

Neocortical substrates of feelings evoked with music in the ACC, insula, and somatosensory cortex

Stefan Koelsch, Vincent K.M. Cheung, Sebastian Jentschke, John-Dylan Haynes

Supplementary Figure S2

The figure shows the statistical parametric map for the five-fold cross-validated decoding accuracy between joy and fear stimuli, mean-averaged across subjects. As in the main decoding analysis (see main text), no significant decoding results were obtained from subcortical regions such as amygdala, or striatum.
