

PROJECT SUMMARY

Sao Tome and Principe

PROJECT NAME

Targeted Support Towards Building Climate Resilience

GRANT OBJECTIVE AND ACTIVITIES

The project provides foundational support to enable decision-makers in the country to better understand climate risks, facilitate the integration of climate resilience measures into policies and investment plans, and build targeted capacity to improve the design of projects, portfolio planning and coordination across national institutions and international partners. The support will result in the creation of a Web-Geographic Information System (GIS) decision-making platform to facilitate access to information on climate risks, registry of disasters and a national portfolio for climate resilient projects. The platform can be used as a coordination instrument to help the government implement their NDC. Additionally, selected priority projects will be developed to a concept stage and one will be developed further. Sao Tome and Principe is a member of the [NDC Partnership](#).

COUNTRY FOCAL POINTS

Minister of Infrastructure, Natural Resources and Environment, Ministry of Finance, National Climate Change Committee (NCCC), Office of the Director General of Planning

WORLD BANK GROUP PRACTICE

-  Environment and Natural Resources
-  Social, Urban, Rural and Resilience
