

PROJECT SUMMARY

Chile

PROJECT NAME

Support for NDC Revision and LTS Development

GRANT OBJECTIVE AND ACTIVITIES

This project supported Chile in revising its NDC which was recently submitted to the UNFCCC. It also continues to support the development of Chile's LTS by supporting a participatory process of stakeholder consultations in 2020, which engages the private and public sectors, civil society, and academia. The support includes the development of a workplan for the implementation of the strategy. This process is intended to help identify the long-term vision and goals on mitigation and adaptation in priority sectors as defined in the recently updated NDC. Additionally, the project has supported the development of a macroeconomic assessment of the impacts of the proposed NDC climate change mitigation policies on economic indicators such as GDP. This report has helped the country inform the development of the LTS priorities and support mainstreaming of climate change across major economic sectors. Chile is a member of the [NDC Partnership](#).
