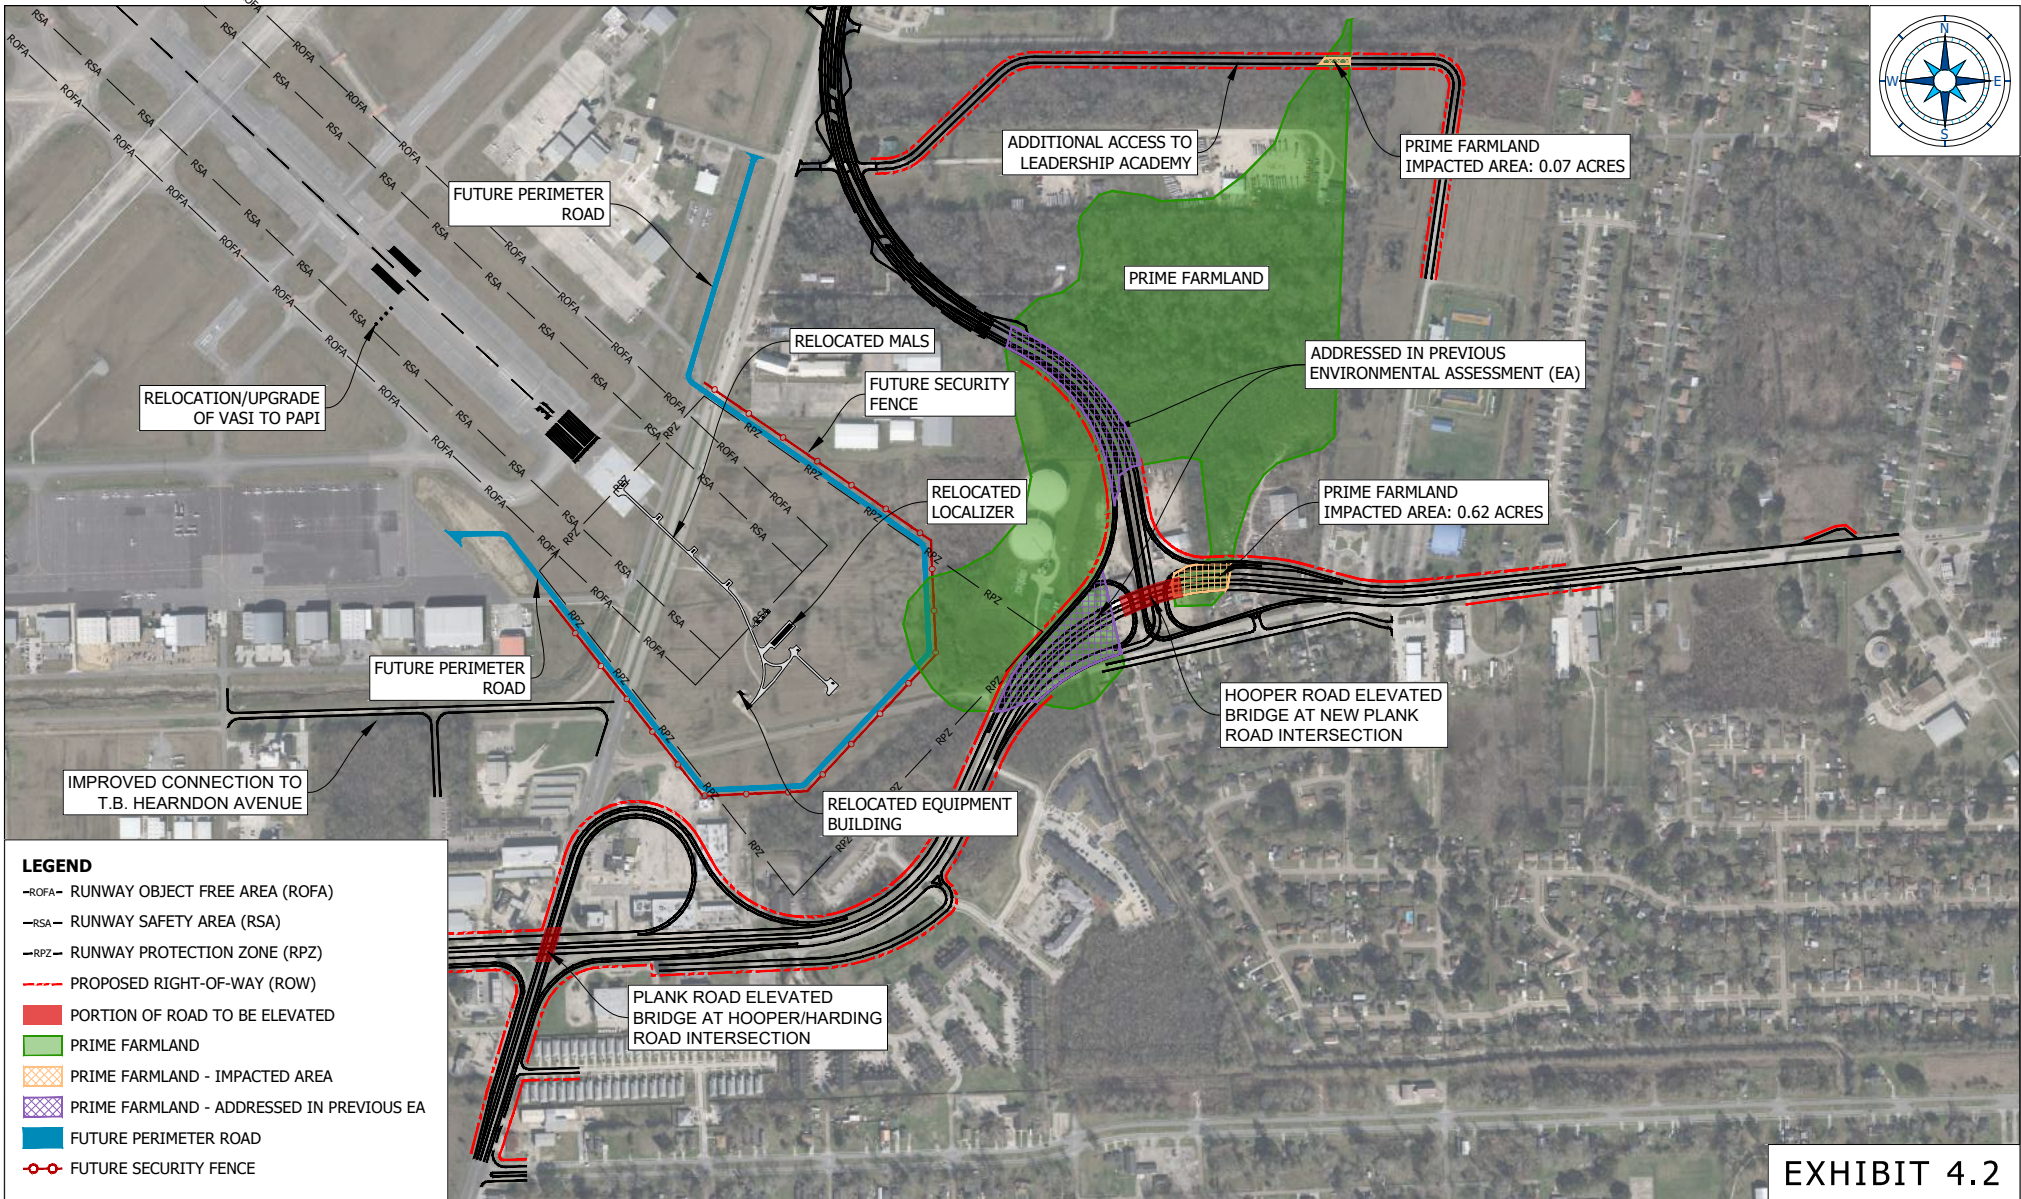

EXHIBIT 4.2

FARMLANDS

4.7 Hazardous Materials, Solid Waste, and Pollution Prevention

4.7.1 SOLID WASTE

The Resource Conservation and Recovery Act (RCRA) of 1976, as amended (42 U.S. C. § 6901) set forth the standards for management of solid waste in the United States. Solid waste is expected to be generated as a result of the following activities: clearing and grubbing, demolition of existing paving along Plank Road, removal of the EMAS system, construction of the new roadway and addition of travel lanes. Most of these wastes are anticipated to be managed in Construction and Demolition (C&D) landfills. Construction debris will consist of non-reusable lumber, containers, etc. Materials that are taken to the C&D landfills are recycled where possible into re-usable mulch and fill materials. All materials will be managed in accordance with local requirements. The project is not expected to generate an appreciably different quantity or type of solid waste or use a different method of collection than is typical for the construction industry. Generation of solid waste will also occur during the demolition of structures. Approximately 3,500 yd³ of concrete parking lot and paving will be removed from the existing shopping center. Existing State regulations require that construction debris be managed in both C&D landfills or in solid waste landfills. For wastes that contain asbestos or lead paint, specific procedures may be required depending on the level of such materials present. At the intersection of Plank Road and Hooper Road, concrete debris will be generated as a result of removing existing shopping center parking lot and driveway pavement. It is anticipated this will be recycled.

During field investigations, solid wastes were observed at 5407 Hooper Road, including miscellaneous vehicles, metal and wood components, and machinery. At the eastern edge of the trace proposed for access from Plank Road to the Leadership Institute, mounds of building foundations and other construction debris were encountered. These materials will need to be properly characterized and disposed of.

At the location of the improved connection to T.B. Herndon Avenue, an abandoned roadbed was noted. This material may be potentially re-used in the proposed improvements.

4.7.2 Hazardous Materials and Hazardous Wastes

Numerous materials meeting the definition of “hazardous” are typically used during the demolition and construction phases of the proposed project, the most common of which is fuel. These materials must be managed in accordance with the U.S. Department of Labor, Occupational Safety and Health Administration (OSHA) Hazard Communication Standard (HCS) (29 CFR 1910.1200, 2012). This standard requires that the chemical manufacturer, distributor, or importer provide Safety Data Sheets (SDSs) (formerly MSDSs or Material Safety Data Sheets) for each hazardous chemical to downstream users to communicate information on these hazards. The employer is required to inform employees of the hazards associated with each compound and provide appropriate training and personal protective equipment. Additionally, for ‘oils’ (including fuel) in quantities on-site greater than 1320

gallons, the construction site operator must have a prepared Spill Prevention Control and Countermeasure Plan (SPCC) as described in Section 311 of the Clean Water Act (CWA) and found at 40 CFR 112. Additionally, DEQ requires that the 1320-gallon threshold includes all additional hazardous substances (such as paints or sealers) that are not specifically defined as oils be included in the SPCC plan. The operator must keep containers in good condition, assure that they are labeled, and provide necessary equipment for responding to leaks or spills.

Few hazardous wastes, which are defined as a subset of solid wastes under RCRA, are generated during construction activities. Exceptions are fuel spills which may result in generation of saturated soils that would be considered as hazardous if the flash point is less than 140°F. Each generator is responsible for characterizing and managing any hazardous waste which must be disposed properly in a permitted landfill. Waste must be placed in containers such as roll off boxes or bins, and managed to prevent precipitation infiltration. Only permitted transporters may transport the material to the designated landfill.

Because the build options will require the acquisition of property used for industrial purposes in the past and demolition of structures and soil excavation will be needed, it will be necessary to properly characterize the generated wastes. The locations of the properties that have past industrial uses are described in detail in the Phase I Environmental Site Assessment (ESA) prepared for this project (**Appendix B**). Two sites located on the north side of Hooper Road at the location of the proposed Plank Road/McClelland Drive intersection were investigated during a Phase II investigation. Constituents of Concern were below Louisiana Department of Environmental risk assessment screening standards.

This Supplemental EA investigated impacts associated with the build alternatives that include elevated sections at Plank/Hooper Road and relocated Plank Road/McClelland Drive. Because the elevated sections will require some piling placement, estimated to be at least 80' below ground surface, additional reviews of existing remediation information were performed. In addition to sites identified in the Phase I ESA, there are four locations within the study area of the Plank Road/Hooper Road grade separation that are reported to have soil and/or groundwater contaminants present. The sites are the former Chevron station at 4716 (Old) Hooper Road, Plank Food Mart at 8085 Plank Road, the Circle K at 7997 Plank Road, and Circle K at 8133 Plank Road. The Louisiana Department of Environmental Quality has issued "No Further Action at this Time" letters for all sites; however, no soils may be removed from the sites without approval by the LDEQ. The first two sites also have deed restrictions filed with the parish Clerk of Court notifying potential purchasers of site conditions (**Appendix B**). A Phase II investigatory plan for this area, along with relocated Plank Road/McClelland Drive locations that will also include piling placement, should be implemented during the design phase. The plan will be developed and submitted to LDEQ prior to implementation for concurrence. If contaminated soil and/or groundwater is encountered during the investigation, an appropriate remedial plan will be developed and implemented in order to prevent downward migration of contaminants.

Any wastes meeting the definitions of hazardous as described in 40 CFR Part 261 must be managed in a permitted hazardous waste landfill.

4.7.3 Pollution prevention

Solid wastes will be generated during the demolition and construction phases. Proper testing of the wastes will be needed to determine the appropriate disposal methodology. Currently there is adequate capacity within the project vicinity to manage C&D waste, solid waste, or hazardous waste. Removal of these wastes from the uncontrolled environment to a permitted facility will provide a positive environmental impact.

Waste materials will be generated during the demolition and construction process, and hazardous materials will be used as well. Generated wastes must be characterized by the generator and managed in accordance with State and Federal regulations. Existing disposal capacity is adequate for the generated wastes. Pollution prevention programs will be implemented for any of the build alternatives to minimize production of solid, hazardous, and surface water pollution.

In addition to the recycling of removed roadway portions, parking lot pavement, and use of cleared wood materials into mulch, additional pollution prevention measures will be implemented for the build alternatives. These measures include:

- Preparation of and adherence to a site-specific Storm Water Pollution Prevention Plan (SWP³) as required under LPDES regulations;
- Preparation of a site-specific Spill Prevention, Control and Countermeasure Plan (SPCC) for more than 1,320 gallons of fuel and/or hazardous substances on-site.

These plans require that the contractor identify specific procedures and equipment for:

- Management of runoff during construction;
- Maintenance of runoff protection systems, such as berms and silt fences;
- Periodic inspection of runoff controls;
- Institute vegetative cover and maintain after construction;
- Provide secondary containment for fuels and hazardous substances;
- Provide methods of removal for spills and leaks.

The implementation of site-specific Stormwater Pollution Prevention Plans and Spill Prevention Control and Countermeasure Plans during construction will assist in reducing pollution resulting from construction.

4.8 Historical, Architectural, Archaeological and Cultural Resources

The description of resources regarding historical, architectural, archeological, and cultural resources remains the same as the 2018 EA analysis. During the 2018 EA process, Federal, State, local agencies and Federally-recognized tribes were notified to determine whether the implementation of the proposed action would adversely affect known archaeological sites or historical properties. Additionally, coordination was conducted with potentially impacted Federally recognized Indian Tribes.

Correspondence received from the Louisiana Department of Culture, Recreation, and Tourism indicated that no known archaeological sites or historic properties would be affected by the proposed action and there are no historical or cultural resources adjacent to the proposed project. No potential impacts to cultural resources were identified or received from Indian Tribes. The proposed project is not anticipated to impact historical, architectural, archeological, or cultural resources, no mitigation measures are required. However, should construction associated with the proposed action unearth any archaeological resources, the provisions of emergency discovery would apply, and the appropriate agencies would be contacted.

4.9 Land Use

East Baton Rouge Parish is located in the southeastern part of Louisiana along the east bank of the Mississippi River and has a total land area of 292,314 acres. The primary city, Baton Rouge, is the capital city of Louisiana. As of 2020, the parish was estimated to have a population of 456,781. The parish enjoys a diversified economy including numerous governmental offices and agencies, Louisiana State University and Southern University, numerous petrochemical manufacturing facilities, and a strong health care industry.

Baton Rouge is the farthest inland port on the Mississippi River that can accommodate ocean going tankers and cargo carriers. It is also the tenth largest port in the U.S. Ships transfer their cargo (grain, crude, cars, containers) at the Port of Baton Rouge onto rails and pipelines (to travel east-west) or barges (to travel north).

East Baton Rouge Parish has a semi-tropical climate and, in the past, was a significant producer of agricultural commodities. Since the 1960's, significant industrial and residential expansion has occurred and the parish is no longer primarily rural. Geologically, the parish is considered to be a part of the Prairie Complex that lies across southeastern Louisiana, with elevations typically 50 to 150 feet above mean sea level. The soils found here are considered to be made up of late Pleistocene deposits. The area surrounding the Baton Rouge Metropolitan Airport is made up of a mix of commercial light industrial and residential communities. The proposed project is located within an area known as Brownfields, which

is unincorporated. The area in which the project is located is shown in **Exhibit 4.2: Land Use**. Brownfields has a mix of mostly residential buildings with some light industrial and commercial enterprises. New commercial construction has taken place mostly west of the intersection of Hooper Road and Plank Road, including restaurants, service stations, etc. A major soft-drink manufacturing facility and car dealership have been constructed within the last 15 years on Plank Road, north of Robique Road.

It is anticipated that land use in the project area will change from mostly undeveloped along relocated Plank Road to a mix of uses.

4.10 Natural Resources and Energy Supply

The description of natural resources and energy supply remains the same as the 2018 EA analysis. The amount of energy required to construct the proposed improvements will be in the form of fuel for construction and demolition activities. This is a small-scale project in the metropolitan statistical area and is not expected to result in any measurable diminution of energy supplies. Impacts to natural resources (i.e. forested wetlands) will be offset by mitigation, when required.

4.11 Noise and Compatible Land Use

4.11.1 ROADWAY NOISE

The traffic noise for residents along Plank Road and Hooper Road within the proposed project boundary was analyzed using the Federal Highway Administration (FHWA) approved Traffic Noise Model, version 2.5 (TNM). In accordance with the DOTD Noise Policy, noise impacts were analyzed for the existing highway configuration and for the proposed build alternatives. Impacts were examined for the existing traffic levels (2017), and the design year (2037) traffic levels.

For Alternative 1, 16 properties, including six residences and two other sensitive uses, will have noise levels above the DOTD Standard of 66 decibels (dBA). (See Noise Analysis, **Appendix D: Traffic Noise Assessment**). Other commercial receivers will have noise levels above 71 decibels (dBA), which is the DOTD standard. Of the 16 receivers, 5 will have increases greater than 10 dBA.

For Alternative 2, 16 properties had significant noise increases. Three residences and two other sensitive uses will have noise levels above 66dBA. Eight of the remaining properties experienced a greater than 10 dBA increase.

The preferred Alternative, Alternative 3, a “hybrid” of Alternatives 1 and 2 includes an elevated north-south section at existing Plank/Hooper Roads, and an elevated east-west section of Hooper Road at the new Plank/Hooper Road intersection. For this configuration, a total of 17 properties were impacted, including five residences and two other sensitive uses. Five properties experienced increases of greater than 10 dBA.

Additional evaluation of alternatives may be prepared at the 60% design level to determine if a barrier is feasible and reasonable.

It is anticipated that post-construction, a total of 8, 6, and 7 properties for Alternatives 1, 2 and 3, respectively, will have noise impacts. These are summarized in the Tables included in **Appendix D**.

4.11.2 Aircraft Noise

This section presents the assessment of the affected environment for aircraft noise at BTR. The refined alternatives do not change aircraft noise in any way. Therefore, there is no change in aircraft noise as is depicted in the 2018 EA.

BATON ROUGE METROPOLITAN AIRPORT SUPPLEMENTAL ENVIRONMENTAL ASSESSMENT

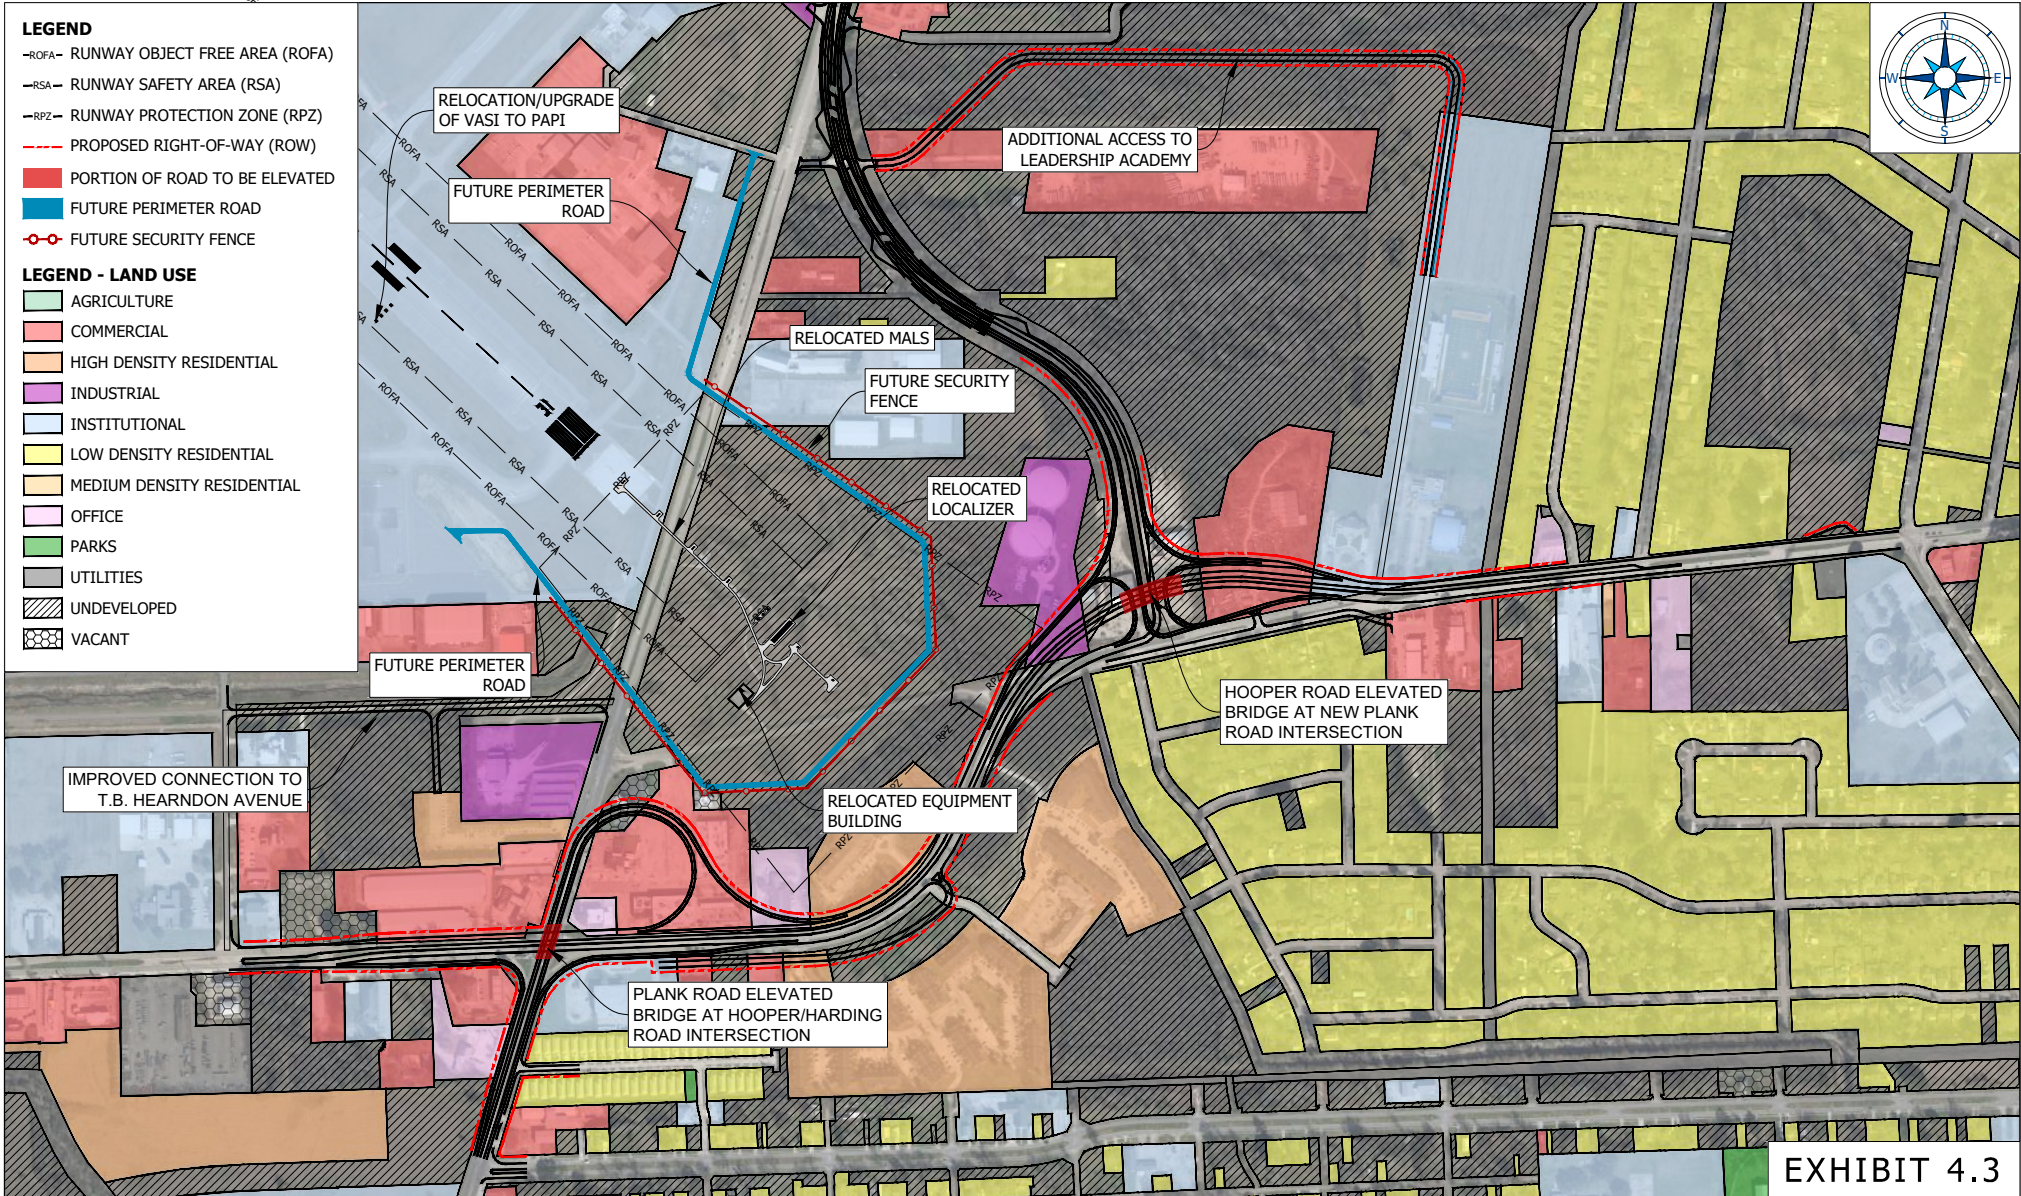

EXHIBIT 4.3

LAND USE

4.12 Socioeconomics, Environmental Justice, and Children's Environmental Health and Safety Risks

The description of resources regarding socioeconomics, environmental justice, and children's environmental health and safety risks remains the same as the 2018 EA analysis.

Regarding socioeconomics, the 2015 census data within the East Baton Rouge Parish remains unchanged for the proposed project. The proposed project will require additional residential and business relocation for implementation. Additional land acquisition is also required. **Exhibit 4.4** provides the 2018 EA land acquisition/relocation parcels and the Supplemental EA land acquisition parcels. All other potential socioeconomic impacts remain the same as the 2018 EA analysis.

4.12.1 Socioeconomics

4.12.1.1 Social Impacts

The proposed project is located within the census tract designated as "Brownfields" within East Baton Rouge Parish. According to the United Census (<https://www.census.gov/quickfacts/fact/dashboard/brownfieldscdplouisiana.eastbatonrougeparishlouisiana/POP010220>). As of April 1, 2020, there were a total of 5,145 people living within this tract. The census tract borders the neighboring places of Baker, Baton Rouge, and Central, Louisiana. Also, in 2020 the median household income was \$51,304. The mostly likely racial or ethnic group to be impoverished in this tract is African American, since this demographic constitutes 77.1% of the population. On average, wages are distributed more evenly in Brownfields, Louisiana than they are nationally, according to the ACS. However, the national salary according to the Bureau of Labor Statistics for 2020 was \$55,744.

There are 20.7% of the population living below the poverty line in this area compared with 23.7% in 2017. The largest demographic is Female, at 54.4%. Over 8% of the people living in poverty in this area are African American, followed by White and Hispanic. The overall race and ethnicity in the area is primarily African American, at 77.1%, followed by White at 19.7%, Asian at 2.3%, and with the remainder Hispanic at 0.5%, American Indian, 0.3%, and two or more races 0.2%.

The number of persons employed in the tract has increased from a total reported in 2015 of 2,422 employees to a total of 3,128 in 2020. The most common employment sectors are health care and social assistance, retail and manufacturing. The area also has a large population of military personnel who served in Vietnam, at 1.25 times greater than any other conflict.

The median property value in 2017 was reported to be \$132,700, and in 2020, the median property value had increased by 1.013% to \$134,500. This trend reversed the previously report median value in 2015 which was a decline of 2.78% from the prior year.

4.12.1.2 Relocation of Residences and/or Businesses

For the preferred alternative, two residential relocations and 22 business relocations may be required in order to provide adequate space for the roadway improvements along Hooper Road and Harding Boulevard.

Two businesses, both gas stations, will have their access drastically limited by the project's roadway right of way requirements. Due to the nature of the business at the gas stations, this action could have a negative impact on the business's long-term viability. Though only portions of each of these properties are required for the project's construction, the full property acquisition may be justified and warranted at the business's discretion due to the changes in access.

The entirety of the one business and the church may not be needed to meet the project's roadway right of way requirements, however, due to DOTD's control of access standards which will no longer allow left turns into traffic, access is significantly reduced to these parcels beyond what was planned in the original EA with at-grade signalization. These standards also eliminate left turns across traffic into parking lots. Though only portions of each of these properties are required for the project's construction, the full property acquisition may be justified and warranted at the business and church's discretion due to the changes in access.

There will be a one-year deadline beyond the project completion put in place for the three businesses and church to choose full acquisition. If they choose not to participate by that one-year deadline, the full property will not be acquired.

Due to the low number of home relocations, there will be negligible resultant social impacts from same. There will be two HUD house relocations required for the preferred alternative along Plank Road south of Hooper Harding. Additionally, 24 businesses will be relocated, and 53 parcels zoned commercial/industrial will be acquired. This area is depicted in **Exhibit 4.4: Land Acquisition and Relocation Parcels**. Additional information is available in **Appendix F: Land Acquisition and Relocation Assessment**.

The initial review of land acquisition for this project did not include any additional right-of-way for the roadway widening along Hooper Road. Further project definition of the preferred alternative resulted in the potential need for additional land along Hooper Road for roadway right-of-way. The additional right-of-way potentially needed for the project is a little more than 2 acres. Additional details related to the expansion of the right-of-way can be found in **Appendix F**.

4.12.1.3 Alteration of Surface Traffic Patterns

The existing surface traffic patterns will be altered and temporarily disrupted by the construction of the preferred alternative. The creation of grade separation and thus elimination of signalized intersections will improve traffic efficiency in the project area.

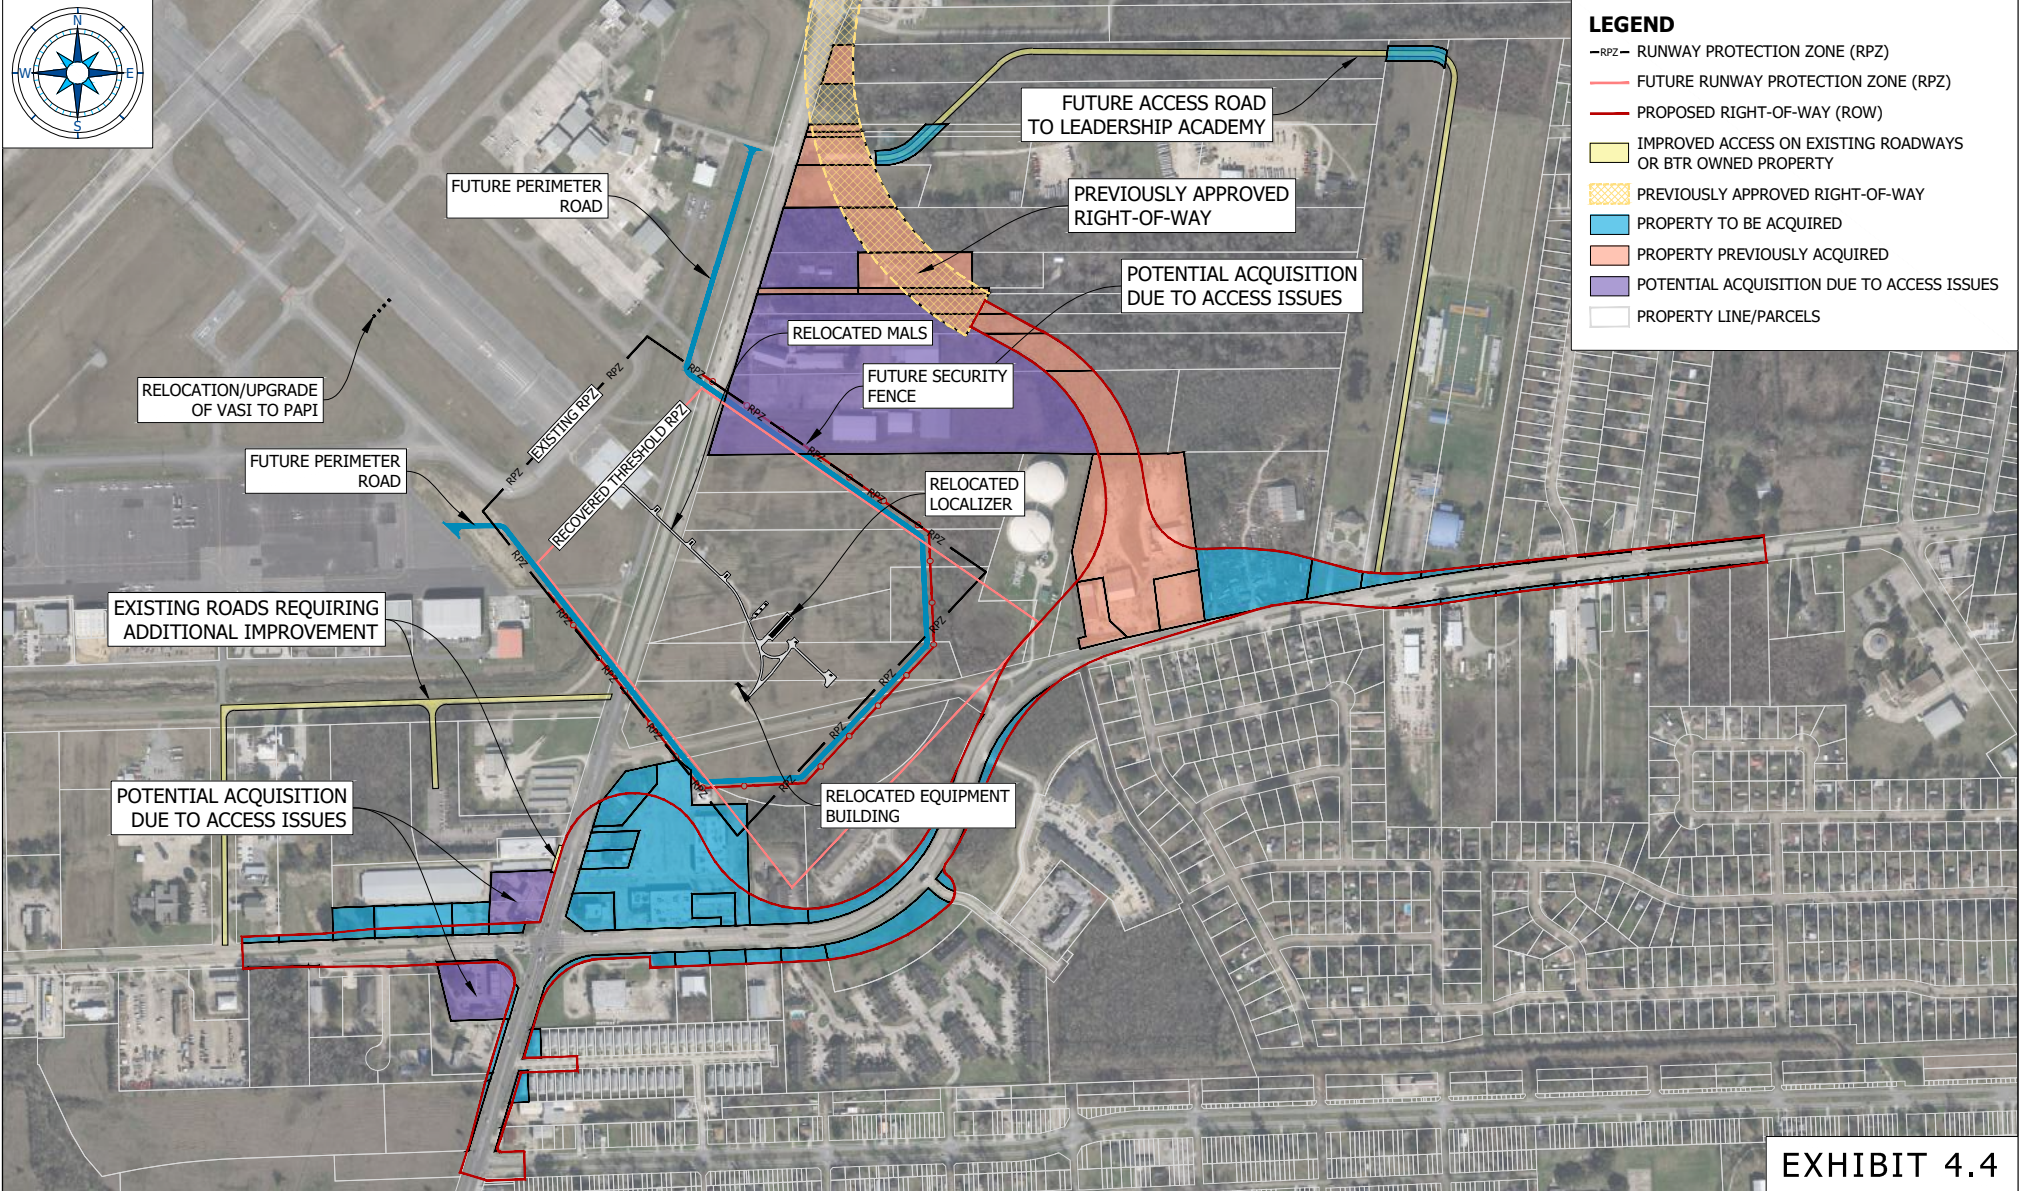

4.12.1.4 Disruption of Established Communities

The construction of the preferred alternative will result in the relocation of two residences. Of the 5355 parcels used in the past for commercial/industrial activity, 33 are currently vacant.

4.12.1.5 Diversion of Orderly, Planned Development

No known planned developments are located within the project area that would be impacted by the preferred alternative.

BATON ROUGE METROPOLITAN AIRPORT SUPPLEMENTAL ENVIRONMENTAL ASSESSMENT

LAND ACQUISITION

4.12.1.6 Creation of Appreciable Change in Employment

The construction activity typically results in a temporary increase in local employment. However, 2422 businesses will be purchased and relocated due to this project's right of way requirements and access to business issues. There are similar businesses and employment opportunities in the vicinity. In November 2021, the unemployment rate in Baton Rouge was 3.5%, below the national average of 4%.

4.12.1.7 Induced Socioeconomic Impacts

Both short-term and long-term socioeconomic impacts are anticipated if the preferred alternative is implemented. Short-term adverse impacts include inconvenience to the traveling public and nearby residents from construction activities. Short-term employment may rise due to construction activities. Long-term impacts may include the addition of commercial/light industrial development properties along relocated Plank Road. The addition of the flyovers are expected to improve traffic flow and reduce conflict points. As discussed in the 2018 EA, no significant socioeconomic impacts are anticipated as a result of the proposed project.

4.12.2 Environmental Justice

As defined by US Department of Transportation, Federal Aviation Administration, FAA 1050.1F, "Environmental justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies. Fair treatment means that no group of people should bear a disproportionate share of the negative environmental consequences resulting from industrial, governmental, and commercial operations or policies. (Order 1050.1F, February, 2020). Meaningful Involvement means that:

- people have an opportunity to participate in decisions about activities that may affect their environment and/or health;
- the public's contribution can influence the regulatory agency's decision;
- their concerns will be considered in the decision making process; and
- the decision makers seek out and facilitate the involvement of those potentially affected. (Order, par 2.5, 2015).

In order to meet the requirements for meaningful public involvement by minority and low-income populations, an early outreach program was initiated for the project. This included meetings with local public officials and an open house meeting where members of the affected area were invited to participate in a casual review form. At the publication of the Draft EA, a formal public meeting will be held to provide additional public comment.

4.12.2.1 Mitigation Measures

For those persons directly impacted by the proposed relocations, it will be necessary to provide mitigation. Because “adverse impacts” under environmental justice U.S. Department of Transportation (DOT) Order 5610.2(a) is defined as: “...the totality of significant individual or cumulative human health include...displacement of persons, businesses, farms, or nonprofit organizations; increased traffic congestion, isolation, exclusion, or separation of minority or low-income individuals within a given community or from the broader community...” (DOT Order 5610.2(a), 5/2/2012). The residential relocation impacts will be primarily to African American residents (based on Census data), and it may be appropriate to address additional mitigation measures. Additionally, during the acquisition process, the potential for disproportionately high and adverse effect on minority and low-income populations will be addressed. These are effects that according to FAA 1050.1F are adverse impacts that:

1. “Are predominately borne by a minority population and/or a low-income population; or
2. Will be suffered by the minority population and/or low-income population and are appreciably more severe or greater in magnitude than the adverse effect that will be suffered by the non-minority population and/or non-low-income population.”

DOT Order 5610.2(a) indicates that mitigation and enhancement measures and offsetting benefits can be taken into consideration when determining if there are disproportionately high and adverse effects from a project.

4.12.2.2 Summary of Findings

For the build alternatives, only two residential relocations will be required. Because the adverse impacts during construction will be temporary, no additional mitigation and enhancement measures and offsetting benefits are required. However, 24 businesses will be purchased and relocated due to this project’s right of way requirements and access to business issues. As discussed in the 2018 EA, no significant environmental justice impacts are anticipated as a result of the proposed project.

4.12.3 Children’s Environmental Health and Safety Risks

As identified in Executive Order 13045 “Protection of Children from Environmental Health Risks and Safety Risks”⁴, it is necessary to evaluate the effects Federal actions may have on children. The risks include those that are attributable to products or substances that a child is likely to come in contact with or ingest, such as air, food, drinking water, recreational waters, soil or products they might use or be exposed to.

⁴ 62 FT 19885, April 23, 1997

There are several residences in the project area where children may reside. The Leadership Academy on Hooper Road hosts athletic and other activities that children may attend. Currently, children may be exposed to exhaust from existing traffic and this would continue with the no-action alternative. Because the residences and the Leadership Academy are outside of the construction area of any of the build alternatives there will be no discernable impact. The implementation of OSHA compliance practices during construction will further minimize any off-site exposure to the chemicals used during construction such as fuels and paints. There will be a small increase in vehicle emissions for the residences located along Hooper Road for the preferred alternative due to the moving of the northbound traffic from its current location to the intersection at McClelland Drive. This increase does not trigger additional conformity review under the Clean Air Act; so, it is not anticipated to be a significant impact⁵.

4.13 Visual Effects

The category of Light Emissions includes any lights that emanates from the light source into the surrounding environment. For the proposed build alternatives, the primary impact will be the addition of light emissions from the elevated sections at both Plank Road and to the relocated portion of Plank Road at McClelland Drive. For the alternative that includes elevated Plank Road at McClelland Drive, south bound headlights may impact several residences. No significant changes to the Runway 13-31 and RSA area are anticipated.

The existing lighting along Hooper Road at grade will be repositioned; therefore, no significant impacts are anticipated.

4.14 Water Resources

4.14.1 Wetlands

Executive Order 11990, Protection of Wetlands⁶, is implemented by U.S. DOT Order 5660.1A, Preservation of the Nation's Wetlands [2004]. The Executive Order requires federal agencies to avoid, to the extent possible, the adverse effects associated with the destruction or modification of wetlands wherever there is a practical alternative. FAA Order 5050.4B, Airport Environmental Handbook, requires that these orders be reviewed to determine their applicability⁷.

⁵ Ex. Order 13045, 1997

⁶ Order 11990, 1977

⁷ Order 5050.4B, 2006

The basic Federal wetlands law Section 404 of the Federal Water Pollution Control Act Amendments (Clean Water Act) defines the term wetlands as “those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs and similar areas⁸.”

As set forth in Section 404 of the Clean Water Act, jurisdictional wetlands are determined based on the criteria set forth in the 1987 U.S. Army Corps of Engineers (USACOE) Wetland Delineation Manual. Pursuant to Section 404, a permit must be obtained from the USACOE prior to any activity that involves the discharge of dredged or fill materials into a wetland⁹.

The regulatory definition of a jurisdictional wetland is outlined under the Clean Water Act at 33 CFR § 328.3 (c)(4), and further guidance is found in the EPA/USACE Memorandum “Clean Water Act Jurisdiction” following the U.S. Supreme Court’s Decision in *Rapanos v. United States* and *Carabell v. Army Corps of Engineers et al.* In Louisiana, the U.S. Army Corps of Engineers, New Orleans District, is responsible for the administration of the program regulating wetlands. Additionally, the Louisiana Department of Environmental Quality is responsible for administering Section 404 of the Clean Water Act to ensure the proposed action will not have an adverse impact on the water quality impacted by the project. A wetlands delineation project was conducted for the proposed build alternatives and the report is included in **Appendix E: Wetlands Assessment**. It was concluded that approximately 1.7 acres of jurisdictional wetlands will be affected by the build alternatives associated with the proposed Leadership Institute additional access and the Cypress Road driveway extension. Therefore, a permit under Section 404 of the Clean Water Act and appropriate mitigation for the loss of the wetlands will be required^{10,11}. Consultation with the New Orleans District, U.S. Army Corps of Engineers regarding Section 404/Section 10 is a part of the NEPA process. A map is provided in **Exhibit 4.4: Wetlands**.

The construction of the proposed alternate driveway access roads will result in the loss of approximately 1.7 acres of jurisdictional wetlands.

To compensate for unavoidable wetland impacts, the Baton Rouge Metropolitan Airport will propose to contract with an acceptable wetlands mitigation bank overseen by the U.S. Army Corps of Engineers, New Orleans District. The amount of mitigation required will depend on the final design layout, and the mitigation ratio as determined by the selected mitigation bank.

⁸ CWA, 1987

⁹ Delineation Manual, 1987

¹⁰ CWA, 1972

¹¹ Clean Water Act Jurisdiction, 2008

The proposed build alternatives will have long term impacts to jurisdictional wetlands that will be mitigated by acquiring compensatory mitigation at approved wetlands mitigation bank. There are no navigable waters within the boundary of the proposed project and consequently, no impacts to navigable waters will occur.

4.14.2 Floodplains

Executive Order 11988, Floodplain Management, (Exec. Or. 11988, 42 Red. Reg. 26951, May 25, 1977) and U.S. DOT Order 5650.2, Floodplain Management and Protection, requires that all FAA actions must avoid floodplains if a “practicable alternative” is available. For regulatory purposes, floodplains are low lying areas that are discussed in percent likelihood of inundation occurring within one year. Thus, an area with a 1% chance of inundation is referred to as the “base flood” or, more commonly, the “100-year” flood. The Federal Emergency Management Agency (FEMA) is the implementing agency for the flood plain regulations. East Baton Rouge Parish has developed a floodplain management program that requires construction within the base flood areas be “mitigated.” That is, an equal amount of floodplain capacity must be provided for the volume of base flood area impacted. As shown on **Exhibit 4.5: Floodplains**, the project area is not located within the base flood area so no flood plain fill mitigation will be needed.¹² There is no change to floodplains impacts from the preferred alternative.

There are no impacts to floodplains, and consequently, no floodplain impacts will result from the project.

¹² The National Flood Insurance Act, (44 CFR part 60).

BATON ROUGE METROPOLITAN AIRPORT SUPPLEMENTAL ENVIRONMENTAL ASSESSMENT

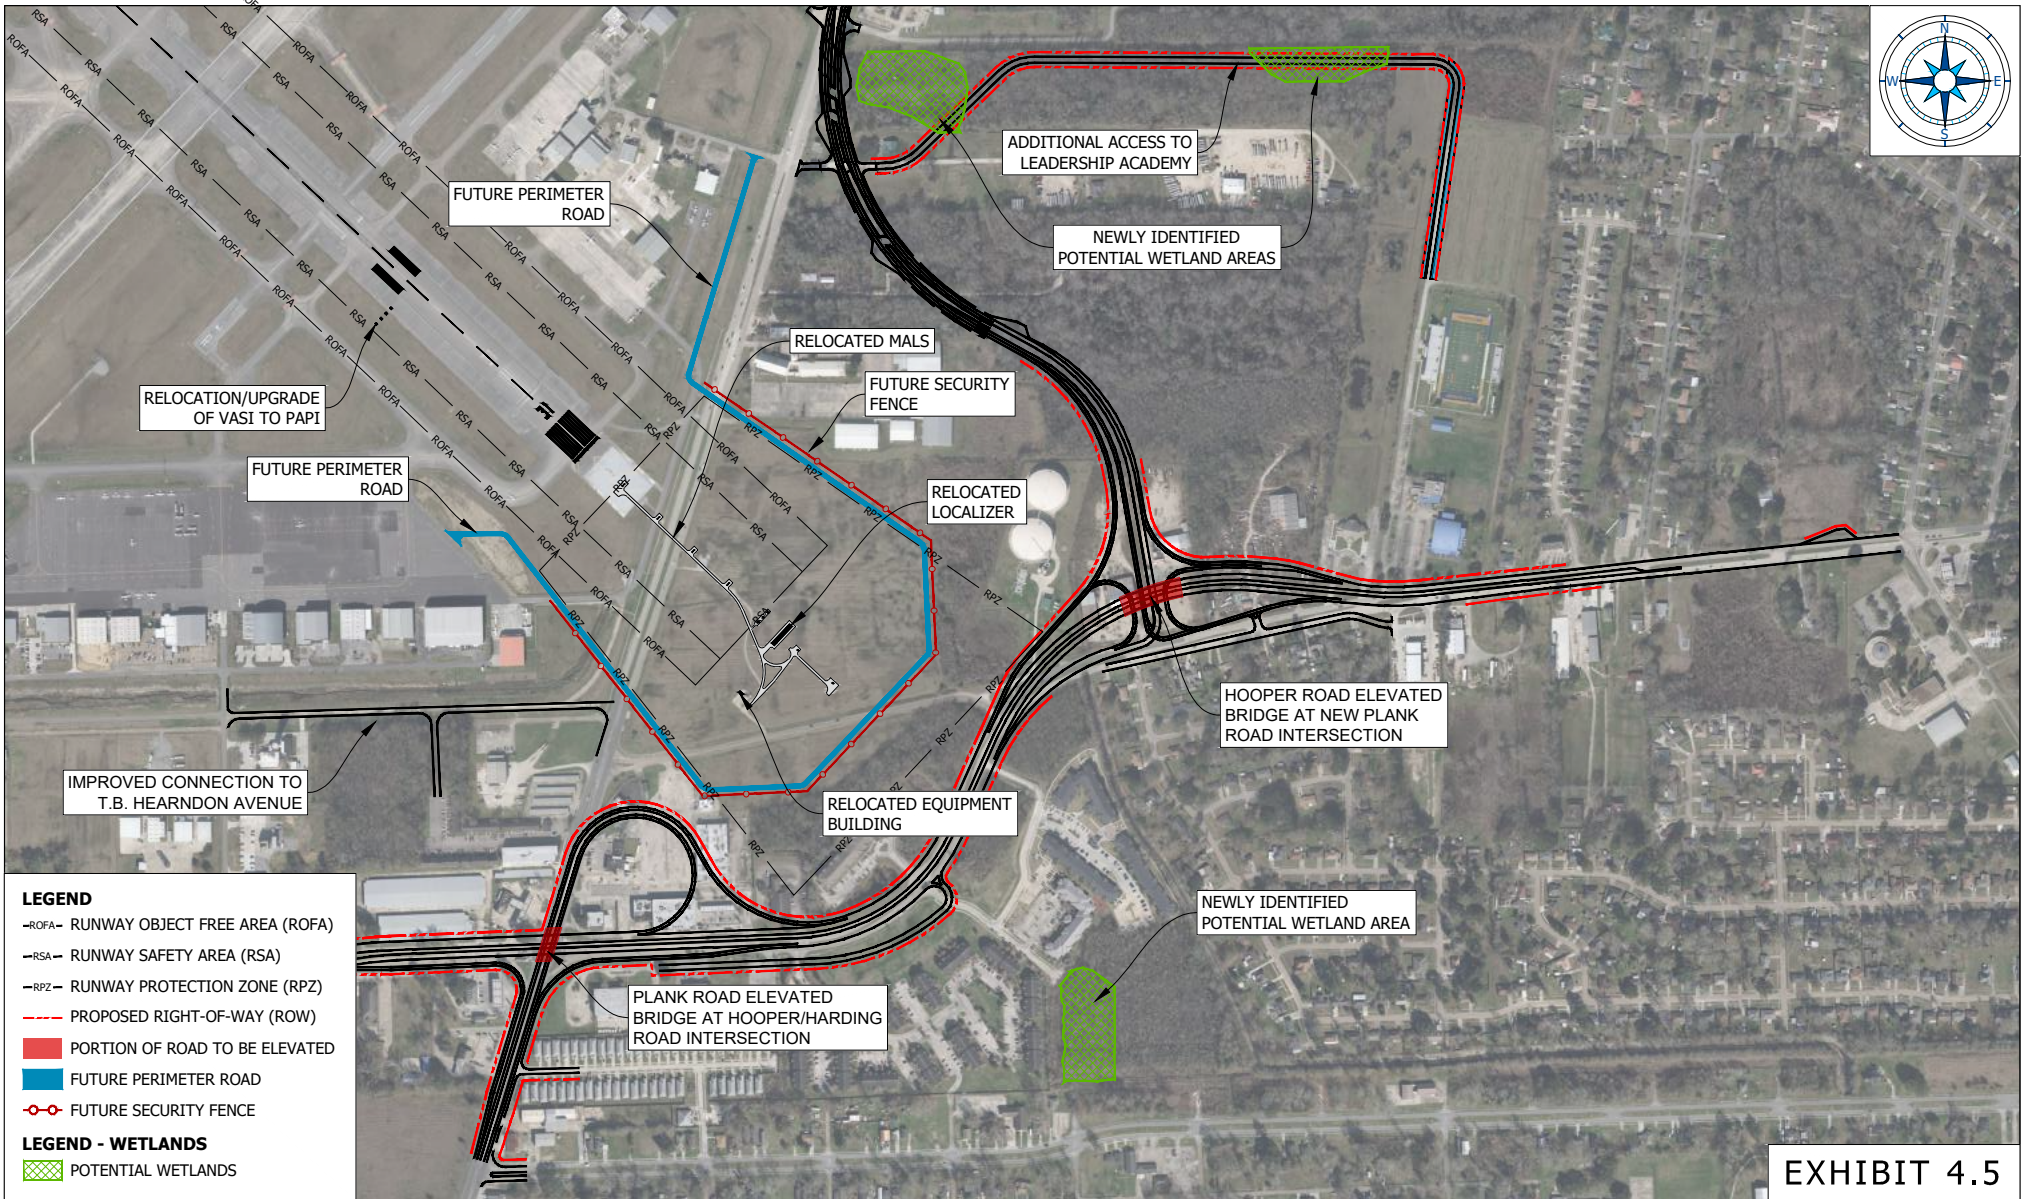

EXHIBIT 4.5

WETLANDS

4.14.3 Surface Water

A review of historic USGS topographic maps was completed to identify current and historic surface water features¹³. There is a ditch located near Ford Street that eventually reaches Roberts Canal and may be considered as “other waters” by the U.S. Army Corps of Engineers. The ditch discharges into Roberts Canal and, thence, into the Comite River. The Comite joins the Amite River near Denham Springs, Louisiana. The ultimate receiving water is Lake Maurepas.

It is anticipated that the build alternative may result in the filling of part of the unnamed ditch and installation of a culvert. Because the U.S. Army Corps of Engineers has typically exerted jurisdiction over similar surface water features under Section 10 of the Rivers and Harbors Act, it is possible that a Section 10 permit will be required prior to alteration of the ditch¹⁴. This will not be known until permitting of the project occurs. If a Section 10 permit is required, the Airport Sponsor will take all necessary steps to acquire the permit.

4.14.3.1 Water Quality, Water Supply, and Stormwater Control

The Federal Water Pollution Control Act (the Clean Water Act) requires that airport proprietors establish water quality standards and control discharges into surface and subsurface waters¹⁵. Particular concerns include the preservation of existing drainage, the protection of aquifers from fuel spills and aircraft washing runoff, and control of sedimentation and erosion during construction.

Industrial plant operations, including airports, are required to obtain stormwater permits under the 1987 amendments to the Clean Water Act. The National Pollutant Discharge Elimination System (NPDES) permit requires submission of information regarding existing programs to control pollutants and field screening of major outfalls to detect improper discharges. All discharges of stormwater runoff must be identified and characterized, including those containing deicing fluids, liquid fuels, and chemicals used for maintenance. This project would not result in any discharge of these aviation wastes and primary concern would be construction related actions.

4.14.3.2 Environmental Impacts

Federal, State, and local agencies were previously notified to determine whether the implementation of the proposed action would adversely affect water quality, the water supply, or stormwater control. In its response, the Louisiana Department of Environmental Quality (LDEQ) did not raise any objections to the project, however they indicated that the use of

¹³ USGS Topographic Map, Comite, LA, SW ¼ Zachary 15' quadrangle, 1963, revised 1970, 1980

¹⁴ 33 USC 403, 1899

¹⁵ Clean Water Act, (33 U.S.C. 1251-1376)

best management construction practices would be required to protect ground water of the region.

The proposed project may have impacts to water resources should any of the alternatives be implemented. However, these impacts may be classified as short-term and measures will be selected and used to help mitigate the impacts. Impacts can be grouped into those that include the following categories: wetlands, floodplains, surface waters, including “Waters of the United States”, groundwater, and wild and scenic rivers. If present, each of these categories of water feature may be subject to regulatory authority as described in the following sections.

4.14.4 Wild and Scenic Rivers

According to the Louisiana Department of Wildlife and Fisheries and a search of all applicable databases, there are no wild or scenic rivers located within the project area.

4.14.5 Groundwater

A water well search was performed to identify current and historic groundwater use in the project area. A total of 96 wells were identified within a one-mile radius. As noted in the Phase I Environmental Assessment report (found in **Appendix B**), the majority of these wells were designated as "domestic use." The Baton Rouge area overlies the Southern Hills aquifer system and has an abundant supply of high-quality groundwater, although concerns have been raised regarding the presence of saltwater intrusion into lower strata. According to the Capital Area Groundwater Conservation Commission, over 170 million gallons per day of fresh water are provided to users throughout the five parishes within the system. There are deep pilings associated with the proposed alternatives that are anticipated to impact the near-surface productive sand lenses of the aquifer; so, due to the presence of known “recognized environmental conditions” including releases of petroleum hydrocarbons, consultation with the Louisiana Department of Environmental Quality (LADEQ) will be done during the design phase¹⁶. This project would not result in any discharge of aviation wastes and primary concern would be construction related actions. There are no identifiable impacts at this time; however, should any impacts be identified during the design and construction process, they would be coordinated directly with LADEQ.

4.14.5.1 Sole Source Aquifer

Consultation with the Louisiana Department of Environmental Quality (DEQ) was initiated on May 15, 2017. To date, no findings of impact to the aquifer have been documented by DEQ.

¹⁶ Capital Area Ground Water Conservation Commission, n.d.

If needed, remediation activities will be implemented which may include removal of contaminated soils and/or groundwater.

4.14.5.2 Storm Water

The Federal Water Pollution Control Act (the Clean Water Act) requires that Airport proprietors establish water quality standards and control discharges into surface and subsurface waters. Particular concerns include the preservation of existing drainage, the protection of aquifers from fuel spills and aircraft washing runoff, and control of sedimentation and erosion during construction. During any required permitting processes of the project, should the preferred alternative involve the relocation of facilities within the expanded Runway 13-31 Protection Zone, it will be evaluated for impacts to the existing facility Storm Water Pollution Prevention Plan. If there are any impacts, the plan should be revised as needed to account for these activities.

Any of the build alternatives will create additional impervious surfaces as a result of the roadway realignments. However, there are also planned removals of existing pavement from Plank Road and Old Hooper Road. It is important to note that implementation of either of the build alternatives will also result in the removal of some existing impervious surfaces.

Design and engineering of the proposed action would include stormwater control elements that would tie into the existing roadway stormwater system. All drainage facilities will be designed to comply with FAA Advisory Circular AC No. 150/5320-5D criteria local and regional drainage laws, flood control master plans, and the Uniform Regulations for the Control of Drainage. All stormwater control facilities would be designed so as to not adversely affect downstream areas as a result of concentrated, diverted, or increased flows and would include provisions to limit contamination of stormwater¹⁷.

Sedimentation and erosion impact during construction of the proposed action would be avoided by the use of “best management practices” for erosion and sediment control, as described in AC 150/5320 15, CHG 1, Management of Airport Industrial Waste¹⁸. Best management practices include the use of control devices such as silt fencing, diversion berms, or other applicable devices approved by the Soil Conservation Service.

No other adverse effects on water quality, water supply, or stormwater control are expected under the proposed action because all necessary mitigation measures would be incorporated into the construction procedures for the proposed Runway 13/31 RSA and RPZ project due to the creation of additional impervious surface.

¹⁷ AC No. 150/5320-5D-Airport Drainage Design, 2013.

¹⁸ Management of Airport Industrial Waste, 2008

4.14.5.3 Summary of Findings

Design and engineering of the proposed action would include stormwater control elements that would tie into the existing roadway stormwater system. All drainage facilities will be designed to comply with FAA Advisory Circular criteria, local and regional drainage laws, flood control master plans, and the Uniform Regulations for the Control of Drainage. All stormwater control facilities would be designed so as to not adversely affect downstream areas as a result of concentrated, diverted, or increased flows and would include provisions to limit contamination of stormwater.

Sedimentation and erosion impact during construction of the proposed action would be avoided by the use of "best management practices" for erosion and sediment control. Best management practices include the use of control devices such as silt fencing, diversion berms, or other applicable devices approved by the Natural Resource Conservation Service.

No other adverse effects on water quality, water supply, or stormwater control are expected under the proposed action because all necessary mitigation measures would be incorporated in the construction procedures for the proposed Plank Road relocation and implementation of the RSA improvements.

4.15 Past, Present, and Reasonably Foreseeable Future Projects

The Council on Environmental Quality (CEQ) Regulations define a cumulative impact as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or non-Federal) or person undertakes such other actions" (40 CFR § 1508.7). Cumulative impacts can be viewed as the total combined impacts on the environment of the proposed action or alternative(s) and other known or reasonably foreseeable actions.

The Past, Present, and Reasonably Foreseeable Future Projects remains the same as the 2018 EA analysis.

5. Environmental Consequences

5.1 Summary of Consequences

The potential environmental consequences as a result of the preferred alternative include:

- Loss of 1 acre of prime farmland;
- Impacts to 1.7 acres of jurisdictional wetlands, which will be mitigated;
- Short-term increase in air pollutants from construction activities;
- Relocation of two residential units;
- Relocation of 24 businesses;
- Relocation of one church
- Noise increase to 5 residential units and two other noise sensitive units along Hooper Road, mitigation may be possible, further design of project will be required
- Minor noise increases from construction and change in traffic patterns.

Past improvements to Plank Road and Harding Boulevard have resulted in the addition of several light industrial and commercial operations. Within the past three years, additional senior housing residences have been constructed. Constructing the preferred alternative can reasonably be expected to continue this trend along the relocated portion of Plank Road.

Significant cumulative impacts are not anticipated due to construction of the preferred alternative.

This section contemplates the full array of project components which were analyzed in this Supplemental Environmental Assessment (SEA) as well the original Environmental Assessment (EA) for the Runway 13/31 Runway Safety Area and Runway Protection Zone Improvements. These project components include:

Airfield Improvement Projects:

- Property Acquisition of approximately three (3) acres of land should be acquired for positive control of the land within the RPZ

- A standard 1,000-foot RSA will be graded per Federal Aviation Administration (FAA) Circular 150/5300-13
- Demolition of the existing EMAS
- Construction of a 200 x 200-foot blast pad in place of existing EMAS
- With the relocation of Plank Road, the landing threshold can be shifted to the end of the pavement, thereby adding 315 feet of LDA to Runway 31 operations
- Grading, drainage, airfield electrical, and pavement markings to accommodate the landing threshold shift
- Modification of FAA Navigational Aids associated with the threshold shift including:
 - Relocation and replacement of the Runway 13 Localizer Antenna Array/Distance Measuring Equipment (DME) and equipment shelter
 - Replacement of the Runway 31 Visual Approach Slope Indicator (VASI) with a Precision Approach Path Indicators (PAPI)
 - Relocation/replacement of the Runway 31 Medium Intensity Approach Lighting System (MALS) and addition of an Equipment Shelter
- Amended arrival procedures associated with the landing threshold shift including:
 - PFAF on the RNAV (GPS) RWY 31 will move straight out the final approach (Southeast) 325.06 ft, keeping the altitude of 1700 ft MSL as the crossing altitude; angle of 3 degrees and TCH of 52 ft will not change
 - The DME Values on the ILS or LOC RWY 13 may change based upon the LOC Shelter and DME antenna moving approximately one tenth of a nautical mile. The fixes will not move, the course/ground tracks will not move, only the published DME values may require a new value to be published
 - Circling area may be increased by 314 ft to the southeast of the current area, compensating for the threshold moving; preliminary evaluation revealed no increase in minima
- Amended departure procedures associated with the landing threshold shift including:
 - Instrument Flight Rules (IFR) Departure procedure for Runway 13; will have fewer penetrations listed as “Low Close-in” penetrations eliminating the following:
 - Runway 13, pole 300' from the DER, 549' left of centerline, 22' AGL/91' MSL.
 - Vehicles on roadway 342' from DER, left and right of centerline, up to 15' AGL/84' MSL

Landside Development and Improvement Projects:

- Obstruction Removal
- Property Acquisition of 55 parcels impacted by the proposed Right of Way: two (2) parcels with single family residential homes and 53 commercial/industrial parcels.
- Realignment of perimeter road and fence
- Realignment of Plank Road including construction of approximately 0.65 miles of new roadway and requires changes to the right of way for approximately 2.5 miles of roadway
- Construction of related Plank Road tie-in with existing Hooper Road
- Introduction of two elevated bridge structures to better accommodate traffic movements

Coordination with resource agencies for SOV included the overall project area for any concerns related to the entirety of the project including the location of relocated Navigational Aids. A total of 77 SOV letters were sent regarding this project for BTR and depicted the overall project area. A summary of the concerns received were published in the EA and are also published in this SEA and no significant impacts or resources were identified associated with any of the project elements.

Aircraft Noise Modeling for this project included the implications of the threshold shift. This modeling included: the modification of FAA Navigational Aids associated with the threshold shift; amended arrival procedures associated with the landing threshold shift; and amended departure procedures associated with the landing threshold shift. This resulted in the model - aircraft being lower by 18 feet along the arrival path when compared to the no action condition. The noise associated with aircraft being 18 feet lower along the flight path was modeled and found to be negligible. Any other NAVAID change or flight procedure change that did not change the geometry (location) or altitude of the aircraft remained consistent in the model between the no action and the proposed action conditions. The Runway 13 departures were modeled for the proposed action to begin at the existing Runway 13 end of pavement and included the threshold shift at the 31 end of the runway. Again, noise modeling found the change to be negligible.

It was determined through the analysis of the EA and SEA that there were no significant impacts from the proposed project. This included the overall project area and all proposed elements, including navaid relocations and noise impacts included in the overall Runway 13/31 RSA and RPZ project.

Table 5.1: Environmental Consequences Matrix

ENVIRONMENTAL RESOURCES	IMPACTED	CONSEQUENCE
Air Quality	YES	Short term increase in air pollutants from construction activities. Emissions were determined to be under the threshold of significance for the pollutants evaluated.
Biological Resources	NO	
Climate	NO	
Coastal Resources	NO	
Department of Transportation Act, Section 4(f)	NO	
Farmlands	YES	Loss of 1 acre of prime farmland.
Hazardous Materials, Solid Waste, and Pollution Prevention	NO	
Historical, Architectural, Archeological and Cultural Resources	NO	
Land Use	YES	Loss of two residential HUD units, businesses, and 53 commercial parcels
Natural Resources and Energy Supply	NO	
Noise and Compatible Land Use	YES	Minor noise increases from construction and change in roadway traffic pattern.
Socioeconomics, Environmental Justice, and Children's Environmental Health and Safety Risks	YES	Five residential units and two other sensitive uses
Visual Effects	NO	
Water Resources	YES	Impacts to 1.7 acres of jurisdictional wetlands, which will be mitigated if it cannot be avoided in final engineering of roadway alignment. ¹⁹
Past, Present, and Reasonably Foreseeable Future Projects	NO	

Source: K&G Team Analysis, 2022

¹⁹ Anticipated Wetland Mitigation will be done by purchase of Wetland Mitigation Credits at a ratio of 2 to 1 per communication between EA team and Army Corps of Engineers

5.1.1 Air Quality

Direct and indirect emissions were calculated for activities conducted with the preferred alternative. Emissions were determined to be under the threshold of significance for the pollutants evaluated.

5.1.2 Biological Resources (including Fish, Wildlife, and Plants)

A Biological Assessment report was prepared at the recommendation of the U.S. Fish and Wildlife Service in the previous EA. The Biological Assessment determined there would be no impacts to Threatened or Endangered Species due to the proposed projects. Impacts to other biological resources including bottomland hardwood habitat will be long-term. Loss of jurisdictional bottomland hardwood will be offset by wetlands mitigation.

5.1.3 Climate

For the no-action alternative, there will be no projected increase or decrease in greenhouse emissions. Short term emissions will be experienced with the proposed alternative. According to the Air Quality Analysis performed, 473 tons/year of CO² were calculated to be emitted from construction activities. Since standards for determining levels of significance of these emissions do not exist, there is no anticipated significant impact to climate from the build alternatives.

5.1.4 Coastal Resources

The project is not located within the Coastal Zone boundary, therefore no impacts to the coastal zone will occur.

5.1.5 Department of Transportation Act, Section 4(f)

No Section 4(f) properties will be impacted by the proposed project and no mitigation measures will be required.

5.1.6 Farmlands

The preferred alternative will impact approximately 1 additional acre of prime farmland. It does not appear that the area designated as prime farmland has been used within the recent past for agricultural production because it remains heavily wooded.

5.1.7 Hazardous Materials, Solid Waste, and Pollution Prevention

The build alternatives will require the acquisition of property used for past industrial purposes and require structure demolition and soil excavation. These properties are described in the Phase I Environmental Site Assessment. Two sites are located on the north side of Hooper

Road at the location of the proposed intersection, and the other one is located on Martin Road. Typical constituents of concern can include heavy metals, hydrocarbons, and solvents. Any wastes meeting the definitions of hazardous, as described in 40 CFR Part 261 must be managed in a permitted hazardous waste landfill.

The implementation of site-specific Stormwater Pollution Prevention Plans and Spill Prevention Control and Countermeasure Plans during construction will assist in reducing pollution resulting from construction.

5.1.8 Historical, Architectural, Archaeological and Cultural Resources

The project area is not known to be associated with any high probability of prehistoric occupation. Therefore, the proposed project is not expected to impact currently undiscovered archaeological resources. If during construction any archaeological resources are unearthed, then the provisions of emergency discovery would apply and the appropriate agencies contacted. Since no adverse impacts upon historic, architectural, archaeological, or cultural resources are anticipated, no mitigation measures will be required.

5.1.9 Land Use

The project area is located in the northeastern portion of East Baton Rouge Parish in an unincorporated area known as Brownfields. In addition to the airport facility, the area is made up of mostly commercial light industrial and residential communities. Some newer commercial construction exists west of the Hooper Road/Plank Road intersection and on Plank Road north of Robique Road. Two residential HUD units, 24 businesses and one church will be relocated in the preferred alternative.

Two businesses, both gas stations, will have their access drastically limited by the project's roadway right of way requirements. Due to the nature of the business at the gas stations, this action could have a negative impact on the business's long-term viability. Though only portions of each of these properties are required for the project's construction, the full property acquisition may be justified and warranted at the business's discretion due to the changes in access.

The entirety of the two businesses and the church may not be needed to meet the project's roadway right of way requirements, however, due to DOTD's control of access standards which will no longer allow left turns into traffic, access is significantly reduced to these parcels beyond what was planned in the original EA with at-grade signalization. These standards also eliminate left turns across traffic into parking lots. Though only portions of each of these

properties are required for the project's construction, the full property acquisition may be justified and warranted due to the changes in access.

There will be a one-year deadline beyond the project completion of construction to be put in place for the four businesses and church to choose full acquisition. If they have chosen not to participate by that one-year deadline, the full property will not be acquired.

It is anticipated that land use in the project area will change from mostly undeveloped along relocated Plank Road to a mix of uses.

5.1.10 Natural Resources and Energy Supply

The proposed project will require energy in the form of fuel for construction and demolition activities. Since the project is small in scale, it is not expected to result in any measurable diminution of energy supplies. Any impacts to natural resources (i.e. forested wetlands) will be offset by compensatory mitigation.

5.1.11 Noise and Compatible Land Use

5.1.11.1 Roadway Noise

Impacts were examined for both the existing traffic levels (2017 being the most recent data collection) and the design year (2040) traffic levels. The change in noise levels was found to be minor and didn't reach the level of significance. For the "no build" alternative, 13 residential structures and one additional receiver were found to have current noise levels above the DOTD standards of 66 decibels (dBA). A total of 13 residential structures and two receivers would be above the 66 dBA level in 2040, if the no build alternative is selected.

Though 13 residential structures and one additional receiver were found to have current noise levels above the DOTD standards of 66 decibels (dBA), none of the receivers were determined to have a noise level increase of 10 dBA or greater over the

existing noise level with the preferred alternative. As there are no impacts greater than 10 dBA, no noise abatement measures were considered as defined in the State of Louisiana Department of Transportation and Development Highway Traffic Noise Policy. Greater detail can be found in **Appendix D: Traffic Noise Assessment**.

5.1.11.2 Aircraft Noise

The refined alternatives do not change aircraft noise in any way. Therefore, there is no change in aircraft noise as is depicted in the 2018 EA.

5.1.12 Socioeconomics, Environmental Justice, and Children's environmental Health and Safety Risks

5.1.12.1 Socioeconomics

If the build alternatives are implemented, both short-term and long-term socioeconomic impacts are likely to occur. Short-term adverse impacts include inconvenience to the traveling public and nearby residents from construction activities. Neighborhood cohesion along Hooper Road will be disrupted by the construction. Short-term employment may rise due to construction activities. Long-term impacts may include the addition of additional commercial/light industrial development properties along relocated Plank Road.

5.1.12.2 Environmental Justice

The proposed project will require relocation of two residences and 22 businesses and 33 vacant commercial/industrial parcels which are vacant. Within the project area, the population found is mostly lower-income and minority (African-American). Although short-term impacts will occur, the construction of the project is not expected to have a significant impact and disproportionate effect on this population.

5.1.12.3 Children's Environmental Health and Safety Risks:

Some children may reside within the project area. For the "no build" alternative and all the "build" alternatives, any children residing within the project area could be exposed to traffic exhaust. The Leadership Academy on Hooper Road hosts athletic and other activities that children may attend. However, no discernable impacts will impact children at this facility. Further, the implementation of OSHA compliance practices during construction will minimize any off-site exposure to the chemicals used during construction such as fuels and paints. Air emissions from vehicular traffic are not expected to increase as a result of the proposed alternative.

5.1.13 Visual Effects:

For the proposed build alternatives, the primary impact will be the repositioning of existing roadway lighting for existing Plank Road to the relocated portion of the road. The existing lighting along Hooper Road at grade will be repositioned; therefore, no significant impacts are anticipated.

5.1.14 Water Resources

The proposed project may have impacts to water resources should any of the alternatives be implemented. However, these impacts may be classified as short-term and measures will be selected and used to help mitigate the impacts. Impacts can be grouped into that that include the following categories: wetlands, floodplains, surface waters, including "Waters of the United States", groundwater, and wild and scenic rivers. The presence of any of these

water features may be subject to regulatory authority. A summary of impact to the water resources in the proposed project area are discussed in the following sections.

5.1.15 Wetlands and Navigable Waters

The build alternatives will result in impacts to 1.7 acres of jurisdictional wetlands. Because the design requirements applicable to the proposed Plank Road relocation are fixed, it is not possible to re-route the roadway to avoid wetland impacts. Therefore, a permit under Section 404 of the Clean Water Act and appropriate mitigation for the loss of the wetlands will be required. The amount of mitigation required will depend on the final design layout and the mitigation ration as determined by the selected mitigation bank.

Based on environmental analysis and correspondence with the U.S. Army Corps of Engineers, no navigable waters exist at the project site.

5.1.15.1 Floodplains

The project area is not located within the base flood area, as developed by the East Baton Rouge Parish floodplain management program. Therefore, the project will not require floodplain fill mitigation.

5.1.15.2 Surface Water

A small, unnamed, meandering ditch or swale that is mostly concrete-lined begins near Robique Road and flows south. At Hooper Road, the ditch flows south via culverts and proceeds southerly through Zion City subdivision and then to the east. The ditch discharges into Cypress Bayou, and then, into the Comite River and ultimately Lake Maurepas. The build alternative may result in the filling of part of the unnamed ditch and, the drainage would then be re-routed. The fill and relocation of the ditch may require a U.S. Army Corps of Engineers Section 10 permit.

5.1.15.3 Groundwater

The project area overlies the Southern Hills aquifer system. No deep piling penetrations were identified and, therefore no significant impacts are anticipated to groundwater resources.

5.1.15.4 Stormwater

Due to project roadway realignments, the build alternatives will remove existing impervious surface and create new imperious surfaces. During design and construction, stormwater control elements will tie into the existing roadway stormwater system and all drainage facilities will be designed to comply with FAA Advisory Circular criteria, local and regional drainage laws, flood control master plans, and the Uniform Regulations for the Control of Drainage. These facilities will be designed so as to not adversely affect downstream areas as a result of concentrated, diverted, or increased flows and would include provision to limit

contamination of stormwater. Also, during construction, "best management practices" for erosion and sediment control will be observed.

No other adverse effects on water quality, water supply, or stormwater control are expected under the proposed action because all necessary mitigation measures would be incorporated into the construction procedures for the proposed Plank Road relocation and implementation of the RSA improvement.

5.1.16 Past, Present, and Reasonably Foreseeable Future Projects

The present proposed project is a continuation of evaluating potential environmental impacts of implementing ongoing improvement activities at the Baton Rouge Metropolitan Airport as outlined in the current Baton Rouge Metropolitan Master Plan. Since 2004, the Airport has systematically made improvements in accordance with FAA standards. The purpose of the current project is to introduce needed changes that will reduce safety risks to airport operations.

The proposed project will require a committed amount of resources, time, and funding. Beneficially, the proposed project will provide much needed improvements to the Baton Rouge Metropolitan Airport. If implemented, the Airport will benefit from increased safety, enhanced productivity, and extended life span of the facility. The traveling public will also benefit from the proposed improvements.

All proposed project alternatives will create minor short-term impacts to water resources, land use, and societal concerns. These impacts will be due to construction activities and, will be offset by best management practices observed during the construction phase of the project. The most significant impact will be the disturbance of approximately 1.7 acres of wetlands. However, this will be offset by mitigation.

The build alternatives will relocate a portion of Plank Road and provide grade separation eliminating the need for two traditional intersections, which will result in several important benefits. Traffic congestion, traffic flow, and available land will be direct benefits. Available land to build for redevelopment should provide incentives in new development as the area is made more accessible and attractive to businesses and residents. New development will result in potential increased economic opportunities for employers and employees. Improved opportunities of households to take advantage of relocation opportunities should also result in increased property availability, property values, and improvement community cohesion. Before, where the area was economically stagnant, any of the build alternatives will present new opportunities for strong economic growth opportunities to employers and households, which will benefit local populations and economy.

6. Agency and Public Involvement

6.1 Public Involvement and Agency Coordination Approach and Process

The Environmental Assessment (EA) coordination process described in this chapter provided interested agencies and the public the opportunity to comment on the potential effects of the construction and operation of the Proposed Action.

As the National Environmental Policy Act (NEPA) and Federal Aviation Administration (FAA) Order 1050.1F require, a public involvement process was conducted. This process provided the opportunity for public and agency input regarding the Proposed Action analyzed in this EA. The public and agency involvement process was initiated to:

- Provide information about the Proposed Action's purpose and need and the alternatives the EA discusses.
- Obtain feedback about the above information from the public and agencies interested in and affected by the Proposed Action (i.e., interested parties).
- Inform those interested that the EA will provide a full and fair discussion of project related environmental effects.
- Provide timely public notices to the interested parties so that they may submit comments and participate in public open meetings concerning the Proposed Action.
- Record comments received from interested parties.

6.1.1 Informational Meeting/Hearing

In order to meet the requirements for meaningful public involvement by minority and low-income populations, an early outreach program was initiated for the project. This included meetings with local public officials and an open house meeting where members of the affected area were invited to participate in a casual review form. The open house information is included in **Appendix G: Agency and Public Involvement**. Another open house will be held after the publication of the Draft Environmental Assessment where additional public comments will be gathered.

6.1.2 Other Agency/Public Involvement

During the Section 404/Section 10 permitting process, additional public input will be solicited during the Public Notice portion of the process. Public notice will be solicited by both the U.S. Army Corps of Engineers, and the Louisiana Department of Environmental Quality, Water Quality Certification process.

6.1.3 Distribution of Draft EA

BTR will publish a notice of availability for the Draft EA in *The Advocate*. As **Table 6.2** shows, the Draft EA will be available for a 30-day Public review (30-days after the notice of availability advertisement) at BTR’s administrative office during normal business hours, on the Airport’s website (www.flybtr.com), and at two local libraries.

Table 6.1: Draft EA Available Locations

LOCATION NAME	ADDRESS
Baton Rouge Metropolitan	9430 Jackie Cochran Dr. Suite 300 Baton Rouge, LA 70807
Baton Rouge Metropolitan Airport Website (electronic copy)	www.flybtr.com
	7711 Goodwood Blvd Baton Rouge, LA 70806
Scotlandville Branch Library	7373 Scenic Highway Baton Rouge, LA 70807

Source: Kutchins & Groh, 2022

Electronic copies were provided to agencies who have requested a copy of the Draft Supplemental EA for review. Agencies and the public will be provided the opportunity for an agency meeting and public open house during the 30-day Draft EA review period. Agency and public comments on this Draft EA will be addressed, as appropriate, in the Final Supplemental EA.

Table 6.2: SOV Responses Summary

OWNER/AGENCY	COMMENT/OBJECTION	RESPONSE
<p>Chitimacha Tribe</p> <p>Kimberly S. Walden, THPO</p>	<p>Our records and oral traditions do not indicate that a specific Chitimacha archaeological site or Traditional Cultural Property is within the APE and could be affected; therefore we have no objection to the implementation of the proposed activity; however, if human remains or cultural resources are discovered, you should stop immediately and contact me and the Louisiana State Historic Preservation Office.</p>	<p>Response Noted</p>
<p>Louisiana Department of Culture, Recreation & Tourism – Division of Archaeology</p> <p>Kristin P. Sanders, State Historic Preservation Officer</p>	<p>No known historic properties will be affected by this undertaking. Therefore, our office has no objection to the implementation of this project. This effect determination could change should new information come to our attention.</p>	<p>Response Noted</p>
<p>Linda Piper, Environmental Scientist Manager</p>	<p>Effective March 21, 2017, East Baton Rouge Parish was designated by EPA as an ozone attainment area with a maintenance plan under the 8-hour standard (81 FR 95051, December 27, 2016). As part of the ozone maintenance area, federal activities proposed in East Baton Rouge Parish may be subject to the State’s general conformity regulations as promulgated under LAC 33:III.Chapter 14, Subchapter A, Determining Conformity of General Federal Actions to State or Federal Implementation Plans.</p> <p>In order to determine if the proposed project in East Baton Rouge Parish is subject to the full requirements of the general conformity regulations, the project sponsor must first make a general conformity applicability determination. This determination can be made by summing the total of direct and indirect volatile organic compound (VOC) and nitrogen oxide (NOx) emissions caused by the project. If the net total of VOC and NOx emissions is determined to be less than the prescribed de minimis level of 100 tons per year per pollutant, then this action will comply with the conformity provisions of Louisiana’s State Implementation Plan (SIP) and the Air Planning and Assessment Division will not object to implementation of the project.</p> <p>Please email your general conformity applicability determination to Linda Piper, Linda.Piper@LA.GOV.</p>	<p>As presented in Section 4.1.2.1 thru Section 4.1.3 of this document, for 2022-2024, this project’s air quality contributions are calculated as 5.26 tons per year (tpy) of NOx emissions and 0.32 tpy of VOC emissions, well below the de minimis level of 100 tpy per pollutant to comply with the conformity provisions of Louisiana’s State Implementation Plan (SIP).</p>

OWNER/AGENCY	COMMENT/OBJECTION	RESPONSE
<p>U.S. Army Corps of Engineers, New Orleans District</p> <p>Brett Herr, Branch Chief, Lake Pontchartrain and Vicinity Branch</p>	<p>We have reviewed your project, as proposed, and determined that a Department of the Army permit under Section 404 of the Clean Water Act or Section 10 of the Rivers and Harbors Act will not be required. Any changes or modifications to the proposed project will require a revised determination.</p>	<p>Response Noted</p>
<p>U.S. Department of Agriculture, Natural Resources Conservation Service</p> <p>Mitchell J. Mouton, State Soil Scientist</p>	<p>I have reviewed the above referenced project for potential requirements of the Farmland Protection Policy Act (FPPA) and potential impact to Natural Resources Conservation Service projects in the immediate vicinity.</p> <p>Projects are subject to FPPA requirements if they may irreversibly convert farmland (directly or indirectly) to nonagricultural use and are completed by a federal agency or with assistance from a federal agency. For the purpose of FPPA, farmland includes prime farmland, unique farmland, and land of statewide or local importance. Farmland subject to FPPA requirements can be forest land, pastureland, cropland, or other land, but not water or urban built-up land.</p> <p>The project map and narrative submitted with your request indicates that the proposed construction area is in an urban area and therefore is exempt from the rules and regulations of the Farmland Protection Policy Act (FPPA)—Subtitle I of Title XV, Section 1539-1549.</p> <p>Furthermore, we do not predict impacts to NRCS work in the vicinity.</p>	<p>Response Noted.</p>

6.1.3.1 Recirculated Draft Supplemental EA

A Draft Supplemental EA was published on May 16, 2022. Public notices were placed in the Baton Rouge Advocate on May 16, 2022, and June 2, 2022 advertising the availability of the Draft document and the Public Hearing on June 16, 2022 (advertisements included in Appendix G: Agency and Public Involvement). Additionally, copies of the document were made available on the Airport's website, at the Airport's Administrative Offices, the Baton Rouge Main Library, and the Scotlandville Branch Library. No comments were made on the Draft Supplemental EA document itself. Comments received at the Public Hearing are included in Appendix H: Response to Comments.

Following the Public Review of the Draft Supplemental EA, additional clarification was required related to the relocation of navigational aids in response to FAA comments on the first Draft Supplemental EA. Therefore, the Draft Supplemental EA was recirculated for public review on October 12, 2022. Public notices were placed in the Baton Rouge Advocate on October 12, October 19, and October 26, 2022 (advertisements included in Appendix G: Agency and Public Involvement). Additionally, copies of the document were made available on the Airport's website, at the Airport's Administrative Offices, the Baton Rouge Main Library, and the Scotlandville Branch Library. No comments were received on the Recirculated Draft Supplemental EA document.

6.1.4 Final EA

The Final EA will be made available at the Airport's administrative office and on the Airport's website.

7. List of Preparers

7.1 Lead Agency

The FAA is the lead agency for the preparation of this EA. Responsibility for review and approval of this EA rests with the FAA. The following FAA staff members were involved in the preparation of this EA:

Tim Tandy, Environmental Protection Specialist

7.2 Principal Preparers

Responsibility for preparation of this EA rests with the Baton Rouge Metropolitan Airport Commission. Listed below are the persons responsible for the preparation of this EA.

7.2.1 Baton Rouge Metropolitan Airport Commission

Mike Edwards, Director of Aviation

7.2.2 Kutchins & Groh

Bradley C. Kutchins, P.E. B.S., Civil Engineering. 33 years of experience. Responsible for contractual oversight of the EA preparation and client coordination.

7.2.3 Compliance Consultants

Mary M. Field, P.E. BS Civil Engineering, MS Environmental Engineering. 37 years experience. Responsible for project management and EA preparation.

Stephen D, Field, P.E. BS, MS, PhD. Environmental Engineering. 44 years experience. Responsible for noise analysis and air quality oversight.

Ashley Leggitt, DVM. Nine years' experience. Responsible for biological resources and wetlands evaluation.

Jason Field, P.E. BS Civil Engineering, MBA. 15 years' experience. Responsible for floodplain analysis, drainage and hydraulic impacts, noise model.

Dixie Gregory, BS, Business Management/Psychology. 32 years experience. Responsible for document research and technical writing/preparation.

7.2.4 GoTech

Rhaoul A. Guillaume, Sr., P.E., F.ASCE B.S., Civil Engineer, 50 years of experience. Responsible for oversight / coordination and meeting attendance.

7.2.5 W.D. Schock Company

Leigh Lasley, President and CEO. 29 years experience. Responsible for contractual oversight of the EA preparation and client coordination.

Cindy (Boudreaux) Kelly, Assistant Project Manager. 24 years experience. Responsible for research.

Michael DeFelice, over 30 years experience, MAI, SRA, Real Estate Appraiser & Analyst

7.2.6 Newhouse and Associates, LLC

Monica R. Newhouse, B.S. Aerospace, M.B.A. Information Decision Sciences. 26 years of experience. Responsible for overall document preparation and technical writing.

EXECUTIVE SUMMARY

In 2017, a Phase I Environmental Site Assessment (ESA) was performed by Compliance Consultants, Inc. (CCI) under contract with Kutchins & Groh, consultants to Baton Rouge Metropolitan Airport (“Client”), located in Baton Rouge, Louisiana. The extent of the project area has expanded due to proposed changes to exiting roadway configurations and connections. CCI was engaged to update the original ESA that incorporates the new proposed project areas.

For this task, inspections were performed, environmental agencies were contacted, individuals knowledgeable with the site were interviewed, and regulatory personnel were questioned. A regulatory database was obtained and reviewed, along with historic Sanborn® maps, historic aerial photography, and historic topographical maps. **It is concluded that there is evidence of “recognized environmental conditions”, by the current ASTM standard, associated with past or existing practices near the site.**

Specific findings and recommendations are detailed in the report. This supplemental assessment was performed according to the American Society for Testing and Materials Standard Practice (E 1527-13), to satisfy the **“innocent landowner”** defense under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), also known as (“Superfund”).

**SUPPLEMENTAL
PHASE I ENVIRONMENTAL SITE ASSESSMENT
Baton Rouge Metropolitan Airport
Runway 13-31 Safety Area and Protection Zone Improvements
EAST BATON ROUGE PARISH, LOUISIANA**

1.0 INTRODUCTION

1.1 Purpose

The purpose of this Supplemental Phase I Environmental Site Assessment (ESA) is to identify, to the extent feasible pursuant to the processes described herein, *recognized environmental conditions* at the proposed site for Runway 13-31 Safety Area and Protection Zone Improvements at the Baton Rouge Metropolitan Airport (BRMA). The improvements to the runway protection zone require a realignment of Plank Road and potential improvements to Hooper Road. The original proposed project area has recently been expanded. The site of investigation is located in Baton Rouge, Louisiana, in East Baton Rouge Parish at latitude N 30°31'39.64" and longitude W 91°08'16.94". Figure 1 shows the site location and Figure 2 shows the corridor of the new potential road improvements.

Compliance Consultants, Inc. (CCI) personnel Mary M. Field, P.E., Cory Rogers, Environmental Tech, performed an environmental assessment in accordance with ASTM E 1527-13. This supplemental report presents the results of the investigation.

1.2 Detailed Scope-of-Services

The primary goal of an environmental site assessment is the identification of a "recognized environmental condition." A "recognized environmental condition" means the presence or likely presence of any hazardous substance or petroleum product in, on, or around a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

De minimus conditions are conditions that generally do not present a threat to human health or to the environment and that generally would not be the subject of an enforcement action, if brought to the attention of appropriate governmental agencies. *De minimus conditions* are not

recognized environmental conditions or controlled recognized environmental conditions. De minimus conditions are not included in this report.

An evaluation of the business environment risk associated with the property is beyond the scope of this report.

1.3 Limitations and Exceptions of This Report

This supplemental ESA was developed using the ASTM E 1527-13 standards, which are designed to meet the *All Appropriate Inquiries* standard for property purchasers, with the exception of items noted herein. Due to the large size of the property, the investigation protocol for large parcels was followed. This included a review of most of the perimeter of the site, walking interior portions of the site, and traversing the surrounding area. As per the ASTM standard, not every square foot of the property was investigated. **However, a reasonable effort was made to review the property and to view the surrounding area.** It is possible that small amounts of hazardous substances are present that were not directly observed; however, as per the ASTM standard, this information is not considered “reasonably ascertainable” nor would it be expected to indicate a recognized environmental condition.

CCI did not perform a complete assessment of all possible conditions or circumstances that may exist at the referenced site. For example, buried debris, in addition to any surface debris found, may exist and was not found due to the limitations of the Phase I ESA process. Also, certain items are specifically not included in the scope of services. These include asbestos or lead inspection, sampling, and analysis of structures; geotechnical investigations; and the presence of endangered species. Assessment regarding the eligibility of the site for the National Register of Historic Places was excluded since this is outside the scope of a Phase I ESA. No information regarding environmental liens was supplied. The user of this report did not supply any special knowledge concerning the site.

The Phase I Environmental Site Assessment process does not include inspections of physical structures from an engineering standpoint, nor does it include inspections of electrical, heating and cooling, utilities, or other systems that constitute improvements on the property except as specially discussed herein. This report does not constitute a warranty or guarantee of conditions at or near the site.

The Phase I Environmental Site Assessment process does not address whether requirements, in addition to the *All Appropriate Inquiries*, have been met in order to qualify for

the “Landowner Liability Protections” (LLPs), including the continuing obligation not to impede the integrity and effectiveness of Activity and Use Limitations (AULs), or the duty to take reasonable steps to prevent releases, or the duty to comply with legally required release reporting obligations.

Additionally, there are requirements of local, state or federal laws other than the *All Appropriate Inquiries* provisions of the LLPs. Federal, state, and local laws may impose environmental assessment obligations that are beyond the scope of this report. Other legal obligations with regard to hazardous substances or petroleum products discovered on the property that are not addressed in this report and that may pose risks of civil and/or criminal sanctions for non-compliance may exist.

A supplemental investigation was deemed necessary due to the expansion of the proposed project site the time frame that the original Phase I could be relied upon. At the time of this report, CCI personnel were not granted access to all properties.

1.4 Special Terms and Conditions

This Supplemental Phase I Environmental Site Assessment was performed by CCI expressly for the client, at the location described herein, on November 16, 2021. As per ASTM E 1527-13, the information provided may be relied upon for 180 days after the date of this report. This report is subject to certain limitations that are noted herein. In addition, it must be recognized that the passage of time affects the information provided in the report and in the databases reviewed as part of this work.

The Phase I Environmental Site Assessment process includes research and reporting requirements that support the user’s ability to qualify for the LLPs. As such, sufficient documentation of all sources, records, and resources utilized in conducting this inquiry required by this process is provided in this report.

1.5 User Reliance

This Phase I Environmental Site Assessment permits a user to satisfy one of the requirements to qualify for the “innocent landowner”, “contiguous property owner”, or “bona fide prospective purchaser” limitation on CERCLA Liability, otherwise referred to as “landowner liability protections,” or “(LLPs)”, which allows for “all appropriate inquiries” into

the previous ownership and uses of the property consistent with good commercial or customary practice as defined in (42 U.S.C. § 9601 (35)(B)).

2.0 SITE DESCRIPTION

2.1 Site Location

The Baton Rouge Metropolitan Airport (BRMA) and the project site are located in the northwest portion of East Baton Rouge Parish, about five miles north of downtown Baton Rouge, Louisiana. The BRMA complex is bordered by Interstate I10 to the west, T. B. Herndon Avenue and Harding Boulevard/Hooper Road (LA 408) to the south, Plank Road (LA 67) to the east and Blount Road to the north. The proposed site for the BRMA improvements project will include the re-routing of Plank Road and Hooper Road located south of the BRMA complex as well as improvements to portions of Hooper Road, Plank Road and Harding Boulevard. A Site Location Map is shown on Figure 1. Additional supporting details of the on-site investigation are included in the Site Inspection Report in Appendix A. Photographs of the site and surrounding area are also included in Appendix A.

2.2 Site and Vicinity Characteristics

The project site is located in Baton Rouge, Louisiana, and includes a mix of commercial, governmental, light, industrial facilities and residential housing, and undeveloped property. The proposed project site is primarily centered on the intersection of Plank Road and Hooper Road and Harding Boulevard. Plank Road runs north and south and is adjacent to the BRMA complex. Hooper Road and Harding Boulevard run east and west through the proposed project area and are located south and southeast of the BRMA complex.

Figure 2 shows the corridor for the Plank Road elevated sections.

2.3 Current Uses of the Adjoining Properties

A variety of light industrial businesses, commercial sites, and governmental offices are located adjacent to the target site. These include: United States Postal Service, ExxonMobil Station, Shell Gas Station, Chase Bank, Cube Smart Self Storage, Pirates Bend Apartments, Baton Rouge Metropolitan Airport, Executive Aviation, Civil Air Patrol, Transmission Service Connection, Bust Out Bail Bonds, Express Jet Airlines, and All Star Chevrolet North. Residential tracts and undeveloped land are found along the northeastern side of the target site. Other uses along Hooper Road include additional residential home sites, apartments and senior citizen apartments.

3.0 USER PROVIDED INFORMATION

3.1 Title Records

No title records for the subject property were presented to CCI. Any title records submitted within a 10-day release of this report will be reviewed, and the report will be amended.

3.2 Environmental Liens or Activity and Use Limitations

No information relating to environmental liens, or activity and use limitations for the property, were supplied to CCI.

3.3 Valuation Reduction for Environmental Issues

There was no information supplied by the client concerning a valuation reduction for environmental issues.

3.4 Owner, Property Manager, and Occupant Information

Questionnaires were sent to each owner with a parcel or parcels associated with the target site. These questionnaires are used to ascertain additional information concerning the environmental history of each parcel. The completed questionnaires are included in Appendix C.

3.5 Reason for Performing Phase I ESA

The purpose for conducting the Phase I Environmental Site Assessment is to determine, to the extent possible, if there are any “recognizable environmental conditions” associated with the property. The prior Phase I investigation had indicated the presence of “recognized environmental conditions” and additional investigations were undertaken in November 2021. Because additional traffic improvements may require pile supported elevated sections, this Supplemental Phase I ESA was prepared.

4.0 ENVIRONMENTAL DATABASE SEARCH AND REVIEW

4.1 Overview of Databases

An extensive search of federal and state databases was conducted to determine if there were any reported recognized environmental conditions for the subject property or any other property within the radius limits as set by American Society for Testing and Materials (ASTM). The Environmental Data Resources, Inc. (EDR) database report, included in Appendix B, searched for identified information in the following records: Standard Environmental Records, Additional Environmental Records, EDR High Risk Historical Records, and EDR Recovered Government Archives. Searchable lists included in these records are shown below:

- Standard Environmental Records
 - Federal NPL site list
 - Federal Delisted NPL site list
 - Federal CERCLIS list
 - Federal SEMS-ARCHIVE site list
 - Federal RCRA CORRACTS facilities list
 - Federal RCRC non-CORRACTS TSD facilities list
 - Federal RCRA generators list
 - Federal institutional controls/engineering controls registries
 - Federal ERNS list
 - State and tribal equivalent CERCLIS
 - State and tribal landfill and/or solid waste disposal site lists
 - State and tribal leaking storage tanks list
 - State and tribal registered storage tank lists
 - State and tribal institutional control/engineering control registries
 - State and voluntary cleanup sites
 - State and tribal Brownfields sites
- Additional Environmental Records
 - Local Lists of Landfill/Solid Waste disposal sites
 - Local Lists of Hazardous waste/contaminated sites
 - Local land records

- Records of Emergency Release reports
- Other Ascertainable Records
- EDR High Risk Historical Records
 - EDR Exclusive records
- EDR Recovered Government Archives

Other sources of information that were reviewed include the U.S. Environmental Protection Agency “Envirofacts” database as well as the Louisiana Department of Environmental Quality, UST Division, database. The latter maintains current and updated records concerning Underground Storage Tanks. Together, these two databases supplement the private party database search (EDR).

The database search results in a plot of those potential high liability sites located *on and/or* near the subject property. Occasionally, addresses are reported that are either incorrect or incomplete; these sites are listed as “un-plottable.” A reasonable effort to locate those sites that may affect the subject property was made.

This section describes the databases and indicates, in bold type, if any sites were identified in the search. A complete list of the sites included in the database search is summarized in the Appendix B.

4.2 Standard Environmental Records

4.2.1 Federal NPL and Delisted NPL site list. – **None.** The search did not indicate the presence of any National Priority List (NPL), or "Superfund" sites within a one and a half-mile radius of the subject property. This list includes sites that are included on the NPL list, proposed for the NPL list, or that have NPL liens associated with “Superfund” activities. Also, there were no ‘delisted’ NPL sites found within a one and a half-mile radius of the subject property. These are sites in which Federal actions have been undertaken to remediate the release of hazardous substances, and the action has been completed.

4.2.2 SEMS-ARCHIVE site list. – **One.** The Superfund Enterprise Management System Archive (SEMS-ARCHIVE) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP and renamed to SEMS ARCHIVE by the EPA in 2015. Archived status indicates that, to the best of EPA’S knowledge, assessment at a site has been completed and the

EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL) unless information indicates that this decision was not appropriate or other consideration require a recommendation for listing at a later time. If site conditions change and/or new information becomes available, EPA may continue to perform a minimal level of assessment work at a site while it is archived.

The database search indicated the presence of 1 SEMS-ARCHIVE site. Browning Ferris Industries, located at 7850 Plank Road, appears on this list and is within one eighth-mile radius from the target property. This facility achieved compliance on February 15, 1986, according to the Louisiana Department of Environmental Quality (LDEQ).

4.2.3 Federal RCRA CORRACTS and non-CORRACTS TSD facilities list. – **None.** The Corrective Action Report (CORRACTS) tracks hazardous waste handlers with Resource Conservation and Recovery Act (RCRA) corrective action activity. RCRA are sites that have had remedial actions undertaken in response to a release of hazardous waste and/or hazardous substances. The search indicated no presence of any CORRACTS sites within a one and a half-mile radius of the target property.

The RCRA-TSDF system tracks hazardous waste treatment, storage, and disposal facilities. There were no RCRA-TSDF sites found within one and a half-mile of the subject property.

4.2.4 Federal RCRA generators list. – **Seventeen.** The RCRA Generator (RCRA-GEN) system tracks hazardous waste generators. Large Quantity Generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste per calendar month. **One** LQG site was found within one eighth mile radius of the target property. Qualawash Holdings, LLC, is a LQG located at 5395 Hooper Road.

Small Quantity Generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. **Three** SQG sites were reported within a half-mile radius of the target property at equal/higher elevation. These sites are: Express Jet Airlines, Inc., located at 9455 Plank Road (no violations or evaluations were reported for this site); Peerless Road Unauthorized Dump, located across from 4851 Peerless, (No violations or evaluations were reported for this site) and Star ENT, located at 7160 Plank Road.

The RCRA-VSQG database provides selective information on sites which generate, transport, store, treat and/or dispose of hazardous was as defined by the Resource Conservation and Recovery Act (RCRA) and the Hazardous and Solid Waste Amendments (HSWA). RCRA-

VSQG generators generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. **Fourteen** RCRA-VSQG sites were located within a half-mile radius of the target property.

Seven RCRA-VSQG sites are at equal/higher elevations and within one quarter mile radius of the target site. These sites are: Browning Ferris Industries, located at 7850 Plank Road; Jiffy Lube Intl Inc.; located at 7818 Plank Road; Exxonmobil Oil Corp., located at 7997 Plank Road (no violations/evaluations reported); Baton Rouge Fire Department, located at 8011 Merle Gustafson (no violations/evaluations reported); Bellsouth K3207 (no violations/evaluations reported), located at 4070 Harding Boulevard; Coca Cola Bottling Co., located at 9696 Plank Road (no violations/evaluations reported); and Plank Road Cleaners, located at 7332 Plank Road (no violations reported).

The remaining 7 RCRA-VSQG sites are listed at lower elevations than the target site and include: Chevron SS, located at 4716 Hooper Road; Keans the Cleaner, located at 8178 Plank Road; Dollar General 4216, located at 4770 Hooper Road, FAA Baton Rouge SSC, located at 8326 Merle Gustafson; LA Aircrafts, at 4225 Chuck Yeager Avenue; Exxon Co USA 50627, located at 6404 Hooper Road and Roadrunner Wrecker Service, located at 3465 Harding Blvd. No violations/evaluations were found for these sites.

4.2.5 Federal institutional controls/engineering control registries. – **None.** US Engineering Controls Sites List (US ENG CONTROLS) is a listing of sites with engineering controls in place. Controls include various forms of caps, building foundations, liners and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health. No such listings were found within one and a half-mile radius of the subject property.

US Institutional Control sites (US INST CONTROL) include administrative measures such as restrictions on groundwater use, construction, property use to prevent exposure to contaminants remaining on site. There were no US INST CONTROL sites discovered within a one mile and a half radius of the subject property.

Land Use Control Information System (LUCIS) contains records of land use control formation pertaining to the former Navy Base Realignment and Closure properties. No LUCIS sites were found within one-and-a-half-mile radius of the target site.

4.2.6 Federal ERNS list. – **Three.** The Emergency Response Notification System (ERNS) list records and stores information on reported releases of oil and hazardous substances

associated with the target property. The database search indicated 3 ERNS records for a site located at 5395 Hooper Road and located within a quarter mile radius of the target site.

The following incidents occurred at a site located at 5395 Hooper Road. On March 23, 1992, during a cleaning procedure, a caustic vat hose came loose and approximately 200-gallons of sodium hydroxide flowed into a parking lot and ditch. The material was contained and none reached water. On November 18, 1993, a sheen from an unknown oil material was discovered at the same location. The unknown material was recovered and put into drums and disposed of. Then, on February 12, 2007, facility personnel observed an unknown white powder when arriving for work. The powder had been released on the property over the weekend. The substance was collected by U.S. Environmental Services personnel and disposed of. No other information is presented regarding these incidents.

4.2.7 State and tribal landfill and/or solid waste disposal site lists. – **None.** These databases include the following: Solid Waste Facilities/Landfill Sites (SWF/LF), Louisiana Department of Environmental Quality Approved Debris Sites (LDEQ DEBRIS or LDEQ HIST DEBRIS). No SWF/LF, LDEQ DEBRIS, or LDEQ HIST DEBRIS sites were found within the search radius of a half -mile from the target site.

State and tribal-equivalent CERCLIS (SHWS). The database search indicated 1 SHWS site; X-Pert Tune, located at 4474 Airline Hwy and found within one quarter mile radius of the target site. No pertinent information is reported for this site.

4.2.8 State and tribal leaking storage tank lists. – **Eighteen.** These databases include the following: Leaking Underground Storage Tanks (LUST), Underground Storage Tank Case History Incidents (HIST LUST), and Leaking Underground Storage Tanks on Indian Land (INDIAN LUST). Research did not indicate any INDIAN LUST sites within one mile of the target site.

Eleven LUST sites were found. **Five** of the LUST sites are located at equal/higher elevations and a within a half-mile radius of the target site. The LSUT sites are: Rite Track, located at 4114 Harding Boulevard; Exxonmobil Oil Corp., located at 7997 Plank Road (1 LUST removed in April, 1984); Etoile De Mer LLC, located at 7175 Plank Road; Texaco #44-398-1307, located at 7160 Plank Road and Earl Scheib Auto Paint & Body, located at 7550 Plank Road.

The Earl Scheib Auto Paint & Body site is located within a one-eighth mile radius of the target site. A Phase II site investigation conducted on April 27, 2009, indicated levels of benzene

and TPH-G in soil and groundwater samples exceeding RECAP Screening Standards (SS). In October 2009, two USTs were removed from the property. Re-sampling performed on July 28, 2016, found all Constituents of Concern (COCs) to be below RECAP Screening Standards. A “No Further Interest” letter was granted by LDEQ on September 30, 2016. No other recent violations have been reported for this site.

The following 6 LUST sites are located at lower elevations and within a one-mile radius of the target site. The sites are: Plank Food Mart, located at 8085 Plank Road; Chevron Station Inc. #109056, located at 4716 Hooper Road; LA0046, located at 8133 Plank Road; The “C” Store, located at 7111 Hooper Road; Con-way Freight, located at 3125 Harding Boulevard; and Delta 3040, located at 4719 Airline Hwy. See HIST LUST section for more information about these LUSTs.

HIST LUST sites are sites of previous underground leaking storage tanks that have been removed, the area remediated, and cases closed by LDEQ. **Seven** HIST LUST sites were found within a one-mile radius of the target site. **Two** HIST LUST sites are found at equal/higher elevations and are: Baton Rouge Commercial BFI #279, located at 7850 Plank Road and Texaco #44-398-1307, located at 7160 Plank Road.

Baton Rouge Commercial BFI #279 appears on this list after gasoline was discovered in the soil during an UST removal in July, 1994. LDEQ-directed remediation was conducted at the site and a “no further assessment and/or remediation” letter was granted by the LDEQ on September 10, 1998.

Former Texaco Station #44-398-1307 experienced a 33-gallon gasoline leak in November, 1998. Remediation was completed and a “No Further Action” letter was granted by LDEQ on July 23, 2009.

A discussion of the 5 HIST LUST sites located at lower elevations and with one mile radius of the target site follows.

Plank Food Mart, located at 8085 Plank Road, reported a gasoline leak in April, 1989. A Corrective Action Plan was approved by LDEQ and implemented, and a “No Further Action” letter was granted by LDEQ on December 5, 2008.

Hooper Road Exxon 5062, located at 6404 Hooper Road, reported a gasoline leak in February 1993. A Corrective Action Plan was implemented and a “No Further Action” letter was granted by LDEQ on April 3, 1996.

The “C” Store, located at 7111 Hooper Road, reported a gasoline leak due to a line leak detector trip off in May 1992. Energy Equipment performed the repair work. No other information is provided.

An unreported gasoline incident occurred at Steve Thompson Trucking, located at 3125 Harding Boulevard, in July, 1998. In 1996 a UST assessment found groundwater in 2 borings which were removed in May, 1998. Elevated BTEX and TPH were also found in the soil. A scope of work was prepared and approved by LDEQ in May, 1999. A proposal for an additional site assessment was completed in July, 1999.

Delta 3040, located at 4719 Airline Hwy, reported a dispenser leak in January, 1992. LDEQ requested CAP alternatives and approved a passive remediation in December 1998. A 1999 Corrective Action Status Report indicated BTEX concentrations above DEQ closure levels and recommended removal. In March, 1994, a defective submerged pump caused a leak on an unleaded plus product line. A Phase II Assessment report was submitted on March 30, 1994. LDEQ accepted a Quality Report and disapproved on December 12, 1994, a request for discontinuance of the sampling program. No other information was reported for this site.

4.2.9 State and tribal registered storage tank lists. – **Twenty-four.** The Underground Storage Tank (UST) database contains registered USTs. **Fourteen** UST sites were found at equal/higher elevations and within a half-mile radius of the target property. Information concerning these UST sites follows.

Blue Chip Ice Co., located at 9022 Plank Road. Two USTs were removed from this site in 1997. No other information is provided.

Section 42 Old State Hanger, located at 9195 Plank Road. Two USTs at this site were closed in 1980. No other information is listed for this site.

The LDEQ database search reveals the Rite-Track site had 2 inactive USTs that we closed in accordance with RECAP Screening Standards in 2021. No incident was reported.

Browning Ferris Industries, 7850 Plank Road reported 1 UST and removed 3 USTs in 1994 according to the LADEQ database search.

The Jiffy Lube #472, located at 7818 Plank Road, had 1 used oil UST closed in 1996. No other information is given for this site.

Exxonmobil Oil Corp., located at 7997 Plank Road, had 4 USTs closed and removed in 2003. A database search indicated a Site Assessment conducted at the site in 2011. Groundwater sampling indicated groundwater RECAP Screening Standard exceedances. LDEQ

recommended closure of all borehole and/or monitoring/recovery wells present at the site. In September, 2011, plugging and abandonment of monitoring wells was successfully completed. The location was sold to Circle K Stores Inc. (Circle K #7657) in November, 2011.

In 1997, 2 USTs and associated equipment were removed from AT&T Services DBA AT&T, located at 4070 Harding Boulevard, site. No other UST information was reported for this site.

The database search indicated the Coca-Cola Bottling Co. United Inc., located at 9696 Plank Road, site had 2 active USTs that were installed in 2008. No further information is provided.

Executive Aviation LLC, located at 4490 Blanche Noyes Avenue; had 3 active USTs for aviation fuel and 1 1,000-gallon UST was closed and removed in 1993.

Earl Scheib Auto Paint & Body, located at 7550 Plank Road had 2 USTs closed & removed in 2009. The LDEQ database indicates a 2009 Phase II Site Investigation was conducted in regard to a real estate transaction. The investigation revealed soil and groundwater RECAP exceedances. Subsequently, 2 600-gallon USTs were removed. In 2016, the LDEQ granted a “No Further Interest Letter”.

Louisiana Community Technical College System, located at 4460 Blanche Noyes Avenue had two, 6,000-gallon jet fuel tanks removed from in February 2007.

Etoile De Mer LLC, is a former Chevron USA, Inc, Service Station 60210428 and d/b/a “Swiftly’s Food Mart #21” site. According to LDEQ database search, a site investigation and work plan was performed in response to a 2004 suspected hydrocarbon release at the site. As a result, additional sampling was requested in accordance with RECAP standards. Four monitoring wells were installed. The LDEQ ordered the wells plugged and abandoned in 2006. This site was purchased by Amar Brother, LLC in 2003.

In 2003, 4 USTs were removed from Texaco #44-398-1307, 7160 Plank Road, site. No further information is provided for this site.

In 1996, 4 USTs were removed from the Closed Shell Gas Station, 7070 Plank Road, site. No other information was reported in the database search.

The database search identified **Ten** UST sites located at lower elevations within one-half mile radius of the target site. These USTs are discussed below.

Plank Food Mart, located at 8085 Plank Road. See Section 4.8 of this report for more information concerning this site.

In 1990, the database search revealed 7 USTs were removed from Chevron Station Inc.#109056, 4716 Hooper Road. No other information was reported in the database search.

Three active USTs(2 12,000-gallon gasoline and 1 8,000-gallon diesel fuel) were removed from the LA 0046 site. No other information was reported in the database search.

Cecil D. Gassiott LLC, located at 5151 Hooper Road, site closed 1 UST in 1983. No other information was reported in the database search.

The database search indicates James A Teague Rental Equipment, located at 8195 Plank Road, had 1 UST removed in 1994. No other information was reported in the database search.

Two USTs were removed from the Final Approach Inc., 4411 Chuck Yeager Ave., in 1998. No other information was reported in the database search.

Texaco Agency, 6404 Hooper Road, closed 4 USTs in 1986 and has 2 active USTs. No other information was reported in the database search.

One UST was located within a quarter mile radius of the target site. The site is Race Trac #117 3730 Harding Boulevard. This site has 3 active USTs. No other information was reported in the database search.

Four USTs were removed from Tire Discount, located at 6970 Plank Road, site in 1999. No other information was reported in the database search.

Two USTs were removed from Edwin A Bordelon, located at 6920 Plank Road, site. One UST was removed in 1992 and the other tank was removed in 1993. No other information was reported in the database search.

4.2.10 State and tribal institutional control/engineering control registries. – **Seven.** Sites on the Activity and Use Limitations (AUL) list have a notice of contamination (nature and levels of contaminants) and a restriction of property to non-residential use placed in the conveyance records for the property. The **Seven** AUL sites are located within a three-quarter mile radius of the target site. **Three** AUL sites are located at equal/higher elevations within a one-eighth mile radius of the target site. These sites are: Rite-Track Deli & Grill, located at 4114 Harding Boulevard; Pel State Oil Company #48, located at 4113 Harding Boulevard and Texaco #44-398-1307, located at 7160 Plank Road.

Rite-Track Deli & Grill, was once the site of Pel State Oil Company #48 Pel State that operated the site as a convenience store and retail fuel facility since 1969. In October 2000, hydrocarbons were detected in both soil and groundwater samples during a Phase II Environmental Site Investigation due to a leaking UST. A remediation plan was approved by

the LDEQ and was carried out until the contamination was reduced to the extent necessary to achieve standards compatible with industrial occupancy. A “No Further Action Required” letter was submitted by the LDEQ on January 3, 2007. If the land use is to be changed from industrial to non-industrial, the LDEQ shall be notified by the responsible party within thirty days and the site shall be reinvestigated to determine if the site is suitable for the proposed use.

Four AUL sites are located at lower elevations and within one-mile radius of the target site. These AUL sites are identified as: Plank Food Mart, located at 8085 Plank Road; Chevron Station Inc., located at 4716 Hooper Road; Con-way Freight-LB, located at 3125 Harding Boulevard and Delta 3040, located at 4719 Airline Hwy.

4.2.11 State and tribal Brownfields sites. – **None.** Brownfields (BROWNFIELDS) are underused or abandoned properties that potentially contain a hazardous substance and complicate the development of said property. No sites were located within a half-mile radius of the target site.

4.3 Additional Environmental Records

4.3.1 Local Brownfield list. – **None.** US Brownfield sites are properties that are potentially usable, but may contain hazardous substances from previous occupants. No US Brownfield sites were recorded within a half-mile search of the target site.

4.3.2 Local landfill/solid waste disposal sites. – **Three.** This database includes sites listed on the Recycling Directory (SWRCY). **Two** SWRCY sites are identified at equal/higher elevations and located within a one-eighth mile radius of the target site. These sites are: LA Lubricants DBA Jiffy Lube #472, located at 7818 Plank Road and Coca-Cola Bottling Co. United Inc., located at 9696 Plank Road.

The LA Lubricants DBA Jiffy Lube #473 site voluntarily accepts and disposes of used motor oil in accordance with the LDEQ.

One SWRCY site; Con-way Freight-LB, a trucking facility, is located at 3125 Harding Boulevard and is located at a lower elevation and within a one-mile radius of the target site.

4.3.3 Local lists of hazardous waste/contaminated sites. – **Two.** Deleted Potential & Confirmed Site (DEL SHWS) are properties that were once a potential source of hazardous waste, but have since been rectified by the responsible party. **Two** DEL SHWS sites were reported as being at a lower location and within a one-mile radius of the target property. The

sites are: Abandoned Drum Site, located at 6770 Sumrall Drive and Auto Shop-Burn Site, located at 2404 72nd Avenue.

The LDEQ EDMS database revealed an investigation of the Abandoned Drum Site in April, 2008. At that time the property was found to have 12 heavily rusted 55-gallon drums on site and a vacant house listed for sale. A follow up site visit found the house occupied and the unidentified drums in the same condition as before. In 2009, it was determined the original contents of the drums contained tetraethyl lead. The LDEQ requested the property owner to submit a Removal Action Work Plan. In April, 2011, the LDEQ invoked its statutory authority to conduct a site investigation of the site. Subsequently, the drums were removed and contents sampled. The LDEQ granted a No Further Action letter on June 3, 2013. The case was settled on October 11, 2017.

A search of the LDEQ EDMS database indicates the Auto Shop-Burn Site, an auto mechanics shop, caught fire and burned down in February 21, 2007. The fire caused chemicals to spread to a neighbor's yard. A site investigation was conducted, samples were taken, and the matter was referred to remediation in September, 2007. In November, 2013 a Work Plan and Technical Sampling and Analysis Plan was submitted to the LDEQ. In April, 2014, a Phase II Site Assessment investigation was conducted to determine soil and groundwater conditions at the burn site. COCs were found to be present in soils and groundwater that exceeded RECAP SS standards. On October 7, 2015, the LDEQ determined that no further action was necessary.

4.3.4 Local Land Records. – **None.** No Environmental Liens (LIENS) or CERCLA Lien Information (LIENS 2) were reported.

4.3.5 Records of Emergency Release Reports. – **Forty-one.** Reports of environmental emergency or incidents that pose a sudden threat to public health. The SPILLS database is a collection of spills and/or releases, to land, reported to the Emergency Response Section. The database search identified **Twenty-six** SPILLS sites located at equal/higher elevations and within one-quarter-mile radius of the target site. These sites are identified as:

LDEQ database records indicate a report of a fire of unknown origin at the warehouse on September 18, 2009, was reported for Harvey Hilburn Tractor Co., Inc., 5407 Hooper Road. The incident is closed.

On September 6, 2011, a 50,000-gallon sewage spill occurred at East Baton Rouge City Parish-North Wastewater Treatment Plant (WWTP), located at 6175 Hooper Road. The spill

occurred when an air release valve broke releasing sewage into a storm drain. The pump was repaired and the area was deodorized and disinfected. LDEQ reports the incident is closed.

ExxonMobil Refining & Supply, located at 7997 Plank Road, reported a release of Phase II ground water concentrations of total petroleum hydrocarbon, gasoline (TPH-G), total petroleum hydrocarbons-diesel (TPH-D), Benzene, arsenic, lead, and methyl-tertiary butyl ether (MTBE) above RECAP Screening Standards (SS) on May 4, 2011. In January, 2007, the supreme gas failed to shut off and gas spilled on the ground. LDEQ reports these incidents are closed.

Incident #95475. In November, 1993, a truck overturned and spilled a hazardous chemical at Plank Road and Harding Boulevard. The cause of the incident is reported as unknown and unreported. The incident is now closed.

During an environmental assessment in October, 2000, Benzene, toluene, ethylbenzene, and xylene (BTEX) & MTBE contamination was discovered at Pel State Oil, Fina No. 48, 4114 Harding Boulevard. The incident is reported as closed.

On January 12, 2021, during a tank closure, Benzene, Ethylbenzene, Total Xylenes and TPH-G were detected above RECAP Screening Standards at the Rite-Track, 4114 Harding Boulevard. This incident is closed.

A malfunctioning valve on a tank truck caused used oil to overfill and spill onto the ground. The incident occurred at Jiffy Lube #472, 7818 Plank Road. The incident occurred in March, 2005 and is closed.

In February 8, 2004, the East Baton Rouge City Parish-North WWTP, located at 5885 Hooper Road, reported a deteriorated air release valve. On February 7, the East Baton Rouge City Parish-North WWTP, reported an air release due to a ruptured valve. These incidents are closed.

A 250-gallon, underground tank was discovered during an EBR City Parish Road construction project at 7700 Velie. The tank was full of water and emitted some propane-like odors. Oil Mop sampled the tank area. The incident is closed.

In August, 2009, the Coca-Cola Bottling Company, located at 9696 Plank Road, reported a wastewater spillage. The facility remediated the spillage. In April, 2015, a 500-gallon release of wastewater was reported for this site. The incident was due to a failed lift station. The facility deployed spill response equipment to reduce the amount of discharge to storm drains. The site also experienced an ammonia release due to a leaking compressor gasket in June, 2016. Diesel,

gasoline and oil tanks at the site were flooded during an August 2016, flood event. In September, 2015, sewerage water backed upon on Cola-Cola's property. These incidents are closed.

Arkel Constructors LLC, located at 4490 Blanche Noyes Avenue, overfilled a tank and spilled 68-gallons of jet fuel on the pavement in January, 2005. This incident is closed.

In November, 2000, Executive Aviation Baton Rouge Metro Airport, located at 4490 Blanche Noyes Avenue, reported a leak of under 10-gallons of aviation gasoline while doing repairs. This incident is closed.

A report of pouring motor oil on the ground occurred at the property of Harry Christophe, located at 5156 Stearns Street, in April, 2006. A search of the LDEQ records indicates the Constable's office sized the property. The ground at the site was found to be saturated with waste oil and 5 drums, of unknown contents, had been abandoned. The incident was referred to Enforcement. No further information is provided.

In October, 2002, nearby residents reported odors from Earl Scheib Auto Paint & Body, located at 7550 Plank Road. In May, 2009 this facility was referred to remediation for potential soil and groundwater sampling above RECAP standards. No further information is reported concerning these incidents.

East Baton Rouge Parish DPW, located at 4848 Cadillac Street, reported a freon odor in June, 2004. EBR DPW also reported a sewage leak at 8777 Cedar Glen. No sewage leak was detected. In May, 2004, the EBR Parish responded to brown liquid flowing from woods near the Baton Rouge Airport at 5741 San Juan Drive. These incidents are reported as closed.

A-1 Lawnmower Repair, located at 7330 Plank Road, reported a truck ran over a sewer pipe in September, 2001. This incident is closed.

The EBR City Parish – North WWTP reported a sewage overflow at 5221 Monarch Avenue in December, 2001. This incident is closed.

Fifteen SPILLS sites were revealed to be at lower elevations and within a quarter mile radius of the target site. A discussion of these sites follows.

In July, 2016, an investigation was conducted at Qualawash Holdings LLC, 5395 Hooper Road, following complaints of a rotten egg odor; however, no odors were detected. In February, 2007, 2,000 lbs. of an unknown white powder were discovered on the ground and in standing water on the property. In October, 2003, a tank was uncapped to clean the tank and discovered product remained in the tank. In February, 2010, DPW representatives conducted an on-site visit following a request to re-open the facility. Abandoned drums and containers with suspected

hydrocarbons were found. A complaint of a strong odor coming from the facility was reported in May, 2003. In August, 2015, a complaint was made of a probable residual product released from a tank truck. These incidents are reported as closed.

A bad odor was reported at 8357 McClelland Court in April, 2005. In May, 2005, a report of a chemical odor since January or February was made. These incidents are reported as closed.

East Baton Rouge City Parish-North WWTP responded to a sewer overflow from a manhole at 8357 McClelland Drive, in June, 2004. In October, 2005, a resident reported odor penetrating her home. These incidents are reported as closed.

In May, 2005, a report of an unknown red liquid in a canal was reported at Merle Gustafson and T.B. Hearndon. The report is closed.

Petroleum hydrocarbons found above RECAP standards were reported at Shell #166535, 8133 Plank Road, on March 9, 2006. This incident is closed.

On May 23, 2003, Chevron, located at 4716 Hooper Road, was found to have sampled groundwater from monitoring above RECAP standards. The matter was referred to LDEQ Remediation. In March, 2006, Chevron had a diesel release from a UST and dispenser island. This matter was also referred to remediation. Gasoline and diesel were released in March, 2006, at the site. The cause of the release is reported as unknown. No further information is provided about these incidents.

Circle K #9727, located at 8133 Plank Road, had an inconclusive detection release. An investigation was conducted and tank testing passed. On September 18, 2009, an incident occurred involving soil. No other information is provided. On July 31, 2007 it was reported a diesel tank failed. This incident is closed.

On August 16, 2001, a spill occurred at an abandoned gas station located at 6404 Hooper Road. No other pertinent information is provided about this incident.

On January 27, 2021, several materials were detected above RECAP at an EMS Vehicle Maintenance and Storage Facility, 3801 Harding Boulevard. Remediation notification was recommended. According to LDEQ records, this incident is reported as open.

On April 30, 2003, a report was made of odor in air causing burning eyes at 3773 Harding Boulevard. The incident is listed as open.

4.3.6 Other Ascertainable Records. – **Eleven.** The RCRA Nongene/NLR Database provides information on sites which generate, transport, store, treat and/or dispose of hazardous

waste but do not presently generate hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA) Non-Generators do not presently generate hazardous waste. **Seven** sites were found at equal/higher elevations and within a half-mile radius from the target site. The list includes: Harvey Hilburn Tractor, located at 5407 Hooper Road; Metro Collision Center, located at 9222 Plank Road; Top Services, Inc., located at 4950 Robique Road; Southern Aircraft Rentals, located at 4041 Chuck Yeager Avenue; Earl Scheib of Louisiana, Inc., located at 7550 Plank Road; A 1 Lawn Mover Repair, located at 7330 Plank Road and Allen Marine, Inc. located at 3975 72ND Avenue.

Harvey Hilburn Tractor, a small quantity generator of non-hazardous waste, requested to be deactivated of its EPA ID number in January, 1992.

Four RAC NonGen/NLR sites were found at lower elevations and within a quarter mile radius of the target site. These sites are: Advanced Transmission; located at 8932A Plank Road; Slades Industrial Svstems; located at 4225 Chuck Yeager Avenue and CV Service Center, located at 3445 Harding Boulevard.

One Formerly Used Defense Site (FUDS) was found within a quarter mile radius of the target property. During World War II, the War Assets Administration had jurisdiction over Harding Field (now known as the Baton Rouge Metropolitan Airport, Ryan Field) and particular adjacent property. The area was used as a fighter aircraft training facility and approximately 300 structures were built on site ranging from housing to target butts. As of today, only 12 of the 300 structures from that era are still present, along with multiple concrete slabs.

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the National Pollutant Discharge Elimination System (NPDES) program. **Three** ICIS sites are listed. **Two** ICIS sites are listed at equal/higher elevations and within a one-eighth mile radius of the target site. These sites are: Southern University A&M College, located in the 700 Block of Harding Boulevard and Exxon Co USA., unknown address.

One ICIS site, Teague Rental Equipment Inc., located at 8195 Plank Road, is found at a lower elevation and within a one-eighth mile radius of the target site.

The US AIRS is a sub-system of the Aerometric Information Retrieval System (AIR) Three. Emission and compliance data of air pollution point sources regulated by the US EPA and/or state and local air regulatory agencies is tracked. the US AIRS databased list 2 US AIRS at equal/higher elevations and within a one-eighth mile of the target site. These FUDS sites are:

Southern University A&M College, located in the 700 Block of Harding Boulevard and Coca-Cola Bottling Company United Inc., located at 9696 Plank Road.

Qualawash Holdings LLC, located at 5395 Hooper Road is also a US AIRS site that is located at a lower elevation and within a one-eighth mile radius of the target site.

The Facility Index System (FINDS) contains both facility information and “Pointers” to other sources of information that contain more details – **Forty-six**. Other sources include: RCRIS, Permit Compliance System (PCS), Aerometric Information Retrieval System (AIRS), FATES FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTTS [FIFRA/TSCA Tracking System], CERCLIS, DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), Federal Underground Injection Control (FURS), Federal Reporting data System (FRDS), Surface Impoundments (SIA), TSCA Chemical in Commerce Information System (CICS), PADS, RCRA-J (medical waste transporters/disposers), TRIS, and TSCA. **Twenty-nine** FINDS sites were reported to be found at equal/higher elevations and located within a quarter mile radius of the target site. The FINDS are: Harvey Hilburn Tract, located at 5407 Hooper Road; LA Leadership Institute, located at 5763 Hooper Road; Express Jet Airline, located at 9455 Plank Road; Metro Collision Center, located at 9222 Plank Road; United Rentals, located at 5592 Hooper Road; Browning Ferris Industries, located at 7650 Plank Road; Southern University located in the 700 Block of Harding Boulevard; Exxon Co. USA, address unknown; Jiffy Lube International, Inc., located at 7818 Plank Road; Exxonmobil Oil Corp.; located at 7997 Plank Road; Hinton Construction, located at 7900 Plank Road; Hooper Pointe Residences, located at 4888 Hooper Road; US Postal Service, located at 7980 Plank Road; Top Services, Inc., located at 4950 Robique Road; Baton Rouge Fire Department, located at 8011 Merle Gustafson; Southern Aircraft Rental, located at 4041 Chuck Yeager Avenue; Bellsouth K3207 located at 4070 Harding Boulevard; All Star Chevrolet North, located at 9444 Plank Road; Baton Rouge Metropolitan Airport, located at 9352 Plank Road; Coca-Cola Bottling Co., located at 9696 Plank Road; Express Jet Airlines, located at Metropolitan Airport; Arkel Constructors LLC, located at 4490 Blanche Noyes Avenue; 577 Properties LLC, located at 3950 Harding Boulevard; Earl Scheib of Louisiana, located at 7550 Plank Road; Moran Builders, Inc., located at 5311 Cadillac Street; Quality Carriers, Inc., located at 5050 Robique Road; Peerless Road Unauthorized, located Across from 4851 Peerless and Plank Road Cleaners located at 7332 Plank Road.

Seventeen FINDS sites were reported to be found at elevations lower and within a quarter mile radius of the target site. These sites are: Advanced Transmission, located at 8932A Plank Road, Chevron SS, 109056 located at 4716 Hooper Road; Quala Systems, Inc., located at 5395 Hooper Road; City of Baton Rouge, located at 515 Hooper Road; FAA Baton Rouge SSC, located at 8326 Merle Gustafson; Keans the Cleaners, located at 8178 Plank Road; Dollar General, 4216 located at 4770 Hooper Road; Sales Industrial Systems; located at 5385 Hooper Road; Cecil D. Gassiot, LLC located at 5151 Hooper Road; Hooper Springs, located at 5150-T Hooper Road; Circle K Store #2709, located at 8133 Plank Road; Teague Rental Equipment, located at 8195 Plank Road; 3 Point Properties P, located at 4451 Chuck Yeager Road; LA Aircrafts, located at 4225 Chuck Yeager Avenue; Bombardier, located at 4225 Chuck Yeager Avenue; Exxon Co. USA 50627, located at 6404 Hooper Road and City of Baton Rouge, located at Ford Street from Plank.

The UXO database is a listing of unexploded ordnance site locations. **Two** UXO sites were listed within a one-mile radius of the target site; Small Arms Range Complex and Skeet Range and Firing-in-Butt, located at the Harding AAF. These sites were established during World War II and were located at the former Harding Army Air Field and converted into the Baton Rouge Metropolitan Airport.

The ECHO database provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide. The database search revealed **Forty-six** ECHO sites within a quarter mile radius of the target property. **Twenty-nine** ECHO sites are listed at equal/higher elevations and within a quarter mile radius of the target site. The ECHO sites listed are: Harvey Hilburn Tract, located at 5407 Hooper Road; LA Leadership Institute, located at 5763 Hooper Road; Express Jet Airlines, located 9455 Plank Road; Metro Collision Center, located at 9222 Plank Road; United Rentals, located at 5592 Hooper Road, Browning Ferris Industries, located at 7850 Plank Road; Southern University, located in the 700 Block of Harding Boulevard; Exxon Co. USA, located at Unknown; Jiffy Lube International, Inc., located at 7818 Plank Road; ExxonMobil Oil Corp., located at 7997 Plank Road; Hinton Construction, located at 7900 Plank Road; Hooper Pointe Residences, located at 4888 Hooper Road; US Postal Service, located at 7980 Plank Road; Top Services, Inc., located at 4950 Robique Road; Baton Rouge Fire Department, located at 8011 Merle Gustafson; Southern Aircraft Rentals, located at 4041 Chuck Yeager Avenue; Bellsouth K3207, located at 4070 Harding Boulevard, All Star Chevrolet N, located at 9444 Plank Road; Baton Rouge Metropolitan, located at 9352 Plank

Road; Baton Rouge Coca Cola, located at 9696 Plank Road; Expressjet Airlines, located at Metropolitan Airport; Arkel Constructors LLC, located at 4490 Blanche Noyes Avenue; 577 Properties, LLC, located at 3950 Harding Boulevard; Earl Scheib of Louisiana, located at 7550 Plank Road; Moran Builders, Inc., located at 5311 Cadillac Street; Quality Carriers Inc., located at 5050 Robique Road; Peerless Rd Unauthorized, located across from 4851 Peerless; A 1 Lawn Mower Repair, located at 7332 Plank Road and Plank Road Cleaners, located at 7332 Plank Road.

The following **Seventeen** ECHO sites are listed at lower elevations and within a quarter mile radius of the target site. These sites are: Advanced Transmission, 8932A Plank Road; Chevron SS 109056, located at 4716 Hooper Road; Quala Systems, Inc., located at 5395 Hooper Road; City of Baton Rouge, located at 51515 Hooper Road; FAA Baton Rouge SSC, located at 8326 Merle Gustafson; Keans the Cleaners, located at; Dollar General 4216, located at 4770 Hooper Road; Slades Industrial Systems, located at 5385 Hooper Road; Cecil D Gassiott, LLC, located at 5151 Hooper Road; Hooper Springs, located at 5150-T Hooper Road; Circle K. Store #2709, located at 8133 Plank Road; Teague Rental Equipment, located at 8195 Plank Road; 3 Point Properties P, located at 4451 Chuck Yeager Road; LA Aircrafts, located at 4225 Chuck Yeager Avenue; Bombardier, located at 425 Chuck Yeager Avenue; Exxon Co USA 50627, located at 6404 Hooper Road and City of Baton Rouge, located at Ford Street from Plank Road.

The AIRS database provides a listing of facilities with air permits issued by the Air Permits Division. The database search identified three AIRS sites within a quarter mile radius of the target site. The database search revealed **Three** AIRS sites. These sites are: Coca-Cola Bottling Company United Inc., located at 9696 Plank Road; Expressjet Airlines Inc., located at the Metropolitan Airport and Qualawash Holdings, LLC, located at 5395 Hooper Road. The Coco-Cola Bottling Company and Expressjet Airlines are located at equal/higher elevations and within an eighth-mile radius of the target site. Qualawash Holdings, LLC, is located at a lower elevation and within an eighth mile radius of the target site.

The ASBESTOS database tracks known asbestos sites. **Three** ASBESTOS sites were found to exist within a quarter-mile radius of the target property. The ASBESTOS sites are: Blue Chip Ice Co., located at 9022 Plank Road; Morgan Chase Bank, located at 7979 Plank Road and Buzzbee Properties, located at 5253 Hooper Road. Blue Chip Ice Co. and Morgan Chase Bank are located at equal/higher elevations and within an eighth mile of the target site.

According to database records, asbestos was found in the kitchen, washroom and dining room of the Blue Chip Ice Co. In December, 2020, the asbestos was removed and disposed of.

In February, 2016, asbestos was reported in the Morgan Chase Bank lobby. The asbestos was removed and disposed of.

In November, 2020, asbestos was found in the West Office Building of Buzzbee Properties. The asbestos was removed and appropriately disposed of. This site is located at lower elevation and within an eighth mile radius of the target site.

Drycleaner Facility List (DRYCLEANERS) revealed 2 DRYCLEANER locations within an eighth mile radius of the target property. The DRYCLEANERS sites are: Plank Road Cleaners, located at 7332 Plank Road (equal/higher elevation) and Keans the Cleaners, located at 8178 Plank Road (lower elevation). No violations were discovered during the database research for both locations.

NPDES is a listing of sites with a Louisiana Pollutant Discharge Elimination System (LPDES) program issued permit. The database search revealed **Twenty-five** NPDES sites within a quarter mile of the target property. **Twenty** NPDES sites were identified at equal/higher elevations and within a quarter mile radius of the target site. The NPDES sites identified are: All Star Properties III LLC, located at 9444 Plank Road; Percy J. Matherne Contractor Inc., located at 5762 Hooper Road; LA Leadership Institute Band Hall, located at 5763 Hooper Road; Rad-Ton LLC- All Star Chevrolet North, located at 9444 Plank Road (Portion of); G.L. Sullivan Sr. Contractor LLC-All Star Chevrolet, located at 9444 Plank Road; Buquet & Leblanc Inc.-United Rentals, located at 5592 Hooper Road; Circle K #7657, located at 7997 Plank Road; Exxonmobil Oil Corp. #56364, located at 7997 Plank Road; US Postal Service-Scotlandville Station, located at 7980 Plank Road; PAI Aero Inc., located at 4141 Chuck Yeager Avenue; Dow Chemical LA Division, located at 4041 Chuck Yeager Avenue; Baton Rouge Metro Airport located, at 9352 Plank Road; Industrial Enterprises Inc., located at 9352 Plank Road; Coca-Cola Bottling Co. United Inc., located at 9696 Plank Road; Arkel Constructors LLC, located at 4490 Blanche Noyes Avenue; Expressjet Airlines, located at Metropolitan Airport; 577 Properties, LLC-Cruzin Express Carwash, located at 3950 Harding Boulevard; Louisiana Community & Technical College System, located at 4460 Blanche Noyes; Moran Builders, Inc.-Zion City Homes, located at 5311 Cadillac Street and Quality Carriers, Inc., located at 5050 Robique Road.

Five NPDES site are reported at lower elevations and located within an eighth mile radius of the target site. These NPDES sites are: Baton Rouge City of-Hooper Storage/Equalization,

located at 5151 Hooper Road; Cecil D. Gassiott LLC-Hooper Storage/Equalization, located at 5151 Hooper Road; LA0046, located at 8133 Plank Road; Hooper Springs Ebenal General Inc, located at 5150-T Hooper Road and Gafford Builders Inc.-3 Point Properties Private, located at 4451 Chuck Yeager Road.

REM sites come to the Underground Storage Tank and Remediation Division through self-notification or referral. **Fourteen** REM sites were reported within a three-quarter mile radius of the target property.

Six REM sites are reported at equal/higher elevations and within a half-mile radius of the target site. These sites are: Rite-Track Deli & Grill, located at 4113 Harding Boulevard, formerly Pel State Oil Company #48, and was previously discussed in section 4.2.10. A “No Further Action required” letter was submitted by the LDEQ on January 3, 2007.

Exxon Mobil Oil Corp, located at 7997 Plank Road, reported an unauthorized release of gasoline and diesel from a UST in March, 2011, and confirmed groundwater concentrations of Constituents of Concern (COCs) in April, 2011. An abatement plan, submitted by Exxon’s environmental consultant was implemented. The site was monitored and the case was closed by the LDEQ in October, 2011.

AT&T Services DBA AT&T, located at 4070 Harding Boulevard, was once the site of BellSouth K3207. The property was used for maintenance of BellSouth vehicles and contained underground hydraulic lifts. Contaminated soil was detected on the property and removed in accordance with LDEQ RECAP. A letter of “No Further Action” was granted by LDEQ in November, 1999.

Earl Scheib Auto Paint & Body, located at 7550 Plank Road, appears on the REM list and was previously discussed in section 4.2.8. A “No Further Interest” letter was granted by LDEQ in September, 2016.

Etoile De Mer LLC, located at 7175 Plank Road, was the former site of Chevron Facility No. 60210428. In October, 2003, petroleum hydrocarbons were detected in soil and groundwater samples. An LDEQ RECAP plan was instituted and a “no further action” letter was granted by LDEQ in July 2006.

Former Texaco Station #44-398-1307, located at 7160 Plank Road, experienced a 33-gallon gasoline leak in November, 1998. Remediation was completed and a “no further action” letter was granted by LDEQ on July 23, 2009. The site is now owned by Motiva Enterprises, LLC.

The database search revealed 8 REM sites located at lower elevations and within a one-mile radius of the target site. These sites are:

Plank Food Mart, located at 8085 Plank Road, reported a gasoline leak in May, 1988. A Corrective Action Plan was approved by LDEQ and implemented, and a “no further action” letter was granted by LDEQ in December 2008.

Chevron Station Inc. #109056, located at 4716 Hooper Road, appears on the REM list due to detection of gasoline and diesel in the soil and water in 2006. No information was provided on how and when the release occurred. The contamination was remediated in accordance with LDEQ RECAP and letter of “No Further Action” was granted by LDEQ in October, 2009.

In 2006, Circle K Corporation purchased the site (LA 0046) formerly occupied by Shell #166535, located at 8133 Plank Road. Site investigations were performed in 2006 to determine the environmental condition at the site. Constituents of Concern were detected in the groundwater samples, but their levels did not exceed the established RECAP standards. A letter of “no further action” was granted on February 25, 2008.

According LDEQ records, 3801 Harding Boulevard, is an EMS Vehicle Maintenance and Storage Facility. Diesel-like odors occurred at this site during a geotechnical investigation. A Limited Site Investigation was conducted in January, 2021. COCs exceeding RECAP standards were found. No other pertinent information was found for this site.

The “C” Store, located at 7111 Hooper Road; Con-way Freight, located at 3125 Harding Boulevard; and Delta 3040, located at 4719 Airline Hwy, appear on the REM list and were previously discussed in section 4.2.8.

According to LDEQ records, X-Pert Tune, located at 4474 Airline Hwy, was reported as a closed business in May, 2009. In February, 2016, a Phase I Environmental Site Assessment and Limited Site Investigation were conducted at 4474 and 4520 Airline Hwy (former used car dealership and trucking company locations). Contaminants were detected in the groundwater above the regulatory screening standards. A letter of no further action determination was recommended. Four wells remained on site as of January 27, 2017. No other information was reported for this site.

4.4 EDR High Risk Historical Records.

4.4.1 EDR Exclusive Records. –**Sixteen.** The EDR Historic Auto (EDR Hist Auto) database searches for records of gas station/filing station/service station establishments, etc. This databased is classified by EDR as “High Risk Historical Records (HRHR). **Seven** EDR Hist Auto sites were listed at equal/high elevations and within a one quarter mile radius of the target site. These sites are: Airport Garage Auto, located at 7744 Plank Road; Turners Garage, located at 5231 Stearns Street; Cox Bros Esso Service Station, located at 7550 Plank Road; Chevron Stations Ln, located at 7175 Plank Road; Texaco Self Service, located at 7160 Plank Road; Smitty’s Shell Service, located at 7070 Plank Road and Pat’s Texaco, located at 7060 Plank Road.

Nine EDR Hist Auto sites were listed at lower elevations and within a half-mile radius of the target site. These sites are: T S C Transmissions, located at 8932 Plank Road; Circle K Stores Inc., located at 8085 Plank Road; Chevron Stations, located at 4716 Hooper Road; Strasburger Enterprise, located at 8133 Plank Road; Gulf Self Service Station, located at 8194 Plank Road; Exxon Aviation LA Ac, located at 4225 Chuck Yeager Avenue; Hooper Road Exxon, located at 6404 Hooper Road; Racetrac Petroleum, located at 3730 Harding Boulevard and Baton Rouge Auto Parts Inc., located at 3465 Harding Boulevard.

The EDR Exclusive Historic Dry Cleaners (EDR US Hist Cleaners) Database searches of records of dry cleaning sites. **Six** EDR US Hist Cleaners sites were found within a quarter mile radius of the target site. **Three** EDR US Hist Cleaners sites are listed at equal/high elevations: Carter John Jr Drycleaners, located at 5290 Ford Street; Carter Cleaners, located at 5278 Ford Street and Plank Road Cleaners, located at 7332 Plank Road.

Three EDR US Hist Cleaners sites listed at lower elevations are: Keans Laundry, located at 8175 Plank Road; Keans the Cleaner, located at 8178 Plank Road and K Klean Kleaners, located at 6131 Mickens Road.

4.5 EDR Recovered Government Archives

4.5.1 Exclusive Recovered Government Archives. – **Seven.** Databases researched include: Recovered Government Archive Leaking Underground Storage Tank (RGA LUST) database list. This database list LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. List includes records formerly available from the Louisiana Department of Quality. The RGA LUST sites listed as located

within a quarter mile of the target property. **Two** RGA LUST sites are listed as equal/higher elevations and are: Exxonmobil Oil Corp, located at 7997 Plank Road and Pel State Oil Co #48, located at 4113 Harding Boulevard.

Five RGA LUST sites are listed at lower elevations. These sites are: Circle K #8041, located at 808 Plank Road; Shell #166535, located at 8133 Plank Road; Chevron Station Inc., located at 4716 Hooper Road; Circle K #2709727, located at 8133 Plank Road; and Tim's Food Inc., located at 8085 Plank Road.

4.6 Additional Records Reviewed

4.6.1 Facility Detail Reports and Databases and Update Information. – Several. Additional EDR Site Reports were reviewed. The EDR Site Reports are a comprehensive presentations of government filings on facilities identified in a search of federal state and local environmental databases. Information presented is derived from two sources; Facility Detail Reports and Databases and Updated Information. The Facility Details Reports features detailed information from databases where sites are identified. The Databases and Update Information provides name, source, update dates, contact phone number and description of each of the databases searched. Information contained in the Site Reports provide confirmation that the report meets or exceeds the 90-day updating requirement of the ASTM standard.

Forty-seven EDR Site Reports were provided and reviewed. The primary databases searched included: EPA ECHO, FINDS, NPDES, RCRA, RCRA Info, RCRA-VSQG, SEMS Archive, US AIRS (AFS), NCDB (National Compliance Data Base), DRYCLEANERS, ICIS, LA TEMPO, LA REM, LA LUST, LA UST, LA SPILLS, NPDES, Airs Minor, and NonGen/NLR databases. The EDR Site Reports updated information for sites already described and/or discussed in “4.0 Environmental Data Search and Review, sections 4.2 through 4.5” of this report.

The EDR Site Reports did include 4 FINDS sites that were not included in the EDR Radius Report. These FINDS sites are: Command Construction Industries, LLC-BR Airport; Ernest P. Breaux, L. King Company, LLC, Transportation Security Administration and Delta Air Lines. All sites are located at 9430 Jackie Cochran. A search of the LDEQ Database revealed that Command Construction Industries, Ernest P. Breaux and L. King Co, LLC, applied for LDEQ stormwater discharge permits for work at the airport in 2015/2016. The Transportation Security Administration provided notifications of regulated waste activity for

TSA. No records were found for Delta Airlines. All these sites are outside the proposed project boundaries.

4.7 Physical Setting Source(s)

The EDR database search included some of the topographic, geologic, and hydrological characteristics of the site.

4.7.1 Surface Water Flow. According to the EDR Geocheck®, the existing topography exhibits a general slope to the south. There are two existing drainage features on the site; Cypress Bayou which eventually drains to the Comite River and Monte Sano Bayou which drains to the Mississippi River.

4.7.2 Groundwater. During the LDEQ file review, information was obtained indicating the groundwater flow in the area is generally to the southwest.

A total of 96 wells were found using the Geocheck® Physical Setting Map within one mile of the site. There was one domestic well, one abandoned domestic well, 1 destroyed domestic well, 3 municipal and public supply wells, two destroyed public wells, one heat pump hole, 43 plugged and abandoned wells, 1 plugged and abandoned borehole, 13 monitor wells, and 10 USGS LA wells. The approximate location of these wells is described in Appendix B

Monitor wells are generally installed to “monitor” an underground environmental problem. The presence of monitor wells in close proximity to a site can be indicative of possible underground contamination that could migrate to the subject property. During the LDEQ file review, no sites within a mile radius of the site were currently under investigation for underground contamination.

4.7.3 Soils. According to the East Baton Rouge Parish Web Soil Survey, Jeanerette is the dominant soil composition in the general area of the target site. Jeanerette soils are described as a silt loam, Class D soil. The soil exhibits very slow infiltration rates that are clayey, have a highwater table and/or shallow to an impervious layer. They are classified as somewhat poorly drained soils. The soils commonly have a layer with low hydraulic conductivity, wet state high in profile with a depth to water table of 1 to 3 feet. Jeanerette soils do not meet the requirements for a hydric soil. The Soil Map is located in Figure 3.

4.7.4 Vapor Intrusion. Under the 2013 ASTM standard, vapor impacts must now be considered during the Phase 1 ESA. No previous releases were reported on the subject property.

4.7.5 Radon. Radon information for the approximate area around the target site is provided in the Geotcheck® Physical Setting Source. Federal and State Radon test results were all within the normal limits.

4.8 Historical Use Information on the Property

Reasonably ascertainable historical sources were reviewed to fulfill the requirements of ASTM E 1527-13 Section 4.5.5 re: current use of the properties adjoining the target property. The objective of the research is to determine if any previous uses of the property may have led to a recognized environmental condition. Sanborn® Maps were requested, but none were available for the subject property.

USGS Topographic Maps USGS topographic quadrangle maps were reviewed for the years: 1906, 1939, 1940, 1953, 1954, 1963, 1970, 1980, 1992, 1994, 1995, 1996 and 2012. The 1906 map shows a few structures mostly clustered close to the intersection of Plank Road and Hooper Road. Two topographical features appear; Cypress Bayou and Monte Sano Bayou. The 1939 and 1940 maps show a slight increase in structures in the area and Airline Hwy is shown as under construction. Topographic features that appear during this time frame are Cypress Bayou (north of Plank Road) and Monte Sano Bayou (west of Plank Road). The 1953, 1954, 1970, 1980, 1992, 1994, 1995, 1996 and 2012 maps show continued property development concentrated primarily to the east of Plank Road and south of Hooper Road. Ryan Airport first appears on the 1953/1954 maps. The 1963 map shows the Airline Hwy/Plank Road cloverleaf road system. The I-10 roadway first appears on the 1970 map. Ryan Airport is shown as “Baton Rouge Metropolitan Airport, Ryan Field” on the 2012 map.

4.9 Historical Use Information on Adjoining Properties

The same databases and maps were used to analyze the surrounding properties and their historical use. The surrounding properties have remained mostly undeveloped forest land on all maps, with the number of structures increasing throughout the years. The Baton Rouge Metropolitan Airport (formerly Ryan Airport) first appear on the 1953 and 2012 maps. The airport complex is located west of Plank Road and North of Harding Boulevard and is the prominent structure in the area. Subdivisions, with residential homes, and commercial sites are located primarily east and north of Plank Road and north and south of the Plank Road/Harding

Boulevard intersection. Growth in this area has increased dramatically between 1953 and 1995/1996 according to the historical topo maps.

Commercial and light industries are mostly located along either side of the Plank Road and Harding Boulevard/Hooper Road intersections. The area at the intersection of Hooper Road and Plank Road and Plank Road and Harding Boulevard is an area of commercial and light industry. This area first appears on 1906 topographical map with little change to the present.

The Louisiana Department of Environmental Quality (LDEQ) EDMS database was also searched for historical use information on adjoining properties in the proposed project area. The found information is presented below.

Jiffy Lube #472, 7818 Plank Road, is located east and north of the Plank Road and Ford Street intersection. The Jiffy Lube site was formerly Pentagon Services, Inc. d/b/a Kwik Change. In 1988, the site changed ownership to Gulf Coast Lubrication Inc. d/b/a Jiffy Lube #472. Jiffy Lube first appears on the 1998 Google Earth® Map. A search of the LDEQ EDMS database revealed a report of a subsurface investigation due to a lube oil leak in August, 1994. The investigation identified a 15-foot area south of building impacted with TPH concentrations that exceeded LDEQ clean up action levels. No significant ground water impacts were evident. LDEQ approved the facility's spill plan and excavation activities were carried out. However, impacted soil under the slab had to be left in place because further extraction would have jeopardized the integrity of the building. Four oil tanks with COCs below DEQ action levels were closed. Future documents pertaining to this site are to be certified and filed with the Parish Clerk of Court.

Shell #166535/Circle K, 8133 Plank Road, is located west of Plank Road and north of Harding Boulevard. The site is within the project proposed boundary. More information about Circle K is presented in the next paragraph.

Circle K, 8133 Plank Road, is located at the northwest corner of the Plank Road and Harding Boulevard intersection. Shell developed the site in 1970. Other owners of the site include: Third Coast Energy, LLC d/b/a Harding Shell #14; Motiva Enterprises, LLC d/b/a Shell Branded Service Station/**Shell #1666535** (purchased 2001) and Circle K Stores, Inc. (purchased 2006). In 2020, it was purchased by Lehigh Gas Wholesale Services d/b/a LA0046. In 2005, a driver ran into a gasoline dispenser causing 15-gallons of unleaded gasoline to spill and enter a subsurface drain. The spill was cleaned up using absorbents and vacuum removal. In 2006, an unknown quantity of gasoline was released at the site. Five soil borings were installed and

concentrations of MTBE and TPH-GRO were found to be above RECAP standards. LDEQ classified the site as a Groundwater 3 non-drinking water site. In 2008, a MO-2 RECAP Evaluation report was submitted and a recommendation for a “No Further Action At This Time” was granted.

Plank Food Mart, 8085 Plank Road, is located east of Plank Road and north of Hooper Road. The site was originally owned by ConocoPhillips, then The Circle K. Corp. and Circle K. Stores, Inc. Next, it was acquired by Alimentation Couche-Tard, Inc. In February, 2005, the site was changed to Plank Food Mart. In 1989, a semi-annual groundwater monitoring investigation was conducted at the site. The site has been monitored since 1994. By February, 2002, 4 monitoring wells had been placed on the site and volatile organic hydrocarbons were detected. In October, 2008, a “No Further Action” was requested. The database search indicates that DEQ must approve any soil removal from this site.

Exxon Company, USA (Plank Road Exxon 5-6364) 7997 Plank Road, is located south of Harding Boulevard and west of Plank Road. Ownership changed to Exxon Mobil Corp. in 2001. According to the EDMS database search, the site was first developed in 1986. At the time of permitting, the site had 4 tanks and 2 associated car wash buildings. These tanks were approved for removal and replaced by 3 new tanks. In March, 2011, an unknown release occurred during a Phase II Environmental Site Assessment. The analytical results indicated unknown quantities of gasoline and diesel were released. The surface impact was considered incidental and de minimis. However, levels of dissolved TPH-G, TPH-D, Benzene, MTBE, Arsenic and Lead in groundwater above RECAP Screenings Standards were found. Because there was no open or closed incident numbers found for the site and, in order to obtain data to further evaluate conditions at the site, data was gathered from a facility located, at 8133 Plank Road (former Chevron #60210428), 7175 Plank Road, and classified as a Groundwater Class 3A Non-Drinking Water site and within one mile of the Exxon site. Based on the Chevron evaluation, LDEQ classified the Exxon site as a GW3NDW site. Seven wells were plugged and abandoned at the site in September, 2011. LDEQ issued a closure letter. This site was purchased by Circle K Stores, Inc. on November 16, 2011. In November, 2012 a complaint was made that the nozzle at dispenser #3 did not operate properly. A site investigation found no fault with the nozzle operation. No other information was available.

Chevron #109056, 4716 Hooper Road, is located east of Plank Road and south of Hooper Road across from the Louisiana Leadership Institute complex.

This site has been in existence since the early 1990's. The owner of the site is Chevron U.S.A. Inc./Marketing. In February, 1990, demolition of the station, asbestos survey and removal of four USTs was performed. Asbestos was found to be present in the kiosk finishes, tiles, etc. Three USTs were removed and 10 soil samples were taken and tested for Benzene, toluene ethylbenzene and total xylenes (BTEX). In March 1990, soil was removed and disposed of. BTEX was found in the soil sample. Due to the elevated BTEX, LDEQ ordered a further investigation. A site assessment was conducted in March, 1992. Laboratory analysis confirmed BTEX concentrations in all samples tested. BTEX was also detected in groundwater samples. In 1995, LDEQ determined "No Further Assessment and/or Remediation" was warranted. In July, 2003, it was reported the site was to shut down in a few weeks and the UST system to be put in temporary closure prior to UST removal. The LDEQ UST Division voiced concern due to the lack of available records for the ATG system installed in December, 2002. The station was closed in August, 2003 and listed for sale. The LDEQ, in 2004, filed a compliance order for retention of the UST automatic tank gauging systems. A Baseline Assessment report was prepared in April, 2006. Soil borings and groundwater sampling were conducted in February, 2006. Laboratory results indicated petroleum hydrocarbon constituents' concentrations above RECAP levels in soil and groundwater in the vicinity of the UST system. Highest soil concentration was found near the former northwest dispenser island. Highest groundwater concentrations were found near the former northwest dispenser island, which was located southwest of the station building, in the approximate location of the former diesel UST hole. LDEQ ordered a remedial investigation of the site. A proposed work plan was developed and approved and completed in March, 2008. The report found that the area immediately surrounding the site indicated a potential for off-site sources of petroleum hydrocarbon compounds in soil and/or groundwater located southwest of the site. The report also found that possible man-made pathways for exposure to COCs existed along Plank Road. The report further indicated two AOCs that exhibit constituent concentration above SO SS values. In March, 2009, the USTs were purged and removed from the site. The temporarily moved soil was replaced and reported closed in April, 2009. Monitoring wells were plugged and abandoned in October, 2009. LDEQ granted a "No Further Action".

Rite Track (owner Pel-State Oil Co., Inc. #48), 4114 Harding Boulevard is located west of Plank Road and south of Harding Boulevard and the Metro Airport. The site was purchased in 1969 and 2 USTs were installed the same year. A hydrocarbon release occurred in October,

2000. A Phase II Environmental Assessment was conducted in October, 2000 for purposes of a property transaction. Benzene, dissolved concentration of benzene, and xylene concentrations were detected in soil borings that exceeded soil and groundwater standards. Since 2001, the site has been in remediation. Five monitoring wells were installed on site and 1 well was installed off site in July, 2001. Petroleum hydrocarbon impacted soil and groundwater was located beneath the on-site building. The contractor recommended at least 3 more monitoring events to determine plume stability prior to determining need for correction action and installation of 2 additional on-site monitoring wells for delineation of the plume and installation of 1 off-site wells for horizontal delineation purposes. In February, 2003, 5 replacement monitor wells to replace previous wells lost/damaged during RECAP activities and new construction activities at the site were installed. By September, 2003, the new station was open for business. In 2006, soil was removed from Monitor Well #2R and COCs were found to be below RECAP standards. A Plugging and Abandonment (P&A) Completion Report and certified conveyance notification by the Clerk of Court was recommended. Existing monitoring wells were plugged and abandoned in March, 2006. In October, 2006, LDEQ found P&A deficiencies. However, on January 3, 2007, the LDEQ determined “No Further Action Necessary At This Time” was warranted. However, the site has been closed under site specific limiting RECAP standards and LDEQ has ruled that prior approval is needed for soil removal. Any new construction needs LDEQ prior approval, and re-evaluation of site conditions if land use is changed from industrial to non-industrial; 30-day prior approval required.

Keans the Cleaner, 8178 Plank Road, located east of Plank Road and north of Hooper Road. No records for this site were found in the EDMS Database.

Steve Thompson Trucking, 3125 Harding Boulevard, formerly located north of Harding Boulevard and east of Veterans Memorial Boulevard. This area appears to have been recently cleared.

Teague Rental Equip. Inc. (Sullivan Oil Co. d/b/a Teague Rental), 8195 Plank Road, is located west of Plank Road and south of T. B. Herndon Avenue. Following the permanent closure of 4 unregistered tanks, BTEX and TPH was found. In 1993, at the request of City National Bank, a Phase I ESA was conducted for the site. Hydrocarbon stains and odors were found west of the back of the main building, scattered hydrocarbon staining around the diesel pumps, and scattered staining across the equipment parking area. At the time, no significant environmental degradation on or beneath the site was found. Also in 1993, a Phase II ESA was

performed with respect to a Waste Oil Tank Closure at the site. Elevated oil and field contamination was found. In 1994, the tank was closed and removed. No other records were available in the database.

Cecil Gassiott, 5151 Hooper Road, is located east of Plank Road and north of Old Hooper Road/Hooper Road. The property was formerly owned by W.O. Bergeron Const. Co. The EDMS database search indicates that 3 gasoline tanks for non-commercial use were installed on the property prior to 1988 and closed sometime in 1988. The tanks were located on the southern portion nearest Plank Road. The City of Baton Rouge purchased the property for a new lift station area development in connection with the Hooper Storage/Equalization Program. An UST Assessment was conducted in April, 1989. Soils samples were tested for BTEX and lead and indicated a high background concentration of lead in the area and the concentration increased with depth and the property was found to be clean and non-contaminated. The LDEQ granted a NOI in January, 2013.

EMS Maintenance, 3801 Harding Boulevard, is located west of Plank Road, north of Harding Boulevard, and south of T. B. Herndon Avenue. This is a City of Baton Rouge/Parish of East Baton Rouge, Hooper Storage/Equalization Facility. The EDMS Database search did not reveal any further pertinent records regarding this site.

Service Distributors, Inc. of Louisiana, 5407 Hooper Road, is located north of Hooper Road and Keely Weeden Avenue runs along the main building/warehouse to the west. The current owner is **American Clean Energy Refining, LLC**. The site has the same address as the Harvey Hilburn Tractor site previously discussed in Sections 4.3.5 and 4.3.6 of this report. During a recent drive-by of the site, numerous parked truck trailers and a large amount of piping and various other industrial equipment were scattered about the property and extended beyond Keely Weeden Avenue to the west. Google Earth® shows a suspected disposal pit area at the back of the main building. No other records were available for this site.

Con-way Freight-LB, 3125 Harding Boulevard, was formerly located north of Harding Boulevard and east of Veterans Memorial Boulevard. It appears the area where this site was located has recently been cleared.

Browning-Ferris, Inc. (BFI), 7850 Plank Road, is located east of Plank Road at the intersection of Plank Road and Ford Street. This site is also reported as Baton Rouge Commercial-BFI #279 and is discussed in Section 4.2.8 of this report. BFI was in business from 1979 to July, 1993, when the site was closed. The property was originally leased from Harland

Brown. The current owners are Shannon, Brown & Decouteaux. In 1990, LDEQ investigated a complaint and found fugitive hydrocarbons from various places (leaking trucks, oil loading points, drainage from scrap hold bins) had escaped the facility due to the gradient of the parking/working lot area. In the same year a resident, address unknown, complained of oily, stinky water standing in a ditch by her house; street before Haring Boulevard by Jiffy Lube, U Kelly's Meat Mart ditch is next to 4715 Ford Street. No other information is provided regarding this incident. In 1991, the facility reported 4 registered USTs; 3 in use and 1 permanently out of use and estimated to have last been used in 1984. Also, in 1991, 1 500-gallon used oil tank was reported removed and clean closed. An inspection conducted of the site in June, 1993, reported 2 8,000-gallon diesel and 1 4,000-gallon gasoline USTs were located onsite. The file notes the USTs are to be excavated and closed when BFI vacates the property in July, 1993. By May 1994, 3 tanks had been permanently closed and removed. The age of the tanks removed were estimated to be between 10 and 17 years old. Samples taken during removal indicated BTEX gasoline over 7,000 ppm. During the removal approximately 407 cubic yards of soil was over excavated from the southern portion of the diesel tank hold and from all sides of the gasoline tank hold. Soils were excavated three more times. Approximately 6,600 gallons of water resulting from seepage and rainfall runoff was also removed. Samples indicated a total BTEX of 40.47 ug/kg and TPH-G of 7415 ug/kg. Next, the stockpiled soils were sampled and found not to be a source of contamination to site soils, groundwater or rainfall runoff. The stockpiled soils were spread onsite at the extreme eastern side of the facility in an attempt to reduce the low concentrations of petroleum hydrocarbons in the soils. LDEQ granted a "No Further Assessment and/or Remediation" for the site in September, 1998.

Blue Chip Ice Co., 9022 Plank Road, is located east of Plank Road and north of Robique Road. Notice to LDEQ of intent to remove 2 out-of-service 1,000-gallon USTs for gasoline and diesel was filed in August, 1997. In January, 1998, the tanks were removed and disposed of. Between November 2020 and February, 2021, and December, 2020 and June, 2021, asbestos was removed from the kitchen, washroom and dining room. No further information is available in the database.

AT&T Services, 4070 Harding Boulevard (formerly Bellsouth Telecommunications, Inc. K3207), is located west of Plank Road and south of Harding Boulevard. The site is leased to: Ray Marino, Joan Housey, John Saunders and E. Howard Reed, Jr. This site consisted of an office building, automotive shop, warehouse and concrete parking area and UST dispenser island

in northwest corner of the property. This site has been in existence at least since October, 1984. In September, 1989, the site reported 2 tanks failed a tightness test but there was no indication of loss of fuel. The fuel was removed from the tanks and remediation requested. An additional onsite tank was registered with LDEQ in 1989. The tanks were upgraded in late 1991 and/or 1992 and removed in February 1994. Field screening samples did not reveal the presence of petroleum hydrocarbons. In September, 1995, the below ground hydraulic lift had a 7-gallon leak of hydraulic fluid due to a faulty seal. The lift system was removed in November, 1995, and the soils tested for hydrocarbon impacts. In September, 1996, soil remediation activities found contaminated soil at the site, which was removed along with the collection of confirmed contaminated soil. At the time of this activity, the site consisted of 2 buildings, 10 movable buildings, and 1 former UST hold area. In March, 1996, soil samples indicated elevated levels of hydrocarbons containing concentrates of barium, cadmium, chromium, lead, mercury, selenium, silver, Reactive Cyanide, Reactive Sulfide, and Corrosivity pH. Three temporary monitor wells were also installed to assess the groundwater. Following the closure activities, the LDEQ found the site had not been adequately remediated. Between August, 1997 and September, 1997 an in-situ bioremediation consisting of the application of microorganisms for biological degradation and bioventing unit was installed. From August, 1997 to August 1998, soil remedial activities, along with the collection of remedial test borings, were conducted. Findings indicated that bioremediation and bioventing effectively reduced petroleum hydrocarbon soil contamination below the Management Option 1 RECAP standard of 2,100 ppm and that groundwater had not been impacted. The bioremediation and bioventing were terminated. A Petition for Site Closure Soil Remedial Activities Report was prepared in March, 1999. No other information is reported.

Section 42-Old State Hangar Complex, 9195 Plank Road, is located at the northwest corner the intersection of Plank Road and Blanche Noyes Avenue. The owner of this site is listed as the State of Louisiana Department of Transportation and Development. Two tanks 9,490-gallons (lasted used January, 1987) and 1 5,000-gallon tank (last used July, 1979) were removed in February, 1987. In October, 1988, a UST Registration form indicates 2 12,000-gallon capacity tanks are temporarily out of use and have not been filled as of March, 20, 1987; One tank is listed as containing Jet A fuel. No other records are available.

Qualawash Holdings, LLC, 5395 Hooper Road, is located north of Hooper Road at the intersection of Hooper Road and McClelland Drive. It first appears on the 1989 Google Earth®

map. CCI personnel conducted a Phase I Environmental Site Assessment (ESA). The search of LDEQ EDMS revealed a documented history of violations, poor housekeeping methods, as well as potentially hazardous material stored on site. Due to these conditions, it was concluded that sufficient evidence existed to conclude that a “recognized environmental condition” exists at the site. Subsequently, CCI personnel conducted a Phase II ESA and no hazardous substances over RECAP Screening Standards were found.

4.10 Oil and Gas Exploration and Production

A search of the Louisiana Department of Natural Resources oil and gas well database reports revealed no active oil and gas wells located within one mile of the subject property. A Louisiana Department of Natural Resources Strategic Online Natural Resource Information System (LDNR SONRIS) map can be found in Appendix B.

4.11 Solid Wastes

No permitted solid waste facilities were noted during the database search within one mile of the property. A prior site investigation carried out for the prior Phase I ESA, CCI personnel discovered that Qualawash Holdings, LLC, 5385 Hooper Road, exhibited “recognized environmental conditions”. A Phase II ESA was conducted for this site as noted above.

Since the first site investigation was performed, the proposed route has shifted to encompass additional properties. In support of this Supplemental Phase I ESA, CCI personnel have conducted a site investigation of the new project area. During the site investigation several sites were identified as possibly having “recognized environmental conditions” that may require remedial and/or removal activities.

Upon finalization of the piling placement/design phase, the following sites are recommended for further investigation during Phase II sampling: 2 sites located on the north side of Hooper Road, at the location of the proposed Plank Road/McClelland Drive intersection, were investigated during a Phase II investigation. Constituents of Concern (COC) were below Louisiana Department of Environmental (LDEQ) risk assessment screening standards. This Supplemental EA investigated impacts associated with the build alternatives that include elevated sections at Plank/Hooper Road and relocated Plank/McClelland Roads. Because the elevated sections will require some piling placement, estimated to be at least 80’ below ground surface, additional reviews of existing remediation information were performed. In addition, 2

sites identified in the Phase I ESA, there are 4 locations within the study area of the Plank Road/Hooper Road flyover that are reported to have soil and/or groundwater contaminants present. These sites are the former Chevron station at 4716 (Old) Hooper Road, Plank Food Mart at 8085 Plank Road, Circle K at 7997 Plank Road and Circle K at 8133 Plank Road. The LDEQ has issued “No Further Action at this Time” letters for all sites; however, no soils may be removed from the sites without approval by the LDEQ. The first 2 sites also have deed restrictions filed with the parish Clerk of Court notifying potential purchasers of site conditions. A Phase II investigatory plan for this area, along with relocated Plank Road/McClelland Road locations that will also include piling placement, should be implemented during the design phase. The plan will be developed and submitted to LDEQ prior to implementation for concurrence. If contaminated soil and/or groundwater is encountered during the investigation, an appropriate remedial plan will be developed and implemented in order to prevent downward immigration of contaminants.

4.12 Emergency Response

No emergency responses were found for this site.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Compliance Consultants, Inc. (CCI) employees Mary M. Field, P.E. and Cory R. Rogers, E.S., conducted site investigations during October and November 2021, on portions of the site layout. Additional supporting details of the items investigated and the results of the investigation are included in the Site Inspection Report in Appendix A. The general conditions were noted and photographs were taken. Photographs of the site are also included in Appendix A.

5.2 General Site Setting

During the site inspection, CCI representatives accessed portions of the property to complete the Supplemental Phase I site inspection. The inspection began at the northern-most point the target property. The site was traversed around the perimeter, along survey transit lines (if present), and along the public streets. At the time of this completed report, CCI personnel were not granted access to investigate all target properties. The following information pertains to those properties that CCI personnel were able to inspect.

5.2.1 Hazardous Substances. No hazardous substances were found during the on-site inspection.

5.2.2 Aboveground Storage Tanks. No Aboveground Storage Tanks (AST's) were reported to be on-site, nor were any found on the site during the inspection.

5.2.3 Underground Storage Tanks. No Underground Storage Tanks (UST's) were reported to be on-site, nor were any found on the site during the inspection.

5.2.4 Polychlorinated Biphenyls (PCB's). The presence of polychlorinated biphenyls (PCB's) in the environment is of concern since the materials accumulate in animal tissues. One potential source of PCB's is electrical transformers. Transformers were present on electrical poles adjacent to the property; however, none were labeled as PCB-containing.

5.2.5 Solid Waste Disposal. No Solid Waste Disposal sites were noted on the property or associated with the property. However, as noted in Section 4.10, two unpermitted disposal facilities were noted adjacent to the subject property.

5.2.6 Hazardous Waste. No hazardous wastes were noted during the site inspection.

5.2.7 Oil and Gas Wells. There were no oil and gas wells observed or reported to be on the subject property.

5.3 Site Characterization

An overview of possible compliance areas is presented below.

5.3.1 Wastewater Discharge. No wastewater is anticipated to be discharged from the site.

5.3.2 Air Quality. Considering the planned use at the site, a construction air permit from the State of Louisiana will not be required. However, an air quality impact analysis will be done.

5.3.3 Wetlands. A separate wetland delineation was prepared for the site.

5.3.4 SWPPP. When construction occurs on the subject property, the Contractor will be required to have a Storm Water Pollution Prevention Plan in place to manage erosion and site-generated debris.

5.4 Exterior Observations

Standing or intact structures were located on portions of the Plank Food Mart property, located at 8085 Plank Road. The exterior observations of note include a large pile of used vehicle tires was found. Scattered debris, including used vehicles and equipment was noted on property owned by American Clean Energy Refinery, LLC, located at 5407 Hooper Road.

5.5 Interior Observations

Standing or intact structures were located on the subject property. The interior of these buildings has not been investigated.

6.0 INTERVIEWS

Interviews are considered an important part of the Phase I ESA process. Interviews with the property owner, site manager occupants, local government officials, or others can provide valuable information about recognized environmental conditions in connection with the property.

6.1 Interview with Owner

Questionnaires were sent to each owner with a parcel or parcels associated with subject site. These questionnaires are used to ascertain additional information concerning the environmental history of each parcel. The completed questionnaires are included in Appendix C.

7.0 SUMMARY

7.1 Opinions

Compliance Consultants, Inc. performed a Supplemental Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 for the project site located in Baton Rouge, Louisiana. Any exceptions to or deletions from the practice are described in Section 1.3 of this report. This assessment has revealed **the presence of recognized environmental conditions** as defined by the ASTM standard in connection with the property.

7.2 Conclusions

This assessment has revealed **the presence of “recognized environmental conditions” in connection with the property.** It should be noted that the findings in this report are not a guarantee that no additional financial liabilities associated with the property exists. However, a reasonable effort was made during the site inspection and records search to determine, if any additional significant financial environmental liabilities exist for the subject site.

If evidence is encountered during construction of releases from nearby sites with “recognized environmental conditions”, then the Louisiana Department of Environmental Quality should be notified. Evidence could include the presence of sheens, stained soils, and/or odors. Additional Phase II investigations and coordination with the Louisiana Department of Environmental Quality will be required prior to construction. Attention will be focused on areas where deep pilings will be required.

7.3 Deviations

This Supplemental Phase I ESA investigation is based on the requirements as set forth in American Society for Testing and Materials (ASTM) Standard E 1527-13 “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.” As defined by ASTM E 1527-13, detailed considerations regarding but not limited to environmental compliance, asbestos containing building materials, radon, endangered species, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, indoor air quality, biological agents, lead-based paint and lead in drinking water, and

mold are beyond the scope of Phase I ESA investigations. No environmental liens information or other environmental information was supplied.

7.4 Additional Services

CCI was engaged to perform a Supplemental Phase I Environmental Site Assessment in conjunction with a NEPA-compliant Environmental Assessment. This Supplemental Phase I ESA is part of the work.

Property Address: Various properties along Hooper Road
City: Baton Rouge **Parish/County:** East Baton Rouge **State:** Louisiana **Zip:** 70807
Legal Description: See Report
Property Is: Occupied
By Whom: Baton Rouge Metropolitan Airport
Prepared For: Kutchins & Groh, LLC
Phone: 504-799-4090

PROPERTY DESCRIPTION AND ANALYSIS

Current Use of Property Residential Commercial Industrial Undeveloped Other
Past Use of Property Residential Commercial Industrial Undeveloped Other
Land Use, Business, Structures within ¼ mile radius of site: Government offices, light industrial facilities, auto facilities, and forested land.
Comments: Subject property will be utilized for airport improvement projects.

GENERAL FIELD OBSERVATIONS

Are there any signs of the following on the property?

Yes	No		Yes	No	
X		Wetlands Conditions: Undisturbed.		X	Wells Conditions: NA
X		Streams, Lakes, or Ponds Conditions: Drainage swale appears in normal condition. No signs of sheens or oily components.		X	Cisterns/Septic Tanks Conditions: NA
X		Surface Water Discharge Conditions: Via roadside ditches and swales. No signs of sheens or oily components.		X	Mechanical Wastewater Treatment Plant Conditions: NA
	X	Vegetation Damage Conditions: NA		X	Abnormal Odors at the Site
	X	Oily Sheens or Discoloration of Flowing or Poned Water Conditions: NA		X	Recent Soil Grading or Soil Discoloration Conditions: NA
	X	Conditions Indicative of Special Resource Value Concerns (Including Natural, Historic, Cultural, Recreational, or Scientific): NA	X		Storm drains, manholes, interior drains Conditions: Drainage ditches/swales along roadside and one through interior appear in normal conditions. No signs of sheens or oily components.

Are representative site maps available or scaled field drawings generated? See report.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
SITE INSPECTION REPORT

CHEMICAL, GAS, & MINERAL INSPECTION

Yes	No	Chemical & Raw Materials	
	X	Are MSDs available at the site? Comments: NA	
X		Are any signs visible which indicate that hazardous or potentially hazardous chemicals or raw materials have been used, generated, stored, released, transported, or disposed of at the site? Comments: Several sites are classified as a Large/Small Quantity Generators. Permission for site access has NOT be granted at the time of this report, thus, a thorough inspection cannot be completed.	
X		Are other or additional hazardous or potentially hazardous substances customarily used, etc. by similar operations? Comments: NA	
Yes	No	Polychlorinated Biphenyls (PCBs)	Comments
		Do records indicate, or are any of the following observed on the property and labeled as containing PCBs?	
	X	Transformers	
	X	Capacitors	
	X	Vacuum Pumps	
	X	Heat Transfer Systems	
	X	Lamp Ballast	
	X	Hydraulic Fluid	
	X	Pesticide Extenders	
	X	Lubricants	
	X	Cutting Oils	
	X	Plasticizer Applications	

**PHASE I ENVIRONMENTAL SITE ASSESSMENT
SITE INSPECTION REPORT**

Polychlorinated Biphenyls (PCBs) continued:

For each such observation, determine the following if possible.

Observed Condition NA
PCB Content of Oils: _____
Evidence of Spills and Releases _____
Name of Utility Company _____
Unit Manufacturer _____
Identification, Model No., Serial No. _____
Date of Manufacturer _____
Conditions of Possible Future Liability _____
Location of Equipment, Oil etc. (Include on Map) _____

**PHASE I ENVIRONMENTAL SITE ASSESSMENT
SITE INSPECTION REPORT**

CHEMICAL, GAS, & MINERAL INSPECTION (Continued)

Yes	No	Asbestos-Containing Materials (ACMS)	Comments
X		Were any facilities or structures at the site built before 1980?	Residential and commercial sites appear to be older than 1980, however, access was not granted at the time of this report.
NA		Do building blueprints, records, or material specifications indicate the use of ACMs in the facility construction?	Building records not examined.
NA		Are any of the following observed on the property which appears to be ACMs? Insulation Ceiling & Floor Tiles Sheetrock Pipe Wrap	
Radon			
	X	Is the site located in an area with a known propensity for exposure and accumulation of radon in the air and radium in the groundwater? If yes, what are radon levels in the area?	None found onsite.
Lead			
NA		Are there any indications that lead containing paints, sealers, etc. have been used at the site? If so, what is the possible danger of such materials to site occupants?	No buildings inspected at time of report.

GROUNDWATER INSPECTION

Yes	No		Comments
X		Are any groundwater monitoring, purging, or water supply wells identified on the site?	Past groundwater monitoring wells have been plugged & abandoned.
X		Are any groundwater monitoring, purging, or water supply wells identified within a 1 mile radius of the site?	See Phase 1 ESA report for details.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT
SITE INSPECTION REPORT**

HAZARDOUS & SOLID WASTES

Yes	No		Comments
X		Have current or past occupants been issued EPA or State ID numbers for the site?	Qualawash Holdings, LLC EPA# 1000425075 5395 Hooper Road Baton Rouge, LA 70811
X		What methods/contractors have been used to dispose of hazardous wastes generated at the site?	LDEQ records indicate past violations, however site is currently in compliance.
X		Does evidence show that waste materials have been stored, transported, treated or disposed of at the site? Are these methods adequate or appropriate?	.Site inspection not completed at this time.

LANDFILLS

Yes	No		Comments
X		Is there any evidence at the site of licensed or unlicensed landfills, CERCLA, federal, or state, permitted hazardous waste/disposal site, or associated ground water or soil contamination areas?	See report for discussion.

PITS & SUMPS

Yes	No		Comments
X		Is there any evidence of pits or sumps at the site? If so, what are their contents and conditions?	LDEQ records indicate sumps at Qualawash Holdings, LLC, site.

STORAGE TANKS

Yes	No		Comments
X		Is there any evidence of any aboveground storage tanks (ASTs) or underground storage tanks (USTs) at the facility?	See report for discussion.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT
SITE INSPECTION REPORT**

Provide the following information for each tank:

Tank Identification/Location Onsite above ground tanks
 Scaled drawing with fill ports, vents, pumps, concrete pads, saw cuts in paved areas, etc. _____
 Volume & Dimensions Access not granted at the time of this report.
 Materials of Construction _____
 Age _____
 Material Stored _____
 Corrosion Protection Method _____
 Containment Facilities _____
 Regulatory Registration No. _____
 Copies of Inventory Reports _____
 Current Status _____

Yes	No		Comments
	X	Is there any evidence of any removed or abandoned in place ASTs or USTs at the facility? If so, provide a copy of any reports or records detailing the removal or abandonment.	
X		Are there any registered USTs within a 1 mile radius of the site? If so, assess the potential for environmental degradation at the site due to these USTs.	See Phase 1 ESA report for details.

APPENDIX D
ENVIRONMENTAL PROFESSIONAL QUALIFICATIONS

PROFESSIONAL BACKGROUND AND QUALIFICATIONS

Mary M. Field, P.E.

Senior Project Manager: Environmental Engineer 05

Educational Background

1982 M.S., Civil/Environmental Engineering
Louisiana State University

1981 B.S., Civil Engineering
Louisiana State University

Professional Experience

In the area of compliance management and training, Ms. Field, a Professional Engineer and has considerable expertise in the area of environmental assessment.

Ms. Field has conducted environmental audits for various facilities, including Phase I audits for real estate transactions, proposed industrial locations, past site disposal areas, and proposed expansion areas. Her assessment experience has also included the identification and delineation of U.S. Army Corps of Engineers jurisdictional wetlands in accordance with Corp's procedures. This work has resulted in the preparation of mitigation plans and permit applications for private clients including developers and home builders, as well as regulatory response and interaction. She is qualified in State and Federal court as an expert witness in environmental regulation and compliance, and is an instructor for environmental regulatory review courses at Louisiana State University.

A primary focus of projects includes investigation of groundwater conditions and historical practices prior to planning and implementing construction projects. Included were evaluations of both lead and hazardous material presence, with recommendations for investigations of abatement or removal measures.

Groundwater monitoring projects for local industrial clients have been completed, including groundwater sampling, field supervision, implementation of site sampling, quality assurance, health and safety plans, and analytical data and groundwater flow interpretation. Ms. Field has developed closure and post closure plans for a variety of facilities, including closure and post closure cost estimates. She has participated in underground storage tank removal projects, development of remedial options and cost estimates, and interface with regulatory agencies.

Ms. Field has a broad range of experience in solid/hazardous waste management, and has been qualified as an expert witness in regulatory affairs. She has developed hazardous waste management plans for clients based on field interviews of waste handling practices. The management plans included development of waste analysis, training, and contingency plans, as

MARY M. FIELD, P.E. (Cont.)

well as identification of waste minimization/compliance strategies.

In the areas of water quality/wastewater treatment, Ms. Field has developed water quality sampling and analysis programs for several clients, including collection of samples from an acute care facility for analysis of waste characteristics re: hazardous waste management. Other ongoing projects included collection and data analysis of potable water system samples and industrial discharges. The programs included provisions to assure legally defensible results as well as preparation of summary reports. Ms. Field has prepared numerous wastewater discharge permit applications for local industrial clients, including preparation of discharge monitoring reports. Ms. Field wrote quality assurance/quality control plans for sites, and developed the QA/QC plan for CCI.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

9430 JACKIE COCHRAN DR.
BATON ROUGE, LA 70811

COORDINATES

Latitude (North): 30.5233990 - 30° 31' 24.23"
Longitude (West): 91.1415170 - 91° 8' 29.46"
Universal Transverse Mercator: Zone 15
UTM X (Meters): 678317.2
UTM Y (Meters): 3378071.5
Elevation: 63 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no

EXECUTIVE SUMMARY

further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.75 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-LQG site within approximately 0.5 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 3 RCRA-SQG sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EPA ID:: LAD985197367

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 14 RCRA-VSQG sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 11 RCRA NonGen / NLR sites within approximately 0.5 miles of the target property.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there are 3 US AIRS sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UXO: A listing of unexploded ordnance site locations

A review of the UXO list, as provided by EDR, and dated 12/31/2018 has revealed that there are 2 UXO sites within approximately 1.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SMALL ARMS RANGE COM		NW 1/2 - 1 (0.509 mi.)	Z215	480
SKEET RANGE AND FIRI		NW 1/2 - 1 (0.509 mi.)	Z216	480

ECHO: ECHO provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide.

A review of the ECHO list, as provided by EDR, and dated 04/04/2021 has revealed that there are 46 ECHO sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 22 EDR Hist Auto sites within approximately 0.375 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 6 EDR Hist Cleaner sites within approximately 0.375 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a

EXECUTIVE SUMMARY

list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Quality in Louisiana.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 10 RGA LUST sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Click Here:

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Incident Desc: c16-83067 Rotten egg odor in air BH
Incident Type Desc: Complaint, Odor
Comments: A complaint investigation was conducted in regards to allegations reported on July 1, 2016, of a rotten egg odor causing headaches and causing stomach sickness. According to the Incident Report Form (Attachment 1), this is from across the street from a chemical storage facility. During a phone conversation with the complainant on July 20, 2016, he indicated the facility is Qualawash Holdings, LLC which is located at 5395 Hooper Road in Baton Rouge, Louisiana. He said he had a headache from the odor which was strong at the time. A file review revealed the Department reissued Small Source Air Permit 0840-00118-02 to the facility on December 10, 2015. According to the permit, the facility is permitted for emissions involving the cleaning of empty containers including tank truck semi-trailers that previously contained various chemical products. The facility can sometimes use diesel as a solvent to clean the containers. A site visit to the facility on July 20, 2016 (Attachment 2 - Field Interview Form), revealed no odors before entering the facility or while in the parking lot of the facility. A review of the container cleaning records revealed various chemicals that were once stored in the containers to be cleaned including, but is not limited to acids, caustic, and oils. The facility documents information regarding the cleaning of the tank trailers which are either completely empty or have a small amount of "heel" which is drained into a smaller container in order to clean the tank trailer. Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Organization Name: Qualawash Holdings LLC
Incident Desc: 0
Incident Type Desc: Complaint, Abandoned Drums/Containers
Comments: On 2/05/2010, Karen Price contacted Qualawash representative in Houston, TX to make arrangement to meet at the site. Karen Price and Peter Michgelsen investigated the complaint on 2/10/2010. Qualawash previously operated a tank trunk cleaning terminal using primarily caustic and detergents to wash exterior and interior of tank trailers. The inspectors met facility representatives Thomas McCrystal (225-326-0570) and Todd Smith at the site. DPW representatives, Tonya Marshal and Mike Thompson were also onsite. The facility had requested a permit from DPW to re-open the facility and DPW was concerned about the condition of the facility in regards to the corrosion on the electrical and tank system and the materials remaining onsite. The site has an EPA identification number of LAD981059264, Air Permit number 084-00118-01 and Permit number 20090001 on file. Mr. McCrystal stated the facility was closed in July of 2007. He stated that all tanks were empty and the material sent off-site for disposal. During the inspection, a 550 gallon tote was observed in the first bay. The tote was approximately one-third full of an unknown material (Picture 1). Mr. Smith stated that he thought it was used oil. The tank was not labelled used oil. The tank was screened with a hydrocarbon and a halogen meter. The hydrocarbon indicated a high levels in detection. The halogen meter had a slight rise in detection. The inspectors next inspected the cleaning vats (two 500-gallon and two 700-gallon tanks). The inspectors observed some spillage below the vats Pictures 2, 3, 4). The two 700 gallon vats still contained material in them. Mr. Smith advised us that one of the tanks held diesel and the other one held caustic. Outside the facility, the wastewater system tanks were inspected. A cone shaped tank held liquid that Mr. Smith identified as rainwater that was removed from the sump area (Picture 5).

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Louisiana Tools for Environmental Management and Protection Organizations (LA-TEMPO) is an Integrated Management System. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Waste Code:	D033
Waste Description:	HEXACHLOROBUTADIENE
Waste Code:	D034
Waste Description:	HEXACHLOROETHANE
Waste Code:	D035
Waste Description:	METHYL ETHYL KETONE
Waste Code:	D036
Waste Description:	NITROBENZENE
Waste Code:	D038
Waste Description:	PYRIDINE
Waste Code:	D039
Waste Description:	TETRACHLOROETHYLENE
Waste Code:	D040
Waste Description:	TRICHLOROETHYLENE
Waste Code:	D043
Waste Description:	VINYL CHLORIDE
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE

USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F035
Waste Description: WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT USE INORGANIC PRESERVATIVES CONTAINING ARSENIC OR CHROMIUM. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.

Waste Code: K001
Waste Description: BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATERS FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.

Waste Code: K019
Waste Description: HEAVY ENDS FROM THE DISTILLATION OF ETHYLENE DICHLORIDE IN ETHYLENE DICHLORIDE PRODUCTION.

Waste Code: K022
Waste Description: DISTILLATION BOTTOM TARS FROM THE PRODUCTION OF PHENOL/ACETONE FROM CUMENE.

Waste Code: K035
Waste Description: WASTEWATER TREATMENT SLUDGES GENERATED IN THE PRODUCTION OF CREOSOTE.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Comments: This site visit was made on 11-1-10 in response to incident # 127365. My observations: --This incident refers to an underground tank which was discovered during a EBR City Parish road construction project. --On this visit, I spoke with John Chadwick of Richard Price Construction Co. who is Site Foreman on this project. Mr. Chadwick stated that he was the heavy equipment operator at the time of the discovery. He said that the tank was small, about 250 gallons, and appeared to be an old propane tank. He indicated that this tank was full of water and emitted some propane-like odors. He also said that Oil Mop of Port Allen, LA responded and collected samples from around the perimeter of the tank. --On my visit, I noted that the tank had been covered up with dirt and the area taped off. --I later spoke with a spokesman with Oil Mop and requested a copy of the lab report. The Oil Mop employee indicated that she will e-mail a copy of the requested lab report.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Organization Name: COCA COLA BOTTLING CO. UNITED INC.
Incident Desc: s15-59873waste water released to water due to a failed liftstation CML
Incident Type Desc: Release/Spill, Sewage
Comments: EBR lift station failed and caused the primary wastewater discharge line from the plant to the lift station to back up. Wastewater flowed from the cleanouts and pre-treatment system into nearby stormwater drains discharging to outfall 003. Spill response equipment was deployed to reduce the amount of discharge to storm drains. EBR DPW was contacted regarding the failure of the pump station. md

 Organization Name: COCA COLA
 Incident Desc: s16-82939 release of ammonia to air due to a leak in a gasket on a compressor CML
 Incident Type Desc: Release/Spill, Facility Air Release
 Comments: On June 30, 2016 Emergency Responder Nathan Prince was notified of an incident at the Coca-Cola bottling plant in Baton Rouge. A small leak of Ammonia was found to be coming from a pipeline in the ammonia room. Upon further review, it was discovered that the leak was caused from a faulty gasket in one of the couplings. The leak continued for a few days until they were able to get the parts to fix it. The low level ammonia alarm never went off. The reportable quantity for ammonia was never exceeded. No injuries, fatalities, road closures, and or evacuations occurred because of this incident. At this time no further action is needed. NRP

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Mailing Zip: Not reported
Organization Name: East Baton Rouge Parish
Incident Desc: On 03/18/2009 at 02:13PM I arrived at 8777 Cedar Glen in order to respond to incident T-113263. The complainant was concerned about a sewage leaking problem; allowing sewage to leak on the ground. There was no one home at the above address at the time of my investigation. The next door neighbor told me that the water in front of his house and at the above address came from the car that he was washing at the time of the investigation. I did not see a sewage leak.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 RAB: Not reported
 NPL Status: Not Listed
 Description: The Harding Army Airfield consisted of 13,684 acres. This site is located in East Baton Rouge Parish, six miles north of Baton Rouge, Louisiana. The Army divided the fee-owned land into three parcels, one parcel, was comprised of 127.0 acres and contained the airfield, known as Harding Field (now the Baton Rouge Municipal Airport, Ryan Field). Another parcel was designated as an ordnance magazine area, situated approximately 1.5 mile north of the airfield and was comprised of 665 acres. The third parcel adjacent to the airfield, was a training area and consisted of the remaining 11 acres of fee land. Approximately 11,607 leased acres were used for a gunnery target range. Approximately 21 acres of leased land was used as a radio range site, situated approximately 3 miles north of the airfield. Improvements on the property consisted of complete air training facilities (approximately 300 assorted structures), which included housing and support facilities for servicemen. Of the 300 structures placed on the site, 12 structures remain along with numerous concrete slabs.
 History: This property consists of approximately 13,684 acres of land. By Letters of Acceptance from the Governor of the State of Louisiana, between 15 January 1943 and 25 August 1944, the War Assets Administration (WAA) acquired the fee acreage and was granted

jurisdiction over the leased and easement acreage. The fee-owned property land was divided into three parcels. One parcel (127.0 acres) contained the airfield, known as Harding Field and is now the Baton Rouge Municipal Airport (Ryan Field). This parcel also included civilian war housing and target butts. Another parcel, situated 1.5 miles north of the airfield, was designated as an ordnance storage magazine area and contained 665 acres. The third parcel, immediately adjacent to the airfield, was an additional training and civilian war housing area, which was comprised of the remaining 11 fee acres. Approximately 21 acres of leased property was used as a radio range site, situated in a remote location approximately 3 miles north of the airfield. Approximately 11,607 leased acres were used for the gunnery target range. The remaining 1,253 acres of leased property comprised of road and aviation easements. The Harding Army Air Field was used as a fighter aircraft training facility during World War II. The presence of an ordnance magazine area at this site, suggests that the airfield had an ordnance capability and may have received, stored and issued ordnance in connection with its mission. The installation was declared surplus by the War Department and custody was assumed by the WAA. The WAA turned the installation over to the Police Jury of East Baton Rouge Parish in 1948. Improvements on the property consisted of complete air training facilities (approximately 300 assorted structures), which included housing and support facilities. Of the 300 structures placed on the site, only 12 structures remain along with numerous concrete slabs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/2021	Source: EPA
Date Data Arrived at EDR: 05/03/2021	Telephone: N/A
Date Made Active in Reports: 05/19/2021	Last EDR Contact: 08/04/2021
Number of Days to Update: 16	Next Scheduled EDR Contact: 10/11/2021
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021	Source: EPA
Date Data Arrived at EDR: 05/03/2021	Telephone: N/A
Date Made Active in Reports: 05/19/2021	Last EDR Contact: 08/04/2021

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Compliance Consultants, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Compliance Consultants, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

ACCESS LETTER

Ms. Enid Matherene
5862 Hooper Road
Baton Rouge, Louisiana 70811

**Re: Baton Rouge Metropolitan Airport
Environmental Assessment for Runway 13/31/RSA/RPZ (RFP15-001)**

Dear Ms. Matherene:

The City of Baton Rouge/Parish of East Baton Rouge and the Baton Rouge Metropolitan Airport Authority intend to modify the Runway Safety Zone for Runway 13/31 to meet current FAA standards. The project will require the re-location of a portion of Plank Road. You have been identified as owning property that could be affected.

Currently, several alignments are being studied to determine the new location of Plank Road. This study may take some time before a final alignment is selected and road design components are finalized.

We wish to advise you that it will be necessary for Compliance Consultants, Inc. (CCI) personnel to enter upon your property to conduct an environmental assessment of the property. We anticipate being on your property within the next two weeks. The information collected will become a part of an Environmental Assessment report in support of the project. Attached is a form, which asks for information on your property. This information will assist our personnel in conducting their field work. Please complete the form and return it to our office as soon as possible. For your convenience a stamped, self-address envelop is included with this letter. You can, but are not required to be present while we conduct our field work. However, if entry to your property requires your presence, such as unlocking a lock, please notify my office (225) 755-0044, to schedule a mutually agreeable time.

Our field personnel will carry credentials identifying them as CCI personnel. They will receive instructions regarding preservation of private property. Our field work **should not** disturb your property in anyway. In the event it does, please contact my office. Please note, our field personnel are collecting data only and will not be able to provide any definite information concerning possible property purchases.

Thank you in advance for your cooperation and assistance.

Sincerely yours,

COMPLIANCE CONSULTANTS, INC.

**Re: Baton Rouge Metropolitan Airport
Environmental Assessment for Runway 13/31/RSA/RPZ (RFP15-001)**

Dear Property Owner:

The City of Baton Rouge/Parish of East Baton Rouge and the Baton Rouge Metropolitan Airport Authority intend to modify the Runway Safety Zone for Runway 13/31 to meet current FAA standards. The project will require the re-location of a portion of Plank Road. You have been identified as owning property that could be affected.

Currently, several alignments are being studied to determine the new location of Plank Road. This study may take some time before a final alignment is selected and road design components are finalized.

We wish to advise you that it will be necessary for Compliance Consultants, Inc. (CCI) personnel to enter upon your property to conduct an environmental assessment of the property. We anticipate being on your property within the next two weeks. The information collected will become a part of an Environmental Assessment report in support of the project. Attached is a form, which asks for information on your property. This information will assist our personnel in conducting their field work. Please complete the form and return it to our office as soon as possible. For your convenience a stamped, self-address envelop is included with this letter. You can, but are not required to be present while we conduct our field work. However, if entry to your property requires your presence, such as unlocking a lock, please notify my office (225) 755-0044, to schedule a mutually agreeable time.

Our field personnel will carry credentials identifying them as CCI personnel. They will receive instructions regarding preservation of private property. Our field work **should not** disturb your property in anyway. In the event it does, please contact my office. Please note, our field personnel are collecting data only and will not be able to provide any definite information concerning possible property purchases.

Thank you in advance for your cooperation and assistance.

Sincerely yours,

COMPLIANCE CONSULTANTS, INC.

APPENDIX D
ENVIRONMENTAL PROFESSIONAL QUALIFICATIONS

PROFESSIONAL BACKGROUND AND QUALIFICATIONS

Mary M. Field, P.E.

Senior Project Manager: Environmental Engineer 05

Educational Background

1982 M.S., Civil/Environmental Engineering
Louisiana State University

1981 B.S., Civil Engineering
Louisiana State University

Professional Experience

In the area of compliance management and training, Ms. Field, a Professional Engineer and has considerable expertise in the area of environmental assessment.

Ms. Field has conducted environmental audits for various facilities, including Phase I audits for real estate transactions, proposed industrial locations, past site disposal areas, and proposed expansion areas. Her assessment experience has also included the identification and delineation of U.S. Army Corps of Engineers jurisdictional wetlands in accordance with Corp's procedures. This work has resulted in the preparation of mitigation plans and permit applications for private clients including developers and home builders, as well as regulatory response and interaction. She is qualified in State and Federal court as an expert witness in environmental regulation and compliance, and is an instructor for environmental regulatory review courses at Louisiana State University.

A primary focus of projects includes investigation of groundwater conditions and historical practices prior to planning and implementing construction projects. Included were evaluations of both lead and hazardous material presence, with recommendations for investigations of abatement or removal measures.

Groundwater monitoring projects for local industrial clients have been completed, including groundwater sampling, field supervision, implementation of site sampling, quality assurance, health and safety plans, and analytical data and groundwater flow interpretation. Ms. Field has developed closure and post closure plans for a variety of facilities, including closure and post closure cost estimates. She has participated in underground storage tank removal projects, development of remedial options and cost estimates, and interface with regulatory agencies.

Ms. Field has a broad range of experience in solid/hazardous waste management, and has been qualified as an expert witness in regulatory affairs. She has developed hazardous waste management plans for clients based on field interviews of waste handling practices. The management plans included development of waste analysis, training, and contingency plans, as

MARY M. FIELD, P.E. (Cont.)

well as identification of waste minimization/compliance strategies.

In the areas of water quality/wastewater treatment, Ms. Field has developed water quality sampling and analysis programs for several clients, including collection of samples from an acute care facility for analysis of waste characteristics re: hazardous waste management. Other ongoing projects included collection and data analysis of potable water system samples and industrial discharges. The programs included provisions to assure legally defensible results as well as preparation of summary reports. Ms. Field has prepared numerous wastewater discharge permit applications for local industrial clients, including preparation of discharge monitoring reports. Ms. Field wrote quality assurance/quality control plans for sites, and developed the QA/QC plan for CCI.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A	Source: EDR, Inc.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 03/24/2021
Date Data Arrived at EDR: 05/11/2021

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
22121C0100D	FEMA FIRM Flood data

<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
22033C0190E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
ZACHARY	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
B15	1/8 - 1/4 Mile WSW	S
82	1/2 - 1 Mile ENE	NE
1G	1/2 - 1 Mile ENE	NE
2G	1/8 - 1/4 Mile WSW	S

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Pleistocene
Code: Qp (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: JEANERETTE

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat poorly. Soils commonly have a layer with low hydraulic conductivity, wet state high in profile, etc. Depth to water table is 1 to 3 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 7.80 Min: 5.60
2	6 inches	40 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 8.40 Min: 6.60
3	40 inches	60 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 8.40 Min: 6.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silty clay loam

Surficial Soil Types: silty clay loam

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: silty clay loam
silt

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

LA WELLS LATD60000060039

Well ID:	033-8811Z	Local Well #:	8811Z
Well Use:	plugged and abandoned monitor	Well Status:	Plugged and Abandoned
Sub-use:	Plugged	Owner:	PEL-STATE OIL
Seq #:	01	Date Drilled:	12/03
Well Depth:	25	Mechanic Test:	Not Reported
Geo Unit:	112SESC	Bio Analysis:	Not Reported
Chemical Analysis:	Not Reported	Driller:	JONES BROTHERS
Pump Test:	Not Reported	Hole Depth:	25
Driller #:	536	Depth From Surface:	8.26
Elevation:	64	Date Added by Agency:	2007-10-08
Measured Date:	12/08/03	Date Plugged:	03/06
Date Registered by Agency:	06/04	Yield on Pump Test:	Not Reported
Plugged By:	JONES BROTHERS	Casing Diameter:	4
Drawdown on Test:	Not Reported	Screen Diameter:	4
Casing Material:	PLASTIC	Assoc Well Serial #:	Not Reported
Screen Interval:	15-25	Comments:	Not Reported
Well Name:	MW-2R	Extension Pipe Length:	Not Reported
Pumpdown Method:	Not Reported	Bottom of Extension Pipe:	Not Reported
Top of Extension Pipe:	Not Reported	Gravel Packed:	N
Screen Material Type:	Not Reported	Screen Diameter:	Not Reported
Ground Elevation:	Not Reported	Avg Heat Pump Depth:	0
Remarks:	Not Reported	Annular Space Cemented Depth:	Not Reported
Heat Pump Hole #:	Not Reported	Screen Slot Size:	Not Reported
Screen interval Length:	Not Reported	Pump Depth:	Not Reported
Inspection Comments:	Not Reported	Planned Pumpage (GPM):	0
Pump Horse Power:	Not Reported	Planned Pumpage (days/yr):	Not Reported
Planned Pumpage (hr/day):	0	Measured Method:	Not Reported
Pump Rate (Gal/day):	Not Reported	Pump Test Date:	0
Hrs of Test:	Not Reported	Static Measurement Method:	Not Reported
Static Water Level:	Not Reported	Pump Test Done:	Not Reported
Water Level Post-Test:	Not Reported	P and A Comments:	Not Reported
Cementing Method:	Not Reported	Casing Length:	Not Reported
P and A Details:	Not Reported	Owner ID:	0
Driller Owner:	Not Reported

FED USGS USGS40000399262

Organization ID:	USGS-LA	Organization Name:	USGS Louisiana Water Science Center
Monitor Location:	EB- 315	Type:	Well
Description:	Not Reported	HUC:	08070201
Drainage Area:	Not Reported	Drainage Area Units:	Not Reported
Contrib Drainage Area:	Not Reported	Contrib Drainage Area Unts:	Not Reported
Aquifer:	Coastal lowlands aquifer system		
Formation Type:	2000-foot Sand of Baton Rouge Area		

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS

Aquifer Type:	Not Reported	Construction Date:	19380921
Well Depth:	1960	Well Depth Units:	ft
Well Hole Depth:	2000	Well Hole Depth Units:	ft
Ground water levels, Number of Measurements:	243	Level reading date:	1956-06-26
Feet below surface:	43.09	Feet to sea level:	Not Reported

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

UST FID No. 17-002012; UST Incident No. 86804 and Incident No. 96014
4716 Hooper Road
Baton Rouge, Louisiana, East Baton Rouge Parish

Dear Ms. Sierra:

The Louisiana Department of Environmental Quality – Underground Storage Tank Division (LDEQ-USTD) has completed its review of your Monitor Well Plugging and Abandonment Activities/NFA-ATT Request Report dated October 6, 2009, for the above referenced area of investigation located at 4716 Hooper Road in East Baton Rouge Parish. Based on our review of this document and all previously submitted information, we have determined that no further action is necessary at this time. The Basis of Decision for this notification is attached.

No soils may be removed from this site without prior approval from LDEQ unless they are removed and disposed at a permitted disposal facility. Prior to the construction of enclosed structures over any portion of the impacted area, further evaluation and approval from LDEQ is warranted.

If you have any questions or need further information, please contact Laurence Carter at (225) 219-3415 or Laurence.Carter@la.gov. Thank you for your cooperation in addressing this area.

Sincerely,

Tim B. Knight, Administrator
Underground Storage Tank Division

BASIS OF DECISION FOR NO FURTHER ACTION

Chevron Station Inc #109056 (Former Chevron Service Station #60109056) AI # 22964

The Louisiana Department of Environmental Quality – Underground Storage Tank Division—Remediation Process (LDEQ-USTD-RP) has determined that Chevron Station Inc #109056 (Former Chevron Service Station #60109056) requires No Further Action At This Time.

The property was previously utilized as a gasoline/diesel fueling station and convenience store from 1986 until February 1990, and as a gasoline fueling station and convenience store from April 1990 until August 2003. The site is currently an inactive service station. A Baseline Site Assessment with a report date of April 1, 2006, and an Additional Site Investigation and RECAP Evaluation with a report date of March 4, 2008, were performed at this facility.

The site was evaluated under the LDEQ's RECAP Screening Option, Management Option (MO) 1, MO-2, and Appendix I MO-2 standards. The source length was determined to be 30 feet and the fractional organic carbon (foc) of the impacted soils was determined to be 0.02. Using Figure I-1 in Appendix I, the site was evaluated as a Category 12. The distance between the Point of Compliance (POC) and the Point of Exposure (POE) was estimated at 2,000 feet. Using Figure I-2 in Appendix I, a dilution factor of 3,380 was derived.

Based on findings from site investigations, two Areas of Concern (AOC-1, AOC-2) were identified. AOC-1 encompasses the entire UST system and AOC-2 is defined as the area adjacent to and including the store building. The limiting RECAP standards (LRS) for soil in AOC-1 were determined by comparing the $Soil_i$, adjusted $Soil_{gw3ndw}$, and $Soil_{sai}$, and the lowest of these values was selected as the LRS. The LRS for groundwater in AOC-1 were determined by comparing the adjusted GW_{3ndw} , water solubility, and the adjusted GW_{airi} , and the lowest of these values was selected as the LRS. The LRS for soil in AOC-2 were the $Soil_{esi}$ (determined from the MO-1 and MO-2 options). The LRS for groundwater in AOC-2 were the GW_{esi} (determined from the MO-1 option). The standards that were applied to this site are listed in the table that appears at the end of this BOD.

The site is surrounded by commercial properties and is zoned as C1 (Light Commercial). There are no domestic water wells located within a one-mile radius of the site that are screened in the same stratum as the aquifer of concern, the maximum attainable yield from the stratum is less than 800 gallons per day, and groundwater at the site is classified as Classification 3A Non-Drinking Water ($GW_{3A_{ndw}}$).

Soil and groundwater sampling has confirmed that constituents of concern concentrations do not exceed the established site-specific remediation standards, so no remedial action was required. No Further Action At This Time is granted when contamination is confirmed to exist at concentrations that do not exceed the established standards.

In accordance with LAC 33:I. Chapter 13, if land use is going to be changed from industrial to non-industrial, the responsible party shall notify the LDEQ within thirty (30) days and the Area of Investigation (AOI) shall be reevaluated to determine if conditions are appropriate for the proposed land use. Future use may dictate additional remedial activities. A conveyance notice has been filed with the East Baton Rouge Parish Clerk of Court noting that the AOI was closed under industrial standards.

An inspection of the site was performed on September 16, 2009, confirming that no investigation derived waste remains on site. No soils may be moved from this location without written authorization from the LDEQ unless they are removed and disposed at a permitted disposal facility. All soil borings and temporary monitoring wells have been properly plugged and abandoned in accordance with applicable regulations.

The impacted media, constituents of concern, maximum concentration remaining on site and limiting RECAP standard established for this site are listed in the following table:

Table 1: AOC-1: Soil

Constituent of Concern (Soil)	Maximum Remaining Concentration (location/depth)	Appx. I Limiting RECAP Standard
Benzene	<4.9 mg/kg (SB-1/4-6ft bgs)	9.2 mg/kg ¹
Ethylbenzene	73 mg/kg (SB-12/4-6ft bgs)	720 mg/kg ²

It should not be interpreted as a final determination by the Department of Environmental Quality or any of its officers or personnel as to any matter, including, but not limited to, a determination of compliance or lack thereof by the facility operator with any requirements of statutes regulations or permits. Each day of non-compliance constitutes a separate violation of the regulations and/or the Louisiana Environmental Quality Act.

Tempo'd 9-16-09

CONVEYANCE NOTIFICATION

Chevron Products USC, current property owner, hereby notifies the public that the following described Areas of Concern (AOCs), Louisiana Department of Environmental Quality (LDEQ) Agency Interest No. 22964 were closed with contaminant levels present acceptable for industrial/commercial use of the property as described in the LDEQ's Risk Evaluation/Corrective Action Program (RECAP), Section 2.9. In accordance with the Louisiana Administrative Code (LAC) Title 33:I, Chapter 13, if land use changes from industrial to non-industrial, the responsible party shall notify the LDEQ within 30 days, and the AOC(s) shall be re-evaluated to determine if conditions are appropriate for the proposed land use.

This site was closed in accordance with the LAC, Title 33:I, Chapter 13. Information regarding this site is available in the LDEQ public record, and may be obtained by contacting the LDEQ Records Manager at (225) 219-3168. Inquiries regarding the contents of this site may be directed to the responsible party, Ms. Amy Sierra with Chevron Environmental Management Company at P.O. Box 430, Bellaire, Texas 77402.

RE: No Further Action Notification
Circle K Store# 8041; AI No. 75247
FID # 17-008740; In. No. UE-92-2-011; 8085 Plank Road; Baton Rouge, East Baton Rouge Parish

Dear Ms. Ruby:

The Louisiana Department of Environmental Quality – Underground Storage Tank Division (LDEQ-USTD) has completed its review of your NFA-ATT Request dated October 6, 2008 for the above referenced area of investigation located at 8085 Plank Road, Baton Rouge, in East Baton Rouge Parish. Based on our review of this document and all previously submitted information, we have determined that no further action is necessary at this time. The Basis of Decision for this notification is attached.

No soils may be removed from this site without prior approval from LDEQ unless they are disposed of at a permitted disposal facility. Prior to the construction of enclosed structures over any portion of the impacted area, further evaluation and approval from LDEQ is warranted.

If you have any questions or need further information, please call Thomas Stafford at 225-219-3222. Thank you for your cooperation in addressing this area.

Sincerely,

A handwritten signature in black ink that reads "Tim B. Knight".

BASIS OF DECISION FOR NO FURTHER ACTION

Circle K Store# 8041

AI No. 75247

The Louisiana Department of Environmental Quality – Underground Storage Tank Division — Remediation Process (LDEQ-USTD-RP) has determined that Circle K Store# 8041 requires No Further Action At This Time.

The property is used as a convenience store that also sells two grades of gasoline. File information begins with an investigation work plan submitted on November 5, 2002, that refers to investigations, emplacement of oxygen releasing compound, in and vacuum events beginning in April 1994. The investigations culminated on July 21, 2004 with submittal of a report documenting completion of an investigation conducted in accordance with the Louisiana Risk Evaluation Corrective Action Program (RECAP)

Remedial standards were developed for this property using RECAP Appendix I. The standards that were applied to this site are listed in the table that appears at the end of this BOD. Light industrial and commercial establishments dominate the area. Drinking water in the area is provided from the City of Baton Rouge water system. There are no domestic or agricultural wells within a one - mile radius. The impacted groundwater is a groundwater three non-drinking water zone.

Remediation comprised excavation of contaminated soil from the area of the original tank hold. Analyses of confirmation samples reported in an Excavation Report dated December 20, 2007 documented that the contamination was less than or equal to RECAP Standards calculated for the site.

No Further Action - At This Time is granted when contamination is reduced to the extent necessary to achieve the established standards.

In accordance with LAC 33:I. Chapter 13, if land use is going to be changed from industrial to non-industrial, the responsible party shall notify the LDEQ within thirty (30) days and the Agency Interest shall be reevaluated to determine if conditions are appropriate for the proposed land use. Future use may dictate additional remedial activities. A conveyance notice has been filed with the East Baton Parish Clerk of Court noting that the AI was closed under industrial standards.

No soils may be moved from this location without written authorization from the LDEQ unless they are removed and disposed at a permitted disposal facility.

The monitoring wells were plugged and abandoned on October 10, 2006. All of the pieces of the wells and other investigation derived wastes were removed at that time. Copies of the plugging and abandonment forms were submitted on December 20, 2007.

BOD
 Circle K Store# 8041
 AI No. 75247

The impacted media, constituents of concern, maximum concentration remaining on site and limiting RECAP standards established for this site are listed in the following table:

Medium	Constituent of Concern	Maximum Remaining Concentration	Limiting RECAP Standard
Soili	benzene	6.9 mg/kg	6.9 mg/kg
Soili	MTBE	4.1 mg/kg	12,000 mg/kg
Soili	TPH-GRO	940 mg/kg	5,000 mg/kg
GW3NDW	benzene	0.8 mg/l	43.9 mg/l
GW3NDW	MTBE	1.0 mg/l	51,000 mg/l
GW3NDW	TPH-GRO	55.0 mg/l	10,000 mg/l
GW3NDW	Aliphatics >C6-C8	4.7 mg/l	10,000 mg/l
GW3NDW	Aliphatics >C8-C10	7.8 mg/l	10,000 mg/l
GW3NDW	Aliphatics > C10-C12	9.5 mg/l	10,000 mg/l
GW3NDW	Aromatics >C8-C10	9.9 mg/l	10,000 mg/l
GW3NDW	Aromatics >C10-C12	9.7 mg/l	10,000 mg/l

Additional information on the details of the investigation and evaluation of this site may be obtained from LDEQ's Public Records Center located in the Galvez Building, Room 127, 602 N. Fifth Street, Baton Rouge, LA 70802. Additional information regarding the Public Records may be obtained by calling (225) 219-3168 or by emailing publicrecords@la.gov.

The north and south boundary lines of the tract herein conveyed run parallel to the utility right of-way and south boundary line of the entire tract from which the lot herein is taken, being a portion of the property acquired by vendor herein by act recorded in Conveyance Book 1265, Folio 487 of the records of the parish of East Baton Rouge Louisiana

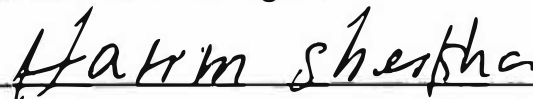

Less and Except

One (1) certain lot or parcel of ground together with all the buildings and improvements thereon, situated in the parish of East Baton Rouge, state of Louisiana, in Section 48, 89 and 90 Township 6 South Range 1 East, and designated on ' Map showing the resubdivision of Lot A-1, formerly a portion of Tract A originally a portion of the Bradley Property, located in Section 40, 89 & 90, T 6-8, R 1 E, East Baton Rouge Parish, LA For Pak A Sak Service Stores, Inc Made by Toxie Craft, Civil Engineer, a copy of which is annexed hereto and made a part hereof, as Lot A 1 A-1, said lot measuring seventy five (75) feet front on the southeasterly side of Plank Road by a depth between parallel lines of two hundred (200) feet

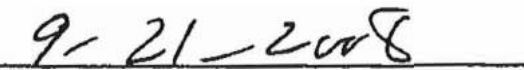

A Site Plan is attached as Figure 1 Analytical laboratory results for the maximum remaining surface soil and groundwater constituents of concern (COCs) for the AOI are summarized on Tables 1 and 2, respectively

<input type="checkbox"/>	Desk Copy File Room

Dear Mr. Harris:

On behalf of ExxonMobil Corporation (ExxonMobil), Groundwater & Environmental Services, Inc. (GES) is submitting three copies of a Phase II Environmental Site Assessment (ESA) Report dated April 1, 2011 for the Exxon Retail Station No. 5-6364 located at 7997 Plank Road in Baton Rouge, Louisiana (Site). This assessment was performed as part of a potential real estate transaction. It is being submitted to the Louisiana Department of Environmental Quality (LDEQ) pursuant to the notification requirements for underground storage tanks (UST) stated in LAC 33:XI.707 due to constituent concentrations detected above the LDEQ Risk Evaluation / Corrective Action Program (RECAP) Table I Screening Standards. The LDEQ Single Point of Contact was notified of the suspected release on March 21, 2011.

A review of available records identified no open or closed Incident Numbers for the Site. In order to obtain data to further evaluate conditions at the Site, a nearby facility with pertinent site data, the Former Chevron #60210428 (LDEQ AI No. 94233) located at 7175 Plank Road, Baton Rouge, Louisiana, was identified within a one-mile radius of the Site. A RECAP Evaluation dated January 16, 2006 indicates the Former Chevron #60210428 is classified as Groundwater Class 3A Non-Drinking Water. The fractional organic carbon content is 0.015. Additional geotechnical soil data are available in the report.

The direction of groundwater flow at the Site, as determined during the Phase II ESA, is to the southwest. The nearest downgradient surface water body is a Monte Sano Bayou located approximately 4,415-feet from the Site. The bayou is not considered to be a drinking water source.

Phase II Environmental Site Assessment Report
Exxon Retail Station No. 5-6364
April 18, 2011
Page 2 of 2

The Phase II ESA identified benzene, methyl *tert*-butyl ether (MTBE), total petroleum hydrocarbons – gasoline range organics (TPH-GRO), total petroleum hydrocarbons – diesel range organics (TPH-DRO), total arsenic, and total lead in groundwater at select monitoring wells above the RECAP Table 1 SS. Based on the concentrations of the COCs and lack of drinking water receptors in the vicinity, it appears that the COCs would be below the GW3NDW RECAP standards under RECAP MO-1. Based on this information, it is GES' opinion that no further action is necessary at this site.

Please submit future correspondence to the attention of Dale Gomm with ExxonMobil at 14950 Heathrow Forest Parkway, Room P031C, Houston, Texas 77032.

If you have any questions concerning this submittal, please contact GES at (877) 680-2850 or Dale Gomm, ExxonMobil Project Manager at (713) 819-6879.

Sincerely,

GROUNDWATER & ENVIRONMENTAL SERVICES, INC.

1.0 INTRODUCTION

ExxonMobil Environmental Services Company on behalf of Exxon Mobil Corporation (ExxonMobil) retained Groundwater & Environmental Services, Inc. (GES) to complete a Phase II Environmental Site Assessment (Phase II ESA) of ExxonMobil Station #56364 located at 7997 Plank Road, in Baton Rouge, Louisiana (the Property). The Property is referenced as ExxonMobil Station #56364, and consists of an active retail petroleum fuel station with an active car wash.

The purpose of the Phase II ESA was to evaluate the Recognized Environmental Conditions (RECs) previously identified in the January 2011 *Phase I Environmental Site Assessment* (Phase I ESA) prepared by GES. The January 2011 Phase I ESA identified the following RECs for the Property:

- REC-1: Current Gasoline USTs, Product Piping and Dispensers: The Property is a retail petroleum station and a car wash. The Property currently utilizes two 15,000-gallon gasoline USTs and one 20,000-gallon double compartment UST with one 8,000-gallon diesel compartment and one 12,000-gallon gasoline compartment that were installed on August 29, 2003.
- REC-2: Former Gasoline USTs, Product Piping and Dispensers: The Property formerly utilized three 10,000-gallon gasoline USTs and one 10,000-gallon diesel UST that were installed April 12, 1984 and removed on August 11, 2003.
- REC-3: Current Car Wash Oil/Water Separator: A carwash with an underground water reclamation system which discharges to the sanitary sewer is located east of the carwash.
- REC-4: Groundwater at the Upgradient (North) Property Boundary: The Tim's Food Inc. was identified in the HIST LUST database for groundwater contamination reported on April 18, 1989, Incident #89-2-0111. The due date for a corrective action plan is December 21, 1998. Tim's Food Inc. operated three 8,000-gallon gasoline USTs installed in 1994. The facility formerly operated two 8,020-gallon gasoline USTs installed in 1964 and one 9,994-gallon gasoline UST installed in 1980. The Circle K #9727 (Shell gas station, north adjacent property) facility formerly operated two 12,000-gallon gasoline USTs and one 8,000-gallon diesel UST installed in 2000.

Further information on each REC is contained in the Phase I ESA report. Based on the identification of the above-referenced RECs, the following scope of work was developed and approved:

- Advancement of eleven monitoring wells (MW-A, MW-B, MW-C, MW-D, MW-E, MW-F, MW-G, MW-H, MW-I, MW-J and MW-K) to evaluate the presence of petroleum hydrocarbons or other constituents of concern (COCs) in soil and groundwater, if any. Specifically, advancement of MW-A, MW-B, and MW-C to address REC-1, MW-D and MW-E to address REC-2, MW-F, MW-G, and MW-H to address REC-3, and MW-I, MW-J, and MW-K to address REC-4.
- Collection and laboratory analysis of soil samples for benzene, toluene, ethylbenzene, total xylenes (BTEX) & methyl tert-butyl ether (MTBE) via United States Environmental Protection Agency (EPA) Method 8260 and total petroleum hydrocarbons (TPH) gasoline range organics (GRO), diesel range organics (DRO), and oil range organics (ORO) via Method 8015. In addition, analyses of selected samples for polycyclic aromatic hydrocarbons (PAHs) via EPA Method 8270, Resource Conservation and Recovery Act (RCRA) 8 Metals Arsenic (As), Barium (Ba), Cadmium (Cd), Chromium (Cr), Lead (Pb), Mercury (Hg).

Selenium (Se), and Silver (Ag) via EPA Method 6010B/7471A, and volatile organic compounds (VOCs) via USEPA Method 8260B; and

- Collection and laboratory analysis of groundwater samples for BTEX/MTBE via USEPA Method 8260, and TPH-GRO, TPH-DRO, and TPH-ORO via Method 8015. . In addition, analyses of selected samples for PAHs via EPA Method, RCRA 8 Metals via EPA Method 6010B/7471A, and VOCs via EPA Method 8260B.

Subject to the limitations listed in section 6.0, the objectives of this evaluation were:

- 1) To provide sufficient information regarding the nature of contamination to assist in making informed business decisions about the property, and
- 2) To provide the level of knowledge necessary to satisfy the innocent purchaser defense under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

Unless otherwise noted, the Phase II ESA was prepared in accordance with ASTM E 1903-97, *Standard Guide for Environmental Site Assessments: Phase II Environmental Site Assessment Process*. This Phase II ESA documents the results of the implementation of this approved SOW.

2.0 BACKGROUND

2.1 Site Description and Features

The Property is located at 7997 Plank Road, in Baton Rouge, Louisiana. **Figure 1** shows the approximate location of the Property on the USGS topographic quadrangle map for Quadrangle 7.5-Minute Series, Scotlandville, Louisiana. The approximate geographical coordinates for the Property are 30 degrees, 31 minutes, 16.3 seconds North (Latitude) by 91 degrees, 8 minutes, 44.2 seconds West (Longitude). The approximate ground surface elevation is about 63 feet above mean sea level (AMSL).

The 1.6-acre property is currently used as an active retail petroleum station with a convenience store and car wash. An active UST system is maintained at the Property. The system includes two 15,000-gallon capacity USTs and one 20,000-gallon capacity, double compartment UST with one 8,000-gallon diesel compartment and one 12,000-gallon capacity gasoline compartment. The current petroleum UST system was installed at the Property in August 2003. Eight double-sided dispensers are present beneath the overhead canopy in the central portion of the Property. The convenience store is located in the western portion of the Property and the car wash is situated along the southern property boundary. **Figure 2** shows a Site Map with the approximate locations of the existing site features.

The Property is zoned heavy commercial district (C2) and is located in an area containing commercial businesses as well as residential housing. Ingress/Egress is provided via two vehicular entrances from Harding Boulevard, which borders the Property to the north, and two vehicular entrances from Plank Road, which borders the Property to the east. The immediate vicinity consists of a Shell gas station, a child care facility, two public use properties, including a post office and a social security office, and various other commercial properties. The nearest residence is more than 100 meters away to the southeast. **Figure 3** shows a Local Area Map depicting the area surrounding the Property, based on field information collected from the Phase I ESA site reconnaissance and property research. According to information provided by EDR in The EDR Radius Map with GeoCheck report (submitted with the Phase I ESA Report) and GES' sensitive receptor survey, there are no public water wells located within a 1.0-mile radius of the site. One private potable water well, reportedly owned by

L. R. Babin, is located approximately 160 meters north of the site. It should be noted that municipal water is supplied to the Property by the Baton Rouge Water Company which obtains the water supply from the Southern Hills Aquifer system through 64 wells. The Property is characterized by impervious concrete surfacing, with landscaped islands located around the perimeter; further information is contained in the Phase I ESA Report.

2.2 Physical Setting

The Property is located in the Gulf Coast Plain physiographic province. The dominant soil type is Jeanerette – silt loam. This soil type is in the Class D Hydrologic group, characterized by slow infiltration rates. The bedrock stratigraphic unit that underlies the unconsolidated soils at the Property was identified as a portion of the Quaternary System of the Cenozoic Era. The series is Pleistocene. The near surface sediments are of Pleistocene age and are comprised largely of fine grained soils including silts and clays.

Soils encountered during this investigation consisted predominately of silty clays, sandy clays, and clays with sand and silt stringers. At MW-H a sand layer was encountered at 20 feet bgs extending to a depth of 24 feet bgs. Bedrock was not encountered during the historical investigations, which extended to a maximum depth of approximately 25 feet bgs.

Based on review of the topographic mapping and on the available background information, the local groundwater flow was anticipated to be to the south. Actual geologic and hydrogeologic conditions observed during the Phase II ESA field activities indicated apparent groundwater flow to be to the southwest. Groundwater elevations observed during the March 14, 2011 groundwater sampling events can be found in **Table 2**. **Figure 4** provides a groundwater monitoring map, which includes contour lines used to calculate a hydraulic gradient of 0.0062 feet per foot (MW-E to MW-B).

2.3 Adjacent Property Land Use

The immediately adjoining properties are summarized as follows:

- The Property is bordered to the north by Harding Boulevard, and beyond is a Shell/Circle K gas station and Tim's Food Mart and a Storage Center.
- The Property is bordered to the south by Chase Bank and Brilliant Child Care Facility.
- The Property is bordered to the east by Plank Road, beyond which lies a United States Post Office.
- The Property is bordered to the west by a Social Security office.

2.4 Existing/Former Environmental Cases

One previous petroleum product release was noted during the Phase I ESA records review process. The release occurred when a dispenser shut-off valve failed and supreme unleaded gasoline was released to the paved ground surface. Incident #93443 was assigned to the release on January 22, 2007. The incident was reported as closed on January 26, 2007.

3.0 PHASE II ACTIVITIES

All fieldwork was conducted based on the ExxonMobil approved Phase II Scope of Work (Attachment A).

3.1 Field Explorations and Methods

On February 19, 21, 22, and March 4, 5, 8, and 9, 2011, GES oversaw the installation of seven monitoring wells at the Property. The locations and depths of the monitoring wells were in accordance with the approved SOW, with the following approved modifications:

- Monitoring wells MW-A and MW-K were shifted to avoid subsurface and/or overhead utilities.
- Monitoring well MW-D was shifted to the south to toward MW-C in order to avoid subsurface utilities.
- Monitoring well MW-H was shifted toward the north to avoid subsurface and overhead utilities.
- Monitoring wells MW-C, MW-F, MW-G, and MW-I were eliminated due to overlap of areas introduced by the relocation of other well locations.
- During the pre-clearing for MW-E, pea gravel was encountered during two attempts to clear the borehole. It is suspected that pea gravel was used as backfill for the former UST field (REC-2) thus preventing any additional attempts to advance a borehole in that area. Because groundwater assessment points were present to the north, west, and south of REC-2 in the form of monitoring wells MW-K, MW-A, and MW-D, monitoring well MW-E was relocated to the landscaped area to the east of the former UST field.

Prior to the initiation of subsurface investigation activities, each proposed well location was cleared in accordance with the requirements of the approved Subsurface Investigation Protocol. Based on the results of the site reconnaissance, private utility location activities, and the use of site wide ground penetrating radar (GPR), the locations of the identified overhead and underground utilities as well as the final well locations are shown on **Figure 2**. Once final field locations were established, each of the proposed boring/well locations was cleared to a minimum of 5 feet bgs using air lance and vacuum clearing technology.

Under the oversight of GES, the soil borings were installed to their terminal depths, with continuous screening of soil samples. Soil samples were collected with a hand auger and field screened for total organic vapors (TOVs) utilizing a photoionization detector (PID), calibrated to an isobutylene standard. At least one soil sample from each soil boring was collected from the 0-15 foot bgs, or "Surface Soil" zone as defined by the Louisiana Department of Environmental Quality (LDEQ) Risk Evaluation/Corrective Action Program (RECAP) regulation, and submitted for laboratory analysis based on the highest PID reading and/or the observed depth to water. Soil samples were placed in laboratory-provided glassware, packed on ice in shipping containers, and submitted under proper chain-of-custody to the analytical laboratory.

Permanent groundwater monitoring wells were installed using 2-inch diameter slotted Schedule 40 polyvinyl chloride (PVC) screen and solid PVC riser to grade. The annular space between the well screen and the borehole wall was backfilled with clean, well-rounded, 20/40 silica sand, and topped with a hydrated bentonite seal. The remaining annular space was grouted with concrete grout, and the monitoring well was completed with a metal flush-mount protective cover within a concrete pad. Well

construction information was recorded by the supervising field geologist and was used to generate the soil boring logs/well construction diagrams included in **Attachment B**.

Between each boring and monitoring well location, non-disposable drilling equipment was decontaminated with a high-pressure water rinse and hand tools were decontaminated in general accordance with industry standards. Each monitoring well was subsequently developed with a submersible pump to promote effective hydraulic connection with the surrounding formation. Development efforts continued until the discharge was relatively clear and turbid free. Decontamination and development fluids were handled in accordance with state and local regulations.

Specific details related to the drilling and monitoring well installation activities at the Property are listed below.

Date Performed	February 19 through March 9, 2011
Well ID	MW-A. MW-B. MW-D. MW-E. MW-H. MW-J. MW-K
Soil Boring ID	Not Applicable
Driller	Best Drilling Services of Houston, Texas
Drilling Method Utilized	Hollow Stem Auger
MW and/or SB Completion Depths	MW-A: 25 feet MW-B: 25 feet MW-D: 25 feet MW-E: 25 feet MW-H: 25 feet MW-J: 25 feet MW-K: 25 feet
Screened Interval (MW only)	MW-A: 5-25 feet MW-B: 5-25 feet MW-D: 5-25 feet MW-E: 5-25 feet MW-H: 5-25 feet MW-J: 5-25 feet MW-K: 5-25 feet
Material Utilized (MW only)	2-inch diameter 0.010 machine-slotted schedule-40 polyvinyl chloride (PVC) well screen with a flush threaded 2-inch diameter solid PVC casing
Annular Space (MW only)	20/40 Sand to two feet above the well screen Hydrated bentonite seal to 0.5 foot below grade Concrete to grade
Soil Sample Intervals (samples submitted to laboratory for analysis)	MW-A: 5 feet MW-B: 5 feet MW-D: 4-6 feet MW-E: 6-8 feet MW-H: 18-20 feet MW-J: 1 foot MW-K: 8 feet
Soil Analyses Conducted	Soil samples analyzed for BTEX/MTBE via EPA Method 8260B, TPH-GRO and TPH-DRO via EPA Method 8015B. Select soil samples analyzed for Full List VOCs via EPA Method 8260B, TPH-ORO via EPA Method 8015B. 8 RCRA Metals and/or Lead via 6010B/7471A.

3.2 Well Elevation and Survey Procedures

Upon completion of the monitoring wells, each location was field-surveyed to determine relative top of casing (TOC) elevations. Lateral locations of the monitoring wells were field-measured and the resulting estimated locations are shown on **Figure 4**; however, the locations are considered approximate.

3.3 Groundwater Sampling and Analysis Procedures

Prior to the collection of groundwater samples, each of the recently-installed groundwater monitoring wells at the Property was gauged with an oil-water interface probe to determine the water level and check for the presence of Liquid Phase Hydrocarbons (LPH). Depth to groundwater and depth to product was measured from the TOC. The resulting data was then used to calculate the groundwater elevation, hydraulic gradient and groundwater flow direction for the property, as documented on the Groundwater Monitoring Map included as **Figure 4**. The measured depths and calculated elevations are shown in **Table 2**.

On March 14, 2011 field sampling personnel collected representative groundwater samples from the recently-installed monitoring wells. A minimum of three (3) well volumes were purged from each monitoring well prior to the collection of groundwater samples. Purging and sample collection was accomplished using new disposable bailers. Aqueous samples were placed in laboratory-provided glassware, packed on ice in shipping containers, and submitted under proper chain-of-custody to the analytical laboratory. All groundwater sample collection was conducted in general accordance with Louisiana Department of Environmental Quality (LDEQ) Risk Evaluation/Corrective Action Program (RECAP) regulations.

Equipment used for groundwater sampling consisted of new, disposable materials, or was properly decontaminated between sample locations. Sampling personnel changed nitrile sampling gloves between each sample location to minimize the potential for sample cross-contamination. Investigative-derived waste (IDW) such as disposable bailers and used nitrile gloves was properly handled as non-hazardous solid waste for disposal.

Date Performed	March 14, 2011
Wells Gauged/ Sampled	MW-A, MW-B, MW-D, MW-E, MW-H, MW-J, MW-K
Wells Gauged Only	None
Liquid Phase Hydrocarbon	None Detected
Minimum / Maximum Depth to Water	1.98 feet/2.77 feet
Hydraulic Gradient	0.0062 foot/foot (MW-E to MW-B)
Groundwater Flow Direction	Southwest
Hydrocarbon Dist./Groundwater Contour Map	Figure 4
Aqueous Analyzes Conducted	Groundwater samples analyzed for BTEX/MTBE via EPA Method 8260B, TPH-GRO and TPH-DRO via EPA Method 8015B. Select samples analyzed for Full List VOC's via EPA Method 8260B, TPH-ORO via EPA Method 8015B, 8 RCRA Metals and/or Lead via 6010B/7471A.

4.0 EVALUATION AND PRESENTATION OF RESULTS

4.1 Soil Sampling Results

Soil analytical results for the collected samples are summarized in **Table 1**, along with the soil sample location and depth. The Laboratory Analytical Report and the corresponding chain-of-custody are included in **Attachment C**.

The data obtained from the contracted laboratory, TestAmerica Labs, was usable for the purpose of this Phase II ESA.

For the sample results reported for the soil samples collected from the Property, no Quality Assurance/Quality Control (QA/QC) data qualifiers were reported.

4.2 Groundwater Sampling Results

Groundwater analytical results from the collected samples are summarized in **Table 2**. The Laboratory Analytical Report and the corresponding chain-of-custody are included in **Attachment D**.

The data obtained from the contracted laboratory, TestAmerica Labs, was usable for the purpose of this Phase II ESA.

For the sample results reported for the groundwater samples collected from the new monitoring wells at the Property, there were no QA/QC data qualifiers reported.

5.0 DISCUSSION OF FINDINGS AND CONCLUSIONS

As discussed in Section 1.0, the previously-performed Phase I ESA identified a series of RECs for the property, and the resulting SOW was developed in order to evaluate the nature of contamination at the REC. The following table summarizes the results of the Phase II ESA:

REC-1: Current gasoline underground storage tanks (USTs), product piping, and dispensers
SOW: Installation of two monitoring wells (MW-A, and MW-B). Collection of soil and groundwater samples from the new monitoring wells. <ul style="list-style-type: none">• Soil samples were analyzed for BTEX/MTBE, TPH-GRO, and TPH-DRO.• Groundwater samples were analyzed for BTEX/MTBE, TPH-GRO, and TPH-DRO.

Results: Soil samples collected from monitoring locations MW-A and MW-B did not exhibit the presence of CoCs above the respective laboratory reporting limits as shown on **Table 1**. Groundwater samples collected from monitoring wells MW-A and MW-B indicated the presence of CoCs above the RECAP groundwater screening standards (GWSS) as shown in **Table 2**. No free-phase product was observed or detected during boring/well installation activities.

Soil: CoCs were not reported at concentrations above the respective laboratory reporting limits in soil samples collected from MW-A and MW-B.

Groundwater: Groundwater sample MW-A had reported concentrations above the GW_SS for benzene (1.55 mg/L), MTBE (0.0408 mg/L), TPH-GRO (8.85 mg/L), and TPH-DRO (1.78 mg/L). The GW_SSs for these compounds are 0.005 mg/L, 0.02 mg/L, 0.15 mg/L, and 0.15 mg/L, respectively. Toluene, ethylbenzene, and xylenes were reported at concentrations above the laboratory reporting limits but below the associated GW_SS in MW-A. Groundwater sample MW-B had reported concentrations above the GW_SS for TPH-GRO (1.68 mg/L). TPH-DRO was reported at a concentration above the laboratory reporting limit but below the GW_SS in MW-B.

REC-2 Former gasoline USTs, product piping, and dispensers;

SOW: Installation of two monitoring wells (MW-D and MW-E). Collection of soil and groundwater samples from the two new monitoring wells.

- Soil samples were analyzed for BTEX/MTBE, TPH-GRO, TPH-DRO, and lead.
- Groundwater samples were analyzed for BTEX/MTBE, TPH-GRO, TPH-DRO, and lead.

Results: Soil samples collected from MW-D and MW-E did not exhibit the presence of CoCs at concentrations above the RECAP Soil Screening Standard Protective of Groundwater (Soil_SSGW) or the Soil Screening Standards for non-industrial sites (Soil_SSni) as shown in **Table 1**. Groundwater samples collected from monitoring wells MW-D and MW-E exhibited the presence of CoCs above the GWSS as shown in **Table 2**. No free-phase product was observed or detected during boring/well installation activities.

Soil: Soil samples collected from MW-D and MW-E had reported concentrations for lead that were above the reporting limit but below the Soil_SSGW of 100 mg/kg.

Groundwater: Groundwater sample MW-D had a reported TPH-GRO concentration of 0.260 mg/L that exceeds the GW_SS for TPH-GRO of 0.15 mg/L. MTBE was reported at a concentration above the laboratory reporting limit but below the GW_SS in MW-D and TPH-DRO was reported at a concentration above the laboratory reporting limit but below the GW_SS in MW-E. The remaining constituents analyzed were not reported above the reporting limit.

REC-3 Current car wash, oil/water separator

SOW: Installation of monitoring wells MW-F, MW-G, and MW-H. Collection of soil and groundwater samples from new monitoring wells.

- Soil samples were analyzed for Full List VOCs, TPH-GRO, TPH-DRO, TPH-ORO, and 8 RCRA Metals (As, Ba, Cd, Cr, Pb, Hg, Se, and Ag).
- Groundwater samples were analyzed for Full List VOCs, TPH-GRO, TPH-DRO, TPH-ORO, and 8 RCRA Metals (As, Ba, Cd, Cr, Pb, Hg, Se, and Ag).

Results: The soil sample collected from MW-H did not exhibit the presence of CoCs at concentrations above the Soil_SSGW or the Soil_SSni as shown in **Table 1**. The groundwater sample collected from monitoring well MW-H did exhibit the presence of CoCs at concentrations above the Soil_SSGW or the Soil_SSni as shown in **Table 2**. No free-phase product was observed or detected during boring/well installation activities.

Soil: Soil sample MW-H (18-20') had reported concentrations of As, Ba, Cr, and Pb above the laboratory reporting limit but below the Soil_SSGW.

Groundwater: Groundwater sample MW-H had reported concentrations above GW_SS for As (0.0230 mg/L) and Pb (0.0402 mg/L). Reported Ba and Cr concentrations in MW-H were above the reporting limit but below the GW_SS. No other CoCs were reported above the reporting limit in the sample collected MW-H.

REC-4 Groundwater at the upgradient (north) property boundary

SOW: Installation of monitoring wells MW-I, MW-J and MW-K. Collection of soil and groundwater samples from new monitoring well MW-H.

- Soil samples were analyzed for BTEX/MTBE, TPH-GRO, and TPH-DRO.
- Groundwater samples were analyzed for BTEX/MTBE, TPH-GRO, and TPH-DRO.

Results: Soil samples collected from monitoring locations MW-J and MW-K did not exhibit the presence of CoCs above the respective laboratory reporting limits. The results are summarized in **Table 1**. Groundwater samples collected from monitoring wells MW-J and MW-K indicated the presence of CoCs above the RECAP groundwater screening standards (GWSS) as shown in **Table 2**. No free-phase product was observed or detected during boring/well installation activities.

Soil: CoCs were not reported at concentrations above the respective laboratory reporting limits in soil samples collected from MW-J and MW-K.

Groundwater: Groundwater sample MW-J had reported concentrations above the GW_SS for TPH-GRO (4.82 mg/L) and TPH-DRO (0.258 mg/L). The GW_SS for these compounds is 0.15 mg/L. MTBE had a reported concentration above the laboratory reporting limit but below the GW_SS in MW-J. Groundwater sample MW-K had a reported concentration for TPH-DRO equal to the GW_SS (0.15 mg/L). All other CoC concentrations reported for MW-K were below laboratory reporting limits.

Based on the results of the evaluation of the identified RECs, hazardous substances or petroleum products have been released or disposed at the property. Specifically, groundwater samples collected from REC-1, REC-2, REC-3 and REC-4 from exceeded the Groundwater Screening Standards (GW_SS) specified in LDEQ's October 20, 2003 RECAP Table 1 - Screening Options Screening Standards for Soil and Groundwater.

Due to the exceedances of the GWSS in the MW-A, MW-B, MW-D, MW-H, MW-J, and MW-K groundwater samples as stated above, the LDEQ was notified by telephone in accordance with the Single Point of Contact procedure on March 25, 2011. The notification was made because of the detected impacts and there are no former or currently existing open environmental cases for the Property. A copy of the LDEQ Incident Report Form is provided in **Attachment E**.

As required by the LDEQ, a 7-day written follow-up report and a 20-day abatement report were submitted to the LDEQ documenting the analytical results. Copies of these reports are included in **Attachment E**.

Unless otherwise noted, this Phase II ESA was prepared in substantive accordance with ASTM E 1903-97. Any variations from the previously approved SOW are noted, and any data insufficiencies that prevent conclusions related to the evaluation of the RECs are provided in the appropriate section.

6.0 LIMITATIONS

GES performed the services for this Phase II ESA in accordance with the professional standard of care defined as that level of services provided by similar professionals under like circumstances. No guarantee or warranty is expressed or implied.

This report may be used only by the client, in accordance with the governing contract, only for the purposes stated, and within a reasonable time from its issuance. Any party other than ExxonMobil, or their assignees who wish to use this report, shall notify both ExxonMobil and GES prior to such intended use to obtain written approval from both parties.

UST FID No. 17-004232
UST Incident Nos. 130186 (Gasoline) & 130188 (Diesel)
7997 Plank Road, Baton Rouge, East Baton Rouge Parish

Dear Mr. Gomm:

We have completed review of the referenced report dated October 14, 2011, submitted on your behalf by Groundwater and Environmental Services, Inc. Thank you for providing this information. It will be added to our file for future reference.

Based on the limited information submitted, sampling being performed in areas most likely to have the greatest impact and contaminant levels being below RECAP standards that would be developed for this site; the Department does not intend to respond further regarding this matter.

Should you discover any discharges in future monitoring efforts, reporting must be in accordance with the Department's regulations. Please note that this letter is not intended and should not be construed to be a concurrence that the information provided is adequate to ascertain the condition of the property in question.

This letter closes out Incident #'s 130186 & 130188 and subsequent notification to SPOC on March 25, 2011.

Mr. Gomm

RE: Assumption of Environmental Remediation Responsibility

Please be advised that in connection with today's transfer of the properties identified on the attached Schedule A to Circle K Stores Inc. ("Circle K"), Circle K has agreed to assume the environmental remedial obligations of ExxonMobil Oil Corporation and Exxon Mobil Corporation (collectively, "ExxonMobil") for the open Agency Interest Number at the above-referenced property. Accordingly, Circle K is hereby taking this opportunity to notify the Department that, as of November 16, 2011 (the "Effective Date"), Circle K will assume all responsibility for the remedial activities associated with the above-referenced number, including but not limited to any monitoring and reporting requirements. ExxonMobil is happy to meet with you to clarify any questions you may have related to the transfer.

Please direct all future correspondence regarding the Agency Interest Numbers to:

Circle K Stores Inc.

Dear Ms. Davis:

The Louisiana Department of Environmental Quality – Underground Storage Tanks Division (LDEQ-USTD) has completed its review of your UST MO-2 Risk Evaluation/Corrective Action Program (RECAP) Report dated February 14, 2008 for the above referenced area of investigation located at 8133 Plank Road in East Baton Rouge Parish. Based on our review of this document and all previously submitted information, we have determined that no further action is necessary at this time. The Basis of Decision for this notification is attached.

No soils may be removed from this site without prior approval from LDEQ unless they are removed and disposed at a permitted disposal facility.

If you have any questions or need further information, please call Mr. John Halk at 225-219-3190.
Thank you for your cooperation in addressing this area.

Sincerely,

Steve Chustz, Administrator
Underground Storage Tank Division

BASIS OF DECISION FOR NO FURTHER ACTION

Circle K # 2709727

AI # 88508

The Louisiana Department of Environmental Quality – Underground Storage Tanks Division—Remediation Process (LDEQ-USTD-RP) has determined that Circle K # 2709727 requires No Further Action At This Time.

The property is used as a retail fuel outlet. A site investigation was performed in February 2006 in which five soil borings were installed and converted to groundwater wells. Soil and groundwater was analyzed for benzene, toluene, ethylbenzene, xylene, total petroleum hydrocarbons-gasoline (TPH-G), total petroleum hydrocarbons – diesel (TPH-D), total petroleum hydrocarbons – oil (TPH-O), polycyclic aromatic hydrocarbons (PAHs), tertiary butyl alcohol (TBA) and methyl tertiary butyl ether (MTBE).

All soil samples analyzed were below the RECAP screening standards. TPH-G, MTBE, and TBA exceeded the groundwater screening standards. A UST MO-2 RECAP Evaluation Report was submitted on February 14, 2008 to further evaluate the groundwater under the appropriate MO-2 UST standards. For tertiary butyl alcohol (TBA), the appropriate groundwater standard was calculated per RECAP Spreadsheets Appendix I Equations.

The standards that were applied to this site are listed in the table that appears at the end of this BOD. The groundwater at the site is classified as GW3NDW based on a facility located 0.6 miles from the site (Swift's #21 Chevron Station). Documentation for using the nearby Swift's site was provided a groundwater classification evaluation report dated October 25, 2007.

Soil and groundwater sampling has confirmed that constituents of concern concentrations do not exceed the established site-specific remediation standards, so no remedial action was required. No Further Action At This Time is granted when contamination is confirmed to exist at concentrations that do not exceed the established standards.

There are no institutional controls on this property.

An inspection of the site was performed on February 19, 2008 confirming that no investigation derived waste remains on site. All soil borings and monitoring wells were properly plugged and abandoned. No soils may be moved from this location without written authorization from the LDEQ unless they are removed and disposed at a permitted disposal facility.

The impacted groundwater, constituents of concern, maximum concentration remaining on site and limiting RECAP standard established for this site are listed in the following table:

Medium	Constituent of Concern	Maximum Remaining Concentration	Limiting RECAP Standard
Groundwater	TPH-G	5.5 ppm	7.9 ppm (GWesi)
Groundwater	MTBE	0.03 ppm	550 ppm (GW3NDW)
Groundwater	TBA	0.42 ppm	140 ppm (GW3NDW)

Additional information on the details of the investigation and evaluation of this site may be obtained from LDEQ's Public Records Center located in the Galvez Building, Room 127, 602 N. Fifth Street, Baton Rouge, LA 70802. Additional information regarding the Public Records may be obtained by calling (225) 219-3168 or by emailing publicrecords@la.gov.

APPENDIX

U.S. Wildlife and Fisheries correspondence dated May 15, 2017

Draft Biological Assessment

This Biological Assessment (BA) report has been prepared for the Baton Rouge Metropolitan Airport 13/31/RSA/RPZ (RFP 15-001) project in support of an Environmental Assessment (EA). The U.S. Fish and Wildlife Service (USFWS) was contacted and found certain listed species to potentially be affected by the proposed project. As a result, the NRCS recommended a Biological Assessment.

1.0 BACKGROUND/HISTORY

The project is located in Baton Rouge, Louisiana. The Baton Rouge Metropolitan Airport is proposing to construct safety improvements for the existing Runway 13-31 and Existing Engineered Materials Arresting System (EMAS). The purpose of the project is to improve airfield facilities and safety so that the Baton Rouge Metropolitan Airport may continue to serve as a regionally competitive, origin-destination airport for passenger aircraft operations.

1.1 Purpose and Need

The purpose of the proposed Runway 13-31 RSA and RPZ improvements is twofold. First, the project will increase compliance with FAA design standards. Second, the project will replace existing physical infrastructure at or near the end of its useful life. This project will improve airfield facilities and safety so that the Baton Rouge Metropolitan Airport may continue to serve as a regionally competitive, origin-destination airport for passengers aircraft operations.

1.2 Need for the Proposed Improvements

The proposed improvements at BTR are needed to provide additional capabilities to safety and efficiently accommodate projected future levels of activity. The Runway 13-31 RSA and RPZ improvements are needed to fully meet current FAA design standards, to provide the maximum reasonable margin of safety for the runway environment, and to preserve the Airport's eligibility to receive federal funding assistance by complying with FAA design standards and federal obligations. These obligations are described by the Federal Grant Assurances which require airport operators to maintain their facilities in a safe and efficient manner for public use. The current Emergency materials Arresting System (EMAS) has reached³ the end of its useful life and will require a near term replacement should these improvements not be made and will require replacement approximately every ten years thereafter.

1.3 Proposed Action

The purpose of the proposed Runway 13-31 RSA and RPZ improvements is twofold. First, the project will increase compliance with FAA design standards. Second, the project will replace existing physical infrastructure at or near the end of its useful life. This project will improve airfield facilities and safety so that the Baton Rouge Metropolitan Airport may continue to serve as a regionally competitive, origin-destination airport for passenger aircraft operations.

The proposed Runway 13-31 RSA and RPZ improvements will allow the Airport to establish a full standard RSA and remove all roadways from the RPZ. This will require the relocation of Plank Road and will allow the elimination of the Engineered Materials Arresting System (EMAS).

If constructed, these improvements will require changes to the existing roadways in the area. A portion of Plank Road will be relocated to the east. Various alternatives for a new Plank/Hooper Road intersection are being evaluated. The current EMAS is nearing the end of its serviceable lifespan, and due to the substantial and increasing maintenance costs, renovation and upgrade is required. Additionally, expansion of the existing RPZ is needed to comply with current FAA design standards and to continue to protect the traveling public. Funding will be applied for through the Federal Aviation Administration (FAA) guidelines, including the Council on Environmental Quality (CEQ) Regulations for Implementing the Procedural Provisions of the National Environmental Policy Act (CEQ Regulations) (40 Code of Federal Regulations (CFR) parts 1500-1508), U.S. Department of Transportation (DOT) Order 5610.1C, Procedures for Considering Environmental Impacts, and Federal Aviation Administration (FAA) Order 1050.1F Environmental Impacts: Policies and Procedures. Additionally, Section 7 of the Endangered Species Act of 1973, as amended, requires federal agencies, in consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service (the Services), to insure that their actions are not likely to jeopardize the continued existence of threatened or endangered species or result in the destruction or adverse modification of critical habitat designated for those species.

The improvements to the RPZ will require Plank Road to be relocated to the east to facilitate this expansion. The subject area of endangered species inquiry is the land acquired to facilitate the expansion and relocation of Plank Road. Because runoff from the proposed project eventually reaches the Amite River and the Ponchartrain Basin, the project has the potential to impact the following species: West Indian Manatee (mammal), *Trichechus manatus* threatened; Atlantic Sturgeon (fish), *Acipenser oxyrinchus*, threatened; Pallid Sturgeon (fish), *Scaphirhynchus albus*, endangered; and Alabama Heelsplitter (clam), *Potamilus inflatus*, threatened.

Early coordination and pre-consultation with the Services was conducted via provision of a Solicitation of Views letter on May 15, 2017. Correspondence received from the USFWS indicated that a Biological Assessment should be prepared.

This BA, prepared by Compliance Consultants, Inc. under contract to Kutchins and Groh, LLC, addresses the proposed action in compliance with Section 7 of the ESA. Section 7 assures that through consultation (or conferencing for proposed species) with the Service, federal actions do not jeopardize the continued existence of any threatened, endangered or proposed species, or result in the destruction or adverse modification of critical habitat.

In summary, the purpose of the proposed action is to provide construction of Runway 13-31 Runway Safety Area and Runway Protection Zone improvements to comply with current FAA standards. This action is needed in order for the airport to be able to safely accommodate air traffic and provide protection for the traveling public. As a part of these improvements it is necessary for Plank Road to be relocated.

2.0 DESCRIPTION OF THE ACTION & ACTION AREA

The proposed action includes:

- Land Acquisition and detailed project design
- Mitigation of unavoidable impacts
- Clearing/Grubbing of Plank Road extension
- Site Grading and Drainage
- Utility Relocation
- Construction of new Plank Road subbase and base layers
- Paving of New Plank Road and expansion of Hooper Road

Demolition of portion of existing Plank Road and Old Hooper Road, regrading
 Removal of EMAS and Pavement and obstructions in EMAS area
 Grading and drainage of RSA area
 Relocation of security fence and localizer

Standard construction techniques will be used for the land grading, roadway construction, utility relocation and demolition. This will involve the disturbance of surface soils, and will require the development and implementation of site-specific Storm Water Pollution Prevention Plans to minimize off-site water quality impacts. Additionally, Spill Prevention Control and Countermeasure Plans will be required to assure that no releases of oil or hazardous substances will impact off-site receiving waters. Because there will be unavoidable impacts to jurisdictional wetlands, compensatory mitigation will be provided in a manner acceptable to the regulating agencies.

2.1 Action Area

The action area includes the off-site drainage system that drains from an unnamed ditch within the project site into Hurricane Creek, and subsequently into the Amite River basin. The point at which the site-specific drainage, commingled with other runoff within the drainage basin enters the Amite River is approximately 9.7 miles from the project site. Because the listed threatened or endangered species are found in the Amite River basin, the fact that drainage from the site eventually reaches the basin is the reason for the Biological Assessment. As required under 50 CFR §402-02:

Action Area: All areas to be affected directly or indirectly by the Federal action and not merely the immediate area involved in the action.

Response: Because the project drains eventually into the habitat of the listed species, it is considered to be included within the action area.

Direct Effects: Direct or immediate effects of the project on the species or its habitat. Direct effects include those resulting from interdependent or interrelated actions.

Response: There are no direct or immediate effects of the project on the species or their habitat.

Indirect Effects: Those effects that are caused by or will result from the proposed action and are later in time, but still reasonably certain to occur.

Response: There are no identified indirect effects resulting from the proposed action.

3.0 LISTED SPECIES & CRITICAL HABITAT IN THE ACTION AREA

The following ESA-listed species occur within the action area, or may be affected by the proposed action:

	Common Name	Scientific Name	Classification
Mammals	West Indian Manatee	<i>Trichechus manatus</i>	Threatened
Fishes	Atlantic Sturgeon	<i>Acipenser oxyrinchus</i>	Threatened
	Pallid Sturgeon	<i>Scaphirhynchus albus</i>	Endangered
Clams	Alabama Heelsplitter	<i>Potamilus inflatus</i>	Threatened

4.0 ENVIRONMENTAL BASELINE CONDITIONS

The Florida manatee lives in freshwater, brackish and marine habitats. Submerged, emergent, and floating vegetation are their preferred food. During the winter, cold temperatures keep the population concentrated in peninsular Florida and many manatees rely on the warm water from natural springs and power plant outfalls. During the summer they expand their range and, on rare occasions, are seen

as far north as Rhode Island on the Atlantic coast and as far west as Texas on the Gulf coast. The most significant problem presently faced by manatees in Florida is death or injury from boat strikes. Currently there is a recovery plan for the manatee, and the species was down listed from endangered to threatened in early 2017.

Gulf sturgeon, a subspecies of the Atlantic sturgeon, are anadromous: adults spawn in freshwater and migrate into marine waters in the fall to forage and overwinter. Juvenile Gulf sturgeon stay in the river for about the first 2-3 years. Gulf sturgeon return to their natal stream to spawn. Riverine habitats, where the healthiest populations of Gulf sturgeon are found, include long, spring-fed, free-flowing rivers, typically with steep banks, a hard bottom, and an average water temperature of 60-72° F. Gulf sturgeon initiate movement up to the rivers between February and April and migrate back out to the Gulf of Mexico between September and November. In 2003, NMFS and the USFWS jointly designated Gulf sturgeon critical habitat in 14 geographic areas from Florida to Louisiana, encompassing spawning rivers and adjacent estuarine areas.

Historically the threats to the Atlantic sturgeon were a result of overfishing, throughout most of the 20th century. Current threats include construction of water control structures, such as dams and "sills", mostly after 1950, exacerbated habitat loss, dredging, groundwater extraction, irrigation, flow alterations, poor water quality, and contaminants, primarily from industrial sources. .

The pallid sturgeon experienced a dramatic decline throughout its range since the mid to late 1960's. Nearly all of its habitat has been modified through river channelization, construction of impoundments, and related changes in water flow. These changes blocked the pallid sturgeon's movements, destroyed or altered its spawning areas, reduced its food sources or its ability to obtain food, and altered water temperatures and other environmental conditions necessary for the fish's survival. The pallid sturgeon was listed as endangered in 1990 and, recovery efforts include research to learn more about its life history and habitat requirements, artificial propagation to improve its numbers, habitat improvement and reducing mortality from commercial fishing.

The primary sources of impact to the habitat of the Alabama Heelsplitter clam is from development along the waters in which it is believed to have been present, i.e. the Amite River basin. This includes dredging in upstream area (north of I-12) for sand and gravel in the absence of effective silt release controls, as well as channelization and dredging. Currently there are no conservation plans or critical habitat rules for this species.

5.0 EFFECTS OF THE ACTION

The most likely deleterious effect from the proposed project to the species listed above would be water quality degradation. Because the manatee populations have declined primarily from physical contact with boat motors, the proposed project will have no impact on this species. Similarly, the sturgeon species numbers have decreased primarily from changes in their spawning and ranging habitat, and the proposed project will have no adverse impact to existing downstream receiving water patterns. Because drainage from the project will eventually reach the Amite River, the only possible deleterious action would be an increase in siltation reaching the Amite River. This will be prevented by the implementation of Federal, State and locally-required coverage under the LPDES General Permit for Construction Activities over 5 Acres, and by implementation of the Spill Prevention Control and Countermeasure Plan as required for hazardous substances and oil including fuels on the construction site. Additionally, the extremely small amount of surface area to be disturbed, in comparison to the size of the watershed, makes it extremely unlikely that this project would have a measurable or observable impact on water quality.

6.0 CUMULATIVE EFFECTS (Formal consultation only)

There are no identified cumulative effects due to this project.

7.0 CONCLUSIONS

In conclusion, we have determined that the proposed action will have no effect on any of the listed species.

Appendix D: Traffic Noise Assessment

Supplemental Noise Abatement Assessment

Scope

This Updated Noise Abatement Assessment evaluates two additional alternatives that were not considered in the original Assessment completed in 2017. These two additional alternatives have been added to improve traffic conditions. The two additional alternatives include fly-overs (bridges) at the intersection of north bound Plank Road with Harding/Hooper Road and south bound Plank Road at Hooper Road. These two alternatives are evaluated for potential noise impacts of their fly-over configurations. Except for the roadway modifications required to accommodate the fly-over designs, all roadway analyses in the original assessment (2017) remain the same, including noise receptors, the No-Build alternative, and the TNM2.5 calibration using field data collected in 2017.

Overview

The Louisiana DOTD (LADOTD) noise policy differs from the FHWA policy in that an impact is considered to occur when dBA levels are over defined levels or defined increase in dBA levels. Furthermore, the FHWA criteria defines different categories of activities to have different acceptable levels of equivalent steady-state sound levels. This is defined as the Leq(h) and is determined as the hourly value of the activity Leq, measured in dBAs. Table 1 summarizes and compares the FHWA criteria with the DOTD criteria. For example, the LADOTD criteria for Activity Category B, "residential", an impact occurs when the noise level is equal to or greater than 66 dBA, or an increase of 10 dBA or greater. For other more sound-sensitive activity categories such as day care centers, hospitals, libraries, places of worship and others included in Activity Category D, an impact will occur when the dBA level is equal to or greater than 51 dBA.

Because there are several residences where the existing noise levels are at 66 dBAs, the LADOTD policy requires that these be addressed within the framework of noise abatement analysis.

A condition of the noise abatement policy is that the primary consideration be given to exterior areas of frequent human use. Therefore, possible receptor locations for residential receivers

include such areas as patios, courtyards, side, front and back yards, pool areas, etc. In most cases the receptor location between the noise source and the receptor will be chosen as the location to model, for example, the front yard is a typical location. To determine the number of receptors impacted, the total number of dwelling units at or above 66 dBA for the design year of 2040 was determined using the TNM2.5 model (Draft Environmental Assessment, November, 2017). There were determined to be 14 residences that exceeded the 66 dBA level.

The additional alternatives evaluation indicates noise impacts as well, with Alternative 1 impacting 16 receptors and Alternative 2 impacting 17 receptors. For both alternatives, The Gardens Senior Apartments had noise level increases to over 66 dBA.

Criteria for Evaluating Abatement Alternatives

Because the noise model results indicated that impacts would exist for the design year that exceed the LADOTD criteria, it was necessary to determine the feasibility and reasonableness of noise abatement measures. According to the LADOTD criteria, the noise abatement measures are analyzed by evaluating the benefits and cost of abatement, and the overall social, economic, and environmental impacts of those measures.

In accordance with criteria in the LADOTD noise policy, noise abatement needs to be studied first for "feasibility" and, if feasible, for "reasonableness." Noise barriers must be both feasible and reasonable for them to be deemed likely for construction. Feasibility includes both acoustical and engineering considerations.

- Acoustical feasibility means that a noise barrier will provide at least a 5 dBA reduction in the one-hour equivalent sound level for at least 75% of the first-row, impacted receptors. If a barrier cannot meet this criterion, abatement is considered to be not acoustically feasible.

Additionally, the noise barrier should be feasible from an engineering perspective.

- Engineering feasibility takes into account topography, drainage, safety, barrier height, utilities, and access and maintenance needs.

For example, a noise barrier may be acoustically feasible but present line-of-sight problems for drivers entering onto a roadway. Such types of engineering problems may result in the barrier

being judged as not feasible even if it meets the acoustical feasibility criterion. The barriers would not be recommended for construction.

Assuming that a barrier meets the acoustical and engineering feasibility criteria, then the barriers are assessed for reasonableness in accordance with the LADOTD's noise policy. To be considered reasonable by LADOTD, All proposed noise abatement must meet the following three criteria: achievement of the noise reduction design goal, cost effectiveness and concurrence of benefited receptors. If any of the criteria are not met, noise abatement measures will not be constructed.

In general, noise abatement measures may include noise barriers, alteration of horizontal and vertical alignment, and traffic management measures (such as reducing speed limits or prohibition of heavy trucks). The latter two forms of abatement have already been considered during the planning phases for previous Hooper Road widening projects. Hooper Road is the only significant roadway through the project corridor so restricting truck traffic is not desired. The posted speed limits along the project are 35-55 mph.

Results of Noise Modeling for Abatement Measures

Evaluation of Noise Barriers: No Build Alternative

For the original EA, prior to consideration of the two traffic improvement alternatives, the primary abatement measure that was modeled using the TNM model was the use of noise barrier. The model assumed that the barrier would be constructed within the existing right-of-way and would extend from driveway to driveway. The model barrier height was chosen as 9 feet. The model results indicate that there would be a reduction in dBA levels for the residences. However, only 3 of the fourteen residences had greater than a 5-dBA reduction. Therefore, the acoustical feasibility goal of having at least 75% of the first row of impacted dwelling units is not achieved so this measure is not considered acoustically feasible.

Subsequently, it was decided to determine if a much taller noise wall would meet the acoustically feasible criteria. The model was run for the design year and conditions using an 18 ft. high barrier. The results of the model output are presented in the original EA. As noted in the table, only 7 of

the 14 receivers met a reduction criterion of 5 dBA. Therefore, this option was also not considered acoustically feasible since 75% of the receivers did not achieve a 5 dBA reduction. Although this option is considered as not acoustically feasible, a construction cost estimate was made. The estimated cost for this option was \$1,117,703, or a total of \$85,977 per receiver which far exceeds the LADOTD criteria of \$35,000 per receiver. It is also recognized that an 18 ft. high wall would likely be objectionable to most homeowners.

Evaluation of Noise Barriers: Alternatives 1 and 2

Because the prior EA focused on impacted residences and The Gardens Senior Apartments had not been shown to have any noise impacts, and both modeled build alternatives did show increases to levels over 66 dBA, the implementation of noise barriers was modeled. Implementation of barriers reduce the sound levels greater than 5 dBA at one of the four modeled locations at the senior center, so this is not considered to be feasible under the LADOTD criteria since it is an approximate 33% reduction in impacted dwelling units.

Summary and Conclusion

Based upon the TNM models run for the original EA, there are no acoustically feasible noise barriers for the proposed project. Additionally, the engineering road design provided for this assessment is only at 15% completion, it is recommended that additional analyses should be done at the 60% engineering design point. Noise impacts for the 15% engineering design point are: No-Build Alternative: 20 Receivers, Alternative 1: 6 Receivers, and Alternative 2: 7 Receivers.

Table 1: Noise Abatement Criteria Hourly A-Weighted Sound Level Decibels				
Activity Category	Activity Leq(h) (dBA)	Evaluation Location	Activity Description	IN LOUISIANA, IMPACT OCCURS WHEN NOISE LEVEL IS EQUAL TO <u>OR GREATER</u> THAN THE VALUES BELOW
A	57	Exterior	Lands on which serenity and quiet are of extraordinary significance and serve an important public need and where the preservation of those qualities is essential if the area is to continue to serve its intended purpose.	56
B	67	Exterior	Residential	66
C	67	Exterior	Active sport areas, amphitheatres, auditoriums, campgrounds, cemeteries, day care centers, hospitals, libraries, medical facilities, parks, picnic areas, places of worship, playgrounds, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, recreation areas, Section 4(f) sites, schools, television studios, trails, and trail crossings.	66
D	52	Interior	Auditoriums, day care centers, hospitals, libraries, medical facilities, places of worship, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, schools, and television studios.	51
E	72	Exterior	Hotels, motels, offices, restaurants/bars, and other developed lands, properties or activities not included in A-D or F.	71
F	NA	NA	Agriculture, airports, bus yards, emergency services, industrial, logging, maintenance facilities, manufacturing, mining, rail yards, retail facilities, shipyards, utilities (water resources, water treatment, electrical), and warehousing.	N/A
G	NA	NA	Undeveloped lands that are not permitted.	N/A

1. Noise Reduction Design Goal: At a minimum, at least one receptor must receive an 8 dBA reduction for the noise abatement system to be reasonable.

2. Cost-Effectiveness: If the estimated cost of constructing a noise barrier (including installation and additional necessary construction such as foundations or guardrails) divided by the number of benefited receptors (those who would receive a reduction of at least 5 dBA) is \$35,000 or less per benefited receptor, a barrier is considered to be cost-effective.

3. Consideration and Obtaining Views of Residents and Property Owners: The viewpoints of the affected property owners and residents are important. If barriers are found to be reasonable by the Cost-Effectiveness and Design Goal criteria, then the opinions of the affected receivers and property owners would be solicited. Noise barriers must be shown to be both feasible and reasonable, as described earlier, for them to be deemed likely for construction.

1.1 OVERVIEW AND INTRODUCTION

The purpose of this report is to provide a narrative description for the proposed property to be used by the Baton Rouge Metropolitan Airport (BRMA) in conjunction with on-going improvements to Runway 13-31 Runway Safety Area (RSA) and the Runway Protection Zone (RPZ) to support a U.S. Army Corps of Engineers (Corps) jurisdictional wetland determination. These improvements include the possible construction of three driveways to provide better access for four property parcels. The remainder of this document describes the salient features of the property, flora community, site soil conditions and site hydrology. Figures discussed to support the narrative are located at the end of this report.

1.2 Site Location

BRMA and the project site are located at latitude N 30°31'39.64" and longitude W 91°08'16.94" in East Baton Rouge Parish, Louisiana. The site is about five miles north of downtown Baton Rouge, and adjacent to Interstate 110. Plank Road is currently undergoing relocation as part of a prior approved project. This project will address traffic improvements that are expected to results from the construction of two elevated bridge flyovers at the intersection of Plank Road and Hooper Road, and re-located Plank Road and McClelland Drive. The site location is shown on Figure 1, the project boundary is shown on Figure 2, and Figure 3 shows the proposed driveway access locations. The property is not located within the jurisdiction of the Louisiana Department of Natural Resources Coastal Zone Management Program.

1.3 Site Description

The property under investigation includes a mix of hardwood forests, pastureland, and private properties consisting of commercial businesses, light industrial facilities, and residential housing. The site is bound by Hooper Road along the southeast, BRMA along the west, and various tracts along the northeast including Baton Rouge Coca-Cola Bottling Company, vacant lots, residential sites, and commercial sites.

1.4 Site Drainage

At this time, most of the subject property is drained by naturally occurring swales and ditches that flow offsite, as well as the existing roadside ditches along Plank Road, Hooper Road, Robique Road, and Martin Road. One naturally occurring large swale is present from just north of Robique Road and travels towards the southwest through the forested portion of the property. This location has been previously permitted. Most of the pasture areas have very good slopes and appear well-drained. When entering the forested areas, the property tends to flatten out and appears less well drained. Figure 3 shows the drainage features of the subject property.

1.5 Planned Project Benefits

The purpose of the proposed Runway 13-31 RSA and RPZ improvements is twofold. First, the project will increase compliance with FAA design standards. Second, the project will replace existing physical infrastructure at or near the end of its useful life. This project will improve airfield facilities and safety so that the Baton Rouge Metropolitan Airport may continue to serve as a regionally competitive, origin destination airport for passenger aircraft operations.

2.1 DETAILED SITE INSPECTION

This section summarizes the information developed during detailed site visits concerning the proposed project site. Preliminary data sheets and photographs of the site are included in the Appendix.

2.2 Site Inspections

Compliance Consultants, Inc. (CCI) representatives M. Field, P.E, and Cory R. Rogers, E.S., conducted field investigations in the area in November, 2021. Based on the information gathered, mapping strategies were implemented, transects were conducted and sample sites were selected. These sample sites are depicted on Figure 3.

2.3 Soil Types

According to the East Baton Rouge Soil Survey, the soils mapped within the subject area are of the Deerford-Verdun complex (DaA), Frost silt loam (FaA), and Urban land (UrA). Very small areas of Oprarie silt (OpB) and Calhoun (Cc) series are present on the perimeter of the subject area, and will not be discussed in this report.

Frost silt loam soils are present in the majority of the forested areas. These soils are described as poorly-drained, with runoff being and permeability being slow. This supports the small portion of wetland found on the subject site, which were secluded to the forested area.

In the areas of the pastures and developed parcels, Deerford-Verdun soils were found. This type of soil is described as somewhat poorly-drained, with slow runoff and permeability. These areas are well-drained due to good slopes and drainage ditches along the roads. Figure 4 is a portion of the East Baton Rouge Soil Survey Map highlighting the area under investigation.

2.4 Sample Sites

Sample sites were selected after a thorough examination of the project limits. The main areas of focus were narrowed by the examination of infrared photography, the topography within the parcel, soil information and a sight drive-by inspection along the proposed realignment. Most of the land along the proposed realignment of Plank Road is undeveloped forested tracts. The pastures and other parcels within the realignment and subject area are very small, but because of the change in vegetation, sample sites were done to represent the areas. Figure 3 shows the location of the sample sites.

Sample Sites were selected to represent the different environments found within the subject property. The environments encountered along the subject property were upland hardwoods (Sample Sites 1 and 4), upland pastures and residential yards (Sample Site 2), and potentially wet bottomland hardwoods (Sample Site 3).

2.4.1 Sample Sites 1 and 4 - These sample sites (SS) represent the upland hardwoods found on the subject property. These areas have a good slope that drain well into the adjacent lower areas and ditches. SS 1 is located on the northern portion of the investigation area near Plank Road. SS 4 is located north of the Gardens Senior Apartments, southwest of the intersection of Old Hooper Road and Hooper Road. The canopy is dominated mostly by loblolly pine, hop-hornbeam, red maple, American elm, and tallow scattered throughout. The understory is thick with privet, yaupon, tallow and young canopy species occurring. The limited emergent growth within these areas is dominated by woody vines, Virginia creeper and grass species. The soils were very well drained with a chroma of 1OYR 6/6. The majority of the woodlands along the investigation corridor are upland hardwoods represented by these sites.

2.4.2 Sample Site 2 - SS 2 is located south of Robique Road and east of Plank Road and represents the well-drained open pastures and residential yards found within the subject property. These areas make up a minor portion of the subject property and are dominated by upland grass species. These areas have little to no canopy or understory because they are regularly maintained by bush hogging or mowing. The natural slope and drainage features along the nearby roadways drain these areas very well. However, the soils appear to have a darker chroma ranging from 1OYR 3/1 to 3/3. These areas are still considered non-jurisdictional due to the lack of hydrology and hydrophytic vegetation.

2.4.3 Sample Site 3 - SS 3 was chosen to represent the bottomland hardwoods on this realignment project that would be considered jurisdictional wetlands. SS 3 is located directly within the small wetland area found on the subject site. The 1.98-acre jurisdictional wetland area is located on the southern third portion of the proposed Plank Road realignment. Most of this area appears to be periodically inundated as evidenced by stained leaves, large water mark areas, fluted tree trunks, and evidence of drift deposits. This site is dominated by emergent wetland vegetation such as rush species, smartweed, and false nettle found throughout the site. Swamp chestnut oak, tallow, sweetgum and cherry bark oak dominate the thick canopy. There is currently standing water within a swale that runs just east of the SS. The soils are hydric with heavy mottling. These wetland areas provide the natural drainage that drain the pastures and large upland hardwood areas.

Data sheets and photographs in the Appendix correspond to the numbered Sample Sites depicted on Figure 3 and further illustrate site conditions found within the tract.

3.0 OPINION OF THE INVESTIGATORS

Based upon site conditions, field investigations and previous experience, there is 1.98 acres of potential jurisdictional wetlands found on the subject site. Sample Sites 1, 2 and 4 are typical examples of non-wetland areas found along proposed project area and do not meet the necessary criteria for classification as U.S. Army Corps of Engineers jurisdictional wetlands. Sample Site 3 represents the small portion of jurisdictional wetlands found within the proposed realignment. The locations of these sample sites and the drainage ditches are found on Figure 3.

Custom Soil Resource Report for East Baton Rouge Parish, Louisiana

West Connector

November 15, 2021

Custom Soil Resource Report Soil Map

Soil Map—East Baton Rouge Parish, Louisiana
(West Connector Driveway detail)

East Baton Rouge Parish, Louisiana

DaA—Deerford-Verdun complex, 0 to 1 percent slopes

Map Unit Setting

National map unit symbol: 2wk4p
Elevation: 10 to 50 feet
Mean annual precipitation: 62 to 64 inches
Mean annual air temperature: 64 to 79 degrees F
Frost-free period: 258 to 321 days
Farmland classification: Not prime farmland

Map Unit Composition

Deerford and similar soils: 50 percent
Verdun and similar soils: 40 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Deerford

Setting

Landform: Terraces
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Fine-silty loess

Typical profile

Ap - 0 to 4 inches: silt loam
E/Bg - 4 to 23 inches: silt loam
Btn1 - 23 to 30 inches: silty clay loam
Btn2 - 30 to 38 inches: silt loam
B'tn - 38 to 92 inches: silt loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: 17 to 24 inches to natric
Drainage class: Somewhat poorly drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately low (0.01 to 0.14 in/hr)
Depth to water table: About 6 to 8 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 1 percent
Maximum salinity: Slightly saline to moderately saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 20.0
Available water supply, 0 to 60 inches: Low (about 3.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C/D
Hydric soil rating: No

Description of Verdun

Setting

Landform: Terraces
Landform position (three-dimensional): Rise
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Fine-silty loess

Typical profile

Ap - 0 to 5 inches: silt loam
B/E - 5 to 9 inches: silt loam
Btn1 - 9 to 16 inches: silty clay loam
Btn2 - 16 to 40 inches: silt loam
Cn - 40 to 80 inches: silt loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: 9 inches to natric
Drainage class: Somewhat poorly drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately low (0.01 to 0.14 in/hr)
Depth to water table: About 6 to 10 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 1 percent
Maximum salinity: Slightly saline to moderately saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 20.0
Available water supply, 0 to 60 inches: Very low (about 1.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4s
Hydrologic Soil Group: A/D
Hydric soil rating: No

Minor Components

Frost

Percent of map unit: 10 percent
Landform: Terraces
Landform position (three-dimensional): Talf
Down-slope shape: Concave
Across-slope shape: Linear
Hydric soil rating: Yes

JeA—Jeanerette silt loam, 0 to 1 percent slopes

Map Unit Setting

National map unit symbol: 2tpcd
Elevation: 10 to 80 feet
Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 235 to 350 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Jeanerette and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Jeanerette

Setting

Landform: Terraces
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loess and/or silty alluvium

Typical profile

Ap - 0 to 11 inches: silt loam
Btg - 11 to 24 inches: silty clay loam
Btkg - 24 to 32 inches: silty clay loam
B'tg - 32 to 79 inches: silt loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 14 to 27 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 7 percent
Available water supply, 0 to 60 inches: High (about 11.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Frost

Percent of map unit: 5 percent
Landform: Terraces
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Concave
Across-slope shape: Linear
Hydric soil rating: Yes

Coteau

Percent of map unit: 5 percent
Landform: Terraces
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Mountainbase, interfluve, tread, dip
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

Custom Soil Resource Report

onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

Custom Soil Resource Report

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

East Baton Rouge Parish, Louisiana

CcA—Calhoun silt loam, 0 to 1 percent slopes

Map Unit Setting

National map unit symbol: 2tpc6
Elevation: 10 to 120 feet
Mean annual precipitation: 53 to 68 inches
Mean annual air temperature: 57 to 72 degrees F
Frost-free period: 248 to 303 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Calhoun and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Calhoun

Setting

Landform: Terraces
Landform position (two-dimensional): Footslope
Landform position (three-dimensional): Mountainbase, base slope, riser, rise
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loess

Typical profile

Ap - 0 to 3 inches: silt loam
Eg - 3 to 17 inches: silt loam
Btg - 17 to 30 inches: silty clay loam
BCg - 30 to 47 inches: silt loam
Cg - 47 to 79 inches: silt loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately high
(0.01 to 0.16 in/hr)
Depth to water table: About 0 to 18 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Very high (about 13.0 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C/D
Hydric soil rating: Yes

Minor Components

Toula

Percent of map unit: 5 percent

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL:
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: East Baton Rouge Parish, Louisiana
 Survey Area Data: Version 17, Sep 8, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 5, 2020—Feb 2, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
DaA	Deerford-Verdun complex, 0 to 1 percent slopes	14.5	32.5%
JeA	Jeanerette silt loam, 0 to 1 percent slopes	30.2	67.5%
Totals for Area of Interest		44.7	100.0%

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however,

Custom Soil Resource Report

onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

East Baton Rouge Parish, Louisiana

DaA—Deerford-Verdun complex, 0 to 1 percent slopes

Map Unit Setting

National map unit symbol: 2wk4p
Elevation: 10 to 50 feet
Mean annual precipitation: 62 to 64 inches
Mean annual air temperature: 64 to 79 degrees F
Frost-free period: 258 to 321 days
Farmland classification: Not prime farmland

Map Unit Composition

Deerford and similar soils: 50 percent
Verdun and similar soils: 40 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Deerford

Setting

Landform: Terraces
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Fine-silty loess

Typical profile

Ap - 0 to 4 inches: silt loam
E/Bg - 4 to 23 inches: silt loam
Btn1 - 23 to 30 inches: silty clay loam
Btn2 - 30 to 38 inches: silt loam
B'tn - 38 to 92 inches: silt loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: 17 to 24 inches to natric
Drainage class: Somewhat poorly drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately low (0.01 to 0.14 in/hr)
Depth to water table: About 6 to 8 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 1 percent
Maximum salinity: Slightly saline to moderately saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 20.0
Available water supply, 0 to 60 inches: Low (about 3.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C/D
Hydric soil rating: No

Description of Verdun

Setting

Landform: Terraces
Landform position (three-dimensional): Rise
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Fine-silty loess

Typical profile

Ap - 0 to 5 inches: silt loam
B/E - 5 to 9 inches: silt loam
Btn1 - 9 to 16 inches: silty clay loam
Btn2 - 16 to 40 inches: silt loam
Cn - 40 to 80 inches: silt loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: 9 inches to natric
Drainage class: Somewhat poorly drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately low (0.01 to 0.14 in/hr)
Depth to water table: About 6 to 10 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 1 percent
Maximum salinity: Slightly saline to moderately saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 20.0
Available water supply, 0 to 60 inches: Very low (about 1.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4s
Hydrologic Soil Group: A/D
Hydric soil rating: No

Minor Components

Frost

Percent of map unit: 10 percent
Landform: Terraces
Landform position (three-dimensional): Talf
Down-slope shape: Concave
Across-slope shape: Linear
Hydric soil rating: Yes

JeA—Jeanerette silt loam, 0 to 1 percent slopes

Map Unit Setting

National map unit symbol: 2tpcd
Elevation: 10 to 80 feet
Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 235 to 350 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Jeanerette and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Jeanerette

Setting

Landform: Terraces
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loess and/or silty alluvium

Typical profile

Ap - 0 to 11 inches: silt loam
Btg - 11 to 24 inches: silty clay loam
Btkg - 24 to 32 inches: silty clay loam
B'tg - 32 to 79 inches: silt loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 14 to 27 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 7 percent
Available water supply, 0 to 60 inches: High (about 11.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Frost

Percent of map unit: 5 percent
Landform: Terraces
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Concave
Across-slope shape: Linear
Hydric soil rating: Yes

Coteau

Percent of map unit: 5 percent
Landform: Terraces
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Mountainbase, interfluve, tread, dip
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

WETLAND DETERMINATION DATA FORM – Atlantic and Gulf Coastal Plain Region

Project/Site: BRMA Runway 13/31/RSA/RPZ Project Wetland City/County: East Baton Rouge Parish Sampling Date: 10-17-2021
 Applicant/Owner: BRMA via Airport Management Group (AMG) State: Louisiana Sampling Point: 1
 Investigator(s): Mary Field, Cory Rogers Section, Township, Range: S 90, T 6S, R 1E
 Landform (hillslope, terrace, etc.): terrace Local relief (concave, convex, none): concave Slope (%): 0-1
 Subregion (LRR or MLRA): LRR = P Lat: 30.529348 ° Long: -91.1468611° Datum: 83
 Soil Map Unit Name: Jeanerette silt loam NWI classification: NA

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: Site of interest is on an abandoned roadbed so fill is present; sample site was taken adjacent to fill in relatively undisturbed area

DRAFT #2

March 25, 2022

This report outlines the project plan for implementation of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended (the Uniform Act), 49 CFR Part 24 and FAA Order 5100.37B, Land Acquisition and Relocation for Airport Projects.

1.1 Assessment of Land Acquisition and Relocation Eligibility

1.1.1 PROJECT SUMMARY

Using the data provided by the client and other Project Consultants, it has been determined that there are fifty-five (55) parcels impacted by the proposed Right of Way: two (2) parcels with single family residential homes and 53 commercial/industrial parcels.

The occupants of the two (2) residential homes will be eligible for relocation assistance in accordance with the Uniform Relocation Assistance and Real Property Acquisitions Act of 1970 (URA). There are 20 businesses in operation within the proposed Right of Way which will be displaced by the project. There are (4) additional businesses and (1) one church that will also be displaced by the program, due to access to the businesses being drastically limited by the program. Two businesses, both gas stations, will have their access drastically limited by the project's roadway right of way requirements. Due to the nature of the business at the gas stations, this action could have a negative impact on the business's long-term viability. Though only portions of each of these properties are required for the project's construction, the full property acquisition may be justified and warranted at the business's discretion due to the changes in access. The owners of those businesses and the church organization will be eligible for business relocation and reestablishment assistance in accordance with the URA. This information is detailed in in the chart below.

The entirety of the one business and the church may not be needed to meet the project's roadway right of way requirements, however, due to DOTD's control of access standards which will no longer allow left turns into traffic, access is significantly reduced to these parcels beyond what was planned in the original EA with at-grade signalization. These standards also eliminate left turns across traffic into parking lots. Though only portions of each of these properties are required for the project's construction, the full property acquisition may be justified and warranted at the business and church's discretion due to the changes in access.

There will be a one-year deadline beyond the project completion to be put in place for the three businesses and church to choose full acquisition. If they choose not to participate by that one-year deadline, the full property will not be acquired.

In order to assess title issues that may impact the acquisition of the parcels to be acquired for this project, research of title history was conducted.

The conclusions in this report are based on public records research, review of the Title Abstracts and Title Opinion Reports and data obtained during visits to the project area.

1.1.2 PARCEL DESCRIPTIONS

1. PARCEL NO. 309311 Chevron U.S.A., Inc.

This parcel is approximately 0.854 acres. A full acquisition of this parcel will be required. The parcel was acquired by act of Cash Sale dated February 10, 1967, from Theo F. Cangelosi and Bilwood Smith to Gulf Oil Corporation, now known as Chevron U.S.A., Inc. There are two structures as well as fueling stations on this parcel. Due to the nature of the prior business operations on this site, a Phase I and possibly a Phase II Environmental Assessment will be necessary on this property. If remediation is required, it could impact the appraised value of the parcel. Presently there is no business in operation on this site.

2. PARCEL NO. 1366084 T & S Investments Properties, LLC

This parcel is approximately 0.346 acres, and a full acquisition will be required for this project. The parcel was acquired by act of Cash Sale dated October 6, 2004, from Circle K Stores, Inc. The title abstract indicates there is an indebtedness agreement in favor of Circle K General, Inc. in the amount for \$5,410.00 which will need to be cleared prior to conveyance of title. The parcel is improvement with a brick building/convenience store and fueling island. The fueling island is not presently in use. Due to the nature of the prior business operations on this site, a Phase I and possibly a Phase II Environmental Assessment will be necessary on this property. If remediation is required, it could impact the appraised value of the parcel. However, there is indication in the title abstract that Circle K LLC, which operated a gas station on this parcel may have performed remediation post sale. Plank Road Food Mart, a convenience store is in operation on this parcel which also serves as a rental center for U-Haul trucks and trailers. The owner of the store is leasing the parcel and will be eligible to receive business relocation and reestablishment assistance in accordance with the URA.

3. PARCEL NO. 1365835 Saber, Imad

This parcel is approximately 0.346 acres located on Plank Road, north of Hooper Road. A full acquisition of this property will be necessary. The parcel was acquired by act of Cash Sale dated July 8, 2016, with Mortgage from Kean's Hooper, LLC. Brother's Auto Plex occupies this parcel and is an auto repair shop as well as a retail tire store. The business is owned by the parcel owner who will be eligible for business relocation and reestablishment in accordance with the URA.

4. PARCEL NO. 213411 Hancock Bank of Louisiana

This parcel is approximately .74 acres, the full parcel will be acquired for this project. The title for this property is currently held in the name of Whitney Bank acquired by act of Cash Sale, March 31, 1994, from Baton Rouge Bank & Trust Company. Subsequently, a merger took place in 2011 making the present holder Hancock Bank of Louisiana. Presently a full-service bank is in operation at this location which will require business relocation and reestablishment assistance in accordance with the URA.

5. PARCEL NO. 1365622 Plank Crossing, LLC

This parcel is approximately 6.79 acres, the full parcel will be acquired for this project. The property was acquired by Act of Transfer dated January 17, 2019, from Boule Enterprises, LLC. There are presently six tenant owned businesses in operation on this parcel. Each of these business owners will be eligible for business relocation and reestablishment assistance in accordance with the URA. The tenants and their business types are as follows: DC Eats is a small café, Glam Place Hair Studio is a hair salon; Vizionz Barber and Company, LLC is a barbershop; Club Bella Noche is a night club Eighty-One 50 is also a night club; and Triumph Construction Company appears to have a business office located on this site as well.

6. PARCEL NO. 1366092 K & J Car Wash, LLC

This parcel is approximately 0.462 acres and full acquisition will be required for this project. The parcel was acquired by Act of Cash Sale dated July 31, 2007, from PKL Wash LLC. The business owner will be eligible for business relocation and reestablishment assistance in accordance with the URA.

7. PARCEL NO. 466360 E & A Properties, LLC

This tract of land is approximately 2.67 acres and for the purposes of this project, a full acquisition is necessary. The parcel was acquired by act of Cash Sale dated December 14, 2004, from State Farm Mutual Automobile Insurance Company. The property is improved with a large multi suite office building which houses tenant owned businesses. Each of these businesses will require Business Relocation and Reestablishment in accordance with the URA. The business offices located on this parcel are State Farm Insurance, Agent Anna Jones; Regina Ashford Barrow, State Senator; EJA Partners, LLC; SRC, LLC; and Ballard-Young Creations, LLC, an embroidery shop.

8. PARCEL NO. 833800 The Gardens Senior Apartments, LLC

This parcel is approximately 7 acres, of which approximately 0.909 acres will be acquired for this project. This parcel was acquired by Cash Sale dated July 20, 2012. There is a judgment on this parcel which must be resolved prior to conveyance of title. A mortgage is also recorded against this parcel. The project will not impact the structures located on this parcel; however, a portion of the concrete driveway and signage will be impacted; these items can be addressed through the cost to cure method during the appraisal process.

9. PARCEL NO. 1268821 William Carrouche

This parcel is approximately 7.36 acres, of which approximately 2.14 acres will be acquired for this project. This property appears to be a salvage yard, improved with a 1,600 square foot metal building, and chain link fencing. The project will not impact structures located on this parcel; however, a portion of the driveway and fencing will be impacted; these items can be addressed through the cost to cure method during the appraisal process. There is a billboard sign located in the taking area of this parcel. The owner of the billboard will be eligible for certain business relocation and reestablishment assistance in accordance with the URA. Presently there are two large sea cans, a recreational vehicle, heavy equipment and multi vehicles stored in the taking area on this parcel. The owner of the property will be eligible for moving cost as well as business relocation and reestablishment assistance resulting from the lease for the space where the billboard sign is located. A Phase I and possibly a Phase II Environmental Assessment will be necessary on this property. If remediation is required, it could impact the appraised value.

10. PARCEL NO. 1163205 Capital Missionary Baptist Church

This parcel is approximately 12 acres, of which approximately 0.372 acres will be acquired for this project. The parcel was acquired by an act of Cash Sale dated July 13, 2001, from Brooks Properties of LA, L.L.C. The project will not impact structures located on this parcel; however, a portion of the concrete driveway and signage will be impacted; these items can be addressed through the cost to cure method during the appraisal process.

11. PARCEL NO. 1465112 Louisiana Leadership Institute

This parcel is approximately 12 acres, of which approximately 0.297 acres will be acquired for this project. This parcel was acquired by an act of Cash Sale dated March 25, 2002, from Brooks Properties of LA, LLC. The title opinion on this parcel indicates that there are judgments filed against this parcel as well as

a performance bond and notice of seizure. These items will need to be resolved prior to the conveyance of title. The project will not impact structures located on this parcel; however, a portion of the concrete driveway and signage will be impacted; these items can be addressed through the cost to cure method during the appraisal process.

12. PARCEL NO. 1465139 Louisiana Leadership Institute

This parcel is approximately 10 acres, of which approximately .0141 acres will be acquired for this project. This parcel was acquired by act of Cash Sale dated March 25, 2002, from Brooks Properties of LA, LLC. 19. PARCEL NO. 1319191 Vallery, John Wayne

This parcel is approximately 0.36 acres of which only a very small portion will be acquired for this project. This parcel was acquired through cash sale May 16, 1994. The project will not impact structures located on this parcel; however, a portion of the concrete driveway and the roadside mailbox will be impacted; these items can be addressed through the cost to cure method during the appraisal process.

20. PARCEL NO. 1147226 Nguyen, Ngoc Lan

This parcel is approximately 0.30 acres of which only a very small portion will be acquired for this project. This parcel was acquired through cash sale March 2, 2001. The project will not impact structures located on this parcel. The driveway is located on the side street of this corner lot and is not in the taking area.

21. PARCEL NO. 1347055 CBN INVESTMENT TRUST

This parcel is approximately 24 acres of which approximately 0.078 acres, acquired for this project. A residential home is located on this parcel. The project will not impact structures located on this parcel; however, a portion of the concrete driveway and the roadside mailbox will be impacted, these items can be addressed through the cost to cure method during the appraisal process.

22. PARCEL NO. 1137662 Ballard, Gregory D

This parcel is approximately 0.24 acres of which only a very small portion will be acquired for this project. A residence is located on this parcel. The project will not impact structures located on this parcel; however, a portion of the concrete driveway and possibly wood fencing may be impacted, these items can be addressed through the cost to cure method during the appraisal process.

23. PARCEL NO. 833681 U S Postal Service/Post Office

This parcel is approximately 3.60 acres of which about 0.322 acres will be acquired for this project. This property was acquired by Warranty Deed, dated September 16, 1985, from the Twenty, Inc. This corner parcel has a taking area on Plank Road as well as Hooper Road. The project will not impact structures located on this parcel; however, a small portion of the concrete driveway will be impacted; this can be addressed through the cost to cure method during the appraisal process.

24. PARCEL NO. 1527258 Realty Income Properties 17, LLC

This parcel is approximately .097 acres, approximately 0.148 acres will be acquired for this project. This property was acquired by act of Cash Sale, dated May 30, 2012, from Family Dollar Stores of Louisiana, Inc. There is a mortgage on this parcel. The structures on this parcel will not be impacted by the acquisition however, most of the existing parking lot is located within the right of way. The cost to cure method may be used to offset the loss of the parking lot and allow a new park lot to be built on at the rear of the parcel. Presently there is a tenant owned furniture store in operation on this parcel. Should an offer be made through negotiations with the property owner for the full acquisition of this parcel on a voluntary basis, the business owner will be eligible for business relocation and reestablishment assistance in accordance with the URA.

25. PARCEL NO. 2601346 Danny Harper

This property is approximately 1.03 acres, 0.164 acres of which will be acquired for this project. The parcel was acquired through an act of sale date September 9, 2015, from Four Development, L.L.C. This is a vacant lot.

26. PARCEL NO. 2601338 Realty Income Properties 30, LLC

This parcel is approximately 1.03 acres, of which 0.148 acres will be acquired for this project. The parcel was acquired by act of Special Warranty Deed (Act of Cash Sale with Limited Warranty) dated January 15, 2014, from Retail Property Investments, LLC. The project will not impact structures located on this parcel; however, a small portion of the concrete driveway will be impacted; this can be addressed through the cost to cure method during the appraisal process. The Dollar General Store, a tenant owned business, is currently in operation at this location.

27. PARCEL NO. 2601311 Hooper Pointe Apartments LLC

This parcel is approximately 14 acres, 0.215 acres of which will be acquired for this project. The parcel was acquired by Act of Contribution by Omega, LLC dated March 2, 2021. Certain liens filed against this parcel may require resolution prior to the conveyance of title. The project will not impact structures located on this parcel; however, a small portion of the concrete driveway and possibly the signage will be impacted; this can be addressed through the cost to cure method during the appraisal process.

28. PARCEL NO. 1526545 Community Development, Inc.

This parcel is approximately 2.68 acres, 0.657 of which will be acquired for this project. The parcel was acquired by act of Cash Sale dated October 30, 2006. There is a mortgage, and a Right of First Refusal

filed against this parcel, as well as a lease with Lamar Advertising. These items will need to be resolved prior to conveyance of title. There is a Lamar Advertising billboard located on this otherwise vacant lot which may be impacted by this project. Lamar Advertising may be eligible for certain business relocation and reestablishment assistance in accordance with the URA.

31. PARCEL NO. 1328107 Percy Matherne Contractors, Inc.

This parcel is approximately 5 acres, of which approximately 0.144 acres will be acquired for this project. The parcel was acquired by Cash Sale dated June 5, 1989, from Percy J. Matherne and Enid R. Matherne. There will be no impact to the structures on this parcel, only a small portion of the concrete driveway will be impacted. This can be addressed through the appraisal process using the cost to cure method.

32. PARCEL NO. 1328085 Matherne, Enid

This parcel is approximately 2.5 acres, approximately 0.043 acres of which will be acquired for this project. The parcel was acquired by Sale with Assumption of Mortgage dated May 29, 1969, by Enid R. Matherne, The Percy J. Matherne Estate Trust, Deborah Matherne Barras, Darrel Matherne, Don Matherne, Darlene Matherne McCrary and Dee Ann Matherne Sheets. There will be no impact to the structures on this parcel, only a small portion of the concrete driveway will be impacted. This can be addressed through the appraisal process using the cost to cure method.

33. PARCEL NO. 1328093 Matherne, Enid

This parcel is approximately 2.5 acres, approximately 0.070 acres of which will be acquired for this project. The parcel was acquired by Sale with Assumption of Mortgage dated April 21, 1972, by Enid R. Matherne, The Percy J. Matherne Estate Trust, Deborah Matherne Barras, Darrel Matherne, Don Matherne, Darlene Matherne McCrary and Dee Ann Matherne Sheets. This is a vacant lot.

34. PARCEL NO. 1186345 Juz Us Childcare Development Center, LLC

This parcel is approximately 1.02 acres, approximately 0.046 acres of which will be acquired for this project. The parcel was acquired by act of Cash Sale dated February 2, 2017, from The Ministry of Love Baton Rouge, Inc. There will be no impact to the structures on this parcel, only a small portion of the concrete driveway will be impacted. This item can be addressed through the appraisal process using the cost to cure method.

35. PARCEL NO. 1222341 Juz Us Childcare Development Center, LLC

This parcel is approximately 3.94 acres, approximately 0.048 acres of which will be acquired for this project. The parcel was acquired by act of cash sale from The Ministry of Love Baton Rouge, Inc. dated February 2, 2017. There will be no impact to the structures on this parcel, only a small portion of the

concrete driveway and the roadside mailbox will be impacted. These items can be addressed through the appraisal process using the cost to cure method.

36. PARCEL NO. 1366742 Poydras, Pam

This parcel is approximately 0.24 acres, approximately 0.020 acres of which will be acquired for this project. The parcel was acquired by act of Cash Sale dated April 6, 2009, from Donnie J. Cotton and Judith Singleton Cotton. There is a mortgage on this property. There is also a lien filed against the parcel which will need to be resolved prior to conveyance of title. There will be no impact to the structures on this parcel, only a small portion of the concrete driveway will be impacted. This can be addressed through the appraisal process using the cost to cure method.

37. PARCEL NO. 1222546 Evans, Julius

This parcel is approximately 4.17 acres, approximately 0.023 acres of which will be acquired for this project. The parcel was acquired by act of Sale dated December 21, 1966, with Vendor's Lien and Pledge from The Capital Building & Loan Association. There will be no impact to the structures on this parcel, only a small portion of the concrete driveway and roadside mailbox will be impacted. These items can be addressed through the appraisal process using the cost to cure method.

38. PARCEL NO. 1366513 Alexander, Carl

This parcel is approximately 0.485 acres, approximately 0.049 acres of which will be acquired for this project. The parcel was acquired by act of Cash Sale dated October 28, 2008, from Debra H. Clark. There is a mortgage on this parcel. There will be no impact to the structures on this parcel, only a small portion of the concrete driveway and roadside mailbox will be impacted. These items can be addressed through the appraisal process using the cost to cure method.

39. PARCEL NO. 2413205 International Union of Operating Engineers, Local 216, AFL CIO

This parcel is approximately 2.18 acres, of which approximately 0.107 acres will be acquired for this project. The parcel was acquired by act of Cash Sale dated October 9, 1967, from Lawrence L. Helouin. There will be no impact to the structures on this parcel only a portion of the concrete driveway will be impacted. This can be addressed through the appraisal process using the cost to cure method. There is a bus stop bench with paid advertising located at the roadside near the taking area. The title abstract does not indicate there is a lease with the parcel owner for the space. It is likely that the bus stop bench is located in the existing right of way through agreement with LA DOTD.

40. PARCEL NO. 1473840 Rufus Mims III, et al

This parcel is approximately 2.33 acres, of which approximately 0.049 acres will be acquired for this project. The parcel was acquired by act of Cash Sale dated May 27, 2004, from SCI Louisiana Funeral Services F/K/A Welch Funeral Home Inc. This appears to be an unimproved wooded lot.

41. PARCEL NO. 1473859 Rufus Mims III, et al

This parcel is approximately 2.33 acres, approximately 0.065 acres of which will be acquired for this project. The parcel was acquired by act of Cash Sale dated May 27, 2004, from SCI Louisiana Funeral Services F/K/A Welch Funeral Home Inc. This appears to be an unimproved wooded lot.

42. PARCEL NO. 3022102 Gardens of Baton Rouge, 2011, LP

This parcel is approximately 0.16 acres, of which approximately 0.107 acres will be acquired for this project. The parcel was acquired by Cash Sale Deed August 30, 2013, from Four Development, LLC. There is an Intercreditor Agreement recorded against this parcel. This parcel is improved with a single-family residence. The structure is located within the proposed right of way, therefore the property owner will have the option for full acquisition of the property. The property owner may elect to sell only the portion of the parcel required for the project and retain the remainder of the parcel. The home is tenant occupied; therefore, the occupants will be eligible for relocation advisory services, related to a replacement housing payment and moving cost. The parcel owner of the parcel will be eligible for business relocation and reestablishment assistance, in accordance with the URA.

43. PARCEL NO. 3020886 Gardens of Baton Rouge, 2011, LP

This parcel is approximately 0.18 acres, of which approximately 0.093 acres will be acquired for this project. The parcel was acquired by Cash Sale Deed August 30, 2013, from Four Development, LLC.

There is an Intercreditor Agreement recorded against this parcel. This parcel is improved with a single-family residence. The structure is located within the proposed right-of-way, therefore the property owner will have the option for full acquisition of the property. The property owner may elect to sell only the portion of the parcel required for the project and retain the remainder of the parcel. The home is tenant occupied; therefore, the occupants will be eligible for relocation advisory services, related to a replacement housing payment and moving cost. The parcel owner of the parcel will be eligible for business relocation and reestablishment assistance, in accordance with the URA.

44. PARCEL NO. 1415646 Rhema Christian Center, Inc.

This parcel is approximately 1.62 acres, of which approximately 0.044 acres will be acquired for this project. The parcel acquired in the name of Rhema Faith Fellowship, Inc. by act of Sale dated December 7, 1995, with Mortgage from Stacey Shannon, Merle Hoover Shannon, Harley C. Brown, Eloise Derowen Brown, and Murry Decoteau dated December 7, 1995. The Sale with Mortgage was corrected to change the name to Rhema Christian Center, Inc. as it presently stands on April 4, 1996. There will be no impact to the structures on this parcel, a portion of the concrete parking lot will be impacted. This item can be addressed through the appraisal process using the cost to cure method.

45. PARCEL NO. 1314823 Crescent City Partners III, LLC

This parcel is .42 acres, of which approximately 0.008 acres will be acquired for this project. The parcel was acquired by act of Quit Claim on March 4, 2020. There will be no impact to the structures on this parcel, a portion of the concrete parking lot will be impacted. This item can be addressed through the appraisal process using the cost to cure method.

46. PARCEL NO. 284998 Circle K

This parcel is approximately 2 acres, of which approximately 0.10 acres will be required for right of way for the proposed project roadway. The parcel was acquired by Cash Sale dated November 16, 2011. The new roadway alignment will not directly impact the structures on this parcel, however, due to the elevation of the new roadway at the intersection of Plank Road and Hooper/Harding Blvd, convenient customer access will be significantly reduced. There will no longer be a direct route for customers to enter the store parking lot from the road that is elevated. This will reduce the stores potential customer base significantly. For this reason, it will be necessary to make an offer to the property owner to purchase the full parcel on a voluntary basis, and to provide the business owner business relocation and reestablishment assistance in accordance with the URA.

47. PARCEL NO. 705683 Chase Bank

This parcel is approximately 1.72 acres, of which approximately 0.17 acres will be acquired for this project. The parcel was acquired through merger October 26, 2006. There will be no impact to the structures on this parcel, only a small portion of the concrete driveway and a portion of the parking lot will be impacted. These items can be addressed through the appraisal process using the cost to cure method.

48. PARCEL NO. 1368737 Elmer Jones

This parcel is approximately 1.31 acres, of which a very small portion of the parcel fronting on Plank Road will be acquired for this project. The parcel was acquired by Act of Donation April 15, 2003. There will be no impact to the structures on this parcel.

49. PARCEL NO. 30833204 Maxco Investments

This parcel is approximately 2.7 acres, 0.10 acres of which will be acquired for this project. This property was acquired by Cash Sale dated April 7, 2002. At the time of this report there is a school under construction on this site. There will be no impact to the structures on this parcel, only a small portion of the concrete driveway and possibly a portion of the parking lot will be impacted. These items can be addressed through the appraisal process using the cost to cure method.

50. PARCEL NO. 2053632 LGP REALTY HOLDINGS, LP (Shell Gas Station)

This parcel is approximately 0.689 acres, of which only a very small portion will be required for right of way for the actual roadway for this project. The parcel was acquired by Sale dated April 6, 2020. The new roadway alignment will not directly impact the structures on this parcel, however, due to the elevation of the new roadway at the intersection of Plank Road and Hooper/Harding Blvd, convenient customer

access will be significantly reduced. There will no longer be a direct route for customers to enter the store parking lot from the road that is elevated. This will reduce the store's potential customer base significantly. For this reason, it will be necessary to make an offer to the property owner to purchase the full parcel on a voluntary basis. If the full parcel is acquired, it will be necessary to provide the business owner business relocation and reestablishment assistance in accordance with the URA.

51. PARCEL NO. 227447 LGP REALTY HOLDINGS, LP (Shell Gas Station)

This parcel is contiguous with the parcel list just above and the structure housing the convenience store and gas station at this location are situated on both parcels. The parcel is approximately 0.58 acres, of which approximately 0.137 acres will be required for right of way for the actual roadway. The parcel was acquired by Sale dated April 6, 2020. The new roadway alignment will not directly impact the structures on this parcel, only a portion of the driveway and a small portion of the parking lot will be directly impacted by the right of way. However, due to the elevation of the new roadway at the intersection of Plank Road and Hooper/Harding Blvd, convenient customer access will be significantly reduced. There will no longer be a direct route for customers to enter the store parking lot from the road that is elevated. This will reduce the store's potential customer base significantly. For this reason, it will be necessary to make an offer to the property owner for the purchase of the full parcel on a voluntary basis. If the full parcel is acquired it will be necessary to provide the business owner business relocation and reestablishment assistance in accordance with the URA.

52. PARCEL NO. 369063 Brookwood Holdings, LLC (Storage Units)

This parcel is approximately 0.47 acres, of which approximately 0.148 acres will be directly impacted by the new roadway, The parcel was acquired through transfer dated June 30, 2017. The building situated on this parcel is located within the required right of way. For this reason, it will be necessary to make an offer to the property owner for the purchase of the full parcel. The property owner will be given the option to sell the entire parcel, fee simple, or to sell only the portion of the property required for the right-of-way and retain the remainder. The property owner also owns the contiguous parcels so this option could be advantageous to them. The business owner will be provided business relocation and reestablishment assistance in accordance with the URA.

53. PARCEL NO. 369071 Brookwood Holdings, LLC (Storage Units)

This parcel is approximately 1 acre, of which approximately 0.32 acres will be directly impacted by the new roadway. The parcel was acquired through transfer dated June 30, 2017. The building situated on this parcel is located within the required right of way. For this reason, it will be necessary to make an offer to the property owner for the purchase of the full parcel. The property owner will be given the option to sell the entire parcel, fee simple, or to sell only the portion of the property required for the right-of-way and retain the remainder. The property owner also owns the contiguous parcels so this option could be advantageous to them. The business owner will be provided business relocation and reestablishment assistance in accordance with the URA.

54. PARCEL NO. 2873567 Community Development, Inc.

This parcel is approximately 10.89 acres, of which approximately .98 acres will be required for the access road from Ford Street to the multi-family apartment complex, located at 8210 Cypress Road. An offer will be made to the property owner for the purchase of required right-of-way, as well as the uneconomic remainder of the parcel, which is approximately 0.60 acres, which will be created by the required acquisition. The parcel is unimproved and mostly wooded.

55. PARCEL NO. 2053098 Brookwood Holdings LLC

This parcel is approximately 3.1 acres, of which approximately 0.02 acres will be acquired for this project. The parcel was acquired through a transfer dated June 30, 2017. The structures and other improvements on this parcel will not be impacted.

56. PARCEL NO. 1162276 The Estate of Richard Braud

This wooded tract is approximately 9.75 acres, with no visible improvements. A portion of this parcel, approximately 1.4 acres, is in the process of being acquired for the required Right of Way for this project. Post-acquisition, the west side remainder of this parcel, located between the existing Plank Road and the right of way for the new Plank Road will be an uneconomic remainder due to limited accessibility, resulting from DOTD's control of access standards which will no longer allow left turns into traffic. The

owner of record of this parcel is deceased and there are numerous heirs to the estate. It is very likely that it will be in the best interest of the project for this parcel to be expropriated.

57. PARCEL NO. 52921 Thomas Baumann

This parcel is approximately 1.27 acres, improved with commercial-industrial structures which appear to be in disrepair and unoccupied. Located between the existing Plank Road and the right of way for the new Plank Road, this parcel will have limited accessibility, resulting from DOTD's control of access standards which will no longer allow left turns into traffic. Though this property is not required for the project's construction, full acquisition is justified and warranted due to the change in access.

58. PARCEL NO. 1454633* Joseph Triche

This property was acquired by Mr. Triche in 1968 and is approximately 1.3 acres. It appears to be unimproved and mostly wooded. The parcel is located between the existing Plank Road and the right of way for the new Plank Road, this parcel will have limited accessibility, resulting from DOTD's control of access standards which will no longer allow left turns into traffic. Though this property is not required for the project's construction, full acquisition is justified and warranted due to the change in access. *This parcel number was assigned to the larger 5-acre parcel prior to the recent acquisition of the right of way for the new Plank Road. The current 1.3 acres parcel is the west side remainder of the 5-acre parcel, post-acquisition of the approximate 1.1-acre portion which was required right of way.

59. PARCEL NO. 3145641* Joseph Triche

This property was acquired by Mr. Triche in 1968 and is approximately 1.6 acres. This parcel is improved with two commercial buildings, a single-story masonry building used as a music academy and a metal building being used as a transmission repair shop. Each of these businesses will require Business Relocation and Reestablishment in accordance with the URA. The parcel is located between the existing Plank Road and the right of way for the new Plank Road, this parcel will have limited accessibility, resulting from DOTD's control of access standards which will no longer allow left turns into traffic. Though this property is not required for the project's construction, full acquisition is justified and warranted due to the change in access. *This parcel number was assigned to the larger 5-acre parcel prior to the recent acquisition of the right of way for the new Plank Road. This 1.6 acre parcel is the west side remainder of the 5-acre parcel, post-acquisition of the approximate 1.1-acre portion which was required right of way.

60. PARCEL NO. 2409488* Church of God in Christ

This property was acquired by the Church of God In Christ by Act of Credit Sale on July 1, 2004. According to the Louisiana Secretary of State the Registered Agent is Bishop Alphonso Denson, Sr. This parcel is approximately 4.3 acres, improved with a church sanctuary and additional buildings on the church campus as well as paved parking lots and driveways. The church will require relocation under Business Relocation and Reestablishment guidelines in accordance with the URA. The parcel is located between the existing Plank Road and the right of way for the new Plank Road, this parcel will have limited accessibility, resulting from DOTD's control of access standards which will no longer allow left turns into traffic. Though this property is not required for the project's construction, full acquisition is justified and warranted due to the change in access. *This parcel number was assigned to the larger 10-acre parcel prior to the recent acquisition of the right of way for the new Plank Road. This 4.3-acre parcel is the west side remainder of the 10-acre parcel, post-acquisition of the approximate 1-acre portion which was required right of way.

61. PARCEL NO. 1327380* Church of God in Christ

This property was acquired by the Church of God In Christ. According to the Louisiana Secretary of State the Registered Agent is Bishop Alphonso Denson, Sr. This parcel is approximately 11-acres, improved with four buildings which are a part of the church campus as well as paved parking lots and driveways. The parcel is located between the existing Plank Road and the right of way for the new Plank Road, this parcel will have limited accessibility, resulting from DOTD's control of access standards which will no longer allow left turns into traffic. Though this property is not required for the project's construction, full acquisition is justified and warranted due to the change in access. *This parcel number was assigned to the larger 20-acre parcel prior to the recent acquisition of the right of way for the new Plank Road. This 11-acre parcel is the west side remainder of the 20-acre parcel, post-acquisition of the approximate 1.6-acre portion which was required right of way.

Table 2: Estimate of Acquisitions of Relocations

Displaced Residents and Businesses	Tenant Occupied	Owner Occupied	Total
Displaced Residential Occupants	2	0	2
Displaced Businesses	16	9	25

Replacement Housing on the Open Market

There is ample amount of replacement housing in the Baton Rouge area, within a 50-mile radius of the proposed project area.

Replacement Tenant Housing

There are ample single family detached homes available for rent in the Baton Rouge area, within a 50-mile radius of the proposed project area, including single family detached homes.

1.2 Availability of Replacement Housing

1.2.1 REPLACEMENT HOUSING ON THE OPEN MARKET

Two residential properties will be impacted by this project. Both of those properties are presently tenant occupied. A market study of residential rental units was conducted to determine the inventory of rental properties available in the Baton Rouge area to serve as suitable replacement properties for the residence of the rental units. There is ample comparable housing available for rent in the Baton Rouge area. The table below is a sampling of available comparable housing found at the time of this study.

Table 3: Replacement Tenant Housing

Address	Bed/Bath	Sq Ft Living	Description	Monthly Rent	Contact
8157 Starwood	3/2	1168 sf	Single Family Detached	\$ 850	Real Property Management Baton Rouge
8914 Hooper Road	4/2	1448 sf	Single Family Detached	\$1,425	Real Property Management Baton Rouge
8933 Baronne Drive	3/2	1386 sf	Single Family Detached	\$1,400	Real Property Management of Baton Rouge
345 Cloud Drive	3/1	1395 sf	Single Family Detached	\$1,450	Zillow.com

1.3 Availability of Replacement Business Sites

1.3.1 AVAILABLE BUSINESS SITES ON THE MARKET FOR SALE

There are eight (8) owner occupied businesses in operation that will be impacted by this project. A market study was conducted to determine the availability of potential replacement sites for the businesses that will be displaced as a result of this project. There are ample sites available for sale in the Baton Rouge area. The table below is a sampling of available sites found at the time of this study.

Table 4: Replacement Business Sites for Sale

LOCATION	SQ. FT	DESCRIPTION	PRICE	CONTACT
Bricksome Ave.	1,465 sf	Business Office Space	\$129,999	David Vercher, Realtor
N. Acadian	1,400 sf	Retail Space	\$139,000	Saurage Rotenberg, Commercial Real Estate
Scenic Hwy	3,262 sf	Retail Space, Convenience Store-	\$1,661,538	The Kase Group, Real Estate Investment Services
Howell Blvd	6,309 sf	Retail Space, suitable for restaurant	\$525,000	Persac Properties, Incorporated

1.3.2 AVAILABLE BUSINESS SITES AVAILABLE FOR RENT

There are sixteen (16) tenant owned businesses in operation that will be impacted by this project. A market study was conducted to determine the availability of potential replacement sites for the businesses that will be displaced as a result of this project. There are ample sites available for rent in the Baton Rouge area. The table below is a sampling of available sites found at the time of this study.

Table 5: Replacement Business Sites for Rent

LOCATION	SQ. FT	DESCRIPTION	RENT AMOUNT	CONTACT
Corporate Blvd	2541 sf	Commercial Retail Space, potentially suitable for hair salon, barber shop and other business types.	\$5,293	Mark Hebert, Realtor
Airline Hwy	5000 sf	Office space, flexible sf available, suitable for business office operations.	\$4,166	Mark Hebert, Realtor

Millerville Road	1,400 to 4,300 sf	Former restaurant endcap space with patio seating and adjacent in-line retail available for lease.	\$4,375 - \$1,2541	Emily Kramer, Realtor
------------------	-------------------	--	--------------------	-----------------------

1.3.3 AVAILABLE BUSINESS SITES ON THE MARKET FOR SALE

There are (2) parcels which are the site of a multi-building church campus that will be impacted by this project.. A market study was also conducted to determine the availability of potential replacement sites for the church campus. Since the church campus buildings are considered speciality buildings with features uncommon to commercial and retails space, the focus of the study was to identify suitable building sites available where a new church campus could be constructed, located in close proximity to the existing church campus. The church organization will have the option to purchase a property with existing structures if they so choose. The table below is a sampling of available sites found at the time of this study

Table 6: Replacement Construction Sites for Sale

LOCATION	ACRES	DESCRIPTION	PRICE	CONTACT
Dyer Ro	27 Acres	Vacant Land, approximately 5 miles from displacement site, rural tract, fronting on Plank Road, rezoning may be necessary, although two other churches are located is close proximity to this site.	\$224,000	Mamye Hall, Realtor
13261 Plank Road	21 Acres	Commercial property located less than 3 miles from displacement site.	\$549,000	Lacy Baaheth, LLC

Appendix G: Agency and Public Involvement

Baton Rouge Metropolitan Airport

Runway 13-31 RSA and RPZ Improvements
Supplemental Environmental Assessment
Open House

November 18, 2021

Background

- In 2016, Baton Rouge Metropolitan Airport updated its Airport Master Plan
 - Master Plan used to determine the long-term development plans for airport
 - Master Plan identified need to provide a standard Runway Safety Area and Runway Protection Zone for Runway 13/31
 - Environmental Assessment (EA) was prepared to identify any environmental concerns associated with project
 - EA was completed in April, 2018
 - Federal Aviation Administration (FAA) issued a Finding of No Significant Impact (FONSI) on June 13, 2018

BTR

BATON ROUGE
METROPOLITAN AIRPORT

Need for Supplemental EA

→ The Need for Supplemental EA

- After completion of previous Environmental Assessment, the Louisiana Department of Transportation and Development (DOTD) raised traffic flow and safety concerns regarding the plans for Plank and Hooper/Harding Roads
- Addressing these concerns, DOTD offered two refined alternatives
 - Designed to improve traffic flow and safety
 - Include options that eliminate traffic lights in several locations
- BTR has chosen to prepare a supplemental EA to examine any potential impacts associated these refined alternatives

BTR

BATON ROUGE
METROPOLITAN AIRPORT

Why Have a Community Open House?

- Provides an opportunity to share information about the project and gather public feedback
- Federal, state, and local agencies and the public can provide information regarding environmental conditions and concerns
- Information received during Open House helps identify areas of concern

BTR

BATON ROUGE
METROPOLITAN AIRPORT

Purpose and Need

→ The Purpose

- Improve airfield facilities and safety so that the Baton Rouge Metropolitan Airport may continue to serve as a regionally competitive, origin-destination airport for passenger aircraft operations

→ The Need

- Runway 13-31 Runway Safety Areas do not meet current FAA standards
- Existing Emergency Materials Arresting System (EMAS) has reached the end of its useful life

→ Reason for Supplemental EA

- Newly refined alternatives improve traffic flow and safety for Plank and Hooper/Harding Roads that eliminate traffic lights in several locations
- To examine any potential impacts as a result of the changed Right-of-Way and the introduction of elevated roadway sections

BTR

BATON ROUGE
METROPOLITAN AIRPORT

Alternatives to Be Considered

→ Alternative #1

- Plank Road Elevated at Hooper/Harding and New Plank Intersections

→ Alternative #2

- Hooper/Harding Road Elevated at Plank and New Plank Intersections

→ Alternative #3

- Combination of elements from #1 and #2

→ No Action Alternative

- Relocate Plank Road with at-grade intersections as approved by initial EA (June 13, 2018)

BTR

BATON ROUGE
METROPOLITAN AIRPORT

BATON ROUGE METROPOLITAN AIRPORT RUNWAY 13/31 RSA IMPROVEMENTS

ALTERNATIVE 1 PLANK ROAD ELEVATED AT HOOPER/HARDING & NEW PLANK INTERSECTIONS

BATON ROUGE METROPOLITAN AIRPORT RUNWAY 13/31 RSA IMPROVEMENTS

ALTERNATIVE 2 HOOPER/HARDING ROAD ELEVATED AT PLANK & NEW PLANK INTERSECTIONS

Next Steps

- Conduct Scientific Investigation of Environmental Areas
- Prepare Draft Environmental Assessment for Agency and Public Review
- Hold Public Hearing on Draft Environmental Assessment Findings
- Receive Federal Aviation Administration approval

Issues of concern and how will they be addressed:
turning lanes, landscape (beautification) drainage,
construction jobs for the community during this project
and jobs after, retail shopping, grocery store support,
support for the connection of "Scottlandville" Southern
University to Plank Rd and the Downtown area,
signage and awareness of the airport to Scenic Hwy
and North I-110 starting @ Blount Rd.
All of the area should look like an airport corridor
seamless and cohesive.

FBI

Continued from page 1A

questions about what happened next, or when the FBI formally opened its investigation. But according to accounts from the Greene family and a State Police investigator, the leader of the FBI field office in Monroe showed little interest and sat on the case for months.

Greene's mother, Mona Hardin, said Special Agent Jared Medaries told her in December 2019 that "no one told me to investigate," but that "if you really want me to, I will start investigating."

State Police investigator Albert Paxton, who was assigned to review Greene's death, had told Hardin to contact the local FBI office because the bureau was supposed to be investigating. In his notes, Paxton wrote that Medaries then called State Police to ask who told her that.

Hardin recalled Medaries saying little would get done before the holidays — and nothing did.

Medaries never picked up the State Police investigative file, but in February 2020, Paxton made the short trip to the FBI office in Monroe to deliver it himself, according to the detective's notes.

Three months later, Medaries "brought the thumb drive back with the copy of the case file" and "said the Baton Rouge FBI was taking over the case," Paxton wrote.

Medaries told Paxton then he didn't see much of a case, Paxton wrote. Medaries said "he didn't really look through the case but 'they (troopers) did what they had to do,'" according to the detective's notes.

That was May 2020, the same month that Greene's family filed a federal civil rights complaint over his death.

The slow-footed early response from the FBI has drawn little public notice amid allegations of an attempt by State Police brass to whitewash Greene's death. The apparent lag has raised questions about the role of Medaries, an FBI mainstay in Monroe.

State Police and FBI agents frequently work together, but Medaries has particularly close ties to the state agency and Troop F, the overwhelmingly White unit at the center of a mounting scandal over accusations of excessive force against Black motorists.

Medaries started his law enforcement career two decades ago at Troop F, working with some of the veteran State Police officers, or former ones, now accused of trying to gloss over the details of Greene's arrest.

"This was at best a matter of bad optics, and quite possibly might present some objectivity issues," said Michael McAuliffe, a former federal civil rights prosecutor. "There should be full accounting as to whether the agent did his job professionally."

McAuliffe said the Greene case exemplifies a frequent tension in federal civil rights

This image from video from Louisiana State Police Lt. John Clary's body-worn camera shows Trooper Kory York standing over a prone Ronald Greene on May 10, 2019, outside of Monroe.

investigations: relationships between FBI agents and local law enforcement officers accused of misconduct.

Those ties can sometimes benefit an investigation — but they can just as easily have the opposite effect, he said. Particularly in the early stages, allegiances can kill a prosecution before it gets off the ground, McAuliffe said.

"It's an ongoing concern, particularly for prosecutors, that agents may be too close with local law enforcement to do their jobs," he said. "That presents an inherent challenge in these cases."

Overlapping careers
Records show Medaries started at the State Police Training Academy in 1995.

He worked as a Troop F patrolman until 1998, when he joined the Bureau of Detectives, still based in Ouachita Parish. Employment records indicate he left the agency the following year.

After training to become an FBI agent, Medaries moved to Joplin, Missouri, where he worked in the FBI field office.

Years later, Medaries returned to his home base, where he became the supervisory agent over the FBI's small Monroe office.

Experts said the FBI generally avoids sending new agents right back to their home districts, but a move home after several years away is common practice.

Jeff Danik, a retired FBI supervisor who oversaw police corruption investigations in the Palm Beach, Florida, area, said he would need to know more about the relationship between Medaries and the troopers he was investigating. The mere fact Medaries once worked at Troop F is not necessarily a red flag, he said.

"That's definitely the proper question to ask, but it could have an easy answer," he said.

FBI officials and federal prosecutors declined to comment on the 2020 decision to have agents in Baton Rouge take over, eight months after Belton first referred it to federal authorities.

Since the Baton Rouge office assumed control, the feds have launched investigations into several other beatings of Black motorists

by Troop F members. The first fruit of those broader federal efforts arrived in September in an indictment charging former Trooper Jacob Brown with violating the civil rights of Aaron Bowman.

Police reports say Brown beat Bowman 18 times with a flashlight in May 2019, weeks after Greene's death. Brown has pleaded not guilty to the federal charges.

The excessive-force allegations now central to the ongoing probe in Greene's case became public only after his family sued State Police. Their federal lawsuit claims the agency initially pushed a narrative that Greene died from a car crash, without any mention of him being beaten by troopers.

A federal grand jury decision in Greene's case is expected in the coming weeks, which could mean charges against some of the troopers involved in the violent arrest.

Questions about the alleged cover-up within State Police — and exactly who was involved — make it difficult to pinpoint whether the FBI was at fault for being slow on the uptake, said Rafael Goyeneche, president of the Metropolitan Crime Commission, a criminal justice watchdog group.

"When you have an agency misrepresenting or withholding information to it becomes very easy for these mistakes to be made," he said. "I don't assign a sinister motive to the FBI in this."

"Could it have been more quickly ferreted out? Yes, but when you're talking about a cover-up like this, it's very hard for a law enforcement agency like the FBI to even comprehend that type of behavior."

During his time at Troop F, Medaries overlapped with prominent State Police official Bob Brown, who later rose through the ranks to become chief of staff under Superintendent Kevin Reeves, another Troop F veteran.

Bob Brown and Medaries worked together in the small detective bureau in Monroe, after Medaries joined the office in 1998.

Bob Brown retired in December 2020 amid mount-

ing allegations of abuses at Troop F, some involving his son Jacob Brown.

According to Paxton's notes, Bob Brown was at a meeting a week after Greene's death in May 2019, during which investigators presented their case for arresting Christopher Hollingsworth, a trooper who has since died, for aggravated battery and obstruction of justice in Greene's arrest.

Paxton wrote that the meeting grew "very heated" and that the investigators were told "there was no obstruction and we needed to wait on the autopsy."

Jacob Brown was not involved in Greene's arrest. But he was arrested in three separate excessive-force incidents unrelated to Greene's arrest, and he resigned from the agency early this year.

In September, Jacob Brown became the first trooper charged amid the ongoing FBI investigation. Around the time he overlapped with Medaries at the State Police detective bureau, Bob Brown faced accusations of racism that resulted in minor discipline but had little impact on his career. He received a letter of reprimand for making

racist comments and hanging a Confederate flag inside his office.

Brown admitted to investigators that the "N-word" was part of his vocabulary, according to the letter.

The investigation was launched after a witness said Brown, discussing a promotional exam, stated "something to the effect of, 'I don't understand how those n***** could pass the test, they're not smarter than us,'" according to his disciplinary letter, signed by former Superintendent Terry Landry.

The letter also accused Brown of being inconsiderate toward other troopers, especially African Americans, by choosing to display the Confederate flag. "You should have been aware that such a display was at least controversial and was not appropriate for a business office," the letter says.

Another 20 years would pass before Troop F officers were accused of routinely using excessive force against Black motorists and covering up their actions, including allegedly concealing and mislabeling bodycam footage.

In the Greene case, the ranking trooper at the scene, Lt. John Clary, allegedly failed to turn over his bodycam footage to investigators immediately afterward, resulting in the evidence being left out of the file turned over to state prosecutors in fall 2019.

The footage was finally discovered several months later. Clary was accused of lying about its existence, but officials said he was recently cleared of wrongdoing and faced no discipline because investigators were unable to prove he acted intentionally.

Echoes of Danziger
The federal response in some ways echoes the hesitant reaction of federal agents and prosecutors in New Orleans after the most notorious episode of excessive police force in recent times in Louisiana.

The FBI was aware early on of major holes in the New Orleans Police Department's account of officers shooting civilians on the Danziger Bridge in the chaotic aftermath of Hurricane Katrina.

Anthony Radosti, a former police detective who was working for the Crime Commission, said the local FBI brushed off allegations of police misconduct even after officers began confiding to Radosti that "there was a problem with the shooting on the bridge."

Radosti said he forwarded information and documents to an FBI contact who "assured me it was a justifiable shooting and it had been fully reviewed," he said.

Radosti said the FBI was echoing what then-Police Superintendent Warren Riley told him at a meeting months after the incident, in which two civilians were killed and four others were badly injured.

"The FBI agents in New Orleans were very close to NOPD for obvious reasons. They were accused of routinely using excessive force against Black motorists and covering up their actions, including allegedly concealing and mislabeling bodycam footage."

In the Greene case, the ranking trooper at the scene, Lt. John Clary, allegedly failed to turn over his bodycam footage to investigators immediately afterward, resulting in the evidence being left out of the file turned over to state prosecutors in fall 2019.

ORGERON

Continued from page 1A

season, but he will not return next year.

"We expect to compete for SEC and national championships year in and year out," athletic director Scott Woodward said. "We are proud of that standard, and we will always work to uphold it. Our last two seasons have simply not met that standard."

Negotiations began after LSU's 42-21 loss to Kentucky last weekend, as first reported by Sports Illustrated. As part of the agreement, LSU will terminate Orgeron's contract "without cause" and pay him the entirety of his \$16.949 million buyout over 18 installments through 2025, which would have been the final year of his deal.

Underneath Tiger Stadium, Orgeron spoke Sunday night inside a room similar to the one in which he began his tenure. Alongside Woodward, the man who will find his replacement, Orgeron spoke matter-of-factly and without regrets. He cracked jokes about buying hamburgers and said his mother, Coco, "wanted to make sure I got my money."

"West it was a great run, if you ask me," Orgeron said. "To be able to go 15-0 and have one of the best football teams that ever played, not every person gets the chance to say that. Let me say it was because of the players and because of the assistant coaches we had."

"But, you know, the last couple of years were not the standard of LSU. I know I went to work as hard as I could every day. Tried as hard as I could every day. That's all you can ask."

During his tenure, Orgeron, 60, assembled one of the greatest teams in college football history in 2019, when he won every national coach of the year award. Orgeron hired passing game coordinator Joe Brady who revolutionized the offense, and paired him with offensive coordinator Steve Ensminger. And he had recruited Heisman Trophy-winning quarterback Joe Burrow the year before.

But LSU was gutted by attrition after the title. Brady turned down a lucrative extension and left for the Carolina Panthers. Burrow — who once said LSU should give Orgeron a lifetime contract — exhausted his eligibility. Defensive coordinator Dave Aranda left to become the head coach at Baylor. The Tigers had 13 other players taken in that year's NFL draft.

Orgeron struggled to maintain success as he tried to reload. Though LSU signed its second straight Top 5 recruiting class last spring, the roster lacked experience and internal leadership, hallmarks of the 2019 team.

Orgeron replaced Aranda with Bo Pelini, who coached LSU's defense during the 2007 national championship and spent the previous five seasons as head coach at Youngstown State. Brady's role was filled by Scott Linehan, a longtime NFL offensive coordinator.

PHOTO BY PATRICK DENNIS

LSU football coach Ed Orgeron, left, speaks as Athletic Director Scott Woodward listens during a news conference Sunday in LSU's Tiger Stadium.

Pelini came recommended by Seattle Seahawks coach Pete Carroll, one of Orgeron's mentors, while Linehan had played quarterback at Idaho for Dennis Erickson, whom Orgeron worked for at Miami from 1989-92. Orgeron later admitted he didn't properly interview the new assistants.

The hires failed, particularly on defense. Orgeron wanted Pelini to run an attacking 4-3 scheme — a departure from the 3-4 used by Aranda — but LSU allowed 623 yards passing, a Southeastern Conference record, in a season-opening loss to Mississippi State. The Tigers struggled with missed assignments, coverage busts and miscommunication throughout the 2020 season. They had the worst pass defense in the nation, and the relationship between Orgeron and Pelini cooled.

As the SEC played a 10-game, league-only schedule because of the COVID-19 pandemic, which had forced a cancellation of spring practice, the Tigers finished 5-5 for their worst season in two decades.

Not only did the coaching hires fail, Orgeron mismanaged a cultural issue last summer. While he supported an effort to register every player to vote, Orgeron didn't march with LSU's players when they skipped an August practice to protest racial injustice and police brutality. The death of George Floyd had sparked similar demonstrations throughout the country.

Some assistant coaches met the players across campus. Orgeron joined them later at the president's office, and the team held an hourlong meeting inside. Orgeron said at the time he didn't know about the protest before it happened and admitted he needed to learn more about the issues affecting LSU's players.

Multiple sources told The Advocate last year they thought Orgeron mishandled the situation.

"It had nothing to do with this decision, and coach (Orgeron) can talk about his personal feelings," Woodward said, "but it was wins

and losses on the field, and where there's where this program was going."

Orgeron added: "It was going on across the country. It wasn't just here. I think we've dealt with it; we've made positive progress toward the things that were wrong. I know LSU is heading in the right direction."

There was clear tension then, but after the season, Orgeron convinced most of LSU's draft-eligible players to return in 2021, including the entire starting offensive line. The Tigers signed another Top 5 recruiting class, and Orgeron overhauled his coaching staff, hiring six new assistants, including defensive coordinator Daronte Jones and offensive coordinator Jake Peetz, as he tried to revive the program.

Even if LSU didn't immediately return to championship contention, Orgeron needed to show improvement. There was hope the 2020 season could be proven as an anomaly. The new assistants lowered the average age of LSU's staff by two decades. Players said they related to them more, and that the new coaches improved communication among the team.

But then Hurricane Ida forced the team to evacuate the week before the first game, and LSU opened with a 38-27 loss to UCLA. Orgeron was filmed before the game shouting at a fan, "Bring ya a" on in your little sissy blue shirt."

Frustration grew. Other problems appeared on the field, from an ineffective rushing attack to a lack of physical play along the line of scrimmage. LSU lost to Auburn at home for the first time since 1999 and was dominated at Kentucky. When LSU seemed to patch one hole, another burst open.

"I know the last two years hasn't been the standard at LSU," Orgeron said. "So when he came and talked to me after the Kentucky game, I knew that it was time."

Even though LSU upset No. 20 Florida on Saturday, support for Orgeron had waned too much to change

his future.

"When we evaluated our on-field results and the future of our program with (LSU President William F. Tate IV)," Woodward said, "we determined that it is time for us to move in a new direction."

In the midst of Orgeron's tenure, a Title IX scandal gripped LSU. Some of the accusations predated Orgeron and primarily implicated former coach Les Miles, but Orgeron was accused of failing to properly report allegations of sexual assault by his players, which he denied.

LSU hired the Husch Blackwell law firm to conduct an internal investigation. Orgeron wasn't implicated in its findings.

But later, Gloria Scott testified in March to the Louisiana Senateselect committee on women and children that former LSU running back Derris Guice sexually harassed her while she worked as a security guard at the New Orleans Superdome in December 2017.

Scott, 74, said Orgeron called her offering to have

Guice apologize "because he's a troubled child." Orgeron denied ever speaking with Scott about the incident. When asked to testify in-person, Orgeron declined — along with other LSU officials — and instead submitted a written statement to the committee.

"As a leader, and as a father, son, and grandson, I want to emphasize that it is heartbreaking Ms. Scott was subjected to such crude remarks by Mr. Guice, and she should be recognized for her bravery and resolve to provide her statements to the Committee," Orgeron wrote. "She, along with this Committee, has my word that I will continue to be vigilant in ensuring that the LSU football program maintains a culture of integrity and compliance."

Three months later, an amended Title IX lawsuit filed by multiple women said LSU "repeatedly engaged in discriminatory, retaliatory, and other unlawful actions" when the students tried to report rape, domestic violence and other problems on campus. Orgeron and his

LLC were named as defendants as he was accused of failing to properly report a rape allegation.

Orgeron was told of a rape by Guice, according to the complaint. The woman's then-boyfriend, who played on the football team, said he told Orgeron, who allegedly said not to be upset because "everybody's girlfriend sleeps with other people." Orgeron denied the accusations. The Husch Blackwell report said he "credibly denied" being told about the incident.

Months later, Orgeron's team was 3-3 six games into the season. Belief created by the 2019 championship run had all but vanished amid the controversy and losses.

Orgeron held a team meeting Sunday night before his news conference. He also talked to two recruits, vowing to continue to do his job through the end of the year.

Burrow, speaking after his Cincinnati Bengals won Sunday in Detroit, said he is "forever indebted" to Orgeron.

"They haven't been winning as many games as I know they would like, but we did just win a national championship two years ago," Burrow told reporters. "That's disappointing, and I love Coach O and everyone over there. I hope he's able to find a place where he feels like he's welcomed."

Orgeron said he won't coach next year as he figures out his next steps in life. He has coached for 37 years, the last five in a job he dreamed of having as a boy watching LSU games on television in Larose. He reached the top, then fell back down. His tenure will end in the weeks to come.

"I don't regret a minute," Orgeron said. "I think we did it the right way. No excuses; we did it the right way. Hey, when you win, you're doing everything perfect. When you lose, you're not. That's the way it is."

This project will certainly include those elements once it gets into the construction phase. At this point, we are looking to get the environmental approval for one of the new alternatives for relocating Plank Road. Once a preferred alternative is approved, construction can move forward.

Good afternoon,

I am very interesting in finding out more information on the Letting process that BTR has in place, and how the process works. Is there a group that I can follow that will allow me to know when projects are coming up for letting, is there a list to be placed on for email notification?

I am going to do my best to attempt to make the meeting on Thursday evening, but I do have a previously scheduled meeting that may run late and not allow me to make the opening, and I would like to know if there if a handout that will be passed out at the meeting, and if there is, if I could obtain a copy of that handout in electronic format.

Thank you for any and all your help, my company would be very interested in working with BTR and becoming a close partner in the growth of the Airport as we have with the DFW Airport in Dallas.

Respectfully,

Phillip Frazier

CAUTION: This email originated from outside Circle K. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Mr. Beaudreau,

I would encourage you to join us for the Open House scheduled for this Thursday, November 18, 2021. At that time members of the Supplemental Environmental Assessment Team can discuss it further with you. That meeting will be held from 5:30 pm to 7:00 pm at the ExxonMobil YMCA at 7717 Howell Blvd. You can drop in at any time during those hours.

Team members can discuss potential impacts related to the project relative to your property at that time.

We received the attached notices regarding the upcoming public meeting for the proposed realignment of Plank Rd. It appears that the access to Circle K store may be impacted. I would appreciate a call to discuss the timing of this project and possible impacts to our store.

Thanks, and "Take it Easy!"

Bob Beaudreau

Good afternoon,

I have a couple of questions, for you, what runway are the planes destined for that fly over Cypress Springs - Senior Living Apartments, 8280 Cypress Road B.R. LA?

Does the project include any revisions regarding this area? These planes are flying too low and right over these senior and/or disabled individuals homes. It appears to be a safety issue to me.

Kind regards,

Mary Hamilton Million

Mr. Beaudreau,

I would encourage you to join us for the Open House scheduled for this Thursday, November 18, 2021. At that time members of the Supplemental Environmental Assessment Team can discuss it further with you. That meeting will be held from 5:30 pm to 7:00 pm at the ExxonMobil YMCA at 7717 Howell Blvd. You can drop in at any time during those hours.

Team members can discuss potential impacts related to the project relative to your property at that time.

I spoke with Mr. Beaudreau,

His concern is loss of access and loss of traffic. He also wants to understand project timing as well as height of elevated sections near their property. Who might be able to discuss it with him further?

Mr. Fazier,

The meeting on November 18, 2021 is only for the Supplemental Environmental Assessment for this project and not directly related to the construction process.

That said, all bids for Airport work go through the Baton Rouge Parish. That website is: <https://www.brla.gov/1434/Contracting-Opportunities>

That site states:

The City-Parish invites all qualified businesses to learn about ways to do business with our various departments and agencies. The first step is to register online through the City-Parish Vendor Self-Service (VSS). This system enables vendors to register and manage vendor account information for the purpose of doing business with the City as well as receive notifications of business opportunities. Future enhancements will allow vendors to, review and respond to solicitations. Detailed registration instructions can be found at <http://brla.gov/vss>.

All advertisements, if required, are listed in The Advocate newspaper. You can also learn more about open bid opportunities by visiting our Scheduled Bid Openings page, which is automatically sorted by date. In addition, select solicitations are posted to [LaPAC, the State of Louisiana's central site for solicitations](#).

Good afternoon,

I am very interesting in finding out more information on the Letting process that BTR has in place, and how the process works. Is there a group that I can follow that will allow me to know when projects are coming up for letting, is there a list to be placed on for email notification?

I am going to do my best to attempt to make the meeting on Thursday evening, but I do have a previously scheduled meeting that may run late and not allow me to make the opening, and I would like to know if there if a handout that will be passed out at the meeting, and if there is, if I could obtain a copy of that handout in electronic format.

Thank you for any and all your help, my company would be very interested in working with BTR and becoming a close partner in the growth of the Airport as we have with the DFW Airport in Dallas.

Respectfully,

Phillip Frazier

Ms. Million,

The runway in the area you are discussing is Runway 13/31.

The project being analyzed in this Supplemental Environmental Assessment is to relocate the current Plank Road outside that runway's (Runway 13/31 Runway Safety Area and Runway Protection Zone. This provides additional safety for aircraft utilizing that runway.

This project does not make any changes that would require the flights to change their altitude in the area of the Cypress Springs Senior Living Apartments.

If you would like further information, please join us at our Open House and members of the Supplemental Environmental Assessment Team can discuss it further with you. That meeting will be held on Thursday, November 18, 2021 from 5:30 pm to 7:00 pm at the ExxonMobil YMCA at 7717 Howell Blvd. You can drop in at any time during those hours.

Good afternoon,

Despite serving as an enterprise fund, the Airport is a department within the City of Baton Rouge. As a result and because of the procurement limits set forth by the City of Baton Rouge's Purchasing Department, the vast majority of our projects are competitively let through the Engineering Selection Committee with the construction of the project being let through a public bid. These opportunities are advertised in the local newspaper (The Advocate), the COBR's website <https://www.brla.gov/> and the LA State Procurement website. Additional information related to contracting opportunities can be found on the following page <https://www.brla.gov/1434/Contracting-Opportunities>. If you choose to register with the City of Baton Rouge on the above page, within your profile can select to be notified about certain procurement and bid opportunities.

In reference to this project, our plan is to advertise for an engineer by January 2022. The construction will be publicly bid once we receive funding for this phase and at the conclusion of the design process.

Please let us know if you have any further questions.

Thanks,

Baton Rouge Metropolitan Airport

Dear Ms. Lawson,

Realty Income received the attached notice regarding a Supplemental Environmental Assessment in proximity to two of our properties listed below.

Prop ID	Tenant Name	Address	City	County	State	Zip/ Postcode
3057	Family Dollar	4750 Harding Blvd	Baton Rouge	East Baton Rouge Parish	LA	70811
4525	Dollar General	4770 Hooper Rd	Baton Rouge	East Baton Rouge Parish	LA	70811

We understand the proposed improvements may impact our properties. At this time, are there any plans available that show any proposed impacts to our properties? Will any right of way be required and, if so, what is the timing for the acquisition?

Any additional information you may have regarding the proposed project will be appreciated.

Regards,

Lisa Sokolow

Ms. Sokolow,

Please forgive the delay, I have attached a map depicting the early level planning of the proposed alignment in the area of these two properties. Though more detailed engineering of the roadway alignment and needed right of way will commence after the completion of the EA, this gives you an idea of the possible implications for those two properties.

Please let me know if you have any questions.

Ms. Sokolow,

Currently we don't anticipate any significant changes in the ROW needs or roadway alignment, though they may be slightly changed during final design of the project.

Our schedule is dependent on the approval of the Supplemental Environmental Assessment. We are hoping for the approvals to be in place later this summer. That would mean that acquisition would begin the last quarter of this year and construction to begin in summer of 2023.

Please let me know if you have any questions.

4525	Dollar General	4770 Hooper Rd	Baton Rouge	East Baton Rouge Parish	LA	70811

We understand the proposed improvements may impact our properties. At this time, are there any plans available that show any proposed impacts to our properties? Will any right of way be required and, if so, what is the timing for the acquisition?

Any additional information you may have regarding the proposed project will be appreciated.

Regards,

Lisa Sokolow

BTR METROPOLITAN AIRPORT MASTER PLAN UPDATE SUPPLEMENTAL ENVIRONMENTAL ASSESSMENT FOR RUNWAY 31

As part of the BTR Metropolitan Airport 2016 Master Plan update, a study used to determine the long-term development plans for an airport, including existing conditions and future growth, capacity and facility requirements, an Environmental Assessment (EA) was conducted to analyze various safety and efficiency projects to provide a standard Runway Safety Area and Runway Protection Zone for Runway 31 at the Baton Rouge Metropolitan Airport (BTR). The EA was completed in April 2018. The Federal Aviation Administration (FAA) reviewed the EA and issued a Finding of No Significant Impact (FONSI) on June 13, 2018.

Following the FONSI, the Louisiana Department of Transportation and Development (DOTD) raised traffic flow and safety concerns regarding the road construction plans for Plank and Hooper/Harding Roads. To address these concerns, DOTD offered two refined alternatives designed to improve traffic flow and safety while remaining within the existing rights-of-way (ROW). The refined alternatives also include options that eliminate traffic lights in several locations.

As part of the road construction approval process, BTR is required to conduct a supplemental EA to examine any potential impacts proposed by these refined alternatives.

The general boundaries of the supplemental EA project area are virtually the same as those examined in the original EA, which encompass key intersections at Plank and Hooper/Harding Roads.

The main difference between the original EA and the Supplemental EA is the introduction of grade separation (bridges) at key intersections of existing Plank and Hooper/Harding roads and at the intersection of the new Plank Road ROW and Hooper Road. These bridges should not result in any significant impacts in the project area.

To keep the community updated, a public information meeting was held in November, 2021 and a public hearing will be held June 16, 2022 at the ExxonMobil YMCA at 7717 Howell Blvd. in Baton Rouge, from 5:30 to 7:00pm, to present the draft supplemental EA for public review and comment.

The supplemental EA projects anticipated include Landside Development and Improvement Projects:

- Property acquisition for roadway realignment
- Realignment of Plank Road including construction of a new roadway
- Construction of related Plank Road tie-in with existing Hooper Road (with new alternatives to improve both traffic flow and safety which will require elevated sections at the intersections of Plank Road and new Plank Road at the Hooper/Harding intersections)

UKRAINE

Continued from page 1A

alliance must continue to offer military support to Kyiv. He spoke by video link to the meeting as he recovers from a COVID-19 infection.

On the diplomatic front, both Finland and Sweden took steps bringing them closer to NATO membership despite Russian objections. Finland announced Sunday that it was seeking to join NATO, saying the invasion had changed Europe's security landscape. Several hours later, Sweden's governing party endorsed the country's own bid for membership, which could lead to an application in days.

If the two nonaligned Nordic nations become part of the alliance, it would represent an affront to Russian President Vladimir Putin, who has called NATO's post-Cold War expansion in Eastern Europe a threat to Russia. NATO says it is a purely defensive alliance.

While Moscow lost ground on the diplomatic front, Russian forces also failed to make territorial gains in eastern Ukraine.

Ukraine said it held off Russian offensives in the east, and Western military officials said the campaign Moscow launched there after its forces failed to seize the capital, Kyiv, has slowed to a snail's pace.

Ukraine, meanwhile, celebrated a morale-boosting victory in the Eurovision Song Contest. The folk-pop

ensemble Kalush Orchestra won the glitzy pan-European competition with its song "Stefania," which has become an anthem among Ukrainians during the war.

President Volodymyr Zelenskyy vowed that his nation would claim the customary winner's honor of hosting the next annual competition.

"Step by step, we are forcing the occupiers to leave the Ukrainian land," Zelenskyy said.

The band's frontman, Oleh Psiuk, said at a news conference Sunday that the musicians were "ready to fight" when they return home. Ukraine's government prohibits men between 18 and 60 from leaving the country, but the all-male band's six members received special permission to go to Italy to represent Ukraine in the contest.

They will return to a country still fighting for survival. Russian and Ukrainian fighters are engaged in a grinding battle for Ukraine's eastern industrial heartland, the Donbas. Ukraine's most experienced and best-equipped soldiers have fought Moscow-backed separatists there for eight years.

Even with its setbacks, Russia continues to inflict death and destruction across Ukraine. Over the weekend, its forces hit a chemical plant and 11 high-rise buildings in Siverodonetsk, in the Donbas, the regional governor said. Gov. Serhiy Haidai said two people were killed and shelling and warned residents still in the city to stay in underground shelters.

ASSOCIATED PRESS PHOTO BY MYSYSLAW CHERNOV
Ukrainian servicemen take position on Sunday during a patrol in a recently retaken village, north of Kharkiv, east Ukraine.

Russian missiles destroyed "military infrastructure facilities" in the Yavoriv district of western Ukraine, near the border with Poland, the governor of the Lviv region said. Lviv is a major gateway for the Western-supplied weapons Ukraine has acquired during the war.

The Ukrainian military said it held off a renewed Russian offensive in the Donetsk area of the Donbas. Russian troops also tried to advance near the eastern city of Izium, but Ukrainian forces stopped them, the governor of Ukraine's Kharkiv region, Oleh Sinegubov, reported.

And Ukraine blew up two railway bridges that had been seized by Russian forces in the eastern region of Luhansk, Ukraine's Special Operations Command said Sunday. It posted a video of exploding bridges on Facebook. The command also said it destroyed Russian

communication lines in the area to prevent Russia from bringing in more troops to attack the towns of Lisichansk and Severodonetsk.

The Ukrainian claims could not be independently verified, but Western officials also painted a somber picture for Russia.

Britain's Defense Ministry said in its daily intelligence update that the Russian army had lost up to one-third of the combat strength it committed to Ukraine in late February and was failing to gain any substantial territory.

"Under the current conditions, Russia is unlikely to dramatically accelerate its rate of advance over the next 30 days," the ministry said on Twitter.

The assessments of Russia's war performance came as Russian troops retreated from around Kharkiv, Ukraine's second-largest city, which was a key mili-

tary objective earlier in the war and was bombarded for weeks. The regional governor said there had been no shelling in the city for several days, though Russia continued to strike the wider Kharkiv region.

One Ukrainian battalion that had been fighting in the region reached the border with Russia on Sunday and made a victorious video there addressed to Zelenskyy.

In the video posted on Facebook by Ukraine's Ministry of Defense, a dozen fighters stood around a blue-and-yellow post, Ukraine's colors.

One explained that the unit went "to the dividing line with the Russian Federation, the occupying country. Mr. President, we have reached it. We are here."

Other fighters made victory signs and raised their fists. Despite the continuing threat of missile attacks, many people were returning home to Kharkiv and other cities around Ukraine, said Anna Malyar, deputy head of the Ministry of Defense, on Sunday. Refugees were returning not just because of optimism that the war might ebb.

"Living somewhere just like that, not working, paying for housing, eating... they are forced to return for financial reasons," she said in remarks carried by the RBK-Ukraine news agency.

In the southern Donbas, the Azov Sea port of Mariupol is now largely under Russian control, except for several hundred Ukrainian

troops who have refused to surrender and remain holed up in the Azovstal steel factory.

Many of their wives called on the global community to secure the release of "the entire garrison," during an online news conference. The women said the troops suffered severe food, water and medicine shortages; untreated injuries were sometimes leading to sepsis.

The Ukrainian prosecutor-general's office said regional prosecutors have launched a criminal investigation into Moscow's alleged use of restricted incendiary bombs at the steelworks. International law allows certain use of incendiary munitions but bars their use to directly target enemy personnel or civilians.

Turkey's presidential spokesman, Ibrahim Kalin, said the country had offered to evacuate wounded Ukrainians and soldiers and civilians by ship from Azovstal, according to official state broadcaster TRT.

The invasion of Ukraine has other countries along Russia's flank worried they could be next, including Finland, which shares both a 830-mile land border and the Gulf of Finland with Russia. Putin told Finnish President Sauli Niinisto in a Saturday phone call that joining NATO would be an "error."

In Sweden, after the ruling Social Democratic Party on Sunday backed plans to join NATO, the plan was to be discussed Monday in parliament, with an announcement by the Cabinet to follow.

BUDGET

Continued from page 1A

The Senate made a number of changes to the budget as written by the House. Tourism marketing will get a \$20 million bump. Entry-level prison guards and child welfare workers — two professions in which the state has had trouble hiring — will be offered more money. And the state will pay more to Medicaid providers of services, such as ambulance transportation, pediatric health clinics and intermediate care facilities.

The plans outlined in the half-dozen bills represent a compromise between Senate and House leaders. The nearly \$39 billion state operating budget could win final approval by Friday.

House Appropriations Committee Chair Jerome "Zee" Zeringue, R-Houma, and Senate Finance Committee Chair Bodie White, R-Central, are confident the changes made in Senate Finance are acceptable to the House. In the past, the House and Senate usually haven't agreed and must cobble together an agreement on the spending plan in the final hours of the session.

"We did most of the things the House asked" in the Senate redraft of spending legislation, White said. "It's been on ongoing discussion with the House and the administration."

"It has been a seamless

process," Zeringue said. The Senate convened at 5 p.m. Sunday to officially accept the budget bills as amended earlier in the day. Senators hope for final vote Tuesday. The House would need to agree on the final calculations and wording by 5 p.m. Friday. That would put the bills on the governor's desk in time for lawmakers possibly to override any line-item vetoes by the governor before adjournment June 6.

Edwards has requested \$500 million for the Baton Rouge bridge, which could cost up to \$3 billion. The House-passed budget set aside \$400 million without specifying how it would be spent, leaving the final version to late-session negotiations between House and Senate leaders.

Senate President Page Cortez, R-Lafayette, said \$200 million was initially targeted for the bridge. That was raised to \$300 million after lawmakers won assurances from the Edwards administration that the money would be put to use quickly, including expensive upgrades to La. 30 on the east side, which is expected to serve as a key connector to the bridge from Interstate 10.

Backers have said \$300 million is the minimum needed and that it could generate another \$150 million in federal matching funds. "I am a little disappointed in terms of the mega project given the scope of it, but

I am very impressed we are making a big investment in infrastructure in general," Shawn Wilson, secretary of the state Department of Transportation and Development, said Sunday.

The Senate spending plans, from a variety of revenue sources, would also include \$200 million for 1-49 South between Lafayette and New Orleans; \$200 million for a new bridge in Lake Charles; and \$150 million for highway and bridge preservation.

Senate leaders, like their House counterparts, had balked at Edwards' \$500 million request, in part because no site for the bridge has been selected.

Ten finalists are in the mix now, and a state panel is expected to trim that to three by the end of the month or in June.

White noted the bridge will likely collect about \$50 million per year for borrowing and other costs through a Cortez-sponsored bill that tweaks a 2021 law moving 60% of motor vehicle sales tax revenue from Louisiana's general fund to one for roads and bridges.

"I think it is well on its way," White said of the bridge. "It was quite a struggle to hold \$300 million."

Edwards asked that his initial \$1,500 teacher pay raise, and \$750 for support workers, be raised to \$2,000 and \$1,000 respectively after the Revenue Estimating Conference last week recognized more than \$100 million in

newly-available dollars for the 2022-23 budget.

But Cortez said the Senate opted to stick with \$1,500, in part because senators want local taxpayers to do more to increase teacher pay.

"We want to be partners," Cortez said, alluding to funding by state and local governments. "We don't want to be pulling the cart without help."

The Legislature has allocated money to provide

\$3,300 in teacher pay raises over the past four years, Zeringue said.

Teachers here are paid an average of \$51,566 per year, which is 12th of 16 states monitored by the Southern Regional Education Board.

The Senate spending plan would also trim faculty pay raises of 5%, as passed by the House, to 3%.

Cortez said colleges and universities are in line to

get other aid to recruit professors.

White also said the spending plans include \$8 million to buy cameras for the classrooms of about 9,000 of the state's most challenged special education students, a longtime goal of Sen. Franklin Foil, R-Baton Rouge, and numerous parents.

GHOST HUNTING WEEKEND

Sponsored by

MYRTLES PLANTATION THE ADVOCATE

If you have ever seen Ghost Hunters and wanted to try your hand at catching paranormal activity, this is your chance to do it in a house widely recognized as one of the most haunted in the nation. We will be auctioning off 5 bedrooms for Friday and Saturday night the weekend of February 10-13, 2022. Experienced paranormal activity experts will bring in equipment to treat guests to an authentic ghost hunting experience. If you've ever wanted to try your hand at communicating with spirits or documenting creepy encounters, don't miss this opportunity!

Room auctions and raffle are open now through 7pm CT Sunday, May 22, 2022.

Check out the other great auction items, including tickets and lodging for 5 for the LSU vs Tennessee football game October 8, 2022

Public input sought on Hurricane Ida aid plan

Federal funds to address housing, other long-term needs

BY MIKE SMITH
Staff writer

A new hurricane season has begun, but parts of the state are still reeling from last year. More help will soon be on the way. State officials called for public input Wednesday on a plan to spend hundreds of millions of dollars in federal money on housing and other needs following Hurricane Ida's destruction in 2021. The state is inviting public comment until June 30, and details can be found at restore.la.gov. Much of the roughly \$1.27 billion in federal money for Ida recovery will address severe housing needs in hard-hit areas. Nearly 8,000 families have been living out of trailers provided by the state and the Federal Emer-

gency Management Agency after Ida, one of the most powerful storms to ever make landfall in Louisiana, and blue roof tarps can still be seen from New Orleans to communities far down Bayou Lafourche. The money is intended to address long-term recovery and comes on top of what FEMA spends to address immediate needs following storms. Long-term recovery dollars typically fall under three main categories: housing, infrastructure and economic revitalization. "This funding will let us open recovery programs for Hurricane Ida and expand our recovery programs for Laura and Delta," said Pat Forbes, who heads the state's Office of Community Development, which is overseeing the aid programs. "We are grateful to Gov. (John Bel) Edwards, our congressional delegation and President (Joe) Biden for their tireless work and commitment in getting us the funding we need to recover

from these storms." Chris Pulaski, planning director for Terrebonne Parish, which saw heavy damage from Ida, said housing will receive "the lion's share" of the money in addition to needs such as infrastructure damage. "We have not dealt with a storm recovery to this scale in quite some time, and for a lot of people in parish government this is the first time that we're dealing with something at this scale," he said. In Terrebonne alone, families are living in nearly 3,500 temporary housing units, mainly mobile homes and travel trailers, he said. While the process may seem slow some nine months after Ida hit, it has actually moved faster than certain other federal long-term recovery programs, particularly for southwest Louisiana following hurricanes Laura and Delta in 2020. The Ida money is expected to begin to flow around August, after the federal government approves the state's spend-

ing plan, Forbes said. Congress approved the aid back in September as part of a larger bill that included nationwide disaster relief. It was then up to the U.S. Department of Housing and Urban Development to allocate those funds according to formulas that account for unmet disaster needs. HUD did so in March, allocating \$1.27 billion for needs related to Ida and flooding in 2021 that hit parts of Baton Rouge and southwest Louisiana. At the same time, it added \$450 million to the aid already allocated for Laura and Delta, bringing the total for those storms to \$1.05 billion. The state was required to wait to move ahead with its public comment period until HUD published the rules for spending the money, which it has now done. State officials have been advocating for further long-term recovery dollars related to Ida, which would require approval from Congress. Edwards has pre-

viously estimated unmet housing needs related to that storm at more than \$2.5 billion, about double what has been allocated so far. The state says nearly 184,000 homes were damaged in the 2021 storms, the vast majority by Ida. In its plans for the money, it is proposing spending nearly 70% of the \$1.27 billion on housing, followed by nearly 20% on infrastructure and close to 10% on economic revitalization. "We still have every expectation of getting another appropriation and allocation for Ida," Forbes said. In addition to opening a public comment period, the state will hold a series of public hearings on its plans for the money beginning on June 20. Homeowners are also encouraged to file out a survey at the restore.la.gov site to see if they qualify for aid. *Email Mike Smith at msmith@theadvocate.com.*

Senate panel endorses measure aimed at third graders' literacy

BY WILL SENTELL
Staff writer

A House-passed measure that would require third graders with reading problems to repeat the grade cleared another hurdle Wednesday night when it was endorsed by the powerful Senate Finance Committee. The measure, House Bill 269, next faces a vote in the full Senate in the last five days of the session. It won House approval last month 84-12. Backers contend the measure makes sense because children who struggle with reading by the end of third grade are almost certain to face academic problems throughout their school

years. They also note that Louisiana has been plagued by literacy problems for years, with less than half of K-3 students reading on grade level. The proposal is nearly identical to a 2013 Mississippi law that backers say has helped spark dramatic improvements in reading skills there. Louisiana has about 4,500 could face promotion problems, based on how Mississippi rolled out its law. Some education leaders have raised concerns that the bill could lead to overcrowded third grade classes because of a surge of students forced to repeat

the grade. However, the state Department of Education would set the cut scores needed for students to move to the fourth grade, which would allow the state to control the number of children forced to repeat the third grade. The legislation was changed in the Senate Education Committee to ensure that students get three chances to meet the standard needed for promotion. Children would also get intensive intervention between tests. Those forced to repeat the third grade would also get a wide variety of assistance, including tutoring, extended school days and summer reading camp.

Legislature to study castration as punishment for child sex abuse

BY MARK BALLARD
Capitol Bureau editor

Without discussion Wednesday, the Louisiana Senate agreed to study the possibility of castrating adults convicted of sexually abusing children. Senate Resolution 167 was introduced May 26 by Sen. Regina Barrow, D-Baton Rouge. She had set aside legislation earlier in the session that would have authorized judges to surgically remove both testicles as punishment for adult men convicted of sexual offenses on victims under the age of 13 years. Senate Bill 252 created a stir during the opening weeks of the session. Barrow said she received strong opposition from people she thought would support the proposal. But she added that she was conflicted about letting the issue go. In addition to inflicting children with trauma, the sexual act also has unintended consequences for the child later in life. Prison officials report 1,937 offenders in custody were convicted of a sexual offense against a victim younger than 13. Morgan Lamandre, the legal director of the state's Sexual Trauma Awareness

and Response center, testified to Senate Judiciary Committee on April 26 that little evidence suggests the procedure serves as a deterrent. She also worried that castrated offenders would turn to deadlier forms of abuse against victims. Louisiana already allows judges to order certain sex offenders to undergo chemical castration. That involves injections of medroxyprogesterone acetate, a drug which suppresses a man's sex drive by reducing testosterone levels. Barrow's resolution sets up the Study Commission on Detering Sex Offenses Against Children to study the best practices to deter sex offenders whose victims are under the age of 13 from reoffending.

In addition to herself, the 10 other members will include top officials, or their designees, from the House Committee of Administration of Criminal Justice, the Louisiana District Attorneys Association, the Department of Public Safety and Corrections, the state public defender, the Louisiana Department of Health, Sexual Trauma Awareness and Response, Voice of the Experienced, Promise of Justice Initiative the Louisiana Center for Children's Rights and the Department of Children and Family Services. The commission will hold its first meeting by Aug. 1 and make findings and recommendations together with a specific proposal for legislation by March 15.

Miss. River bridge funding bill nears final approval

BY WILL SENTELL
Staff writer

A bill that would provide about \$54 million per year in state aid for a new bridge across the Mississippi River near Baton Rouge neared final approval Wednesday when the Louisiana House endorsed it 98-1. The measure, Senate Bill 277, now returns to the Senate for consideration of minor changes made in the House. The Senate earlier gave the plan lopsided approval. It is sponsored by Senate President Page Cortez, R-Lafayette, which all but guarantees final approval. The money would be on top of the \$300 million approved earlier by the Legislature.

2022 LEGISLATURE

Gradually moving 60% of motor vehicle sales tax revenue from Louisiana's general fund to one for road and bridge projects only won approval last year. The bill makes change in the 2021 law, and says that 75% of the new money would be used for the four projects. The other 25% would be used for road and bridge preservation. The House also approved a companion measure — Senate Bill 266 — that would ensure the new revenue is eligible for federal matching funds. The vote was 99-0. It won Senate approval on April 20 37-0. The Cortez bill cleared the Senate the same day 36-0. Both are expected to win final approval before adjournment at 6 p.m. Monday. A state panel Friday narrowed the list of possible sites for a new bridge near Baton Rouge to three, and all three are in Iberville Parish. A final site is expected by summer 2024.

Memo

To: File
From: Brad Kutchins
CC:
Date: July 6, 2022
Re: Senator Regina Barrow's July 5, 2022 Community Meeting

On July 5, 2022, I attended Senator Barrow's community meeting with Mike Edwards. Mike asked me to attend and make a brief presentation on the Runway 13/31 Runway Safety Area and Runway Protection Zone Project. There were approximately 60 attendees in addition to presenters from several state agencies ranging from the insurance commission to the state health department to the state economic development agency. A copy of that presentation is attached to this memo for reference. Following the presentation, there were no substantive comments made by the attendees. Typical questions asked included

- Which streets would be impacted. Mike responded Plank Road, Hooper Road, and Harding Road.
- Would the runway be expanded? Mike responded that the existing pavement would remain with no extensions.

The meeting began at 6:00 pm and was concluded at 8:30 pm.

SENATE DISTRICT 15

Sen. Regina Barrow and Sen. Cleo Fields are inviting you to a District 15 Community Meeting
Tuesday, July 5, 2022
Louisiana Leadership Institute
 5763 Hooper Road
 Baton Rouge, LA 70811
 at 6 pm

WHO WILL BE AT THIS MEETING?
 REPRESENTATIVES FROM:

- Department of Transportation
- Governor's Office
- East Baton Rouge Parish Mayor's Office
- State Fire Marshal Office
- LA Housing Corporation
- Department of Children and Family Services
- LA Department of Health
- Department of Environmental Quality
- LA Department of Insurance

✈ In 2016, Baton Rouge Metropolitan Airport updated its Airport Master Plan

- Master Plan used to determine the long-term development plans for the airport
- Master Plan identified the need to provide a standard Runway Safety Area and Runway Protection Zone for Runway 13/31
- Environmental Assessment (EA) was prepared to identify any environmental concerns associated with the project
- EA was completed in April, 2018
- Federal Aviation Administration (FAA) issued a Finding of No Significant Impact (FONSI) on June 13, 2018

BTR

BATON ROUGE
METROPOLITAN AIRPORT

Background

- After completion of the previous Environmental Assessment, the Louisiana Department of Transportation and Development (DOTD) raised traffic flow and safety concerns regarding the plans for Plank and Hooper/Harding Roads
- Addressing these concerns, DOTD offered two refined alternatives
 - Designed to improve traffic flow and safety
 - Include options that eliminate traffic lights in several locations
- This triggered the need to prepare a supplemental EA to examine any potential impacts associated with these refined alternatives

PUBLIC NOTICE

ADVERTISEMENT FOR BIDS
BID PROPOSAL NO. 50-00139984

Sealed Bids will be received electronically through our procurement site at www.ijefparishbids.net until 2:00 p.m. on November 17, 2022 and publicly opened thereafter. At no charge, bidders may submit their bid to Jefferson Parish's electronic procurement page by visiting www.ijefparishbids.net and registering on this free site.

Bids will be accepted and received through Central Bidding until 2 p.m. The public bid opening will be held at the West Bank Purchasing Department at 200 Airline Drive, Suite 4400, Gretna, LA 70053 beginning at 2:30 p.m. on each bid opening date for the following project:

Three (3) Year Contract to Provide and Maintain Portable Toilets, Wash Stations, Storage Containers and Dumpsters on an as Needed Basis (Parishwide) for the Department of General Services.

Late Bids are not accepted.

Jefferson Parish strongly encourages the involvement of minority and woman-owned business enterprises (DBEs, including MBEs, WBEs and SBEs) to participate in procurement and assistance programs.

All prospective bidders are invited to attend a non-mandatory pre-bid conference which will be held on Wednesday, October 26, 2022 at www.ijefparishbids.net, Suite 4400, Gretna, LA 70053.

Baton Rouge Advocate: October 5, 12 and 19, 2022

For additional information, please visit the Purchasing Website at <http://www.ijefparishbids.net> or call 504-364-7123.

PUBLIC NOTICE

Early Notice and Public Review of a Proposed Activity in a Year

To: All Interested Agencies, Groups and Individuals

This is to give notice that Louisiana Housing Corporation (LHCOR) under Part 58 has determined that the following proposed action, under Louisiana Neighborhood Landlord Rental Program Phase 2 (LNLRP2), under Community Development Block Grant Funds is located in the 100-year floodplain, and LHCOR is identifying and evaluating practicable alternatives to locating the action in the floodplain and the potential impacts on the floodplain from the proposed action, as required by Executive Order 11988, accordance with HUD regulations at 24 CFR 55.20 Support C Procedures or Determinations on Floodplain Management and Protection of Wetlands. The proposed project includes construction of a new apartment building consisting of four rental units. Ground improvements include installation of the building with a footprint of approximately 1,893 square feet with associated parking lots on the property, located at 4730 North Boulevard in Baton Rouge, East Baton Rouge Parish, Louisiana. Approximate coordinates are 30.448398 N, 91.140866 W.

There are three primary purposes for this notice. First, people who may be affected by activities in floodplains and those who have an interest in the protection of the natural environment should be given an opportunity to express their concerns and provide information about these areas. Commenters are encouraged to offer alternative sites outside of the floodplain, alternative methods to serve the same project purpose, and methods to minimize and mitigate impacts. Second, an adequate public notice program can be an important public educational tool. Distribution of information and request for public comment about floodplains can facilitate and enhance Federal efforts to reduce the risks and impacts associated with the occupancy and modification of these areas. Third, as a matter of fairness, when the federal government determines terms and conditions in actions taking place in floodplains, it must inform those who may be put at greater or continued risk.

Written comments must be received by LHCOR at the following address on or before October 28, 2022: Louisiana Housing Corporation, 2415 Quail Drive, 225-763-8700, Attention: Agha Brass, Environmental Manager. Full description of the project may also be reviewed from 9A at 2415 Quail Drive, Baton Rouge.

Legal Notices

Court, an agreement to hold the City harmless from any damages that may be caused to any real or personal property as a result of the vacation of the drainage servitude.

B. The property owner(s) shall prepare and execute a revised plat showing the servitude revocation, and, after obtaining appropriate City signatures to said plat, record the plat with the East Baton Rouge Parish Clerk of Court.

Section 3: The specific terms and conditions of this Ordinance shall prevail against other ordinances of the City to the extent that there may be any conflict. Except for the foregoing, the development of the subject property is subject to the terms of all applicable ordinances and regulations of the City of Central, including any amendment thereto.

Section 4: Severability. If any section, subsection, sentence, clause or provision of this Ordinance is declared by a court of competent jurisdiction to be invalid, such declaration of invalidity shall not affect the validity of the Ordinance as a whole or parts thereof, other than the part declared invalid.

Section 5: Effective Date. This Ordinance shall be effective upon publication.

EXHIBIT A

This property is located at 12986 Devall Road which is on the east side of Devall Road on Tract 15, Section 32, T5S, R2E, G1D, EBR, LA

Appendix H: Response to Comments

H.1 Public Hearing Comments Received

A Public Meeting for the Draft Supplemental Environmental Assessment on potential Runway 13/31 Runway Safety Area and Runway Protection Zone Improvements was held on June 16, 2022. The following table represents both the comments received at that hearing and a response to those comments.

Table H.1: Summary of Comments Received at Public Hearing

OWNER/AGENCY	COMMENT/OBJECTION	RESPONSE
No Name	We did not know of the move or relocation of business office.	Notices of the Public Meeting in November 2021 and the Public Hearing in June 2022 were sent to the property owner of record's address as identified in the East Baton Rouge Parish Assessor database.
Pastor K.G. Knight	<p>How do you address the church property at 8930 Plank Rd</p> <ol style="list-style-type: none"> 1. Will infrastructure be provided for entering & exiting? 2. How long will it take to provide infrastructure? 3. How will the church be accommodated during the process? 	<p>With regard to the church property at 8930 Plank Road: Infrastructure will be provided for entering and exiting the property. The number and location of entrance(s) from the new Plank Road alignment will be controlled by the State of Louisiana Department of Transportation and Development standards. The length of time for providing such infrastructure will be determined as the project is fully designed. Information, timelines, and other accommodations will be communicated by the Project Team.</p>
Vicki Kelly- Property of Richard J Braud	Very well organized. Very interested in selling property	The project team will be reaching out to all property owners whose property will be needed for expanded right of way.

OWNER/AGENCY	COMMENT/OBJECTION	RESPONSE
Angela D White- Southern Heights Property Owner	Alternative route seems to work for my area	Acknowledged.
Roosevelt & Martha Payne	Need to address access to the post office from the north and east	Access to the Post Office will be determined in final design of the proposed alternative.
Regina Barrow	"The purpose of the proposed maps are unclear to me and as I have tried to get a better understanding, I disagree with the rationale and so does the people I represent.	Acknowledged. Director of Aviation Mike Edwards and Supplemental EA Team Staff attended the community meeting held by Senator Barrow in her district. A presentation was made to provide further information related to the project and questions were answered.
