These products are not presented in coils.

(k). Flat-rolled products

Rolled products of solid rectangular (other than square) cross section, which do not conform to the definition at (i), (j) above in the form of:

- coils of successively superimposed layers, or

- straight lengths, which if of a thickness less than 4.75 mm (0.187 inch) are of a width measuring at least 10 times the thickness or if of a thickness of 4.75 mm (0.187 inch) or more are of a width which exceeds 150 mm (5.91 inches) and measures at least twice the thickness.

Flat-rolled products include those with pattern in relief derived directly from rolling (for example, grooves, ribs, checkers, tears, buttons, lozenges) and those which have been perforated, corrugated or polished, provided that they do not thereby assume the character of articles or products of other headings.

Flat-rolled products of a shape other than rectangular or square, of any size, are to be classified as products of a width of 600 mm (23.6 inches) or more, provided that they do not assume the character of articles or products of other headings.

These products may have indentations, ribs, grooves or other deformations and produced during the rolling process (reinforcing bars and rods).
- (m). Other bars and rods  
Products which do not conform to any of the definitions at (i), (j), (k) or (l) above or to the definition of wire, which have a uniform solid cross section along their whole length in the shape of circles, segments of circles, ovals, rectangles (including squares), triangles or other convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). These products may:
  - have indentations, ribs, grooves or other deformations produced during the rolling process (reinforcing bars and rods);
  - be twisted after rolling.
- (n). Angles, shapes and sections  
Products having a uniform solid cross section along their whole length which do not conform to any of the definitions at (i), (j), (k), (l) or (m) above or to the definition of wire. Chapter 72 does not include products of heading 7301 or 7302.

Hollow bars and rods of iron or steel not conforming to this definition are to be classified in heading 7304.

2. Ferrous metals clad with another ferrous metal are to be classified as products of the ferrous metal predominating by weight.
3. Iron or steel products obtained by electrolytic deposition, by pressure casting or by sintering are to be classified according to their form, their composition and their appearance, in the headings of this chapter appropriate to similar hot-rolled products.

2. For the classification of ferroalloys in the subheadings of heading 7202 the following rule should be observed:

A ferroalloy is considered as binary and classified under the relevant subheading (if it exists) if only one of the alloy elements exceeds the minimum percentage laid down in chapter note 1(c); by analogy, it is considered respectively as ternary or quaternary if two or three alloy elements exceed the minimum percentage.
