Title : On Markov Decision Processes with Pseudo-Boolean Reward
        Functions

Speaker : Michael N. Katehakis (Rutgers University, mnk@rutgers.edu)
Authors : Joint work with Wesley Cowan and Daniel Pirutinsky;
          both at Rutgers University.

Abstract: In this talk we discuss how Markov Decision Processes with
Pseudo-Boolean function rewards arise often in practice. We describe
methods of computation of optimal policies under both complete and
incomplete information conditions.
