Tecnológico
de Monterrey

For Tecnológico de Monterrey research is a strategic activity; it is the engine that generates innovative solutions for the economic, social and environmental development of our country. We are committed to the idea that scientific and applied research should be used to add value to a society in a more rapid, measurable manner. We believe that there are three ways to accomplish this: 1) research to improve education; 2) research to achieve innovation; and 3) research to transform society.

Thus, research is a key cornerstone of education, as there is a need to continuously evolve scientific and technological knowledge in our learning process. The challenge is the use of scientific research to create value to develop a more educated society in a global world, regardless of that society's social and economic reality. We understand that science, technology and innovation will continue to add value to society. An innovation process is a driver for research activities and research is fundamental to innovation.

Therefore, the challenge is to enable a positive connection to bridge knowledge generation with value creation in order to address the most demanding problems humanity is facing: water, energy, environment, food security, global health, education, sustainable growth and poverty. Scientific and applied research should transform society. Open research and innovation models are key to address these challenges with a sense of community, collective knowledge and capacity to act.

At Tecnológico de Monterrey we combine two research approaches with open international collaboration: “knowledge driven creation” and “society driven innovation”. Our researchers have a responsibility towards value creation based on our scientific research that addresses society's demands.

But they also have to advance scientific knowledge to create new concepts, theories, and paradigms to advance the understanding of the world and the universe. We are committed to undertaking research to educate, innovate and transform in order to transcend in this lifetime.

Tecnológico de Monterrey has decided to focus this scientific activity on eight main strategic research areas, encouraging innovation, knowledge generation and knowledge transfer, with the goal of trying to solve México's and worldwide problems. These eight strategic areas include: biotechnology and food; mechatronics and engineering; information technology, sustainability; public policy and social sciences; business; medicine; and humanities and education.

This report gives an overview of Tecnológico de Monterrey's scientific and technological activity, offering facts and figures on the impact achieved by our research faculty's work. A general summary of the research and innovation results from 2012 to 2016 is presented, reviewing graduate programs, research areas, international collaboration networks, industrial agreements, patent application results and the institution's standing in the major world university rankings.

These areas are aligned to the eight strategic areas. The scientific work will start, then, from a strategic area that will take concrete form in a discipline and, more precisely, around a theme, where a group of researchers, professors and graduate students meets to generate and transfer new knowledge. To fulfill the scientific objectives, we have created 39 strategic groups that sustain the academic and research activities of the six national schools programs: 1) Engineering and Sciences; 2) Business; 3) Social Sciences and Government; 4) Humanities and Education; 5) Medicine and Health Sciences and 6) Architecture and Design.

Research at Tecnológico de Monterrey fosters the learning process of our students, underpins the intellectual activities of our professors, and generates knowledge and innovative solutions that address society's demands.

Tecnológico
de Monterrey

Tecnológico de Monterrey

- Privately funded in 1943, non-profit, independent.
- Through educational experiences we form people who become agents of change willing to be even more competitive in order to benefit all, with a clear focus on being instead of having, on serving others instead of possessing things; people who are responsible for their own lives, aware of the fact that their actions may promote the transformation of others.

Eugenio Garza Sada (1892-1973) was born into a business family, the son of the man who founded the Cuauhtémoc Brewery in Monterrey in 1890. His experience at MIT was the basis for the organization of Tecnológico de Monterrey, which he established along with a group of Monterrey businessmen. With a prophetic vision, Garza Sada devoted considerable effort to the expansion of the city of Monterrey. He was a tireless defender of private and free enterprise. His leadership in Monterrey was very clear and fruitful, both in the field of business, and in education and social welfare. Both, a successful businessman and an active promoter of community development, Eugenio Garza Sada consistently acted with great simplicity and humanity, focused on the progress of those around him, without distinction. The significance of this great man, industrialist and humanitarian, is undeniable and imperishable.

EUGENIO GARZA LAGÜERA ENTREPRENEURSHIP INSTITUTE

Through educational experiences we form people who become agents of change willing to be even more competitive in order to benefit all, with a clear focus on being instead of having, on serving others instead of possessing things; people who are responsible for their own lives, aware of the fact that their actions may promote the transformation of others.

ENTREPRENEURIAL FORMATION

The Entrepreneurship program led to the establishment of several support projects, including business incubators and accelerators, which continue the Tecnológico de Monterrey community's entrepreneurial spirit.

NETWORK OF CENTERS FOR ENTREPRENEURIAL FAMILIES

- Support the creation, development, growth, solidification, and continuity of family companies.
- Improve the competitiveness and long-term presence of the family company in Mexico.
- Bolster regional economic development through entrepreneurial families.

STRATEGIC RESEARCH GROUPS

SCHOOL OF ENGINEERING AND SCIENCE

Bioprocesses and Synthetic Biology

Our group focuses on the development of technology platforms based on bioprocesses and synthetic biology that generate new applications, new products and new production systems. Our main research lines are: a) Design of bioprocesses, b) novel technologies for bioseparation, c) technologies for measurement and early detection and d) synthetic biology. The bioprocess line focuses primarily on the design, implementation and scaling of unique biotechnological processes for products with commercial potential. The objective of the research line of novel technologies for bioseparation is to generate new strategies for recovery and purification that result in new platforms and products (proteins, enzymes, cells, etc.). The development of technologies for early detection involves the design and use of the micro-devices process for the creation of measurement systems. The research line of synthetic biology focuses on generating unique microbial production systems for obtaining high-value products.

Leader:

Marco Antonio Rito Palomares
mrito@itesm.mx

Cellular and Bioreaction Engineering

The mission of our group is to generate knowledge, new applications, and developments in the area of Pharmaceutical Biotechnology and Biomedicine by combining biological and engineering concepts. Our main research lines are (a) Biopharmaceutical Biotechnology: Production of biopharmaceuticals and recombinant vaccines; (b) Micro- and nanotechnologies for the diagnostic of infectious diseases; (c) Tissue Engineering and stem cell culture; and (d) Engineered biomaterials for biopharmaceutical and biomedical applications. We use reactions mediated by cells and their components (e.g. enzymes and nucleic acids) to generate high-added-value products and applications.

To achieve this purpose effectively, we usually have to engineer the cells and their functions; we use genetic engineering to modify or add new genes to a cell to confer new functions. For example, we engineer bacteria, yeast, and mammalian cells to produce recombinant proteins to diagnose, prevent, or treat global infectious or chronic diseases such as influenza, Ebola, cancer, and rheumatoid arthritis. We also design diagnostic chips to quickly and specifically identify bacteria, virus, or antibodies to tell us whether a person has been exposed to a specific pathogen.

Recently, we entered into the area of biomaterials and tissue engineering. Here we combine concepts of material sciences and technology, microfluidics, genomics, and cell culture in micro-and mini-devices into biomedical applications that could save lives. For instance, we are developing platforms to culture stem cells for tissue repair. We also culture cancer stem cells in continuous-flow microchips to better understand how a tumor grows and how to diagnose or treat a specific type of cancer. For all these applications, we must design and engineer not only the cells but also the systems and environments where we culture them. That is, we also do bioreactor design and engineering.

Leader:

Mario Moisés Alvarez
mario.alvarez@itesm.mx

Emerging Technologies and Molecular Nutrition

Through the convergence of different disciplines (Food Engineering, Biotechnology, Chemistry of Materials, Genomics, Microbiology and Nanotechnology) this group promotes emerging and innovative technologies in order to develop and consolidate its research.

Leader:

Jorge Welti Chanes
jwelti@itesm.mx

NutriOmics

This group performs cutting-edge research in nutrigenomics in order to identify phytochemicals preferably associated with Mexican native plants and foods that have the potential to prevent and treat cancer and chronic degenerative diseases. Important efforts are implemented to extract, identify and isolate phytochemicals, perform in-vitro tests with human and mammalian cells as well as animal tests in laboratory. Additionally, bioprocesses will be developed to obtain tablets, pills and products with nutraceutical and / or pharmacist degrees.

The mechanisms by which phytochemicals prevent or treat chronic-degenerative diseases (diabetes, inflammation, cholesterol and cancer) will be studied by nutrigenomics techniques.

The development of vegetable proteins for food applications, aimed to replace expensive animal proteins, is another important research task of our group. Novel raw materials are being identified, structural modifications of macromolecules are made, novel processes to improve efficiency and functionality of the extraction will be developed as well as the application of proteins in the development of food (dairy, cereals, beverages and other). Biotech also studies the minimization of post-harvest loss of grains and especially molecular markers that increase the nutraceutical capacity of cereals and other grains. This line also studies the processing of the nutraceutical capacity of grain-based foods.

This group will also focus on the creation of a laboratory which processes and does research on the generation of tablets and pills that can be used in clinical studies. This group will do research in the area of genomics.

Leader:

Sergio Román Othón Serna Saldivar
sserna@itesm.mx

Automotive Consortium

This group focuses on the development of modern transportation systems, particularly associated with the automotive industry. The main research topics of our group are: virtual prototyping, the use of new light materials and multimaterial components in the structure, body and drivetrain of the vehicle to reduce its weight; the development of powertrains equipped with electric motors; the integration of structures and modular systems for vehicle design; vehicle connectivity to the network to enhance its functionality; the development of dynamic, characterization and automotive control systems models; the overall behavior analysis of vehicles to achieve comfort; and the increase in maneuverability and stability using stabilizing devices. Several companies are participating as co-sponsors and users of our research and results.

Leader:

Horacio Ahuett Garza.
horacio.ahuett@itesm.mx

Advanced Manufacturing

This group focuses on applied research related to the design and manufacture of products with high added value using disciplines such as competitive intelligence, circular economy, biomanufacturing, additive manufacturing, precision engineering and laser-based microprocessing. The complete life cycle of the product is studied through competitive intelligence, circular economy, ecodesign and green manufacturing concepts. Some of the advanced manufacturing processes of interest to this group include: 3D printing of tissue engineering scaffolds, electrospinning of nanofibers, laser microcutting and microwelding, soft lithography for microfluidics, microinjection molding, micromilling, incremental sheet forming and metrology.

Leader:

Ciro Angel Rodríguez González
ciro.rodriguez@itesm.mx

Industrial Engineering and Numerical Methods

Our group develops approaches, formulations and solutions to specific industrial engineering problems using a quantitative point of view. We solve production and logistics problems such as planning and production scheduling, facility location, inventory, vehicle routing, territorial design, forest management and port logistics. The approach is quantitative, it provides formulation and solution to problems by designing algorithms that allow us to obtain both exact and approximate solutions.

Contact:

Ricardo Ambrocio Ramírez Mendoza
ricardo.ramirez@itesm.mx

Nanomaterials

This group focuses on the surface engineering by assisted plasma. Main research topics are: Prototype design and construction for the thermochemical treatment of steel parts as well as prototypes for physical vapor deposition (PVD); Nitriding, carbonitriding and oxy-carbonitriding of steels (stainless steels 316L, special steels as "Incaloy", and titanium based alloys Ti6Al4Va); Thin film coatings on substrates for tribological systems, high performance components and metal dusting improvement that are required for applications in metalworking, automotive, aerospace and biomedical industry; Development of piezoelectric materials used as sensors. The built prototypes allow us to produce multilayer and multicomponent coatings with plasmas generated by DC, RF and microwave fields.

We also develop mathematical representation of kinetics growth in concomitant nitride layers as well as the mathematical representation of the effects in operating parameters related with the characteristics of thin films. We also perform the structural characterization of a wide variety of steels and thin films using scanning electron microscopy, transmission X-ray diffraction as well as micro and nano hardness and bolt testing.

Leader:

Joaquín Esteban Oseguera Peña
joseguer@itesm.mx

Nanotechnology for Device Design

This research group focuses on: a) The development and characterization of intelligent and morphing biocompatible polymeric materials reinforced with carbon nanotubes or nanoparticles, b) the development of cutting edge technology to manufacture devices based on nanostructured materials, c) the prediction of the dynamic response of linear and non-linear systems by using perturbation techniques, nonlinear modal analysis and cutting-edge experimental techniques, d) The computer simulation of engineering components with Finite Element Analysis.

Leader:

Alex Elías Zúñiga
aelias@itesm.mx

Product Innovation

We investigate state of the art concepts and generate significant contributions related to identification of demand from Rapid Growing Markets as well as characterization and application of accelerating technologies for product and process innovations. We also design and create reference models, methodologies and tools for Rapid Product Innovation and Realization. Our group creates and builds conceptual and functional prototypes of products in the areas of advanced manufacturing technologies (micro-machines/micro-factories, 3D printers), sustainable technologies (solar energy, smart grids, green houses) as well as bio-medical devices and intelligent robots.

Leader:

Arturo Molina Gutiérrez
armolinagtz@itesm.mx

Robotics

Our group develops devices in the areas of bio-mechatronics and autonomous vehicles. In the bio-mechatronics area, the objective is to assist the human motion during rehabilitation and to help geriatric people with wearable robotics. In the case of autonomous vehicles (AV's), we focus on the assistance during natural disasters by using teams of heterogeneous robots (air and ground AV's) that interact simultaneously.

Leader:

José Luis Gordillo Moscoso
jlgordillo@itesm.mx

Sensors and Devices

This group develops micro/nanofabrication processes and novel miniaturized sensors and devices, particularly photonic and electrochemical sensors, and micro-labs on a chip. These sensors and devices are fabricated with various materials, such as metals, polymers and carbon, and can integrate ad-hoc microelectronic systems.

The group deals mainly with, but is not limited to: applications related to environmental monitoring, such as sensor networks that monitor groundwater and air pollutants produced by industrial activity; separation and processing of biological materials used for new drugs; the analysis of biological fluids for the prevention, detection and monitoring of diseases; and the development of devices for monitoring and improving cell culture.

The group's experimental facilities include a laboratory for fabrication and characterization of micro/nanostructures and microfluidic devices, a laboratory for prototyping electronic systems and a computer laboratory for multiphysics modeling and microelectronics design.

Leader:

Sergio Omar Martínez Chapa
smart@itesm.mx

Intelligent Systems

This group conducts basic and applied research to develop intelligent systems for solving problems across a wide range of application areas including optimization and logistics, ambient intelligence, web semantics, healthcare, forecasting and business intelligence, among others.

The investigation focuses on the development of innovative heuristic, metaheuristic and hyper-heuristic algorithms based on computational intelligence and other techniques to model and understand the complexity of the interaction between problems and algorithms with the intention to develop an automated and adaptable computational platform to efficiently solve a variety of real-world problems.

The group also explores strategies such as multi-agent systems, web semantics and data mining for integrating models and methodologies to trace a path toward intelligent organizations and more personalized systems.

Leader:

Hugo Terashima Marín
terashima@itesm.mx

Machine Learning

The group is interested in applying computer technology for solving national priority problems. Currently, we focus mainly on issues such as security, business intelligence, education, logistics and bioinformatics.

Leader:

Raúl Monroy Borja
raulm@itesm.mx

Optics and Lasers

This group studies the application of light in micro-manipulation systems, quantum computing and characterization of micro and nanostructured materials including metamaterials. We develop special light profiles using lasers and other incoherent light sources. Lasers are one of the most important areas in scientific and applied research, they have been successfully applied in various fields such as medicine, metrology, telecommunications and biotechnology, among others.

In all these applications, it is very important to control the widening of the beam as it propagates through the air. Several current research in optics are designed to minimize the light beams dispersion. Additionally, the group will explore the potential applications of these rays in the industry (drilling and cutting laser), biotechnology (optical tweezers) and metrology for materials characterization.

Leader:

Julio César Gutiérrez Vega
juliocesar@itesm.mx

Telecommunication and Networks

The group works on signal processing for image processing as well as on the convergence between optical communications networks and wireless networks. The group also does research in the following areas: radio over fiber, photonic crystals, aspects from the levels of physical layer, connectivity, modulation, configurable network architecture and sensors, optimization of optical and wireless networks and several applications such as medical, automotive and biological imaging, among others. Signal processing spans many applications such as images, video, audio, speech, communications codecs, biological systems, geological systems, electric power systems, radar, sonar, automotive, signal integrity in RF, RF filtering, smart antennas, fractal signals, nonlinear systems, optical systems and quantum signal processing, among others. One of our research areas focuses on the understanding and development of mathematical algorithms for potential applications and the efficient implementation of such algorithms in DSP processors, specific software or architecture. It is also evident that telecommunications are developing almost exponentially worldwide in response to the ever-increasing bandwidth demand and transmission distances required in communication networks. The systems fit to cope with this exponential growth are led by optical networks. This group does research in long haul transmission systems, advance optical modulation formats, radio over fiber, convergence of networks, photonic crystals, network security and evolutionary algorithms applied to network optimization and design, evaluation of the performance of all-photonic networks and the application of new technologies as quantum security. The Wireless Communications group currently conducts research to improve essential understanding of the fundamental performance in the areas of wireless communications and networks such as 4G, 5G, cognitive radio, position location techniques, interference engineering and modeling, optimum receivers, ad-hoc and sensor networks, vehicular communications (V2V and V2I modeling), network coding, MIMO/massive MIMO, channel modeling, coexistence/collaboration/ cooperation in wireless networks, CDMA, multiple access, among others.

Contact:

Ricardo Ambrocio Ramírez Mendoza
ricardo.ramirez@itesm.mx

Energy and Climate Change

The Energy and Climate Change (ECC) group consolidates the research interest of the School of Engineering and Sciences in the broad area of sustainable use of energy and environmental resources. The group is composed by faculty members from a host of different engineering disciplines, including mechanical, electrical, chemical, environmental and forest engineering, as well as from the basic sciences, including physics and geophysics. In addition, faculty members

from the EGADE Business School support the issues addressed by the ECC group from the business and economic perspectives.

Three general topics are central for our research: efficient use of energy and clean technologies, renewable energy sources and environmental impact related to the energy sector with particular emphasis on climate change and air resources. The faculty members preferentially conduct applied research in their areas of interest and seek to establish the connections from specific technological solutions to the “big picture” of economic and environmental implications.

Leader:

Alberto Mendoza Domínguez
mendoza.alberto@itesm.mx

Water Science and Technology

This research group implements several activities related to the management of water resources and engineering for sustainable use in the following areas: a) hydrological processes focused on the management of water resources in the area basin; b) environmental process focused on developing biorefineries and new green technologies; c) environmental geoprocesses focused on the study of the environmental impact in the subsoil related to human activities; and d) environmental nanotechnology focused on the development of new and advanced materials.

Leader:

Jürgen Mahlkecht
jurgen@itesm.mx

SCHOOL OF MEDICINE

Molecular Medicine

We study molecular and cellular alterations in the development of diseases and their treatments.

Leader:

Inma Castilla de Cortázar Larrea
iccortazar@itesm.mx

Bioinformatics and Medical Devices

This group focuses its research on topics of bioinformatics, genomics, medical imaging and medical devices. In bioinformatics, we focus on: algorithms and experiments for analysis, identification and validation of diagnostic biomarkers and forecasts for diseases (including cancer) and in stem cells differentiation processes. We perform computational trials (ie: Machine Learning, Artificial Intelligence) and experiments (i.e: culture, RT-PCR, transcriptomics and genomics). In genomics, we focus on the analysis, identification and validation of mutations, genetic and epigenetic alterations in various diseases and in the use of genomic technologies such as next-generation sequencing (NGS). In Medical Imaging, we focus on computer aided diagnosis and detection via analysis, identification and validation of imaging markers in various diseases including cancer. We are interested in algorithms, techniques and computational models for obtaining knowledge and improving clinical medical diagnosis and prognosis. We also focus on correlations between medical imaging and molecular data. In Medical Devices, we research and develop medical technology to promote innovations in diagnosis, treatment, therapy and assistance for people with disabilities, especially in pediatric populations. We study the design of new robotic rehabilitation schemes to lessen the level of disability of patients with sequel of SCI or EVC and enable their inclusion in social and productive activities. All these efforts are based on personalized medicine.

Leader:

Víctor Manuel Treviño Alvarado
vtrevino@itesm.mx

Cell Therapy

We are dedicated to the study, isolation, expansion and characterization of stem cells – from hematopoietic and adipose tissue– for its use in regenerative medicine programs. The group has an extensive experience in the development of differentiation protocols to specific cell lineages. This cells therapy, through autologous transplantation, is used by our group to improve the quality of life of patients suffering chronic degenerative diseases of the nervous system such as amyotrophic lateral sclerosis (ALS) and Parkinson's disease. We are recognized as a world reference in the ALS therapeutic approach. In the near future, preclinical models in animals will be ready to support the use of these cells in diabetes mellitus treatment.

Leader:

Jorge Eugenio Moreno Cuevas
jemoreno@itesm.mx

Clinical Innovation

This group develops activities focused on the diagnosis, treatment and prevention of diseases. We study our country's great challenges from a traslational approach integrating basic and applied research projects that propose solutions needed for the treatment of the people who are at risk. Our research focuses on metabolic syndrome, blindness and surgery as well as maternal and child binomial.

Leader:

Arturo Santos García
arturo.santos@itesm.mx

BUSINESS SCHOOL

Business Analytics

We study the use of business analytics and digital technologies to understand and improve business performance and process efficiencies.

Leader:

Raúl Francisco Montalvo Corzo
rmontalvo@itesm.mx

Consumer Behavior and Value Creation

We study consumer behavior in order to develop effective business strategies that promote responsible consumption and social welfare.

Leaders:

Raquel Minerva Castaño González
rcastano@itesm.mx

Lorena de la Paz Carrete Lucero
lcarrete@itesm.mx

Groups in the research areas with strategic focus, working in a collaborative and interdisciplinary manner. Generating knowledge and innovation.

Entrepreneurship and Leadership

Tecnológico de Monterrey is one of the pioneers in entrepreneurial education in Latin America. Today, the training and development of entrepreneurial leadership continues to be a strategic pillar of our institution. This research group focuses, enhances and disseminates scholarship on entrepreneurship and leadership which strengthen economic and social development in Mexico.

Leaders:

Ajnes Prasad
prasad@itesm.mx

José Ernesto Amorós Espinosa
amoros@itesm.mx

Finance and Macroeconomics

We contribute to the development of Mexican companies through their integration into national and international financial markets. We promote a better understanding of the relation between companies and global macroeconomic conditions.

Leader:

René Cabral Torres
rcabral@itesm.mx

Retail

This group seeks to develop the retail trade in Mexico in order to achieve international competitiveness by developing strategic thin-king that improves competitiveness through: store experience, operational optimization, use of technology and brand value.

Leaders:

María Elena Vázquez Lira
mevl@itesm.mx

Social Innovation

We engage in basic and applied research aimed at understanding the functioning of corporate social responsibility within the context of both large multinational corporations as well as small and medium-sized enterprises. In addition, we study social, multifaceted entrepreneurship. Furthermore, we evaluate social and ecological costs of doing business in order to identify their causes and find solutions. Finally, we study related phenomenon of current interest such as voluntary environmental programs and the role of the firm in the creation of income inequality.

Leaders:

Bryan William Husted Corregan
bhusted@itesm.mx

Strategy and Management of Organizations in Emerging Economies

In the context of emerging economies, we focus on the research processes and practices related to: strategy development and implementation, organizational capabilities, knowledge transfer, governance and human resources management. We apply strategies and management theories through models and tools designed for decision making and sustainable development for organizations in emerging economies. Theoretical approaches to strategy, institutionalism, culture and stake holdings are the main pillars of our research program.

Leaders:

Anabella del R. Dávila Martínez
anabella.davila@itesm.mx

SCHOOL OF HUMANITIES AND EDUCATION

Industries and Cultural Heritage: Analysis and Trends

We study the term “cultural industry” from a broad perspective that involves the production of cultural goods and services in a non-restrictive and inclusive manner (from popular manifestations to the so-called “high culture”). Its study covers production generated through traditional sectors such as editorial print, analogue or advertising audiovisual, but also via digital media such as newspapers and online magazines, digital transmission of radio and television programs, social networks, sound and film production, etc. Its contents can be educational, artistic, informative and based on entertainment. These can be considered from the following points of view: emission (authorial democratization), reception (new reading canons, coexistence of different types of receptors and audiences), support (convergent platforms), supporting codes (fragmented, inter-texts favoring), representations (new realities, tempo-spatial breaks) and contexts.

We study these industries as an enabling tool for sustainable development that involves various disciplines such as history, political science, economics, literature, communication, design, marketing, ethics, sociology, education, among others. We use the cultural framework proposed by UNESCO: (1) cultural heritage; (2) printing and literature; (3) music; (4) performing arts; (5) phonographic media; (6) audiovisual media; (7) socio-cultural activities; (8) sports and games and (9) environment and nature.

Leader:

María de la Cruz Castro Ricalde
maricruz.castro@itesm.mx

Education Research and Innovation

This group focuses its research on innovation in education in three main areas: management of educational institutions; sociocultural contexts of the digital technology; and teaching and learning processes for a knowledge-based society in diverse areas with an emphasis on science, mathematics, engineering and technology. Some of the multidisciplinary research projects and topics include: impact of innovation strategies in education (gamification, inverted classroom), resources (virtual and remote laboratories, augmented reality, open resources), educational environments (e-learning, b-Learning, m-learning, 3D virtual environment, MOOC), virtual communities (academic writing, educational leaders), training (teachers, researchers, entrepreneurs), skills development (ethical, civic, critical thinking, problem solving) and impact assessments (Tecnológico de Monterrey Educational Model: Tec21, public policy programs).

Ethics and Peace Studies

Leader:

Dora Elvira García Gonzalez
dora.garcia@itesm.mx

SCHOOL OF SOCIAL SCIENCES AND GOVERNMENT

Democracy, Institutions, Security and Justice

This group generates research that strengthens democracy and its political and judicial institutions through identification and analysis of the conditions and institutions that promote or limit the consolidation of democracy. The group also supports institutions and public administration processes that improve efficiency and reliability by designing and implementing public policies that promote the constitutional rule of law, especially in the areas of research, administration and justice. As a group we seek to influence the public agenda, improve the quality of democracy, increase the efficiency of the public administration and consolidate the new criminal justice system. These goals are pursued through the interdisciplinary study of economics, international relations, engineering (computer science, processes, industry and robotics), communication and pedagogy.

Regional Development, Energy and Public Economics

Social Policy and Public Entrepreneurship

Global Issues

This research group consists of scholars working on key contemporary issues of global governance across three main fields: global economic governance, global sustainable development and regional conflicts and cooperation. The research lines of the scholars are complementary, each one addresses important aspects of global governance as well as international cooperation and security. The topics covered are crucial for Mexico and other developing countries that seek solutions to important domestic and foreign policy challenges.

Knowledge Societies

We study the paradigm shift from the material and monetary base of the industrial culture to intangible concepts (ideas and emotions) of the knowledge culture. This new field relies on several specialized areas of knowledge: ethics, epistemology, history of knowledge, knowledge economics, sociology of knowledge, political science and psychology of knowledge as well as technology –particularly ITC and the digital ecosystem– and law. On these grounds, applications are developed and provided for: studies of science and technology, knowledge and innovation management, scientific and technological intelligence, knowledge economy, knowledge-based development and knowledge cities, cultural and legal aspects of technology, ethics and economic culture.

Social Transformation and Sustainability

Through diverse interdisciplinary theoretical perspectives, this group looks for ways and strategies to ensure the continuation of social processes in the future. It studies basic resources such as water, its relation to life in the cities and its general role in sustainability. Social transformation is analyzed from four points of view: a) The theory about social changes; b) Education; c) Local-global linkage; and d) The “trans” criterion of contemporary social phenomena, especially from the trans-national perspective. Ethical issues, peace and sustainability are studied from an interdisciplinary and trans-disciplinary perspective encompassing philosophy, literature, law and international relations. We also study the relationship between development and sustainability as well as cultures of peace. In economic and social aspects, we focus on: evaluation of governmental programs, elections, poverty and inequality, social responsibility and transparency, migration and remittances as well as sub-national public finance.

INSIGNIA PROFESSORS

Insignia award is the largest distinction in research for a Tec de Monterrey professor. Is the principal recognition of Investigation and Innovation prize Rómulo Garza, and is granted every year by Tecnológico de Monterrey and Xignux.

This award recognizes the researchers scientific career, their contributions to the institutional life and the community, and their professional distinctions over the years.

Romulo Garza Prize was created 40 years ago in memory of Mr. Rómulo Garza, who was an important research promoter in the community.

2016

Dr. Mario Moisés Alvarez

Specializing in biopharmaceutical engineering, he is the leader of the research group Cellular and Engineering Biofeedback. His research specialties include design of bio-reactors, transport phenomena and mathematical modeling of biological systems. He has published more than 100 articles in prestigious international journals in his field, and given

papers in several international forums and conferences. His activities have included the creation of a way to mass-produce a vaccine against the AH1N1 virus during the 2009 outbreak. More recently his group became involved in the design and fabrication of chips capable of producing monoclonal antibodies through anchorage dependent mammalian cell culture.

2015

Dr. Marco Antonio Rito Palomares

He is the leader of the research group Bioprocesses and Synthetic Biology. He is recognized as one of the most important biotechnologists in Mexico in the recovery and purification of bioproducts. He has been honored with the Jubilee Award 2003 granted by the International Foundation for Science (IFS) and the Rómulo Garza

Research Award 2002, at Tecnológico de Monterrey. He is a member of the prestigious Mexican Academy of Sciences and president of the Mexican Society of Biotechnology and Bioengineering, Nuevo León State Section. He has published more than 80 research papers and book chapters and holds five patents.

INSIGNIA PROFESSORS

2014

Dr. Julio César Gutiérrez Vega

He is a physicist who has done pioneering work in wave propagation of optical fields; specifically, he introduced the Mathieu family of non-diffracting optical beams and the Helmholtz-Gauss beams. He is the leader of the research group on Optics. His areas of expertise include wave propagation, laser beam shaping and laser cavities. He has authored and co-authored more than 185 articles in international journals, conference proceedings and books.

He was the first Mexican to be named senior member of the International Society of Optics and Photonics, serving in this organization as conference chair, editor and student chapter advisor.

2013

Dr. Sergio Román Othón Serna Saldívar

He specializes in food science, and is the leader of the research group in NutriOmics. He has worked and consulted for Mexican and international businesses and agencies, such as the National Food Research Center in Rio de Janeiro, Brazil, SUSTAIN (US Agency for International Development), Gamesa, GIMSA, Química SUMEX, Omega Tech and other organizations related to food and nutrition. He is also the director of the Protein Research and Development Center (Centro de Investigación y Desarrollo de Proteínas-CIDPRO). His research specialties are the processing of cereals and oil-producing seeds, the extraction of phytochemicals for medicinal use and fermentation enzyme biotechnology. He has published seven books, 29 book chapters, 98 articles in peer-reviewed journals, eight encyclopedia articles and holds two patents, and has applications pending for eight more. He also developed a type of winter wheat used in the United States.

2012

Dr. David Muñoz Rodríguez

He specializes in the areas of position location, cognitive radio in 4th and 5th generation wireless systems and intelligent transportation systems.

He is the leader of the research group in Electronic Communications and Networks. He has done applied research for Motorola, Telmex, PEMEX, Arthur D. Little, Bell-Northern Research, Nortel Networks and COFETEL.

He is also a senior member of the Institute of Electrical and Electronics Engineers. He has published in prestigious international journals and holds several patents.

In 1993 and 1999 he was named "Distinguished Professor in Telecommunications" for his work at Bell Northern Research and Nortel Networks, respectively, and received the Ericsson National Technology Prize.

RESEARCH FACULTY

Dra. Rocío Ortiz López
SNI 3

She graduated in Químico Farmacobiólogo Faculty from Universidad Veracruzana. She had her Masters and PhD in Molecular Biology from Universidad Autónoma de Nuevo León (UANL). She realized a training in molecular diagnosis from Baylor College of Medicine in Houston, Texas. Her expertise areas are the use of Biomarkers in breast cancer and cervix cancer, and the genomic applications in biotechnology. She belongs to National Researchers System, level 3.

Alberto Mendoza Domínguez
SNI 2

He is Professor and Leader of the Research Group in Energy and Climate Change of the School of Engineering and Sciences at Tecnológico de Monterrey. He obtained his PhD from the Georgia Institute of Technology. His main research interests are in the field of air pollution science and engineering. His current interests are in chemical characterization of fine particulate matter (including black carbon), source apportionment studies, use of satellite data for air quality studies, application of statistical tools for environmental data mining (with emphasis on air quality data), air quality forecasting and valorization of residues through thermal conversion processes. He is member of the National Researchers System, level 2.

Alex Elías Zúñiga
SNI 2

He has a PhD in Mechanical Engineering by Nebraska University. He has important research projects in mechanical vibrations and constitutive models of compounds materials. He is member of the National Researchers System, level 2 and leader of the Research Group of Nanomaterials. He has published several articles in indexed journals and was consultant in companies like Prolec, Whirlpool and Vitro. For 8 years he was head dean of Engineering and Science School in Tecnológico de Monterrey. Now he is professor of Advanced methods of material resistance, mechanical vibrations, intelligent materials, and computational material design, among others.

Dra. Carmen Hernández Brenes
SNI 2

She is an active researcher specializing in emerging technologies for stabilization of essential nutrients: food design based on nutrigenetics. Currently she is a research professor in the Department of Biotechnology and Food Engineering and the Biotechnology-FEMSA Center. In her scientific career, she has published numerous articles in refereed journals, has applied for an international patent and is the author of several book and books chapters. At the undergraduate level, she teaches courses in Human Nutrition, Food Safety (HACCP Certified Alliance) and Sensory Evaluation; and at the postgraduate level, the Enzymology and Biocatalysis course. She belongs to National Researchers System, level 2.

Dr. Guillermo Torre Amione
SNI 3

He is the leader of the Research Group in Molecular Medicine. His research focuses on applied clinical investigation in the areas of heart failure and cardiac transplantation. His lab conducts a variety of clinical research protocols, including multinational studies and investigator-initiated protocols. He is also Chief of the Heart Failure Division, Department of Cardiology at Houston Methodist Hospital, dividing his time between an active clinical practice and research on heart failure. Dr. Torre's clinical and basic laboratories are committed to the development of better therapies focused on the modulation of immune responses in patients with heart failure and cardiac transplant. He received the SCOPUS Award for the most-highly cited author on medicine in 2012. He belongs to National Researchers System, level 3.

Dra. Dora Elvira García González
SNI 3

She is the leader of the Research Group Transformation and Sustainability. She specializes in ethics, political philosophy, hermeneutics and the philosophy of culture. Her research lines include ethics, the culture of peace, human rights, water, and sustainable cities. She investigates strategies, methods and tactics to self-sustain human social processes in the present and in the future. She has been a visiting scholar at the University of Granada, Spain, the National University of Comahue and the University of Barcelona. She also serves as the academic leader of strategic projects in the humanities since 2009 and the coordinator of the UNESCO group in ethics and human rights. She is member of the National Researchers System, level 3.

RESEARCH FACULTY

Dra. Raquel Minerva Castaño González
SNI 2

She is the leader of the Research Group Consumer Behavior. Her research lines include brands and adoption of innovations, marketing strategies, cultural meanings of consumption, responsible consumer behavior and social welfare. Her purpose is to understand the factors that influence consumer behavior in the context of the globalization process to identify market opportunities and develop business strategies based on preferences and consumption patterns. She has participated in consulting and training courses for international companies, such as Cervecería Cuauhtémoc-Moctezuma, Gamesa, Cadena Comercial OXXO, HEB and Whirlpool. She received the best paper award from the American Marketing Association (AMA) for the paper published in 2012 "How Close Brands Are Included in the Self: Psychological and Neural. She belongs to National Researchers System, level 2.

Dr. José Florencio Fernández Santillán
SNI 3

He holds two doctorates in political ideas and in political science. He has taught courses, carried out research projects and had fellowships with Harvard University's John F. Kennedy School of Government since 2003 as a specialist in political analysis. He is also a visiting scholar at Georgetown University. He regularly writes for *El Universal* (a Mexican newspaper); he has been named an electoral advisor for the General Council of the Federal Electoral Institute (Instituto Federal Electoral), as well as for the editorial committee of the journal of the Mexican Senate, and for the magazine *Este País*. He is member of the National Researchers System, level 3.

Dr. Carlos Manuel Urzúa Macías
SNI 3

With a PhD in economics, he specializes in economic theory and econometrics. He was Secretary of Finance in the Mexico City government (2000 to 2003). He has worked as a consultant to the World Bank, as well as the United Nations Economic Commission for Latin America and the Caribbean, the United Nations Development Programme and the Organisation for Economic Co-operation and Development. He has published eight books on economics, two books on poetry, and written dozens of articles in various international journals. He is member of the National Researchers System, level 3.

Dra. Marisela Rodríguez Salvador
SNI 2

She has a PhD on Business Management at the Polytechnic University of Catalonia (1999). She belongs to the pioneers groups on the field of Competitive Technology Intelligence on Iberoamerica. In 2001 she established the research area of Competitive Technology Intelligence for Innovation at Tecnológico de Monterrey, campus Monterrey. She has provided consulting services, courses and conferences for more than 100 organizations in Latin America and Europe. She has published more than 100 articles in top refereed journals and conference proceedings in Europe, USA, and Latin America. And has several national and international awards including Romulo Garza award (2011) and Tec Woman (2014). She is member of the National System Researchers (level 2) and she became the first woman at Tecnológico de Monterrey belonging to the Mexican Academy of Sciences.

Dra. Janet Gutiérrez Uribe
SNI 2

She received her PhD in Engineering with specialty in Biotechnology from Tecnológico de Monterrey in 2006, and her Master with specialty in Biotechnology for the same institution in 2003. She has imparted class in Biotechnology area and coordinated the Biotechnology Research Center. She has several articles in important journals, such as publish and filed patents. Her research areas are the identification of substance with antioxidant, anticancer and anticholesterol activities in Mexican food. Actually she is member of the National Researchers System, level 2, and belongs to Tecnológico de Monterrey NutriOmics Research Group.

Dr. Rajagopal
SNI 3

With a doctoral degree in marketing, he specializes in marketing related topics that include competitor analysis, marketing strategy, consumer behavior, selling systems, international marketing, services marketing, and new product development. He has been teaching in undergraduate, graduate and doctoral programs since 1984 in various management schools of high rank in India and at international destinations. He has a vast number of publications on marketing, including 42 books and more than 125 research papers. He is member of the National Researchers System, level 3.

RESEARCH FACULTY

César Vargas Rosales
SNI 2

Received a PhD in Electrical Engineering from Louisiana State University in 1996, and made a research stay at the University of

California, Berkeley. He is a professor in the Doctorate in Information and Communication Technologies and member of the Research Group in Telecommunications and Networks of the School of Engineering and Sciences at Tecnológico de Monterrey. He is member of the National Researchers System, level 2. His research interests are on the following areas: Adaptive receivers for reconfigurable networks, clustering and topology maintenance in ad-hoc and sensor networks, security in interdomain routing, intrusion and attack detection using information theory, Network coding for security in reconfigurable networks, quantum information processing.

Jorge Welti Chanes
SNI 3

He has a PhD in Chemistry with specialty in Food Technology by Universidad de Valencia, España. He is leader of the Research

Group of Emerging Technologies and Molecular Nutrition. Food, Pharmaceutical and Bioproducts Development, from Tecnológico de Monterrey. He is member of the National Researchers System, level 3, and the Mexican Science Academy (AMC). He has published 14 books and more than 180 papers in indexed journals. His research area is focused in process engineering, water activity, fruits processing, emerging technologies and social impact technologies development.

Dra. Anabella del Rosario Dávila Martínez
SNI 2

is a full-time professor and the leader of the Research Group of Strategy and Management of Organizations in Emerging Economies. Previously, she was the Ph.D. in Business Administration Program Director and Research Director at EGADE Business School Monterrey.

Dr. Davila has been a guest professor and invited researcher at several national and international universities, and she is currently an active member of the Academy of Management and of the National Researchers System. level 2. Her teaching and research expertise includes institutionalism, labor culture, human resource strategic management, sustainability, and human development.

Dr. Bryan William Husted Corregan
SNI 3

He is the leader of the Research Group Social Innovation. He has worked at the Instituto de Empresa, Madrid, Military School in Bolivia and School of Business at York University. He currently holds a joint appointment with the Schulich School of Business, York University, where he is a member of the Haub Chair in Business and Sustainability. His main research interests are in: business and international management business, economics and econometrics, finance, technology and Innovation management, and marketing. He received the SCOPUS Award for the most-highly cited author on Social Sciences in 2011. He is member of the National Researchers System, level 3.

Dra. María de la Cruz Castro Ricalde
SNI 2

She has taught at the Tecnológico de Monterrey, campus Toluca, since 1987. She received her PhD from the Universidad Iberoamericana in 1996 and she also completed another one in the Basque Country University, in Spain, where she specialized in Journalism and Cinema. She had worked on essays about women filmmakers in Mexico and Mexican contemporary Literature, with particular focus on Gender and Cultural Studies. She belongs to "Diana Moran", a Mexican researching group centered on Literary Theory and Criticism, since 1998. Since 2006, she coordinates the book collection "Desbordar el canon. Escritoras mexicanas del siglo XX", awarded by the Fondo Nacional para la Cultura y las Artes (FONCA) in 2006 and 2009. Maricruz is recognized by the highest scientific council in México, belonging to the National Researchers System, level 2.

Dra. María Inmaculada Castilla de Cortázar
SNI 2

She holds a doctorate in medicine from the University of the Basque Country, with postdoc in Marburg (Germany) at the Department of Basic Hepatology. She has won awards for biomedical research, "Gil-Vernet" of the Royal Academy of Medicine of Catalonia; "Juan Antonio Garcia Torres" of the Royal Academy of Medicine of Granada; Institute of Spain. Currently She is the Director of the Clinical Doctorate of the National School of Medicine at Tecnológico de Monterrey and she is the leader of the Molecular Medicine Research Group, where she develops the study of the molecular and cellular alterations in diseases development and treatment. Her research lines are focused on the study of pathophysiology at the cellular and molecular level. She is member of the National Researchers System, level 2.

RESEARCH CENTERS

The center focuses on the training of researchers and specialist consultants seeking to participate in the identification and resolution of issues raised by the challenges of globalization of design and product engineering, intelligent manufacturing processes and reconfigurable and logistics systems. CIDyT is based on the use of its intellectual capital, infrastructure and strategic alliances with key technology providers and universities of international prestige for maximum results.

CIDYT

Center for Innovation in Design and Technology

CAALCA

Water Center for Latin America and the Caribbean

The center conducts research and does consulting, providing new knowledge, training and disseminating knowledge for sustainable management and use of water resources in Latin America and the Caribbean.

There are three main areas: bioprocess engineering, food biotechnology and pharmaceutical biotechnology. The research is focused not only on knowledge generation, publication of scientific articles and preparing human resources' level of excellence, but also on the generation of patents, technology solutions for industry, technology transfer and the generation and incubation of new technology-based businesses.

CB-FEMSA

Biotechnology-FEMSA Center

CITES

Center for Innovation and Transfer in Health

Center specialized in research, innovation and transfer in the area of health. The principal lines of investigation include: cardiology, cell therapy, hematology and cancer, ophthalmology, nutrition, health system management.

MIT – TECNOLÓGICO DE MONTERREY

Research Agreement

On October 31, 2014 a cooperation agreement was signed with MIT. Collaboration with MIT represents a strategic opportunity to enhance the research initiative with Tecnológico de Monterrey in nanoscience and nanotechnologies.

The possibilities of this cooperation and collaboration agreement include:

- Promotion of student and researcher exchange
- Enhancement of scientific production
- Encouraging creativity and active learning to exploit the most sophisticated technological knowledge network in the world
- Developing superior competencies and capacities to meet growing industrial competitiveness, foster environmental sustainability and improve the quality life of people.

MIT – Tecnológico de Monterrey

MIT - TECNOLÓGICO DE MONTERREY

Research Agreement

MIT.NANO Research Areas:

- Personal Medicine
- Energy Systems
- Ubiquitous Computing
- Multiscale Manufacturing
- Sustainable Infrastructure
- Quantum Science and Technology

TEC.NANO Research Areas:

- Personal Medicine
- Energy systems
- Multiscale Manufacturing
- Quantum Science and Technology

STRATEGIC INITIATIVES

TEC.NANO

ENERGY

LEADERSHIP &

EDUCATION ENTREPRENEURSHIP

STRATEGIC INITIATIVES: TEC.NANO

Initiative with the aim of supporting research in areas of nanoscience and nanotechnology through interdisciplinary projects in:

- Biotechnology
- Mechatronics
- Sustainability
- Information and Communication Technologies
- Health
- Education
- Entrepreneurship
- Public Policy

STRATEGIC INITIATIVES: TEC.NANO

Ongoing Projects at Tecnológico de Monterrey

- Chemical and electrochemical synthesis of metallic nanoparticles
- New constitutive models of nanostructured materials
- Intelligent surgical meshes
- 3D printing for scaffolds in tissue engineering
- Surface engineering
- Biomems: C-MEMs, dielectrophoresis, CD-microfluidics
- Micromachines and micro-factories
- Development of micromixers for mass transfer in microfluidic cells
- Nanoelectronics (nanosystems; low-power consumption, statistical circuit theory)
- Quantum information processing
- Design of nanostructures for sensor development
- Design of nanoplatforms for controlled release of genetic material and drugs
- Nano-optics: Interaction of light with nano-systems
- Interactions between nano-optical systems

STRATEGIC INITIATIVES: ENERGY

Our goal is to contribute to the competitive development of the energy sector in México.

Research:

- Research in political economy of the Mexican energy reform
- Assessment of social impact, urban risk and strategic opportunities at the local level with energy projects
- Public policy analysis for renewable energy
- Impact analysis of hydraulic fracture technology

Outreach:

- Regional strategic plan for the energy sector
- Capital budgeting in gas & oil
- Identifying business opportunities for the value chain energy sector

BI-NATIONAL LABORATORY ON SMART SUSTAINABLE ENERGY MANAGEMENT AND TECHNOLOGY TRAINING

Supported by CONACYT and Energy Sustainability Program to develop:

INFRAESTRUCTURE

- Decision stage center
- High performance computing platform
- Virtual laboratories
- In site laboratories

RESEARCH

4 Binational research networks

8 Research projects

TRAINING

MéxicoX platform

- Decision Makers
- Managers
- Engineers
- Technicians

ACCREDITATIONS

450 Certified and authorized persons

With the participation of companies, institutions and universities in collaboration with Tecnológico de Monterrey

TECNOLÓGICO NACIONAL DE MÉXICO

RESEARCH PROJECTS:

1

Network

Intelligent decision models for the management of energy sustainability:

1.1

Technology platform for the decision-making

1.2

Interconnection of the Power Systems of the United States and Mexico

1.3

Change of the energy markets in México and evolution of energy markets in the United States

2

Network

Mathematical and knowledge models, optimization, simulation and visualization.

2.1

Bioenergy in Mexico - Comprehensive system for the mapping of feasible energy use routes

2.2

Bioenergy in Mexico - Comprehensive system for the mapping of feasible energy use routes

3

Network

Intelligent technology for the energy value chain

3.1

Advanced technologies to allow high penetration of renewable resources in distribution systems and micro-network

3.2

Technological challenges of integrating the generation of renewable energies to the grid of México

3.3

Restructuring of the market, efficiency and integration of renewable energies to the power sector in México

15 thousand people training in México through 10 MOOC related with the electric energy value chain

450 certified and authorized persons (3% of the MOOC participants)

155 Masters / Specialities

- Energetic Engineering
- Energetic Administration
- Administration of the Energy and his Renewable Sources

29 doctorate students

6
Postdocs

10 SNIs researchers

2 SNIs Instituto de Investigaciones Eléctricas

5 SNIs Tecnológico Nacional de México

3 UC Berkeley researchers

5 ASU researchers

STRATEGIC INITIATIVES: EDUCATION

Serve as a reference for how to educate in order to have an impact on learning processes at different levels:

- Educational policy
- Management of educational institutions
- Curriculum design
- Processes of teaching and learning in the classroom (intensive use of educational technology as a learning mediator)

Projects:

- Assessment for improving external educational evaluation system for public schools with low academic achievement
- Virtual Learning Center
- Center for improvement and educational innovation
- Institutional repository
- Resource Center for Academic Writing
- Culture of legality in primary and secondary schools

OBSERVATORY
of Educational Innovation
Tecnológico de Monterrey

<https://observatorio.itesm.mx/>

WE IDENTIFY AND ANALYZE THE EDUCATIONAL TRENDS THAT ARE SHAPING THE FUTURE OF LEARNING AND EDUCATION

This year, the Observatory of Educational Innovation won the “Open Education Awards for Excellence”, category OER Collection.

The Open Education Consortium is a global network of educational institutions, individuals and organizations that support an approach to education based on openness, including collaboration, innovation and collective development and use of open educational materials.

OBSERVE

IDENTIFY AND ANALYZE HIGH-IMPACT EDUCATIONAL TRENDS.

FOSTER

BOOST AND PROMOTE INNOVATION IN THE TECNOLÓGICO DE MONTERREY AND GLOBALLY.

SHARE

COMMUNICATE EFFICIENTLY AND TIMELY WHAT HAPPENS IN EDUCATIONAL INNOVATION.

OBSERVATORIO Tecnológico de Monterrey
Reporte Semanal de Innovación Educativa
Martes 6 de septiembre de 2016

En esta entrega te compartimos un listado de dieciséis personas que están empleando su pasión y creatividad para cambiar la educación superior en los EE. UU. Por otro lado, la Universidad de Stanford publica un reporte sobre el posible impacto que tendrá la inteligencia artificial en todos los aspectos de la vida en el año 2030.

Destacadas

The Sixteen Most Innovative People in Higher Education
Washington Montly

- This list isn't a ranking, and it's by no means exhaustive. Consider it a snapshot of the various overlapping ways in which creative, passionate people around the U.S.A. are working to make higher education more accessible, affordable, and effective.

CEDDIE connection

The Educational Innovation and Teaching Development Center (CEDDIE) support the diffusion, definition, and application of TEC21 Model, with the creation of revolutionary ways of teaching development through research and educational innovation.

The TEC21 initiative is created to align the efforts and modernize, adapt and guarantee the high academic quality standards of Tecnológico de Monterrey.

Some innovation projects of CEDDIE are:

- The film as didactic resource
- “Gamification”: a fun approach to learning
- Design acting
- The life game

WEEKLY REVIEW

Our Weekly Review is a curated media synthesis of the most relevant articles and stories on education technology and innovation.

Edu OBSERVATORIO de Innovación Educativa del Tecnológico de Monterrey

Casos para aprender y renovar...

Martha García Tenorio
Noviembre 2016

Uno de los retos principales que tenemos los profesores al utilizar el método de casos como técnica didáctica radica en los **sistemas de evaluación de las competencias**. Los métodos de evaluación tradicionales, que por años se han utilizado en modelos educativos más rígidos y formales, **no son eficientes ni funcionales**. Los inconvenientes que se presentan para evaluar la creatividad son un ejemplo de ello, ya que no sería fácil medir esta competencia a través de un sistema de evaluación uniforme como lo es un examen. Las tendencias actuales requieren repensar y diseñar sistemas de evaluación que se adapten a modelos educativos más flexibles, innovadores, estables, interactivos y dinámicos, a través de los cuales podamos observar si el estudiante puede comunicarse de manera efectiva, en forma verbal o escrita, si realizó un análisis previo o una investigación a partir de la información que tiene disponible, o si posee o no habilidades de síntesis, entre otros aspectos.

Brief reports on education and innovation issues, events and interviews with key experts and ed leaders.

STRATEGIC INITIATIVES: ENTREPRENEURSHIP

- Fostering the entrepreneurial spirit among students and professors
- The Eugenio Garza Laguera Institute for Entrepreneurship is the largest entrepreneurship ecosystem in Latin America.
- All the entrepreneurship initiatives contribute to generating jobs and to strengthening the national economy by means of knowledge transfer to create wealth and the growth of companies.
- In 2013, we created INC MTY, an entrepreneurship and innovation festival in which Mexican entrepreneurs, innovators and investors participate. INC MTY is the most important celebration of the entrepreneurial spirit.
- Strategic collaboration: Babson College's Global Consortium

INDUSTRIAL PARTNERSHIPS

motorola
foundation

Cuauhtémoc
Moctezuma

EXAMPLES OF RESEARCH INDUSTRIAL PROJECTS

Navistar

Project: Road Load Data Acquisition

The project has a multi-year horizon and has the primary purpose of developing RLDA (Road Load Data Acquisition) systems that allow collection of information, data and knowledge about the behavior of vehicles on Mexican roads, with the aim of providing feedback to the design process and finding different failure causes in durability and load during operation

Bocar

Is a Company that produce pieces and complex assembles for automotive industry. The research projects related to this area in Tec de Monterrey are:

- Production optimization based in simulation
- On line measurement
- Diagnosis of a high speed mechanized center

Roberto Rocca Research Chair

- Energy efficiency in electric and thermal industrial applications
- Energy conversion and power electronics

EXAMPLES OF RESEARCH INDUSTRIAL PROJECTS

Industrial Consortium in Energy

Companies: Schneider Electric, Ternium, TenarisTamsa, AMI-GE, Cerrey, Prolec-GE, Nutec Bickley, Tenova, Acciona Energy, Diram

Main research areas: Power electronics, design of electrical equipment, optimal dispatch of energy in interconnected power systems, combustion systems, heat transfer and modeling and simulation of industrial processes

Examples of projects:

- Power control optimization of AC electric arc furnaces
- Heat transfer simulation of windings in power transformers for estimation of hot spots
- Compliant mechanisms in miniature circuit breakers

FEMSA

Project: Emerging Contaminant Biodegradation by Enzymatic Processes

This project focuses on the study of the potential use of enzymatic processes for bioremediation of aquatic systems by enzymes extracted from a microorganism obtained from the northwestern region of Mexico, to implement processes of degradation of various compounds. The investigation is focused on kinetics, the major way of degradation of the analysis of interest and toxic by-products.

Metalsa

Project: Design and development of electric propulsion system and semi-active suspension for a light load vehicle

In this project Tecnológico de Monterrey designed a control system for a semi-active suspension in an embedded architecture based on a CAN network. The goal of the algorithm is comfort and individual surface grip on each corner of the car, besides a control system that coordinates each independent corner. The control system is based on the specification and modeling of electrohydraulic dampers, including tolerance to some faults. The system was validated in a commercial vehicle.

LEADERSHIP

Leadership Institute

With the objective of make science in the leadership area, in 2017 is created the new Leadership Institute of Tecnológico de Monterrey, which reinforce the institute commitment to create competitive, transformative, innovates and human sense leaders.

The director of Leadership Institute is Santiago Vázquez Blanco, Phd in Economics by Santiago de Compostela University, and expert in leadership issues, such as positive psychology and happiness science. He is author of “La felicidad en el trabajo... y en la vida”.

AWARDS & PRIZES

QS Stars Reimagine Education Awards

2016

In this edition, 807 project proposals were received, 520 were evaluated, 156 were selected for shortlisted presentations, and 58 were finalists of almost 30 universities around de world. This contest has 15 participation categories.

Tecnológico de Monterrey participated with 16 projects, 9 of them were elected finalist, and 3 of them were awarded:

Projects Awarded:

“Incubation Cells: Researchers and Entrepreneurs”. Project from James Fangmeyer Jr., Francisco Cantú, Silvia Patricia Mora and Nathalie Galeano, professors from Campus Monterrey. The project consists in the incubation of technological base business, using the patents rights results of thesis of PhD and Masters of Tecnológico de Monterrey alumni. This patents are registered by the students and their professors, with the aim of become them in real business. The Incubation Cells Program role is to provide them business, financial, legal, informatics and marketing advising. Also, this program can provide information about seed capital networks, research resources, and even technological parks office space. This project won **the first place in the Nurturing Employability Award category**.

“Semestre i – A new way of learning”. Project from Eduardo Bastida Escamilla and Luis Enrique Herrera del Canto, professors from Campus Santa Fe. The project explains the Semestre i methodology, one of the most innovative initiative of competence-based teaching and learning challenge, and part of Modelo Educativo Tec21. This project won **the first place in Hybrid Learning Innovation-Poster in Latam region**.

“Professor Avatar: Telepresence Model”. Project from Luis Eduardo Luevano Belmonte and Eduardo López de Lara Díaz, from Campus Zacatecas, and Eduardo González Mendivil from Campus Monterrey. The Project consist in a telepresence model for increase the distance education learning-teaching process, and contribute to the humanization and revaluation of the professor and student’s social presence in the distance education model. The project won **second place in Best us of Information and Communication Technology Tools**.

Projects in the final evaluation:

1

“Semana i: Innovation Challenge Week for Healthcare”, from Silvia Lizett Olivares Olivares, Mildred Vanessa López Cabrera, and Jorge Eugenio Valdez García from Campus Monterrey. The project took part in the Presence Learning Innovation category.

2

“Faculty Development Program for Clinical Educators”, from Silvia Lizett Olivares Olivares, Mildred Vanessa López Cabrera, Martha Ruth Loyola, and Jorge Eugenio Valdez García from Campus Monterrey. The project took part in the Presence Learning Innovation category.

3

“Use of Innovative Learning Spaces”, from Martha Elena Núñez López from Campus Puebla. The project took part in the Presence Learning Innovation category.

4

“Numerical methods hybrid learning: a STEM Education’s bridge”, from Francisco Javier Delgado Cepeda, from Campus Estado de México. The project took part in the Hybrid Learning Innovation category.

5

“CONTINUUM: Digital media arts creative hub”, from Miguel Ángel Nájera Mora, Jacob Bañuelos Capistrán and Juan Carlos Olmedo Estrada, from Campus Ciudad de México. The project took part in the Digital Content category.

6

“Science Education and Adaptive Evaluation at High School”, from Rodrigo Ponce Díaz, from Campus Eugenio Garza Lagüera. The project took part in the Teaching Delivery category.

ECONOMIC IMPACT

Examples of tech-based companies

Onko Solutions S. de R.L. de C.V.

A high technology company that aims to establish a progressive dynamic for the development and commercialization of technology based on the use of innovative technology in medical devices. At present Onko is commercializing a cervical cancer medical diagnosis device that is reliable, affordable, portable, user-friendly, and minimally intrusive.

EZKATEC S. de R.L. de C.V.

A biotechnology company devoted to innovating, researching and developing probiotic formulations that do not require cold chain for the dairy and pharmaceutical industries. The technology is an integrated high performance process to obtain biomass of probiotic lactic acid bacteria (probiotic), a dairy-based nutritional serum product that improves the quality and health of the general population.

WeaRobot S.A.P.I. de C.V.

Devoted to designing, developing and producing rehabilitation devices. The use of muscle and brain signals to control robotic rehabilitation can help greatly in the rehabilitation of limbs to supplement control over crucial parameter movement therapy. Aukera Foundation (the social partner of WeaRobot) is an online open innovation platform and crowdfunding offering free prosthetics, orthotics and exoskeletons.

Automatische Technik S.A.P.I. de C.V.

Its the first mexican Company oriented in the production of Delta robotic arms. They can be used to pack, unpack or re-pack any kind of products in small bokes. This company offers solutions oriented to increase production and reduce operation costs, besides, this technology help companies to level up their economies and increase their products quality.

Bio-Recombine Technologies, S. de R. L. de C.V.

A biotechnology company devoted to designing, developing and producing biomolecules of high commercial value (recombinant proteins) to serve the biopharmaceutical market developing vaccines and drugs, and the diagnostic and food sectors through diseasing enzymes with high commercial value.

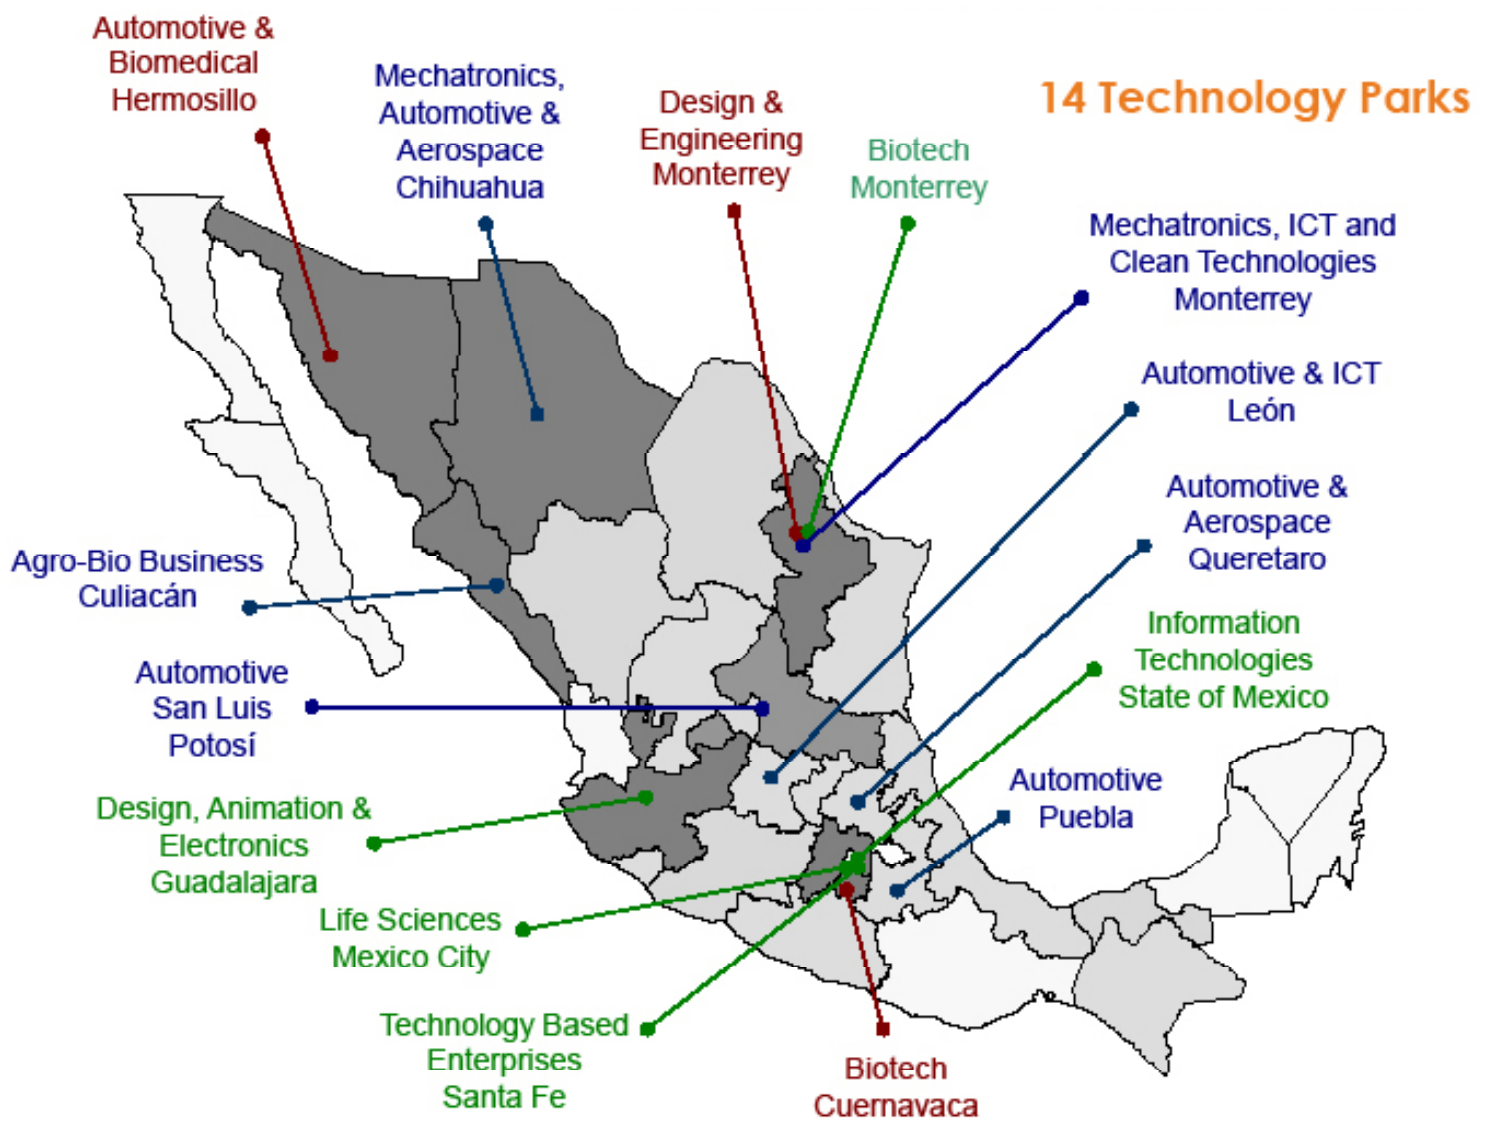

Global Nano Aditives, S.A. de C.V.

A nanotechnology company devoted to the development of nanofluids for coolants and lubricants. These refrigerants contain nanoparticles dispersed and stabilized to provide better heat conduction properties and wear reduction; applications in electrical transformers, automotive systems, and the metalworking industry in general. This technology was recognized as a TechConnect Global Innovation Awardee at the "TechConnect National Innovation Summit", Washington, D.C., 2014.

PROJECTS THAT TRANSFORM MÉXICO 2017

<https://www.youtube.com/playlist?list=PLnncon5XHt5pZFPir1YIsAVZCW9xPIUEe>

Super antioxidants vegetables to improve health

The principal cause of death in México is related with obesity, diabetics, cardiovascular diseases and hypertension caused for lack of prevention strategies. One action to prevent these diseases is increase the ingest of antioxidant compounds that can be present in vitamins and nutritional supplements, but also in their natural state, in the vegetables.

Research professor Daniel Alberto Jacobo Velázquez, and the research group "Bioprocesses and Synthetic Biology" are working in a simple and low cost process that increase the vegetables nutraceuticals compounds concentration. This method is simple and easily done to prevent chronic degenerative diseases.

Acoustics for health

Tinnitus is an ear disease that affects thousands of Mexicans, mostly elders. It's a constant buzz that affect their quality of life, cause sleep disturbance, reduce their work capacity, and even could cause psychiatric problems. One of the treatments for this disease is the use of acoustics therapies. Professors Luz María Alonso Valerdi and David Isaac Ibarra Zarate had developed a method to treat this suffering. With this project they are able to evaluate in short and medium term, with an electroencephalogram, the results, the benefits or non-benefits of acoustics therapies, and determinate if that therapy is the best option for them.

Recirculation of water for food production

Rigoberto Engel Ugalde, Aida Malpica Sánchez and Ezequiel Hernández Salas, from Water Science and Technology Research Group developed a process to recirculate water in an indoors agriculture and aquaculture model to increase sustainable development.

They integrate a hydroponic system of aquaculture and biological nitrification in artificial greenhouses of 240 square feet where they can produce vegetables and rise some kind of fish using interconnected systems that reuse and move water from one device to another.

PRIDE Personal Risk Detection

Recipe help in a risk or danger situation thanks to body and space signs emitted from ourselves isn't science fiction anymore. Research professor Luis A. Trejo Rodríguez and another "Machine Learning" Group professors are developing a mobile device software that generate automatic alerts in a risk or danger situations like kidnappings or natural disasters, and guaranteed a quick response from the in charge authorities. This device born after another project named ELISA (Emergencia, Localización y Asistencia Inmediata) that operate since 2011 in Tecnológico de Monterrey, Estado de México and JM Security business.

Biofortified fruits and vegetables

Human body needs several vitamins and folic acid to improve its functioning. Their deficiency can alter a baby's growth and increase cardiovascular diseases, anemia and even cancer. The lack of this vitamin is also related with depression, cognitive disabilities and Alzheimer.

Research professor Rocío Isabel Díaz de la Garza and their colleagues from Emerging Technologies and Molecular Nutrition Group work with folic acid synthetization. The study case in this project are the plants, they are the principal source of folates and they can produce up to 300% of this vitamin. With these project the researchers can significantly improve the health in Mexico.

Sustainable energy

The research in Tecnológico de Monterrey is oriented in different strategic areas, one of them is Energy. The purpose of educate technicians and experts in México made possible an alliance between Tecnológico de Monterrey, Secretaría de Energía and Conacyt to create a project that improve the education in Energy.

This is the Binational Laboratory for Technological Formation, presented in 2016 by Pedro Joaquín Coldwell, Energy Secretary; Enrique Cabrero, Dean of Conacyt, and David Noel Ramírez, Head dean of Tecnológico de Monterrey. This laboratory integrates infrastructure, development and human resource training to transform energy into a sustainable energy.

Nanotechnology

Science has learned to control materia in a nanometric scale. Nowadays, researchers can design atoms one by one and make unimaginable things with specific properties, generate devices, materials and new and improved drugs and foods.

Nanotechnology has been able to transform society in a few years, and Tec de Monterrey has been part of it. That's what Ricardo Ramírez Mendoza, dean of this initiative said. Since the collaboration with MIT started in 2014, the Institution has advanced in academic and exchange programs, talent attraction, research collaboration and even a state of the art infrastructure.

PROJECTS THAT TRANSFORM MÉXICO 2016

<https://www.youtube.com/playlist?list=PLnncon5XHt5onevVMgQxz75WSrdYpLns9>

Robotics for physical impairment

Doctors Ernesto Rodríguez and Rogelio Soto design and develop a series of robotic exoskeletons with the objective of improving the quality of life of people with some type of disability, as well as the reduction or loss of natural mobility of older adults.

Experts expect their final product to have a low-cost modular design that can meet the specific needs of each patient in an integrated manner. The device will be controlled via neuronal signals and will incorporate technology such as augmented reality to deploy 3-D scenarios linked to rehabilitation routines.

Cell regeneration to see again

Doctors Jorge Valdez and Judith Zavala lead this corneal cell regeneration project, since in Mexico there are over 7,000 people on the waiting list to receive a transplant of this organ, and their chances of success are minimal since there are never enough donors.

Through this project, with a single artificial biocompatible cornea can benefit up to 10 patients. In order to achieve this, a biomaterial will be generated in which the cells can be deposited to multiply them and thus return the view to thousands of people.

Mati-Tec: Education for all

Professor Juan Carlos Olmedo developed an app that helps children and young people with limited resources to increase their grades. Mati-Tec is a research project whose purpose is to improve the mathematical skills, literacy and digital processes of public elementary schools.

The application works through a mobile device with internet access. Once inside the platform, users can play with innovative mathematical and Spanish teaching resources. In four years, Mati-Tec has benefited over 6,000 students and hundreds of teachers in 50 schools. The next step is to deliver this platform to the "SEP" to support millions of students across the country.

Nanotechnology

The Nanotechnology project presented by Dr. Alex Elías is focused on four applications of this discipline: the development of a device for the early detection of type 2 diabetes; the creation of an intelligent film, resistant to aggressive environments; a nanometer-mesh for repairing abdominal wall hernias, and nanosensors to identify contaminants in the environment.

Each of these utilities is the subject of study of a team composed of research professors Joaquín Oseguera, Nancy Ornelas, Flavio Contreras, Marco Antonio Rito-Palmare and Alex Elías.

Biotechnology for food security

The field has long lags and requires sustainable technological modernization. That is why the “Centro Internacional de Mejoramiento de Maíz y Trigo” (CIMMYT) and Tecnológico de Monterrey work together on the MasAgro project. The person responsible for this initiative is Dr. Silverio García, who assures that a great majority of Mexicans live in monetary and food poverty, reason why their project is directed to the base of the pyramid of production. Together with experts from more than 50 institutions, this initiative seeks new technologies that improve the processes of planting and growing food, in particular maize. One of its advances is the development of a maize species that is resistant to pests and is beneficial for health.

Life options for vulnerable communities

Dr. Carlos Brambila and his team have the talent to intervene in rural communities with low levels of agricultural productivity so that, with the help of science and technology, they can improve community development. In Ahuátlan, Puebla, for example, they have found different varieties of plant species that can be exploited in a sustainable way thanks to a vehicle that has two food processing plants: one for peanut products and another for fruit. Dr. Brambila points out that poverty in Mexico is at the same levels of 25 years ago, so its initiative aims to influence the poorest communities through technological processes.

Mechatronics at the service of society

Research professor Pedro Ponce and his project, Robot Teco, are examples of the applications that robotics can have in areas such as health, education and productivity. This android works as a tool for the treatment of children with autism. Teco helps patients express their emotions, improve their social skills and understand the expressions of others.

Another initiative of his work group is a wheelchair with artificial intelligence that through algorithms allows an autonomous navigation. It has different modes of operation and a control system via head movements and voice control.

Building a fair and secure country

After recognizing, that a few years ago our country suffered an escalation of violence, Dr. Pedro Torres of the School of Social Sciences and Government, considered that the Tecnológico de Monterrey had to do something and for that reason developed a security protocol to support in the delivery of justice and security to public ministries and police. He emphasized that his team made the decision to take the research from the cubicles and put it into practice, to meet later with local authorities and governments, and the results are in sight.

A culture of sustainability

Researchers Alberto Mendoza, Gerardo Lozano Fernandez, Bryan Husted Corregan and Roberto Morelos want to have a sustainable Tec. To achieve this, they are working on the creation of the 2016-2030 Technological Sustainability Plan, which is supported by three main axes: environment, energy and health.

This program seeks to position the Institution in the first place in Latin America and be among the top ten in the world in terms of sustainability. Therefore, it is divided

into a focus group on energy and climate change, as well as another dedicated to the social innovation strategy.

Technology-based entrepreneurship

Daniel Moska, Juan Arriaga and Patricia Mora develop a joint project of entrepreneurship to transform research ideas that can be turned into technology-based companies, thanks to the adequate supports that consist of three main factors: the management and simplification of the project, the Training and knowledge of the entrepreneurial environment and finally the approach with the appropriate industry.

QS STARS

Instituto Tecnológico y de Estudios Superiores de Monterrey

The QS Intelligence Unit has, through rigorous and independent data collection and analysis of performance metrics as set out in the QS Stars™ methodology, rated Instituto Tecnológico y de Estudios Superiores de Monterrey as a Five Stars

The QS Stars™ rating system is operated by the QS Intelligence Unit, the independent compiler of the QS World University Rankings® since 2004. The system evaluates universities across a wide range of important performance indicators as set against pre-established international standards. By covering a broader range of criteria than any world ranking exercise, QS Stars™ shines a light on both the excellence and the diversity of the rated institution.
