

HYCU Multi-Cloud and SaaS Protection as a Service

At-Bay Policyholders get special pricing for HYCU's data protection services.

For a limited time only, new policyholders can get a complimentary ransomware readiness assessment and score (R-score). Valued at over \$1,000, the R-score assessment is a hands-on engagement with a data protection expert that was built with collaboration from industry leaders like FireEye, Mandiant, and MIT to provide businesses with a quantitative measurement of their readiness to recover from data compromise. HYCU can help businesses ensure their critical data is protected, available, and recoverable in the event of a human error, malicious attack, or natural disaster.

Over 50% of ransomware attacks target SaaS applications¹

Avg. mid-sized companies use more than 200 applications

HYCU is a leading provider of SaaS and multi-cloud data protection software, focused on delivering simple, extensible data protection that helps businesses protect against and recover from ransomware attacks. Hundreds of data silos with multiple backups running in multiple environments means multiple headaches for IT teams. HYCU offers a single data protection platform, delivered as-a-Service, that unifies data protection across your IT estate so you can quickly and easily manage data protection for the most complex hybrid and multi-cloud environments from a single pane of glass.

Why Use HYCU's Data Protection as a Service?

HYCU has the broadest coverage of any provider in the industry and can scale to protect all your data, wherever it resides. Key benefits include:

Data Protection

Safeguard more of your data and applications from cyber criminals with native, application-consistent backup and recovery functionality for on-premises, cloud and SaaS.

Data Mobility and Migration

Seamlessly lift and shift production workloads for true hybrid, multi-cloud, and cross-platform mobility so you have full control of your data — without disruption or data loss.

Disaster Recovery

Ensure your data is recoverable and available in the event of a disaster with seamless failover from on-prem to public cloud, across regions within a single public cloud, or between multiple public clouds.

At-Bay recommends all policyholders continuously update their view of business critical data and ensure it's covered by backups— including SaaS applications. Together, At-Bay and HYCU can comprehensively protect against cyber attacks and, in the event of a breach, help customers stop the attack, minimize the damage, and get back to business fast.
