

Container Sealing Procedure

All containers must be sealed with high security seals, that meet the ISO 17712 standard for high security seal. When possible, the seal should always be placed in the Secure Cam position to ensure the container sealing security.

Examples of correct sealing position are depicted below:

	<p>Alternate Seal Position At the handle of Left locking bar on the right container door.</p>	<p>Not recommended to affix the seal at left container door and the right hand locking bar of right container door</p>
		
<p>Secure Cam Seal Position At bottom of the left locking bar of the right container door</p>	<p>Correct sealing way at Secure Cam position; please insert the Barrel at the top.</p>	
		

Any container received by Evergreen Line cannot meet this requirement may be rejected to load. Additional sealing with Evergreen Line high security seal may be adopted at carrier's discretion in any stage of transportation without prior consent from shipper. **Evergreen Line retain the civil right to reclaim from the shipper to absorb these extra sealing fees when violating these seal requirements, if any.** Additional sealing with Evergreen Line seal should be under no circumstance to become carrier's obligation.
