

PROJECT SUMMARY

Ethiopia

PROJECT NAME

Enhancing and Mainstreaming the CRGE Strategy and NDC

GRANT OBJECTIVE AND ACTIVITIES

The project builds **Ethiopia's capacity** to update as well as effectively deliver on its NDC and its Climate Resilient and Green Economy (CRGE) strategy. CRGE implementation for the period 2011 to 2019 will be assessed in terms of its impact on reducing national GHG emissions and progress towards achieving targets on building resilience in priority sectors including agriculture, forestry, power, industry and water. Analytical exercises aim to help mainstream the NDC and CRGE into the **country's** upcoming ten-year development plan and into national budget planning processes.

A NDC update roadmap will also be developed which will inform the NDC update process under the **project's support**. Likewise, the project is aimed at enhancing **the country's ability to use climate financing instruments** and monitoring tools to mobilize funds for accelerating low carbon and climate-resilient development. Specifically, **the CRGE will be integrated into the country's Land Use Planning and Policy Processes as well as into Addis Ababa's City Development Plan** with a focus on solid waste management. Ethiopia is a member of the [NDC Partnership](#) and this support is provided as part of the Climate Action Enhancement Package initiative.

COUNTRY FOCAL POINTS

Environment, Forestry and Climate Change Commission, Ministry of Finance

WORLD BANK GROUP PRACTICE

-  Urban, Disaster Risk Management, Resilience and Land
-  Macroeconomics, Trade and Investment
