

Supplementary Fig 1. Stability of CAR expression by CB-NK cells transduced with the iC9/CAR.19/IL15 vector. **(A)** Frequencies of CAR-expressing NK cells generated from 18 different cord blood units as measured by flow cytometry. Samples were analyzed after 14 days of culture (Day 10 after transduction). **(B)** Frequencies of CAR expressing NK cells after 48 days in culture (6 independent experiments). **(C)** NK CAR transduction efficiency with iC9/CAR19/IL-15 or CAR19.
