

My journey through an inequitable system

Natalia Norori

OA.Works

“Open” ≠ “Fair”

Open science can contribute to equity, if it enables **people who are historically marginalized** to **learn about** and **research topics important to them and their communities**, and **have their research recognized and rewarded**, and have that **translate in impact for their communities**.

Open science can contribute to equity, if it enables **people who are historically marginalized** to learn about and research topics important to them and their communities, and have their research recognized and rewarded, and have that translate in impact for their communities.

Nicaragua

- 4 decades of political conflict.
- 6.6 million people.
- 103,600 Nicaraguan refugees and asylum seekers worldwide.

Open science can contribute to equity, if it enables people who are historically marginalized to **learn about** and research topics important to them and their communities, and have their research recognized and rewarded, and have that translate in impact for their communities.

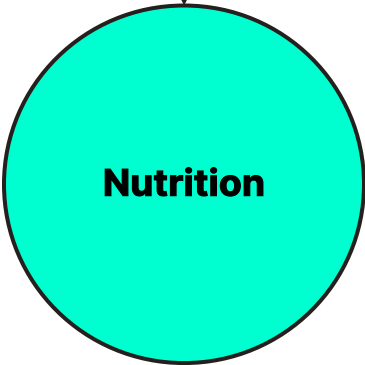

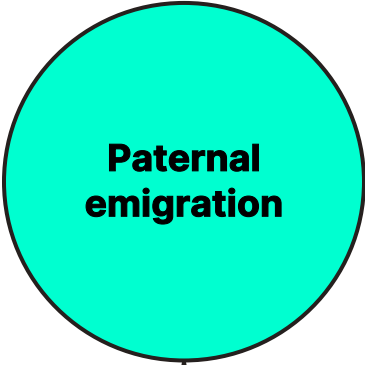

OA.Works tools

Open science can contribute to equity, if it enables people who are historically marginalized to learn about and **research topics important to them and their communities**, and have their research recognized and rewarded, and have that translate in impact for their communities.

Migration

- Harms public health.
- Connected to climate change.
- 405 million total migrants by 2050.
- 200 million environmental migrants by 2050.

Open data allows me to look at problems that are systemic in the communities I am from and lowers the barriers to doing that.

Open science can contribute to equity, if it enables people who are historically marginalized to learn about and research topics important to them and their communities, and **have their research recognized and rewarded**, and have that translate in impact for their communities.

“This journal offers authors the option to publish their research via subscription (without Author Publishing Charge) or open access. To publish open access, a publication fee (APC) needs to be met by the author or research funder”

From <https://www.journals.elsevier.com/public-health>

Open science can contribute to equity, if it enables people who are historically marginalized to learn about and research topics important to them and their communities, and have their research recognized and rewarded, and have that **translate in impact for their communities.**

75%

Of scientific papers are published in English.

16%

Of the world population can read and understand them.

Unless we design Open
carefully, it won't help solve
COVID & climate change in
ways that are equitable and
fair.

“Open” ≠ “Equity”
