

# SUPERIOR ABRASION RESISTANCE

When contractors tell us about real-world issues from the field, we listen. But we know superior quality doesn't mean much if it's not easy to apply in the field. **R-Guard Thru-Wall Flashing** is both.

## EXTRA TOUGH

Compatible with OSB, exterior gypsum, plywood, concrete, and metals.

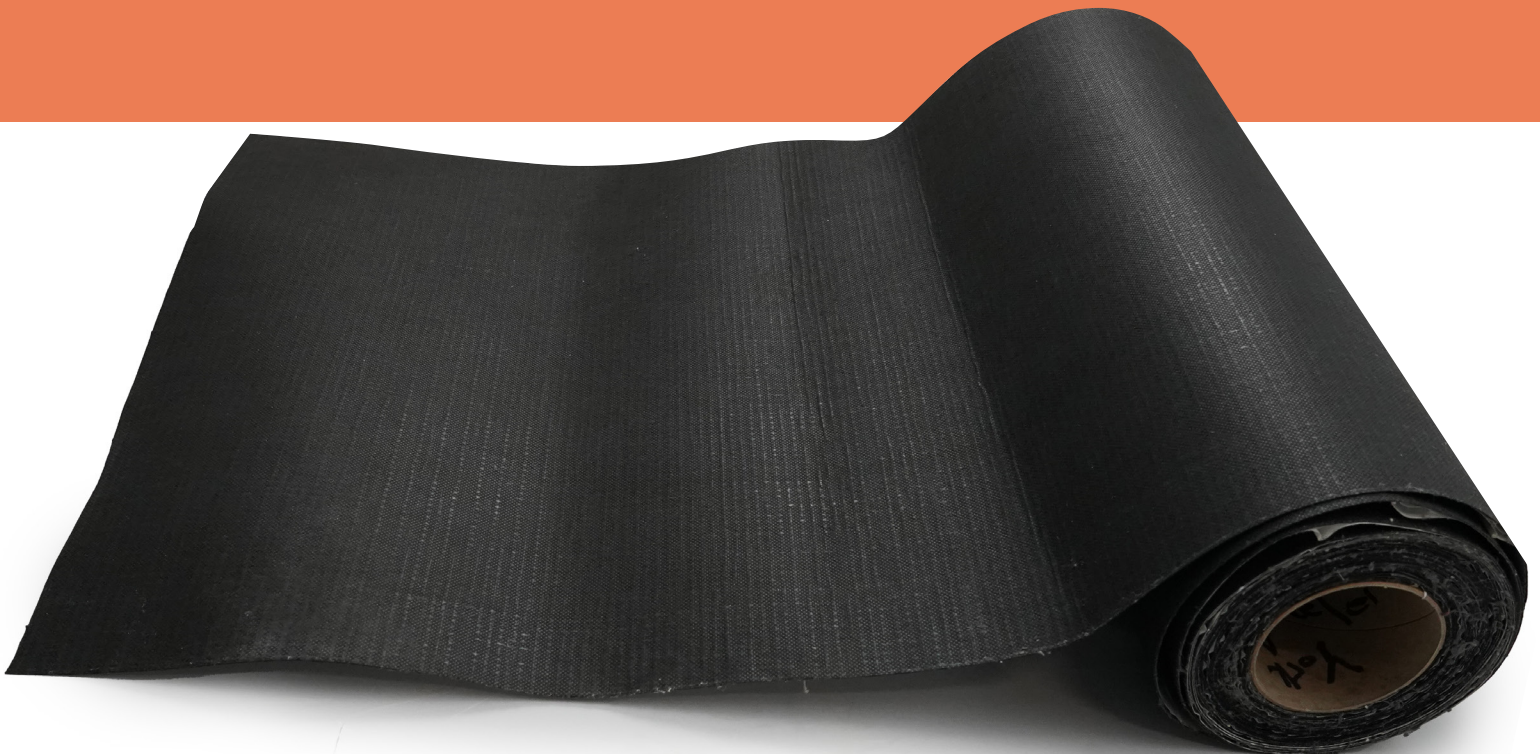

## SAVINGS

Labor and material savings with no requirement for primer

## EASY

Just peel off the backing and apply

**YOU ASKED,  
WE LISTENED.**

Contractors told us they wanted a through-wall flashing with better resistance to punctures and tears. And we listened. The solution is our new Thru-Wall Flashing, featuring an extra-tough, abrasion-resistant facer that can be exposed to UV for up to 6 months.

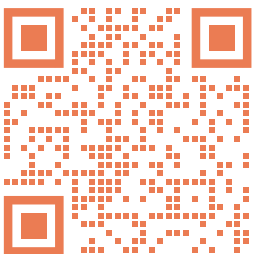

R-Guard Thru-Wall Flashing is simple to apply and it saves on material and labor because it doesn't require a primer.

R-Guard products are famous for their purposeful design based on real requests from the field, their superior quality, and their ease of use. The newest member of the R-Guard family is no exception. We are excited to announce our new Thru-Wall Flashing, which is designed specifically to offer superior protection against punctures and tears. Its pliability allows it to fit endless configurations across myriad building materials, including OSB, exterior gypsum, plywood, concrete and metals.

Installation is a breeze. It requires no primer. Simply remove the paper backing and apply it where needed. It can be installed in temperatures as cold as 20 degrees Fahrenheit and contains no asphalt.

But you don't have to take it from us. Get a free sample of this material to see its superior quality for yourself.
