

SOUTRON ARCHIVE

Protect and preserve, index and make discoverable

Archives are usually unique collections of documents or records, which have been selected for permanent preservation because of their value as evidence or as a source for historical or other research. They tell stories, document people and identity, and are valuable sources of information for research or supporting regulatory requirements.

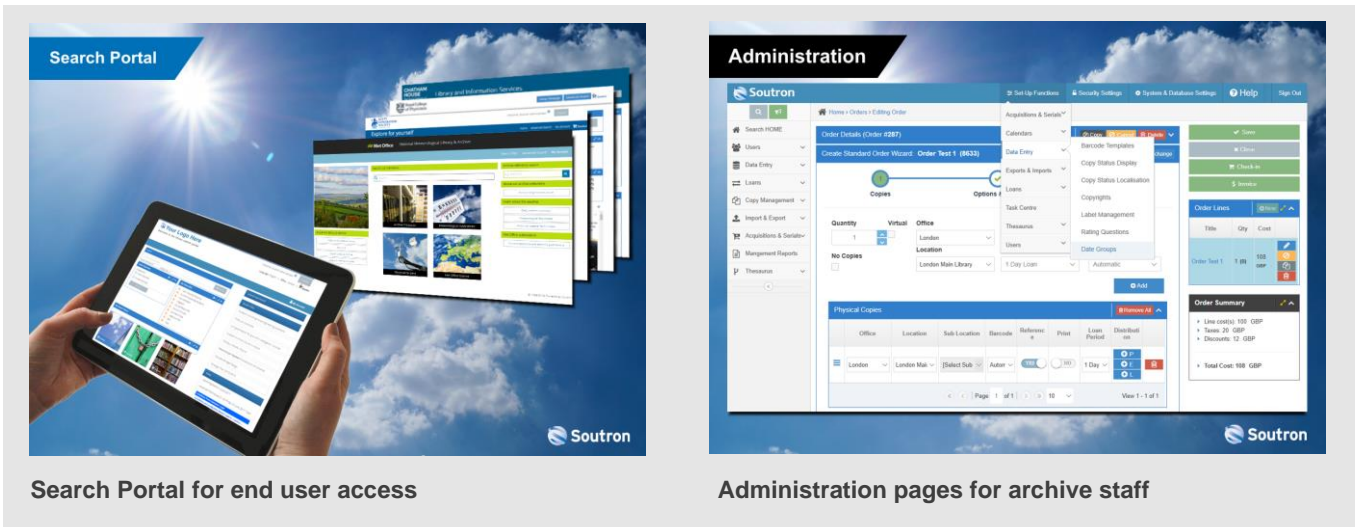

Management of these records is an important business function for many organisations. When records are no longer needed in active use, they are reviewed to decide which should become part of an archive collection. Soutron is designed to meet the needs of organisations pursuing all of these objectives.

- Out of the box, easy to customise, flexible to adapt to future needs
- Continuously developed, fully managed and supported
- Driven by our passion to provide the best Archive Management service

Soutron Archive Management System is engineered to take full advantage of new web technologies including HTML5 leading to improved performance and greater flexibility in presentation of results across all types of devices.

Fast Cloud Based and Mobile Friendly Archive Management Software

Search Portal for end user access

Administration pages for archive staff

The Archivist / Records Manager is in control of every aspect of the system through the use of simple menu selections. There are no external files to manage and no settings to be maintained on individual PCs. Soutron has easy to configure fields, data structures, record templates, classifications, thesaurus terms, locations and policies. Multiple Search Portals can be set up with secured content delivered as needed.

SEARCH AND PRESENTATION

Soutron’s continually evolving and enhanced Search Portal, is supremely flexible and easy to customise with hierarchical tree navigation, related records, control over layout and content presentation and superior performance.

Embed your search in any web page

Soutron is adept at presenting materials for different audiences so public access and guest users can see sub-sets of materials while researchers and others can be offered more expansive access to content. How users interact with the archive and records service can vary and functions are available for users to select and share content, request items for loan or for viewing in situ at the archive under controlled conditions.

Mobile devices are more commonly used by users. Soutron is Mobile Responsive so the display is tuned to the size of the screen on which content is displayed.

Maximising return on investment and simplifying the number of databases in use is a common goal for many of our clients. This is why Soutron is designed to be so flexible:

- Multiple types of data under management in a single database
- Relational structures manage physical items, digital content, PDFs & documents
- All types of content stored (digital assets & metadata recording physical items)
- Ingest PDFs, office docs, video, image, audio, ePUB & others
- Multiple Search Portals linking to internal & external data sources
- Review retention schedules, weeding & integration with digital preservation

Consulting services combined with Soutron’s database flexibility and functional performance provides strategic direction to get the best out of the application software and presenting the archive as a strategic asset.
