ANNOUNCEMENT

Plant extension Valeo Autosystemy sp. z o.o. Engine Cooling Systems in Skawina

Valeo Autosystems LLC (hereinafter: Company) Engine Cooling Systems Division is planning to expand the Company by adding a production and storage part together with the associated technical infrastructure and installations (hereinafter: "Expansion") and therefore intends to apply for an amendment to the current building permit.

The Expansion does not require amending or obtaining a new: (1) an environmental decision; (2) a decision constituting a permit to emit gases and dust into the air ("Emission Permit"). The expanded Company will operate on the basis of existing and current administrative permits.

In relation to the above, I clarify that Expansion:

1. will not be associated with increased emissions from the engine cooling system installation or an increase in the number of emitters from that installation;
2. during the operation phase will not cause any nuisance to the residents of Skawina.

After an additional analysis taking into account the interests of the residents of Skawina, the investment intentions have been changed and therefore in relation to the original plan Expansion:

- a. will reduce company traffic;
- b. will reduce the amount of packaging waste generated at the Company;
- c. will involve the generation of more potential jobs at the site.

Planned scope of the Expansion:

- Extension of the production hall to the south by approx. 3,300 m²;
- construction of a fire pumping station with a fire reservoir;
- Removal of existing entrance from Przemysłowa Street with gatehouse.

If you have any questions or doubts about the Extension, please contact us by email ths.srodowisko.mailbox@valeo.com.
