

1.5% OF GLOBAL MILITARY SPENDING COULD END STARVATION ON EARTH.

The world spends \$2 trillion a year on war and preparations for war. That's not counting the trillions required to clean up the devastating aftermath on communities and the environment.

In 2008, the UN estimated that \$30 billion per year could end world hunger. Thus, doing the math: 1.5% of \$2 trillion = \$30 billion, meaning that only 1.5% of global military spending could end starvation on earth.

HOW WOULD YOU SPEND \$30 BILLION?
