SECTION 1. INTRODUCTION

The Centers for Medicare & Medicaid Services (CMS) contracted with RTI International to develop the Skilled Nursing Facility 30-Day All-Cause Readmission Measure (SNFRM; National Quality Forum [NQF] #2510), which estimates the risk-standardized rate of all-cause, unplanned hospital readmissions. The SNFRM was subsequently adopted for use in the Skilled Nursing Facility Value-Based Purchasing (SNF VBP) Program (80 Federal Register 46419). The SNF VBP Program, authorized by the Protecting Access to Medicare Act of 2014, began affecting payment determination in Fiscal Year (FY) 2019. More information on how the SNFRM is used in the SNF VBP Program is provided on the CMS website.¹

This technical report supplement provides updated analytic and risk-adjustment model results for the SNFRM. Specifically, we present (1) measure specifications and documentation for the SNFRM as well as (2) measure results from FY 2016 and calendar year (CY) 2017.² Previous SNFRM technical reports presented full testing and measure results based on earlier data.³

¹ Available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/Other-VBPs/SNF-VBP.html>

² In the FY 2017 SNF PPS Final Rule, the SNF VBP program finalized a policy wherein the program moved from calculating readmission measures on calendar years to fiscal years to mitigate operational concerns. The FY 2019 SNF VBP program year used a baseline period of CY 2015 and a performance period of CY 2017. The FY 2020 program year uses a baseline period of FY 2016 and a performance period of FY 2018. Fiscal years will be used in all subsequent years.

SECTION 2. MEASURE SPECIFICATIONS

In this section, we describe in detail how the SNFRM is specified and calculated. We first provide an overview of the measure and subsequently, in Section 2.2, we describe the data sources used to calculate the measure. Section 2.3 discusses the eligible populations and how we defined the measure outcome (unplanned readmissions), including a definition of the risk window (Section 2.3.1) and an overview of the Planned Readmissions Algorithm (Section 2.3.2). Section 2.4 is an overview of the SNFRM inclusion and exclusion criteria. Finally, in Section 2.5, we discuss the SNFRM risk-adjustment model and statistical calculation of the measure.

Please note that no changes have been made to the SNFRM's technical specifications or risk-adjustment model since the April 2017 Technical Report Supplement. However, for our readers' convenience, we include a summary of both the model and measure specifications in this document.

2.1 Measure Overview

The SNFRM estimates the risk-standardized rate of all-cause, unplanned hospital readmissions for SNF Medicare fee-for-service (FFS) beneficiaries within 30 days of discharge from a prior proximal acute hospitalization. The measure is risk-adjusted for patient demographics, principal diagnosis from the prior hospitalization, comorbidities, and other health status variables that affect the probability of a hospital readmission. The SNFRM includes Medicare FFS beneficiaries who were admitted to a SNF within 1 day of discharge from a hospital. The measure is calculated annually using a 12-month period.

2.2 Data Sources

The SNFRM applies only to Medicare Part A FFS beneficiaries and is calculated using Medicare eligibility and inpatient claims data. The eligibility files include information on date of birth, sex, reasons for Medicare eligibility, duration of Part A coverage, and enrollment periods in the FFS program. Medicare FFS claims include information on the dates of admission and discharge, relevant diagnoses and procedures, and indicators of dialysis use. Inpatient claims data files contain beneficiary-level SNF and hospital records. No additional information or data are needed from providers beyond what is present in claims and Medicare eligibility files (i.e., no additional data collection is required). Following are the specific files used:

- Medicare Provider Analysis and Review (MedPAR) files
Documentation available at <http://www.resdac.org/cms-data/files/medpar-rif/data-documentation>
- Medicare Denominator files
Documentation available at <http://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/IdentifiableDataFiles/DenominatorFile.html>

2.3 Eligible Population and Outcome Definition

The SNFRM includes Medicare Part A FFS beneficiaries who were admitted to a SNF within 1 day of discharge from an inpatient prospective payment system hospital, critical access hospital (CAH), or PPS-exempt psychiatric or cancer hospital. The measure assesses the facility-level rate of all-cause unplanned hospital inpatient readmissions that occur within 30 days of discharge from a prior proximal hospitalization.

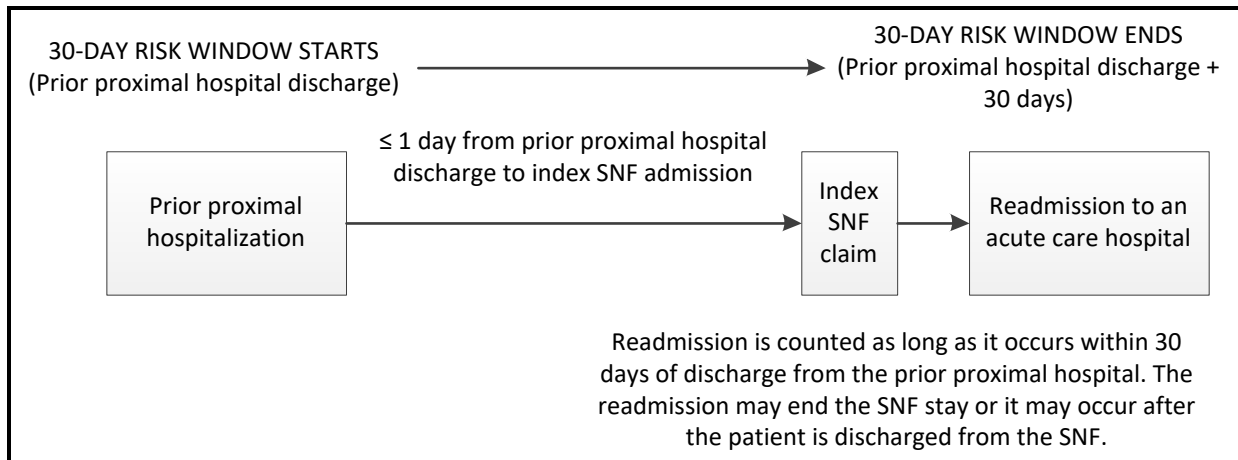

Planned readmissions are not counted as readmissions. In order to define whether a readmission is planned or unplanned, we use the RTI-modified version of the CMS Planned Readmission Algorithm, which includes additional procedures specific to post-acute care (PAC) settings (see Section 2.5 below and *Appendix A*).

This measure is based on data for 12 months of SNF admissions. Because the measure denominator is based on SNF admissions, it is possible that Medicare beneficiaries with more than one eligible admission may be included in the measure multiple times within a given year.

2.4 Thirty-Day Readmission Window

The SNFRM’s “readmission window” extends 30 days from the day a beneficiary is discharged from the prior proximal hospitalization. **Figure 1** below illustrates this window. If the readmission occurs within 30 days of discharge from the prior proximal hospitalization, it will be counted in the numerator of the measure. This is true both for beneficiaries that are readmitted directly from the SNF and for those that are readmitted after SNF discharge.

Figure 1
Risk window for the SNFRM

2.5 Planned Readmissions

The SNFRM uses a modified version of CMS's Planned Readmissions Algorithm⁴ to identify readmissions that are classified as planned and should therefore not be counted as readmissions. Planned readmissions are not counted against facilities because they are not indicative of poor quality of care. A planned readmission is defined as any non-acute readmission in which one of a set of typically planned procedures or diagnoses occurred. The Planned Readmission Algorithm is based on two main principles:

1. Some diagnoses and procedures should *always* be considered planned.
2. A separate, larger group of procedures should also be considered planned except in the presence of a disqualifying diagnosis. That is, if any of the procedures in this group occurs in conjunction with a diagnosis that disqualifies a readmission from being considered planned, the readmission will be considered *unplanned*. The rationale is that the readmission would likely have been necessitated by the acute diagnosis even if the planned procedure was not performed.

Unless a readmission meets the algorithm's definition of planned, it is considered unplanned and counted in the numerator of the measure calculation. Note that admissions for acute illness or for complications of care are classified as unplanned.

The algorithm developed to identify planned readmissions uses procedure codes and discharge diagnosis categories coded using the Agency for Healthcare Research and Quality (AHRQ) Clinical Classification Software (CCS).⁵ Per feedback from a technical expert panel convened by RTI, we added procedures to the CMS Planned Readmission Algorithm that are specific to PAC settings. These additional procedures were codified by a certified nosologist before use.

For additional detail, including a list of codes used to define planned readmissions, please see *Appendix A*.

2.6 Eligible Stays: Exclusion Criteria

SNF stays may be excluded from the SNFRM for a number of reasons. We exclude stays if they are clinically different than most SNF stays, stays for which it would be inappropriate to

⁴ The algorithm we used is adapted from Appendix E, Planned Readmission Algorithm, of *2018 All-Cause Hospital Wide Measure Updates and Specifications Report: Hospital-Level 30-Day Risk-Standardized Readmission Measure – Version 7.0*, written by the Yale New Haven Health Services Corporation, Center for Outcomes Research & Evaluation. The report is available at: http://qualitynet.org/dcs/BlobServer?blobkey=id&blobnocache=true&blobwhere=1228890804653&blobheader=multipart%2Foctet-stream&blobheadername1=Content-Disposition&blobheadervalue1=attachment%3Bfilename%3DHospWide_Readmission_AUS_Report_2018_3-28.pdf&blobcol=urldata&blobtable=MungoBlobs

⁵ AHRQ CCS Groups: Documentation available at <https://www.hcup-us.ahrq.gov/toolssoftware/ccs10/ccs10.jsp>

hold SNFs accountable for possible readmissions, and stays for which the data are insufficient to track readmissions or apply risk adjustment.

To ensure the SNFRM sample aligns with the population of SNFs eligible for the SNF VBP Program, stays at CAH swing beds are excluded from the denominator. Given CAH swing beds are not paid on the SNF Prospective Payment System (PPS), they are not eligible for the SNF VBP Program. However, it should be noted that because the SNF VBP Program includes all SNFs paid on the SNF PPS, SNFs in U.S. territories are included.

The following SNF stays are not considered eligible for inclusion in the measure (denominator exclusions):

1. SNF stays where the patient had one or more intervening PAC admissions (such as inpatient rehabilitation facility [IRF] or long-term care hospital [LTCH] admissions) that occurred either between the prior proximal hospital discharge and SNF admission or after the SNF discharge within the 30-day risk window. Thus, care trajectories where the patient had multiple SNF admissions after the prior proximal hospitalization and within the 30-day risk window are excluded.
2. SNF stays with a gap of greater than 1 day between discharge from the prior proximal hospitalization and the SNF admission.
3. SNF stays where the patient did not have at least 12 months of Medicare Part A FFS enrollment before the proximal hospital discharge and throughout the entire risk period (measured as enrollment during the 11 months before the month of proximal hospital discharge, the month of proximal hospital discharge, and the month after the month of discharge)
4. SNF stays where the patient was discharged from the SNF against medical advice.
5. SNF stays in which the principal diagnosis for the prior proximal hospitalization was for the medical treatment of cancer. Please note that patients with cancer whose principal diagnosis from the prior proximal hospitalization was for other diagnoses or who had surgical treatment of their cancer remain in the measure.
6. SNF stays in which the principal diagnosis for the prior proximal hospitalization was for “rehabilitation care; fitting of prostheses; and adjustment of devices” (CCS 254)
7. SNF stays in which the prior proximal hospitalization was for pregnancy.
8. SNF stays in which data were missing or problematic on any covariate or variable used in the SNFRM construction.
9. SNF stays that took place in a CAH swing bed.

Table 1 summarizes the frequency of exclusions from the denominator of this measure for data from FY 2016 and CY 2017.

Table 1
Frequency of denominator exclusions, FY 2016, CY 2017^a

Individual exclusions (not mutually exclusive)	FY 2016 frequency (%)	CY 2017 frequency (%)
<i>Exclusion 1:</i> SNF stays where the patient had one or more PAC admissions (IRF or LTCH) between the prior proximal hospital discharge and SNF admission, or one or more PAC admissions (SNF, IRF, or LTCH) after the SNF discharge within the 30-day risk window	188,280 (7.9%)	183,188 (7.7%)
<i>Exclusion 2:</i> Gap of greater than 1 day between prior proximal hospital discharge and SNF admission ^b	136,250 (5.7%)	132,041 (5.6%)
<i>Exclusion 3:</i> Not continuously enrolled in Medicare FFS for the year before prior proximal hospital discharge, the month of the prior proximal hospitalization, and 1 month after the hospitalization	429,708 (18.1%)	387,686 (16.4%)
<i>Exclusion 4:</i> Discharged from SNF against medical advice	13,190 (0.6%)	15,701 (0.7%)
<i>Exclusion 5:</i> Principal diagnosis in prior proximal hospitalization for medically treated cancer	29,347 (1.2%)	28,170 (1.2%)
<i>Exclusion 6:</i> Principal diagnosis in prior proximal hospitalization for rehabilitation care	34 (0.0%)	28 (< 0.1 %)
<i>Exclusion 7:</i> Principal diagnosis in prior proximal hospitalization for pregnancy	9 (0.0%)	9 (0.0%)
<i>Exclusion 8:</i> Missing data on variables used for measure construction or other problematic data elements	247,689 (10.4%)	265,964 (11.2%)
<i>Exclusion 9:</i> CAH swing beds	85,184 (3.6%)	84,637 (3.6%)
Total excluded for any reason^c	753,111 (31.65%) (68.4%)	704,953 (29.8%) (70.2%)

^a Before applying exclusion criteria, the initial analytic file for FY 2016 included 2,379,324 index SNF stays across 16,709 SNFs. After applying exclusions, 1,626,213 index SNF stays across 15,409 SNFs remained. The initial analytic file for CY 2017 included 2,365,357 index SNF stays across 16,719 SNFs. After applying exclusions, 1,660,404 index SNF stays across 15,421 SNFs remained.

^b This exclusion includes cases where PAC stays occur during the gap between the prior acute hospital discharge and the SNF admission.

^c Exclusions shown in this table are not mutually exclusive. Patients may be counted in more than one excluded category.

SOURCE: RTI International analysis of Medicare claims (RTI programming reference: MS15 and MS15_001_pt1.xls [FY 2016]; MS07, MS07_001.xls, and allstay40_lk2017_001.xls [CY 2017])

2.7 Risk Adjustment and Statistical Approach to Measure Calculation

The SNFRM risk-adjustment model accounts for variation across SNFs in case mix and patient characteristics. Specifically, the measure risk-adjusts for the following: age, sex, length of stay during prior proximal hospitalization, time spent in the intensive care unit (ICU) during the prior proximal hospitalization, disabled as original reason for Medicare coverage, ESRD, number of acute care hospitalizations in the 365 days before prior proximal hospitalization, principal diagnosis, system-specific surgical indicators, individual comorbidities based on Hierarchical

Condition Categories (HCCs),⁶ and the presence of multiple comorbidities. The way in which covariates were selected and the rationale for their selection is described in detail in the March 2015 SNFRM Technical Report.⁷

Full risk-adjustment model results for FY 2016 and CY 2017 are reported in *Appendix B*.

2.8 Model Definition

The SNFRM employs a hierarchical logistic regression model to model the log odds of readmission for each index SNF stay. The hierarchical model is used to account for the clustering of observations within SNFs. We modeled “readmission within 30 days” as a function of patient-level demographic and clinical characteristics with a random SNF-level intercept. The use of a random intercept accounts for within-SNF correlation of the observed outcomes and the underlying differences in quality among the SNF facilities being evaluated.

We estimate the hierarchical logistic regression model as follows. Let Y_{ij} , denote the outcome (equal to 1 if patient is readmitted within 30 days, 0 otherwise) for a patient i at SNF $_j$. Z_{ij} denotes a set of risk factors. We assume the outcome is related linearly to the covariates via a logit function with dispersion:

$$\begin{aligned}\text{logit}(\text{Prob}(Y_{ij}=1)) &= \alpha_j + \beta * Z_{ij} + \varepsilon_{ij} \\ \alpha_j &= \mu + \omega_j ; \omega_j \sim N(0, \tau^2)\end{aligned}\tag{1}$$

where $Z_{ij} = (Z_1, Z_2, \dots, Z_k)$, a set of k patient-level covariates, α_j represents the SNF-specific intercept, μ is the adjusted average outcome over all SNFs, τ^2 is the between-SNF variance component, and $\varepsilon \sim N(0, \sigma^2)$ captures any over- or under-dispersion.

The hierarchical logistic regression model was estimated using the SAS software (SAS GLIMMIX: SAS/STAT User’s Guide, SAS Institute Inc.).

2.9 Calculating the Risk-Standardized Readmission Rate (RSRR)

We specified and estimated the risk-adjustment model using hierarchical logistic regression to calculate a standardized risk ratio (SRR) for each SNF. To calculate this ratio, we used the results from the hierarchical logistic regression model to calculate the *predicted* and *expected* number of readmissions for each SNF. The predicted number of readmissions takes into account the unique impact of each SNF on the likelihood of readmission (quality), whereas the expected number of readmissions is based on the average SNF. The predicted number of readmissions for each SNF was calculated as the sum of the predicted probability of readmission

⁶ CMS’s HCC mappings. Mappings are included in the software at the following website:
<http://www.cms.gov/Medicare/Health-Plans/MedicareAdvtgSpecRateStats/Risk-Adjustors.html>.

⁷ SNFRM NQF #2510: All-Cause Risk-Standardized Readmission Measure Draft Technical Report (March 2015):
<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/NursingHomeQualityInits/Downloads/SNFRM-Technical-Report-3252015.pdf>

for each patient in the facility, including the SNF-specific (random) effect. The expected number of readmissions for each SNF was calculated as the sum of the predicted probability of readmission for each patient in the facility, *not* including the SNF-specific (random) effect.

Using the notation of the previous section, the RSRR for each SNF is calculated as follows. To calculate the predicted number of readmissions, pred_j , for index SNF stays at SNF_j , we used

$$\text{pred}_j = \sum \text{logit}^{-1}(\mu + \omega_i + \beta * Z_{ij}) \quad (2)$$

where the sum is over all stays in SNF_j , and ω_i is the random intercept. To calculate the expected number, exp_j , we used

$$\text{exp}_j = \sum \text{logit}^{-1}(\mu + \beta * Z_{ij}) \quad (3)$$

As a measure of excess or reduced readmissions among index stays at SNF_j , we calculated the standardized risk ratio SRR_j as

$$\text{SRR}_j = \text{pred}_j / \text{exp}_j \quad (4)$$

This value, SRR_j , is the standardized risk ratio for SNF_j . The standardized risk ratio, SRR_j , is multiplied by the overall national raw readmission rate for all SNF stays, \bar{Y} , to produce RSRR_j .

$$\text{RSRR}_j = \text{SRR}_j * \bar{Y} \quad (5)$$

[This page intentionally left blank.]

SECTION 3. RESULTS

3.1 Overview

In this section, we summarize key results from the SNFRM for FY 2016 and CY 2017. We summarize descriptive statistics on the observed readmission rates and RSRRs for FY 2016 and CY 2017. Similar to our analyses for prior years,⁸ the interquartile ranges show clustering in the middle of the distribution. This is in part attributable to the shrinkage of RSRR scores towards the mean, though the risk adjustment itself can also reduce the range of RSRRs. Full risk-adjustment model results for each year are included in *Appendix B*.

3.2 Results from FY 2016

Next, we report the results of analyses on facilities' readmission rates in FY 2016. The distribution of the observed readmission rates and RSRRs for FY 2016 is shown in *Table 2*. The observed readmission rates range from 0.00 to 100.00 percent with an interquartile range of 13.56 to 23.00 percent. The RSRR, compared with the observed unadjusted rate, has a narrower range, from 11.50 to 29.71 percent, a tighter interquartile range of 17.75 to 19.87 percent, and a much smaller standard deviation (SD) (1.77 vs. 8.38). The mean and median RSRR (18.87 and 18.71 percent, respectively) were slightly higher than the mean and median observed rate (18.42 and 18.18 percent, respectively).

The distributions of the observed readmission rates and RSRRs for FY 2016 are illustrated in *Figure 2*. The vertical axis indicates the percentage of SNFs, and the horizontal axis indicates the readmission rate.

Table 2
Distribution of SNFs' observed readmission rates and RSRRs, FY 2016

	Mean	Std dev	Min	10th percentile	25th percentile	Median	75th percentile	90th percentile	Max
Observed	18.42	8.38	0.00	9.00	13.56	18.18	23.00	27.96	100.00
Risk-standardized	18.87	1.77	11.50	16.79	17.75	18.71	19.87	21.13	29.71
Count of SNF stays	106	111	1	16	35	72	136	236	1,876

NOTE: There were 15,409 SNFs.

SOURCE: RTI International analysis of FY 2016 MedPAR data (RTI programming reference: MS15 and MS15_001_pt2_dualplotsALL.rtf)

3.3 Results from CY 2017

Next we report the results of analyses on facilities' readmission rates in CY 2017. The distribution of the observed readmission rates and RSRRs for CY 2017 is shown in **Table 3**. The observed readmission rates range from 0.00 to 100.00 percent, with an interquartile range of 14.20 to 23.44 percent. The RSRR, compared with the observed unadjusted rate, had a narrower range, from 12.80 to 33.13 percent, a tighter interquartile range of 18.35 to 20.36 percent, and a much smaller SD (1.70 vs. 8.15). The mean and median RSRR (19.42 and 19.27 percent, respectively) were slightly higher than the mean and median observed rate (18.87 and 18.70 percent, respectively).

The distributions of the observed readmission rates and RSRRs for FY 2016 are illustrated in **Figure 3**. The vertical axis indicates the percentage of SNFs and the horizontal axis indicates the readmission rate.

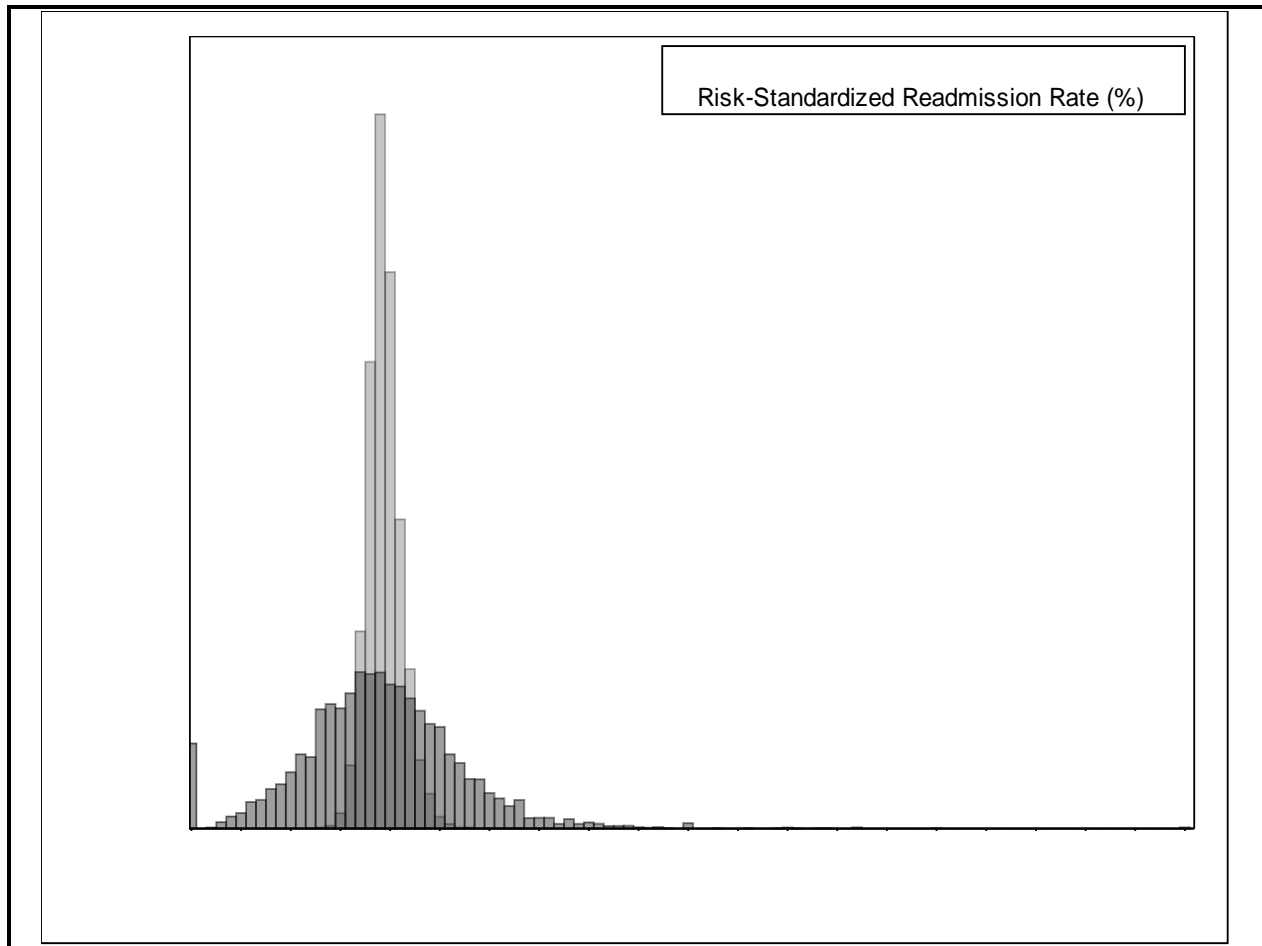

Table 3
Distribution of SNFs' observed readmission rates and RSRRs, CY 2017

	Mean	Std dev	Min	10th percentile	25th percentile	Median	75th percentile	90th percentile	Max
Observed	18.87	8.15	0.00	9.52	14.20	18.70	23.44	28.26	100.00
Risk-standardized	19.42	1.70	12.80	17.43	18.35	19.27	20.36	21.60	33.13
Count of SNF stays	108	113	1	17	35	73	139	240	1,802

NOTE: There were 15,421 SNFs.

3.4 Model Fit in FY 2016 and CY 2017

The c-statistics for the FY 2016 and CY 2017 risk models were 0.674 and 0.673, respectively (**Table 4**). These results are comparable to results from models in previous years.⁹

⁹ SNFRM NQF #2510: All-Cause Risk-Standardized Readmission Measure Technical Report Supplement (April 2017): <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/Other-VBPs/Technical-Report-Supplement.pdf>

**APPENDIX A:
PLANNED READMISSION ALGORITHM**

List of Tables in Appendix A

A-1 Procedure categories that are always planned21

A-2 Diagnosis categories that are always planned.....21

A-3 Potentially planned procedure that may be disqualified22

A-4 Acute diagnoses that disqualify potentially planned procedures25

[This page intentionally left blank.]

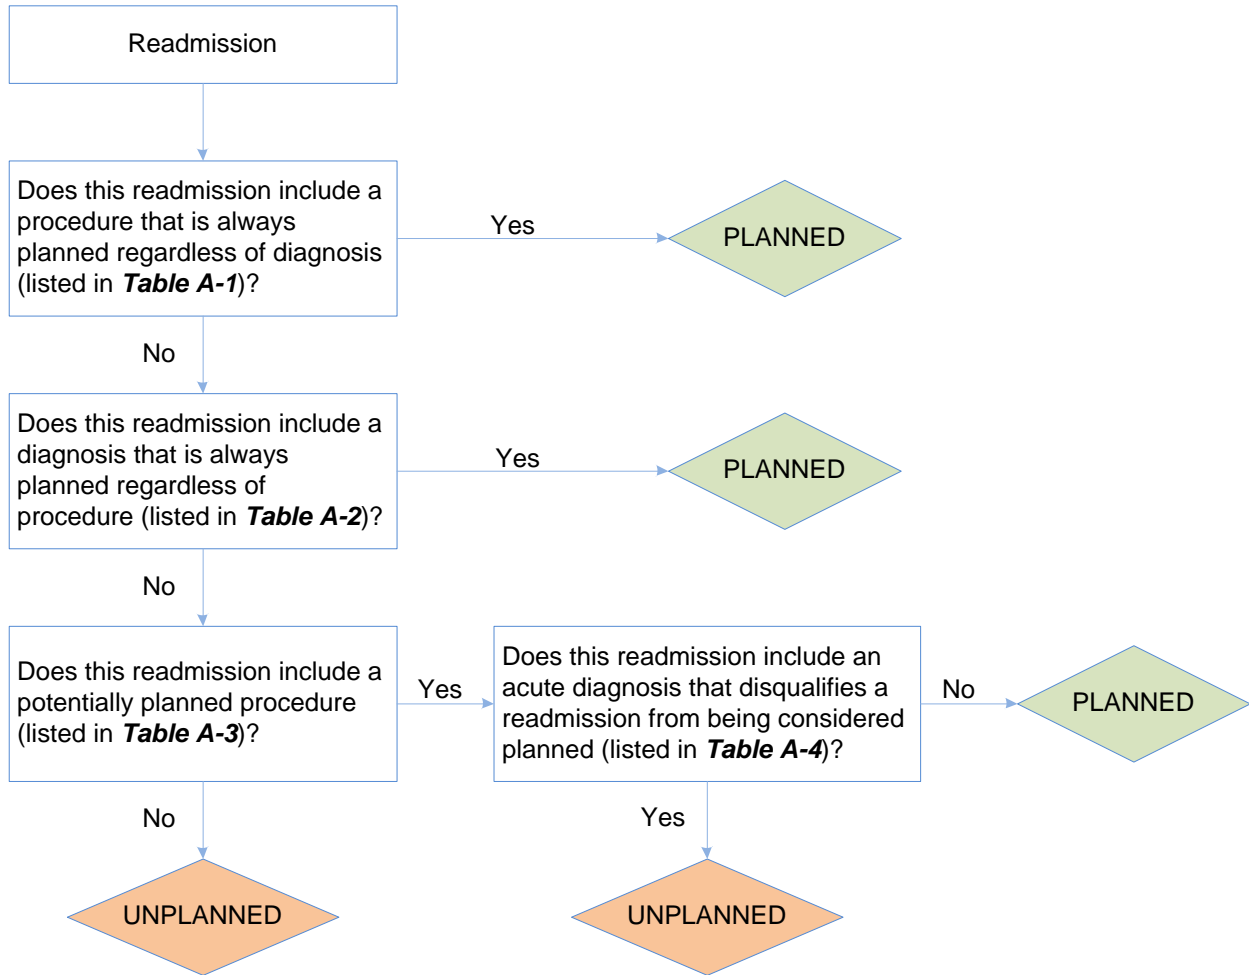

The Planned Readmissions Algorithm version 3.0 was updated for the FY 2019 SNF VBP Program using FY 2018 ICD-10 codes.

When calculating the SNFRM, planned readmissions are distinguished from unplanned readmissions. Only unplanned readmissions are counted in the numerator of the measure. Whether a readmission is planned or unplanned is determined by the algorithm shown in Figure A-1. Table A-1 lists the procedures that automatically qualify a readmission as planned. Similarly, Table A-2 lists diagnoses that automatically qualify a readmission as planned. If a readmission contains a procedure listed in Table A-3, it is a *potentially* planned readmission and will be considered planned only if it does *not* contain a diagnosis listed in Table A-4. In other words, if a readmission contains a procedure listed in Table A-3 but also contains a diagnosis from Table A-4, the readmission is considered unplanned. Please see the algorithm in Figure A-1 below for further detail on how planned readmissions are defined.

For both the procedures in Table A-3 and the diagnoses in Table A-4, we list “Panel A” and “Panel B.” In Panel A of Table A-3, *all* ICD-10 codes for each listed AHRQ CCS group are considered potentially planned procedures that may be disqualified if coupled with an acute diagnosis listed in Table A-4. In Panel B, *some, but not all*, ICD-10 codes for each listed AHRQ CCS group are considered potentially planned procedures that may be disqualified if coupled with an acute diagnosis listed in Table A-4. ICD-10 codes for each AHRQ CCS group are in the supplementary Excel file: Tab 3a for Panel A and Tab 3b for Panel B.

In Panel A of Table A-4, *all* ICD-10 codes for each listed AHRQ CCS group are considered disqualifying diagnoses if coupled with a procedure listed in Table A-3. In Panel B, *some, but not all*, ICD-10 codes for each listed AHRQ CCS group are considered disqualifying diagnoses if coupled with a procedure listed in Table A-3. ICD-10 codes for each AHRQ CCS group are in the supplementary Excel file: Tab 4a for Panel A and Tab 4b for Panel B.

**Figure A-1
Planned Readmission Algorithm¹⁰**

¹⁰ Readmissions to inpatient psychiatric facilities (hospitals or units) are also classified as planned readmissions.

Table A-1
Procedure categories that are always planned

AHRQ CCS	CCS description	# of ICD codes in this CCS
64	Bone marrow transplant	88
105	Kidney transplant	6
134	Cesarean section	3
135	Forceps; vacuum; and breech delivery	4
176	Organ transplantation (other than bone marrow corneal or kidney)	76

NOTE: ICD-10 codes under each AHRQ CCS are included in the supplementary Excel file, Tab 1.

Table A-2
Diagnosis categories that are always planned

AHRQ CCS	CCS description	# of ICD codes in this CCS
45	Maintenance chemotherapy; radiotherapy	3
194	Forceps delivery	1
196	Other pregnancy and delivery including normal	119
254	Rehabilitation care; fitting of prostheses; and adjustment of devices	37

NOTE: ICD-10 codes under each AHRQ CCS are included in the supplementary Excel file, Tab 2.

Table A-3
Potentially planned procedure that may be disqualified

Panel A: AHRQ CCS procedure categories in entirety		
AHRQ CCS	CCS description	# of ICD codes in this CCS
3	Excision destruction or resection of intervertebral disc	42
5	Insertion of catheter or spinal stimulator and injection into spinal canal	42
9	Other OR therapeutic nervous system procedures	1,980
10	Thyroidectomy; partial or complete	24
12	Therapeutic endocrine procedures	621
33	Other OR procedures on mouth and throat	924
36	Lobectomy or pneumonectomy	74
37	Diagnostic bronchoscopy and biopsy of bronchus	173
38	Other diagnostic procedures on lung and bronchus	48
40	Other diagnostic procedures on the respiratory system and mediastinum	120
43	Heart valve procedures	307
44	Coronary artery bypass graft (CABG)	296
45	Percutaneous transluminal coronary angioplasty (PTCA) with or without stent placement	176
47	Diagnostic cardiac catheterization; coronary arteriography	88
48	Insertion; revision; replacement; removal of cardiac pacemaker or cardioverter/defibrillator	118
49	Other OR heart procedures	963
51	Endarterectomy; vessel of head and neck	84
52	Aortic resection; replacement or anastomosis	15
53	Varicose vein stripping; lower limb	27
55	Peripheral vascular bypass	2,322
56	Other vascular bypass and shunt; not heart	800
59	Other OR procedures on vessels of head and neck	2,082
62	Other diagnostic cardiovascular procedures	832
66	Procedures on spleen	51
67	Other procedures; hemic and lymphatic systems	1,478
71	Gastrostomy; temporary and permanent	16
74	Gastrectomy; partial and total	27
78	Colorectal resection	40
79	Excision (partial) of large intestine (not endoscopic)	13
82	Fluoroscopy of the biliary and pancreatic ducts (ERCP ERC and ERP)	9
84	Cholecystectomy and common duct exploration	5
85	Inguinal and femoral hernia repair	54
86	Other hernia repair	24
87	Laparoscopy (GI only)	9
89	Exploratory laparotomy	7

(continued)

Table A-3 (continued)
Potentially planned procedure that may be disqualified

Panel A: AHRQ CCS procedure categories in entirety		
AHRQ CCS	CCS description	# of ICD codes in this CCS
99	Other OR gastrointestinal therapeutic procedures	1,527
104	Nephrectomy; partial or complete	34
106	Genitourinary incontinence procedures	12
107	Extracorporeal lithotripsy; urinary	43
109	Procedures on the urethra	227
112	Other OR therapeutic procedures of urinary tract	1,214
113	Transurethral resection of prostate (TURP)	6
114	Open prostatectomy	8
119	Oophorectomy; unilateral and bilateral	15
120	Other operations on ovary	142
124	Hysterectomy; abdominal and vaginal	10
129	Repair of cystocele and rectocele; obliteration of vaginal vault	4
132	Other OR therapeutic procedures; female organs	589
142	Partial excision bone	260
152	Arthroplasty knee	68
153	Hip replacement; total and partial	120
154	Arthroplasty other than hip or knee	574
157	Amputation of lower extremity	81
158	Spinal fusion	577
159	Other diagnostic procedures on musculoskeletal system	1,809
160	Other therapeutic procedures on muscles and tendons	2,510
164	Other OR therapeutic procedures on musculoskeletal system	2,145
166	Lumpectomy; quadrantectomy of breast	16
167	Mastectomy	3
171	Repair of skin subcutaneous tissue and fascia	67
172	Skin graft	191
175	Other OR therapeutic procedures on skin subcutaneous tissue fascia and breast	1,069
