

## SUPPLYXPERT

# A Comprehensive Solution for Supply Inventory Management

Healthcare labor shortages are a huge challenge today and supply chain leaders are under pressure to do more with less. Proper medical supply management is critical to delivering optimal care but can often be a manual exercise that diverts focus away from patients while exposing the process to human error.

Omniceil's SupplyXpert helps consolidate and automate the management of your entire medical supply inventory. The software integrates with our XT Automated Supply Dispensing Cabinets while also managing supplies stored on open shelves. SupplyXpert converts supply data into dashboards available from anywhere, giving you real-time insights into stockout events, stock values, KPIs, and inventory optimization recommendations.

## A Single Platform to Automate Supply Workflows

When integrated with XT Automated Supply Dispensing Cabinet, SupplyXpert collects medical supply data from the cabinet automatically, giving you up-to-the-minute visibility into device inventory levels, dispenses, and more. The software also comes equipped with handheld devices that allow for the barcode scanning of medical supplies on open shelves in storerooms, patient floors, and procedural areas.

Together, these elements provide an ideal hybrid supply inventory management solution that allows you to fully automate workflows for restocking, ordering, dispensing, and receiving.

## Streamlined Reporting and Financial Decision Making

SupplyXpert enables real-time reporting and visualizations, removing the administrative burden of running batch reports. Tailor your individual dashboard to display the critical reports that matter most to you. More than 60 defined reports are available including inventory reports, usage reports, restock reports, serial/lot reports, procurement reports, and more.

Direct integration with your hospital's procure-to-pay system also facilitates order placing, tracking, cost management, and receipt. Track and cost all supplies at the patient, procedure, and physician level, providing a full understanding of cross-department spending, allowing for the adoption of the most economic and efficient care pathways.

## Amplify Outcomes with SupplyXpert

SupplyXpert provides your health system with numerous benefits including:

### Improved Visibility and Efficiency

Single platform to track and manage both cabinet-based and open-shelf supplies

Track lot and serial numbers down to the patient-level in the event of a product recall

### Workflow Automation

Automate previously manual processes including ordering, restocking, shipment tracking, and more

### Enhanced Accessibility

Access SupplyXpert from a desktop, smartphone, or tablet with a single log-in, removing the need to remotely access your server

### Simplified Reporting and Procurement Integration

Reports are customizable and accessible in near real-time while integration with procurement systems streamlines ordering and cost containment restocking, shipment tracking, and more
