

Foreword	3
Acknowledgements	5
Executive summary	19

## Part A: Overview and context **27**

### **1** Overview and key findings **29**

1.1	Introduction	32
1.2	Causes of the crisis and immediate consequences	33
1.2.1	Causes of the crisis	33
1.2.2	Immediate consequences	36
1.3	Outlook for energy markets and security	42
1.3.1	Trends and vulnerabilities across the energy mix	44
1.3.2	Is a messy transition unavoidable?	58
1.4	Outlook for energy transitions	63
1.4.1	Selected country and regional trends	66
1.4.2	Keeping the door to 1.5 °C open	72

### **2** Setting the scene **83**

2.1	Introduction	86
2.2	Background to the global energy crisis	87
2.2.1	Initial signs of strain	87
2.2.2	Russia's invasion of Ukraine	88
2.2.3	Economic consequences	92
2.3	Where do we go from here?	97
2.3.1	Investment and trade responses	97
2.3.2	Policy responses	102
2.3.3	World Energy Outlook-2022 scenarios	105
2.4	Inputs to the scenarios	107
2.4.1	Economic and population assumptions	107
2.4.2	Energy, mineral and carbon prices	110
2.4.3	Technology costs	115

## Part B: Road to net zero emissions **119**

### **3** An updated roadmap to Net Zero Emissions by 2050 **121**

	Introduction	124
--	--------------	-----

<b>Net Zero Emissions Scenario</b>	<b>125</b>
3.1 Emissions and temperature trends	125
3.2 Energy trends	128
3.3 Fuel supply	133
3.4 Electricity generation	136
3.5 Industry	141
3.6 Transport	146
3.7 Buildings	150
<b>Key themes</b>	<b>155</b>
3.8 Avoiding growth in energy demand	155
3.9 What are the public and private investments needed to 2030?	163
3.10 Can we ramp up low-emissions technologies fast enough?	166
3.11 Energy employment: an opportunity and a bottleneck in the NZE Scenario	175

## **Part C: Key energy trends** **179**

### **4 Energy security in energy transitions** **181**

<b>Introduction</b>	<b>184</b>
<b>Ten essentials for secure energy transitions</b>	<b>186</b>
4.1 Synchronise scaling up a range of clean energy technologies with scaling back of fossil fuels	186
4.2 Tackle the demand side and prioritise energy efficiency	191
4.3 Reverse the slide into energy poverty and give poor communities a lift into the new energy economy	195
4.4 Collaborate to bring down the cost of capital in emerging market and developing economies	200
4.5 Manage the retirement and reuse of existing infrastructure carefully, some of it will be essential for a secure journey to net zero emissions	204
4.6 Tackle the specific risks facing producer economies	209
4.7 Invest in flexibility – a new watchword for electricity security	214
4.8 Ensure diverse and resilient clean energy supply chains	217
4.9 Foster the climate resilience of energy infrastructure	223
4.10 Provide strategic direction and address market failures, but do not dismantle markets	228
<b>Conclusion</b>	<b>232</b>

<b>5</b>	<b>Outlook for energy demand</b>	<b>233</b>
	Introduction	236
	Scenarios	236
	5.1 Overview	236
	5.2 Energy demand	241
	5.3 Emissions	249
	5.4 Air pollution	255
	5.5 Investment	257
	Key themes	259
	5.6 Energy access	259
	5.7 Efficient cooling for a warming world	266
	5.8 Bringing forward the peak in oil use for road transport	272
<b>6</b>	<b>Outlook for electricity</b>	<b>277</b>
	Introduction	280
	Scenarios	281
	6.1 Overview	281
	6.2 Electricity demand	283
	6.3 Electricity supply	290
	6.4 CO <sub>2</sub> emissions from electricity generation	303
	6.5 Investment	305
	Key themes	307
	6.6 Power system flexibility is key to electricity security	307
	6.7 Electricity networks are the backbone of clean power systems	312
	6.8 Critical minerals underpin future clean electricity systems	318
<b>7</b>	<b>Outlook for liquid fuels</b>	<b>325</b>
	Introduction	328
	Scenarios	329
	7.1 Overview	329
	7.2 Oil demand by region and sector	331
	7.3 Oil supply	336
	7.4 Oil trade	341
	7.5 Oil investment	342
	7.6 Liquid biofuels	343
	7.7 Low-emissions hydrogen-based liquid fuels	345

Key themes	347
7.8 Oil use in plastics	347
7.9 Are new conventional oil projects an answer to today's energy crisis?	352
7.10 Refining: immediate and longer term challenges	357
<b>8 Outlook for gaseous fuels</b>	<b>365</b>
Introduction	368
Scenarios	369
8.1 Overview	369
8.2 Gas demand	372
8.3 Gas supply	377
8.4 Gas trade	381
8.5 Investment	383
Key themes	386
8.6 Outlook for natural gas in the European Union after Russia's invasion of Ukraine	386
8.7 Scaling up hydrogen	395
8.8 Is natural gas still a transition fuel in emerging market and developing economies in Asia?	402
<b>9 Outlook for solid fuels</b>	<b>409</b>
Introduction	411
Scenarios	412
9.1 Overview	412
9.2 Coal demand	414
9.3 Coal supply	418
9.4 Coal trade	421
9.5 Coal investment	422
9.6 Solid bioenergy	423
<b>Annexes</b>	<b>429</b>
Annex A. Tables for scenario projections	431
Annex B. Design of the scenarios	463
Annex C. Definitions	485
Annex D. References	505
Annex E. Inputs to the Global Energy and Climate Model	517
