blueeye

Blue Eye live monitoring delivers security at scale, protecting property, equipment and inventory for facilities nationwide

Typically located in safe areas, such as suburban office parks or rural settings, manufacturing plants, warehouses and distribution facilities may not seem like prime targets for theft and vandalism.

Think again.

Opportunistic criminals recognize that more remote locations are less likely to have comprehensive security in place. They also recognize that these large commercial facilities oftentimes house heaps of high dollar inventory, equipment and raw materials.

Keep the criminals at bay with Blue Eye live monitoring. Easily installed on your existing video surveillance system, there is no need to rip and replace camera hardware.

Monitoring

Providing a customized monitoring solution, Blue Eye's intelligent platform is designed to perpetually learn and adapt to changing security conditions.

Detection

Blue Eye continuously analyzes data from multiple sources, such as surveillance cameras and sensors, to identify potential threats before they occur.

Analysis

Once a potential threat is detected, Blue Eye's team of security experts intervene and engage based on the pre-configured protocols.

Response

In the event of a security breach, a custom response plan is deployed, including high decibel speakers, onsite security teams or dispatch to police.

Conventional security systems alone do not offer the protection your manufacturing plant, warehouse or distribution facility needs. Stop crime before it can happen with proactive live monitoring.

Over the last decade, Blue Eye has built a reputation within the security industry for offering progressive, technologically advanced solutions. Our AIPX™ platform utilizes AI to identify abnormalities in your building feed, including unauthorized visitors and suspicious activity. Once an active threat is determined, one of our video surveillance technicians will address the subject(s) directly via speakers on-premises advising that they are being watched and to leave the property immediately. If unmoved by this warning, they will manage the dispatch of authorities to intervene.

- Our software is compatible with the majority of industry leading camera systems. No rip and replace of your existing cameras
- We achieve superior results by combining the best of artificial intelligence with highly trained human judgment
- We work with you to develop security protocols tailored to the unique nuances of your facility
- We're transparent partners who are accountable to results. Our reporting and dashboards provide customers with detailed data on site-level activity

Don't let your facility become one of these headlines:

- *"Brooklyn man sentenced to prison for burglary at Williamsburg matzah factory… involving over $94,000 in [stolen] cash and checks" (Source)*
- *"7 in custody after attempted truck theft at Stellantis Sterling Heights plant" (Source)*
- *"Tulsa Police nab theft suspects at industrial plant… thieves have stolen roughly one million dollars of copper and equipment" (Source)*

Leading Provider of Security-as-a-Service to Manufacturing, Warehousing & Distribution Facilities

Each month we address and resolve thousands of alerts related to manufacturing, warehouse and distribution properties we monitor.

Modern times call for modern technology. Upgrade your security apparatus today with Blue Eye live monitoring.

AIPX Hardware

Blue Eye's intelligent platform runs locally on thin-client hardware. This allows native integration with onsite systems, ensuring our detection and recognition models to execute quickly. AIPX supports both analog and digital systems.

Comprehensive Reporting

Blue Eye's rich reporting capabilities aggregate dozens of data points, providing your teams with comprehensive reports including incident, BOLOs, and site summaries.
